# Standing Pat on Fair Prices

## *The Bane of the Bicycle Trade Is the Fellow Who Wants "Something Off"*

By POWHATAN ROBINSON

**President, New York Sporting Goods Co.**

THE tendency of merchants who are not engaged in the cycle business to buy "around" the local bicycle dealer is unfair to their neighbors and unfair to themselves. How much better it would be for everybody to patronize their local merchants and help build up the general trade of their town, instead of sending to mail order house or "weak kneed" jobbers in large cities to secure some article that can be bought locally at a fair price. In the final analysis, it is cheaper to buy at home, because the home merchant adds his guarantee to the manufacturers' and the friendly spirit created by local trading means reciprocity and the whole community benefits.

### Entitled to Patronage

The merchant who invests his capital in rent and a stock of merchandise in any particular line of trade is entitled to the support of other merchants in different lines, and to the support of the jobber or manufacturer from whom he purchases.

The company, of which the writer is president, makes it a rule not to sell anyone at wholesale prices any merchandise, unless the dealer regularly carries such goods in stock for "over the counter" sales. For example, if we have a customer in a town doing a nice baseball business with us and another gives us a good share of his bicycle business, and they specialize in these lines, it would be manifestly unfair to sell the sporting goods dealer a bicycle for his "sister, his cousin or his aunt" at the wholesale price, thus taking the trade away from the local cycle dealer. By the same token, it would be wrong to sell the bicycle dealer a baseball or bat at the wholesale price, thus doing the sporting goods dealer out of a sale.

### The Bane of the Trade

The man who always wants to get "something off" for one reason or another, is the bane of the bicycle business; if the dealer, however, will make a strict rule that he will make his prices reasonable, and stick to them, his profit and loss account at the end of the year will reflect the wisdom of his stand for good business methods.

Fair prices, good merchandise, courteous treatment, prompt shipment, liberal adjustments, and putting every customer on the same price basis, are essentials to business success. Whereas, slovenly business methods and weakness in upholding fair prices will spell business disaster.

No doubt many a dealer is confronted with cases similar to the one that occurred in a well-known sporting goods store only a few days ago. A "boss" carpenter was employed to do certain work and stated that his price was $5.50 a day for a carpenter, to which the merchant agreed. Before the job was completed the "boss" carpenter asked how much he could "get off" from the price of a camera. He was told by the sporting goods dealer that the price was $6 to him and $6 to anyone else, and that the profit was not unreasonable. He explained further that the rent and expenses must be paid and that the sale would not be made, for obvious reasons, at a cut price. The carpenter bought the camera without murmur and appeared to see the justice of the statement which the dealer had made to him.

To sum up, every merchant should demand a living price for the goods he has to sell; treat every customer alike, and pay a living price for what he buys, giving preference to the local dealer.

# Bicycle's Simplicity an Asset

## *Vehicles Become More Practicable as Their Construction is Less Complicated*

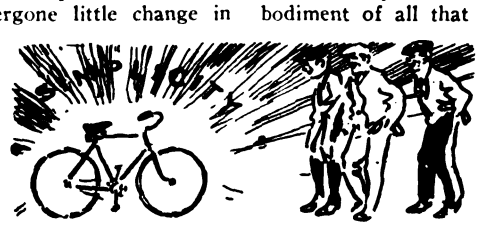
By MAX SLADKIN

**President Haverford Cycle Co.**

EVERY successive year witnesses some new development in the field of locomotion. The automobile, the motorcycle—in fact every prevailing means of conveyance—shows a marked improvement over the standards of five or ten years ago.

### Vehicles Become Simplified

The bicycle is no exception to this, although it has undergone little change in recent years. This, of course, is due to its great simplicity. All the improvements which mark the new models of automobiles, motorcycles, etc., tend toward simplicity and the more they approach the simple the more practicable and more beneficial they become.



So that while the bicycle shows only minor improvements, during the last decade, this fact does not argue that the bike has run its race, but rather that it has reached a stage of simple perfection at which it is best adapted to meet the requirements for which it was designed.

### Motor Attachments Boost

The very best proof that the bicycle is going strong is that during the last year different devices have been invented to serve as an auxiliary to the silent two-wheeler. The motor has appeared in connection with the bicycle and promises to supersede self-propelling. The appearance of this new factor has created quite a sensation and will undoubtedly give the bicycle a position in American every day life that it has never yet attained even in its balmiest days.

In the bicycle of today we have the embodiment of all that is wholesome, graceful and beautiful. Yet, with the exception of slight difference in design or variation in color, the bike is the same today as it was ten years ago, and I dare say as it will be pretty nearly the same ten years hence.

### Commercial Utility

One noticeable feature in connection with the bicycle is its strong position in the commercial field. Merchants everywhere have come to realize the economy of the bicycle.

The strongest proof that the bicycle, far from going back, is here to stay is the fact that instead of being rejected for the motorcycle, the motor has finally come to it and the combination promises to be a winner. The wheel is so simple, so handy and so well suited to ordinary requirements that its success as a permanent factor is practically assured.

# Cycling on Santa

*Coming Out of the Canyon Into the Peaceful Wooded Hills*

MANY Americans who have journeyed to the Pacific Coast have visited Santa Catalina Island and are therefore thoroughly familiar with it. But those who have never even heard of it I would advise to glance at any good map of California, and off the Southern Coast they will find the Santa Barbara group of Islands. Santa Catalina Island is one of the largest and most southerly of the group—a rugged mountainous island, some thirty miles in length and varying from half a mile to six miles in width.

### Yachting to the Island

Some weeks ago, I explored this island on a bicycle, after yachting from the mainland to Santa Catalina. Of the trip over the troubled Pacific Ocean, buffeted about on mountainous seas in the thirty-five-foot yacht "Ensign," I need make no mention, except to say that I was fortunate enough to escape the torture of seasickness, and standing at the wheel with my eye glued to the binnacle I piloted the yacht over the trackless ocean, while several of my less sturdy companions rolled and tumbled about the cabin floor in prostrate misery with the bouncing of the boat.

At last the high peaks of the island rose like distant clouds from the blue haze of the horizon, and an hour later we dropped anchor in Avalon Bay.

Unstrapping my wheel from its position on the cabin wall I lowered it into the stern of the dingy and rowed ashore.

The City of Avalon has a most enviable location—mountains on three sides of it, the beautiful half moon shaped bay on the other, and the bluest of everlasting blue skies overhead, reflecting its blueness into the still deeper blue of the Pacific.

As for location, the only other city that I could compare it with is Lucerne, in Switzerland, with its beautiful mountains and lake.

After touring along the water front and up and down several side lanes, that were nearly overgrown with tall eucalyptus trees and date palms, I inquired for the direction to the isthmus stage road and was on my way with a grim determination to go to the isthmus and to the other side of the island, or break something in the attempt.

### Tackling Tough Grades

It was thirty miles to the isthmus and back, and before I had gone a fourth of the distance I realized that I had tackled something. The road lead up and up, across canyons and into the mountains. I nearly pedalled my lungs out on the first four miles only to find myself in the fifth mile on grades so steep, that in spite of standing on the pedals with my entire weight and pulling up on the bars at the same time, the silent wheeler refused to budge an inch.

Going Ashore at Avalon

"All right," thought I, "feet and Scotchmen's legs were in vogue and were proven a success long before bikes were, so here goes." And I proceeded to "hike it" and lead the bike up the grade.

### Quiet in the Mountains

The stillness of those mountains was almost appalling. There was scarcely a sound besides the chirping of birds and the excited squealing of an occasional lizard that scampered off at my approach. A short distance up at the top of the grade toward which I was headed great banks of clouds rolled over the mountain top in fleecy silence.

I was half asleep in meditation over the beauty of the scene, when my blood actually ran cold for an instant as I was brought to a realization of my senses by the crashing appearance of a great, long-horned, wild goat that tore out of a bunch of Manzanitas almost at my feet and was off up the mountain side jumping from crag to crag, like a cat going through a parlor after a ball of catnip. He looked as big as a load of hay and as angry as a buzz saw.

The goat had only gotten out of sight long enough to let the goose bumps die down on my skin when "whizz! whizz! whizz!"—a flock of partridges soared up almost at my feet. Startling was no name for it.

I soon reached the top of the mountain where a most gorgeous scene burst into view; I could turn on my heel and get a bird's eye view of nearly the entire island. There were mountains and mountains and then more mountains to say nothing of the indigo ocean on two sides. The clouds blew up the one side of the mountain and down the other, apparently too moisture-laden to float in the air until they reached the lower and warmer altitudes. As they blew up around me I inhaled deep breaths of the pure ozone that was heavy with the salty odor of the ocean, until I was dizzy.

Where I Met Hop Lee Yuen

Then I was forced to sit on a rock and admire the scene for a bit before coasting off down the long grade to the ocean on the north side of the Catalina.

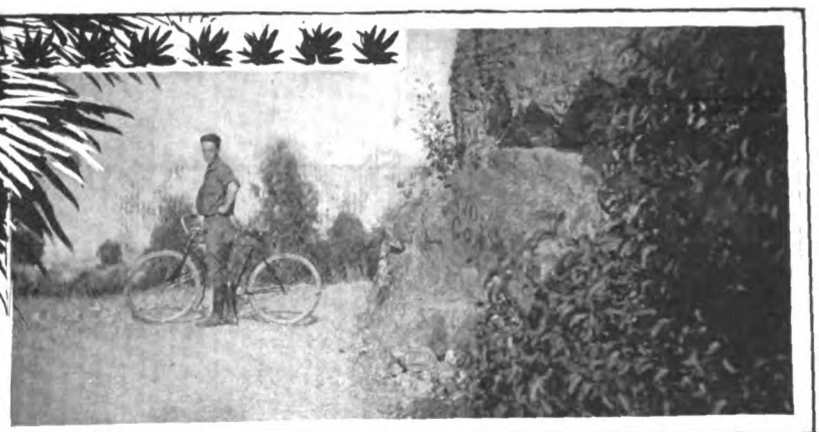
### Many a Hard Pull

The remainder of the trip to the isthmus involved many walks and many a hard pull, to say nothing of several down grades

Digitized by Google

# Catalina Island

By John E Hogg.



*The Sea from Around a Turn in the Granite-Bordered Mountain Road*

that were too steep to be ridden. The roads were for the most part a sort of clay and gravel composition that made very good going, although I did encounter several rocky stretches and some fine chalk-like dust.

The isthmus is just a low place between the mountains where the ocean nearly breaks through and cuts the island in two. Wild goats are plentiful all over the place, but it is on the portion north of the isthmus that the best hunting obtains. This portion of the island is practically unexplored, except along the coast line, and consequently the "big Billies" grow enormous horns unmolested.

It was somewhat past noon, and I had developed a keen appetite when I reached a funny looking little ranch house, nestled down in a canyon between the mountains. It was the first sign of human habitation that I had encountered in miles, so I decided to stop and see how the prospects were for something to eat.

### A Mandarin with a Minnie Goat

I leaned my bike against a nearby loquat tree and was just starting up toward the house on foot when down through the canyon came a barefooted Chinaman leading a Minnie goat. "Hello, John," said I, as the Chinaman approached. "How are the chances for something to eat?"

Half Way to the Summit

At that the Chinaman shook his head and murmured brokenly, "No speak Amelican."

When an undergraduate in college I had as a hobby acquired a fairly respectable vocabulary of the Mandarin language from some Chinese classmates, and here was my chance to put it to good use. So I came back at the Chinaman with a friendly greeting in Mandarin. Immediately he grabbed my hand, patted me on the back and, momentarily forgetting himself, sputtered in broken English—"Where you learn that?"

At South End of the Island

Hop Lee Yuen and I were not long in getting acquainted, and I was soon seated on a bamboo stool at a little round table in the patio where, with Hop Kiao Chi, Hop Lee Yuen's wife, Cheng Fung Fong, Hop Lee's brother-in-law, and Hop Yim Ling, his 12-year-old son, I proceeded to relish a meal of fried fish, yams, rice, and a glass of goat's milk.

I simply could not find my mouth with a pair of chop sticks, and was happy when, after nearly turning the house upside down, Hop Kiao Chi succeeded in digging up a knife and fork, which he handed to me with evident satisfaction.

As we talked over the meal I soon realized that Hop Lee was no ordinary Chinaman. He had a funny fat face, with a pair of eyes that, although set on a slant and back in a corner, were nevertheless sparkling with intelligence.

### Exiled Chinese Politician

It seemed that he had been mixed up in politics in the province of Shung Chizee Kuang, and by his operations had incurred the ill-will of Wu Ting Fang. It then developed that he had had his choice of fleeing from China or having his head chopped off with a sword. Naturally he chose the former, and "beat it" for Germany and later to the United States.

I was thirsty and when I asked for a glass of water was served with a cupful of murky liquid that tasted like the bottom of a canary bird's cage. "I sorry," said Hop Lee, "but it's the best we've got." The water was not only brackish and saline, but also contained a large percentage of sulphur and iron.

The long arid season and total lack of good fresh water have retarded the development of Catalina Island. There is a prize of one million dollars offered to anyone who can secure an abundant supply of good fresh water.

After leaving Hop Lee's place my road wound off into the mountains; up grades that were too steep to pedal up and down grades that were too steep to coast.

### Somersaulting on the Road

After pedalling and walking up one particularly long grade I attempted to coast down the other side. I coasted for more than four miles down with ever-increasing speed, although I was standing on the brake with the rear tire partially sliding, and finally found myself on a hairpin bend with a precipice on one side and a wall of rock on the other. The only logical thing to do was to fall off. So fall off I did, right over the rear wheel. I somersaulted on the road several times—end-over-teakettle—and wound up in a clump of prickly pears at the edge of the precipice.

I pulled myself together only to find that I was in agony from a million stickers all over my body. I undressed on the spot and after spending an hour picking stickers out of my skin was able to proceed, well aware of the fact, however, that there were still a few thousand hairlike stickers in my skin.

For miles and miles I pedaled, walked and coasted in the mountains until I at last came over a crest in the mountains and into the city of Avalon.

Digitized by Google

It seemed that I was asleep the moment I stretched out in bed, and was awakened by the chirping of linnets outside the windows a very few minutes afterwards. After a bath in the ocean and breakfast I straddled my wheel once more and was off toward the south end of the island.

**Salt Dust Ruins Nickel Plate**

The streets of Avalon are sprinkled three or four times a day with sea water. I learned to my sorrow that the salty dust which results from its drying up is most ruinous to steel and nickel plate.

My road to the south led along the seashore for a mile or two—the ocean on one side and solid walls of rock on the other. It was a good road, however, and fairly level so that I made very fair progress.

I crossed over the mouth of a hundred or more canyons that led down from the mountains to the sea, and could not resist stopping several times to revel in the beauty of the mountains and the indigo of the ocean. I could not, however, rid myself of a feeling of loneliness as I coasted down the hills, with not a sound other than the rush of the wind past my ears and the thundering of the surf on the rocky shore below.

This feeling of loneliness was only magnified when I came around a curve in the road where there was a solid wall of rock on one side and a rock bound coast on the other. There were great piles of rock out in the water, which literally teemed with seals—big shiny black creatures that slipt over the rocks and in and out of the water like great soft snails, bellowing and screaming as they went. There seemed to be something spooky about it that made me perfectly content to tour on.

I came at last to a point where I stood at the southernmost end of the island. My road doubled back, while the blue Pacific thundered on the rocks at my feet. Although it led up a hair-raising grade I followed the canyon road to return.

**Avalon from the Distance**

How I had gotten to the southern point of the island I have never from my road maps been able to figure out, for after walking back up the canyon for about two miles I came to the top of a range where I could again see the ocean on both sides of the island, and a few miles off in the distant haze lay the city of Avalon—a mere cluster of buildings nestled in the valley at the water's edge.

Far out at sea to the south of the island some huge, overseas ship was steaming along leaving a long V-shaped wave far in her wake over the blue sea, that appeared as smooth and placid as any mill pond. She was evidently bound for the Panama Canal or some South American port.

The remainder of the run into Avalon was over fairly good gravel and clay road with most of the going down hill.

The ride was through the mountains all the way, around curves innumerable and through long lanes that were nearly arched over with eucalyptus trees. On the last mile I found myself high up in the hills directly above Avalon with the road winding down such a steep grade, that I had to walk down part of it and also had to stop twice to let my brake cool.

It was supper time when I rode up the main street and to the Metropole Hotel, where after cleaning up and joining the rest of our yacht party I sat down to a fine supper with an appetite that put zest and relish into every bite of food.

About nine o'clock the moon rose, and with the bike in the stern of the dingy, I rowed back to the yacht. Half an hour later we pulled up the anchor and sailed away over a sea that blew in silvery ripples on all sides.

I sat on the top of the cabin until midnight—watched the mysterious, beauteous island grow dim in the distance, until its tallest peaks dropped below the moon-lit horizon.

**On a Main Road on the Isthmus**

## ANOTHER CYCLIST CORPS

Ottawa, Ont.—Authorization has just been issued by the Canadian Militia Department for the raising of another Divisional Cyclist Corps for service abroad during the present war. This corps will be made up of picked men and bicycle racers, among others, will be given preference. The work of recruiting the unit, which will be the third of its kind in Canada, has been vested with the Corps of Guides, which is a permanently established fixture of the Canadian militia forces. The men will be trained in reconnaissance, scouting and despatch carrying. It is expected that 150 cyclists will be secured in Toronto for this corps, while it is believed that a number of the members of the Vancouver bicycle volunteers will also enlist. The men will receive several months' training before they are sent overseas.

## WRITES ON BICYCLE'S RETURN

Sacramento, Cal.—L. S. Upson, vice-president and general manager of the Kimball-Upson Company, motorcycle and bicycle distributor and Smith Motor Wheel dealer in this city, writes an interesting letter concerning the return of the bicycle and the future of the Motor Wheel. His letter follows:

"There are more bicycles on our streets now than ever before since the halcyon days of the two wheeler, and a keen observer can see the number growing week by week. I remember the time shortly before the tremendous popularity of the bicycle when there were not as many bicycles in use as there are now. I prophesy the return of the bicycle as a permanent return, bringing it to greater uses than before.

"We must give much credit to the Smith Motor Wheel for helping to bring the bike back. The Motor Wheel makes a new sport to which the bicycle is an accessory, and it lifts the bicycle to greater deeds and broader utilities. All Sacramento—in fact, all our territory—considers the Motor Wheel the greatest invention in the gasoline motor line of the age, and there are a great number of these machines skipping around town. There are many doubting Thomases—that's natural—but they are growing fewer every day, following new feats and performances of the little Motor Wheel. It surely is bringing the bicycle back into the popularity it enjoyed a generation ago, and as a business utility its possibilities seem almost unlimited."

## WRIGHT LEADS THE CRESCENTS

Baltimore, Md., August 16.—Up to the first of the current month, William T. Wright still led in the century mileage contest of the Crescent Bicycle Club, according to the report of Capt. Langdon M. Sanborn. John G. Strickler and Fred M. Sanborn are still holding down second and third positions respectively, with Welby Sherman in fourth place. Wm. H. McAvoy has moved up from sixth place to fifth, displacing Capt. L. M. Sanborn. Walter Doersch is seventh, R. Leimbach eighth, Wm. Leimbach ninth and A. Leimbach tenth.

## CRESCENTS RIDE TO LOCH RAVEN

Baltimore, Md., August 16.—The members of the Crescent Bicycle Club held a regular Sunday run on August 15 to Loch Raven in the beautiful Dulaney Valley and return. When the destination was reached the party of wheelmen spent some time in sight-seeing and snapped a number of interesting pictures. Three short sprint races of about one-half mile each enlivened the homeward ride. Capt. Langdon M. Sanborn, Jno. G. Strickler and Fred M. Sanborn each won one race and took second and third places in the other races.

**Left, "The Bicycle Bishop" Leaving His Shack to Go on His Circuit. Right, Making Repairs on the Road**

FIFTEEN thousand miles over the prairie trails on a bicycle through rain and shine, snow and mud, in the discharge of his pastoral duties is the record of Rev. W. B. Cowgill, better known as the "bicycle bishop" of McKenzie County, which is one of the frontier counties of North Dakota west of the Missouri River. The figure of the reverend on a wheel, with his wooden box of bibles, hymnals and Sunday school quarterlies strapped at the back, is familiar to almost every man, woman and child homesteader in the big county. For three years he has been in charge of Presbyterian organizations, most of which he founded over territory thirty miles in extent.

He lives alone in a 14 by 16 shack at the county seat, "batching it" part of the time and rides out from the shack on his bicycle over the trails preaching in schoolhouses, village halls or any place where he can get the homesteader folks together. He often conducts services at a half dozen places on a Sunday, making a circuit of thirty to fifty miles on his bicycle. He has ridden sixty-eight miles in a day's work.

### A Man of Wide Learning

Rev. Mr. Cowgill talks and can preach Norwegian and German almost as readily as English. This stands him in good stead in the Norwegian and German communities which are numerous in the county. Five years ago he graduated from the McCormack Theological Seminary, having previously taken his B. A. degree at Missouri Valley College, Marshall, Missouri. He was awarded a fellowship for excellency in Greek by McCormack Seminary, which permitted him two years' study in Europe. Part of the two years he chose to spend at Christiania, Norway, in order to become more familiar with the Norwegian language.

### Collided with Pig While Coasting

Often when the roads have proved too heavy for pedaling he has come walking into the place of meeting leading his wheel. He may be a little late, but his parishioners have learned to expect his appearance sooner or later, for he almost never misses an appointment. The one exception was the time he collided with a pig while coasting down a hill. The sudden contact pitched the reverend rider head foremost over the handle bars. The next thing he knew he was lying in the road with a queer feeling in his head, a much battered wheel beside him and the pig nowhere in sight. For a fortnight after the mix-up he held no services.

He has worn out four bicycles in his work. Recently his parishioners about the county clubbed together and presented their pastor with a second-hand two-passenger automobile. He is now using this, but has not abandoned his wheel. He drives the auto with his bicycle strapped to the side for an emergency. Twice he has left the car on a country road and hurried on on his bicycle to fulfill an appointment, returning at his leisure to get the auto going again.

---

## ITALIAN CYCLISTS COMPETE

Montreal, Que.—The Italian colony of Montreal became excited when the annual bicycle road race for Italian riders was held on Sunday, August 8, from the Church of St. Jean de la Croix to St. Vincent de Paul and return, a distance of 21 miles. The prizes were valuable, consisting of a silver cup, one gold and two silver medals. Twenty cyclists participated and the following were the winners: First, F. Williski; second, T. Christins; third, A. Cicilia, and fourth, Z. Lemins. Time, 1:08.

---

## MERCED CLUB PICNIC

Merced, Cal., August 15.—The Merced Cycling Club held its annual run and picnic to Amsterdam on the Merced River on Sunday, August 15. About forty members attended the affair. The following officers are serving during the current year: President, Henry Stay; vice-president, H. M. Baker; secretary, Elmer Bouchet, and road captain, Bill Bailey.

# KRAMER LOWERS GOULLET'S LEAD

## But Australian Rival Is Still Ahead of American Champion by Seven Points.

NEWARK, N. J., Aug. 16.—Frank Kramer, the East Orange speed marvel, who is battling for the national championship against Alfred Goullet, gained three points on his Australian rival here on Sunday, August 15, by annexing first place in the half mile championship race, while the blond haired rider had to be content with third position. Bob Spears, another of those "pesky" riders from the antipodes finished second, while Alfred Grenda, who hails from Tasmania, drew fourth position. By winning, Kramer cut Goullet's lead down seven points. Goullet has scored thirty-seven points in the titular races, while Kramer has tallied just thirty. Big Alf Grenda is credited with twenty-three points, and Spears, who brings up the last of the "Big Four," has eighteen marks.

Kramer defeated Goullet in the first grand semi-final, the draw for heats having brought them together. By beating Goullet here he put the light haired Australian in the final for third and fourth place men with Grenda, while Spears, who had defeated Grenda in a semi-final met Kramer in the dash for first place. Kramer was an easy winner over Spears, outgeneralling him the entire distance. Grenda apparently "laid down" in his match for third and fourth positions with Goullet, and "Goullie" won easily.

When Kramer and Spears took the mark to start the sprint for first place a coin was tossed to see who would set the pace. Kramer went out and led for the first lap and continued to do so going into the second. Spears did not want to go, but as the two cyclists entered the third and last lap of the race, Kramer stalled, forcing Spears into the lead, while Kramer tacked on to Spears's wheel. Taking the first turn "Big Steve" worked hard and rode around Spears going into the back stretch with a comfortable lead. Spears put up a little fight on the back stretch but Kramer let out an extra burst of speed and raced away from him, Bob then gave up trying. Kramer beating him to the tape by half the distance of the home stretch.

The race between Grenda and Goullet was more or less of a farce, as it seemed apparent to every one that Grenda was just letting Goullet romp off with third position without a fight. Grenda lead for two laps and entering the third, Goullet took first position. On the entire last lap, Grenda did not once give his brother Australian any kind of a fight and Goullet won easily while the crowd hissed and booed Grenda. The referee fined Grenda $10 for not trying.

In the heat between Goullet and Kramer, the American rider got off first, while Goullet took the lead going into the second lap. Goullet was riding in first position when the bell sounded, but Kramer did not really get going until the middle of the back stretch on the last lap was reached. He came out at this point and drew up on practically even terms. Then these two wonderful riders battled as one on entering the home stretch. Down the home stretch the sprinting was terrific, with Kramer pulling slightly ahead and winning by just about a foot.

Half Mile Novice (Amateur)—Won by Rudolph Reilsperger, Newark; C. Bowers, Newark, second. Time, 1m. 14⅕s.

Australian Pursuit Race (Amateur)—Hans Ohrt, San Francisco, vs. Albert Krushel, Buffalo. Won by Ohrt. Distance, 4 miles 2¼ laps. Time, 10m. 8s.

Half Mile National Championship (Professional)—Won by Frank Kramer, East Orange; Robert E. Spears, Australia, second; Alfred Goullet, Australia, third; Alfred Grenda, Australia, fourth.

First grand semi-final to decide third and fourth places between Grenda and Goullet—Won by Goullet. Time of the last eighth mile, 11⅘s.

Second grand semi-final to decide first and second places between Kramer and Spears—Won by Kramer. Time of the last eighth mile, 12⅕s.

Half Mile Handicap (Amateur)—Won by Arthur Spencer, Toronto (55 yards); Harry Horan, Newark (50 yards), second; John L. Staehle, Newark (50 yards), third; Frank J. Whitney, Newark (10 yards), fourth. Time, 56⅘s.

Brassard Race, One Mile—Alfred Grenda, Australia, vs. Robert E. Spears, Australia. Won by Spears. Time, 4m. 27s. Last eighth mile, 12⅗s.

Miss and Out Invitation (Professional)—Won by Jacob Magin, Newark; Frank Corry, Australia, second; William Coburn, Newark, third; Norman Hansen, Denmark, fourth; George Cameron, New York, fifth. Time, 4m. 8⅕s.

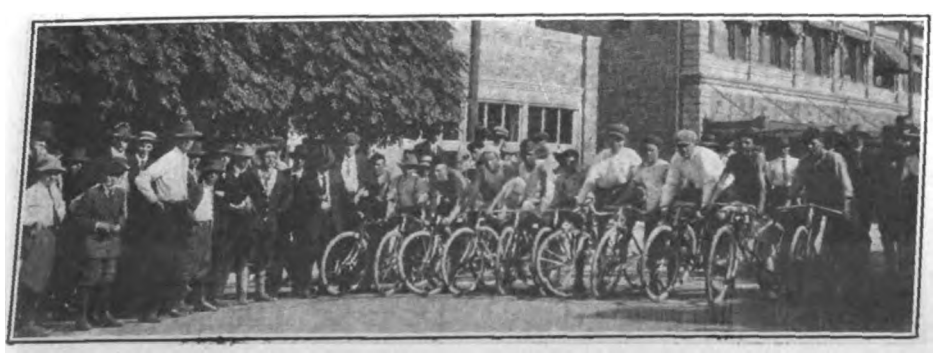
Three mile Open (Amateur)—Won by Hans Ohrt, San Francisco; Walter White, Newark, second; Fred Taylor, Newark, third; Eddie Kane, Newark, fourth. Time, 6m. 39⅕s.

Three Mile Handicap (Professional)—Won by Robert E. Spears, Australia (10 yards); Reginald McNamara, Australia (10 yards), second; A. J. Clark, Newark (30 yards), third; Alfred Goullet, Australia (scratch), fourth; George Cameron, New York (90 yards), fifth. Time, 5m. 52⅖s.

### BRADY OPENS CYCLE SHOP

Stockton, Cal.—J. L. Brady has opened an up-to-date cycle shop at 44-46 South California street, Stockton, Cal., under the name of Brady's Cyclery. He writes that business is good and there is a healthy demand for second-hand wheels, as well as a good demand for the higher-priced bicycles.

### GOLDEN STATE RIDERS ENJOYING THE SPORT



**Start of Seventeen-Mile Road Race in Turlock, Cal.**

# WILEY WINS THE BRASSARD MATCH

## Gets the Coveted Bonus at Revere by Outclassing Walthour and Collins.

BOSTON, Aug. 15.—The one-hour Brassard race, with its coveted $5 a day bonus, went to George Wiley at Revere Cycle track on Saturday night, August 14, who covered 44 miles in order to retain his pleasant emoluments. Bobbie Walthour was only three laps behind, and Elmer Collins was several miles back.

Carman, who from the very start went out with all his speed to wipe out a few old scores against Wiley, seemed destined to be successful, when, in the sixth minute, he came up from behind and passed Wiley as if the latter had been tied. Carman gradually worked this lead up to a quarter of a lap, but on the 17th mile his front tire blew out, and he was thrown down the bank and was picked up unconscious. He was later able to walk to his training quarters.

In the minor events Pat Logan showed that he is a real "comeback" boy by capturing the half-mile open professional against an exceptionally fast field. The best amateur race seen here this year was the five-mile open. Headed more than half a lap by the fast riders, Ned Chandler of Boston started after them, and jumped to a win on the bell lap. The summary:

One-Half Mile Amateur Handicap Race—Won by C. Robinson, Boston (95 yds.); A. R. Cook, Dorchester (105 yds.), second; William Cupit, Roxbury (105 yds.), third; Lewis Hill, Revere (100 yds.), fourth. Time, 57⅕s.

One Mile Invitation Amateur Race—Won by Edward Harrison, Orient Heights; Frank McKenna, South Boston, second; Patsy Antonucci, Boston, third. Time, 2m. 19⅗s.

One-Half Mile Open Professional Race—Won by Pat Logan, South Boston; Frank Droback, South Boston, second; Willie Turville, Revere, third; L. C. Rollins, Everett, fourth. Time, 1m. 3⅘s.

Five Mile Open Amateur Race—Won by Ned Chandler, Boston; Tim Sullivan, New Haven, second; Bert M. Jones, Revere, third; John Barry, Cambridge, fourth. Time, 11m. 24⅕s.

Tim Sullivan was the winner of the most legs.

One and One-Half Mile Professional Handicap Race—Won by Saxon Williams, Buffalo (115 yds.); Hardy Jackson, Revere (145 yds.), second; Willie Turville, Revere (30 yds.), third; L. C. Rollins, Everett (45 yds.), fourth. Time, 3m. ⅗s.

The Brassard One Hour Motor-Paced Race—Won by George Wiley, Syracuse; Bobby Walthour, Atlantic, second; Elmer Collins, Lynn, third. Distance, 44 miles.

Victor Linart, the Belgian, won a hollow victory from Leon Didier, the Frenchman, Wednesday night, August 11, in the twenty-five mile motor paced event. For 24 miles and 6 laps Didier set the pace and seemed sure of a win; but punctured and loosened some spokes at that point.

The riders had signed up to abide by the N. C. A. rules, which allow contestants eight laps to change wheels in case of accident. Didier protested that he should have another mile in which to change machines; the judges, however, gave the race to Linart on the ground that giving the eight laps to change would make the race 26 miles. The matter, put up to the N. C. A., has since been decided in favor of Linart, as everything goes in the last mile of a race.

# LAWSON LEADS IN WESTERN SERIES

## Kockler, Losing Last Amateur Championship Race, Scores Highest for 1915 Honors

CHICAGO, Aug. 15.—The five-mile Chicago amateur championship, the last of the series of races to decide who will be the local speed king, might well be termed a high and lofty tumbling act. A heavy rain in the afternoon for a time looked as though it would cause another postponement, but the track dried out fairly well except on the west turn. The amateur handicap and the professional championship had been run when the track was seen to be getting damper.

The five-mile race was started and it was, as stated above, a tumbling act. Every rider in the race fell at least once, and at one time only two riders remained on the track. Ernest Kockler, who had won the other three races, looked like an easy winner, but he looked around in the last turn, slipped and fell, and brought down three others. Samlow and Hoffman fell with Kockler, but Samlow was the first up and he rode across the tape a winner over Kockler, while Minnetti, a half-lap back of the leaders finished ahead of Hoffman for third place.

Kockler won the series by scoring 18 points to eight for Egisto Davini; seven for Charles Minnetti; five for Fred Samlow; three for George Klasen, and one each for Bert Nelson, Roy McWhirter and Herman Hoffman.

The half-mile professional championship on Saturday night's card was the first of a series of five races to decide the Western title among the cash chasers. Iver Lawson, the local Swede, led Frank Cavanagh, the Newark Irishman, Gordon Walker, the Australian, and Martin Ryan, the Newarker, across the tape in the order named.

The Australian pursuit race for the professionals had eleven starters, and it proved to be a great event. Joe Kopsky, who hails from Bohemia and New York, cleaned the other ten off the track in four miles and four laps (4⅖ miles). Lloyd Thomas, the San Franciscan, ran second; Albert Crebs, Salt Lake City, third, and Gus Wohlrab, the Jersey City baker, fourth. Summary:

Half-mile handicap, amateur—Won by Olaf Lodal, Danish-Am. A. C., 80 yds.; second, Willie Kell, Chicago C. C., 45 yds.; third, Herman Hoffman, Chicago C. C., 80 yds.; fourth, Bert Nelson, Riverview C. C., 60 yds. Time, 56 seconds.

Five-mile Chicago championship, amateur—Won by Fred Samlow, unattached; second, Ernest Kockler, Riverview C. C.; third, Charles Minnetti, Riverview C. C.; fourth, Herman Hoffman, Chicago C. C. Time, 11:08

Half-mile Western championship, professional—Won by Iver Lawson, Chicago; second, Frank Cavanagh, Newark; third, Gordon Walker, Australia; fourth, Martin Ryan, Newark. Time, 1:07⅗.

Australian pursuit race, professional—Won by Joe Kopsky, Bohemia ;second, Lloyd Thomas, San Francisco; third, Albert Crebs, Salt Lake City; fourth, Gus Wohlrab, Jersey City. Time, 10:20. Distance, 4⅖ miles.

### CYCLE RACING STOPS AT SHEEPSHEAD BAY VELODROME

SHEEPSHEAD BAY, N. Y., Aug. 16.—No more professional riders from the Cycle Racing Association are appearing in the Sheepshead Bay Velodrome these days, following a severance of relations between Bill Wellman, the manager-owner of the local track, and the officials of the Association. The C. R. A. controls the cash-chasing cyclists, and Wellman entered into a contract with the Association, whereby the latter agreed to supply the riders for Sheepshead Bay.

Recently a motor truck from the C. R. A. was sent out to Sheepshead and collected all the property of the Association. This is the second break the Cycle Racing Association has had with Wellman, and it claims to have lost in the neighborhood of $3,000 so far this season on the meets at the "Bay" saucer.

Eddie Harvey, manager of the Brighton Beach Motordrome, is said to be anxious to do business with the C. R. A., and at this writing it seems probable that bicycle races may be staged at the Beach track.

# BUSY SEASON FOR SPEED BOYS

## Great Lineup of Bicycle Events in and Around Toronto Keeps Racing Fans on Edge

TORONTO, Ont.—The four-score bike competitors of Toronto, and local bicycle fans in general, are already telescoping the future for what is anticipated to be the greatest fall season in the history of the wheel pastime in Canada. In fact, the cyclists will be engaging in a continuous performance from August until almost December. The first big event on the programme will be the racemeet on Saturday, September 11, at the Canadian National Exhibition when the features will be one and three mile open contests and an invitation fixture. Already several entries have been received from Detroit, Hamilton, Buffalo and New York.

After that meet will come the first bike road race to be staged by the Toronto Bicycle Dealers' Association, the route of which may be laid out from Hamilton to Toronto, a distance of 45 miles. A big feature will be the Dunlop classic, over a twenty-mile course, for the usual large assortment of Dunlop trophies and prizes. This race was established in 1894, and has been conducted yearly since then. The officers of the Classic Bicycle Club are arranging to hold a road race which will be open to all riders, while the Goodyear Tire and Rubber Company, Limited, are also contemplating a big bicycle race.

WHERE INTEREST IN CYCLING IS KEEN THE YEAR ROUND

Members of the Merced (Cal.) Cycling Club on a Holiday Run

Digitized by Google

To finish off with, it is understood that another six-day grind will be held in the Arena, Toronto, under the direction of Johnny Chapman of the Cycle Racing Association. The big pro. stars will ride in this race, but it will be followed by a long race for the local and Buffalo cyclists.

## Century and Mileage Standing in C. R. C. A.

FRED M. SANBORN, of Baltimore, Md., is still the leader of the Annual Century and Mileage Competition of the Century Road Club Association. Sanborn has held this place since the beginning of the year, and by his incessant riding he will probably hold this position throughout the remainder of the year. William M. Winquist, of Brooklyn, N. Y., is still holding down third honors, while Sylvain Segal, of New York, N. Y., is still in third place.

The list, as below, which was issued on August 10, shows the positions of the contestants:

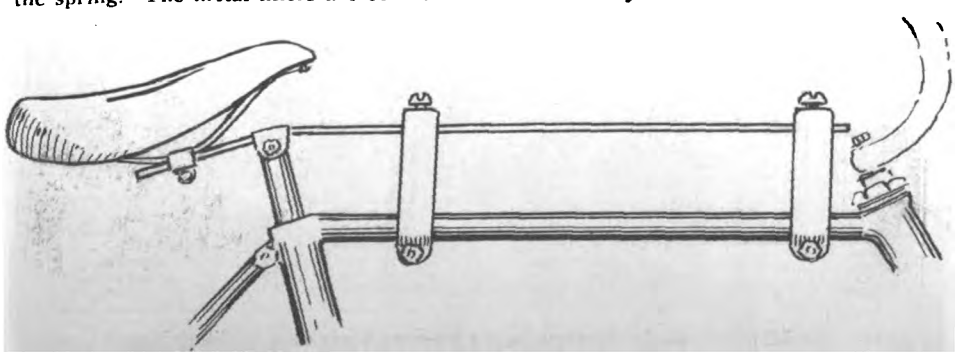
1, Fred M. Sanborn, Baltimore, Md.; 2, William M. Winquist, Brooklyn, N. Y.; 3, Sylvain Segal, New York, N. Y.; 4, Duane W. Moore, Bayonne, N. J.; 5, George Steppello, Astoria, N. Y.; 6, Joseph Caldwell Brooklyn, N. Y.; 7, Charles E. Hansen, Jersey City, N. J.; 8, Ray Caldwell, Brooklyn, N. Y.; 9, Adolph Weiner, New York, N. Y.; 10, Andrew N. Segal, New York, N. Y.; 11, Harry A. Whiteman, New York, N. Y.; 12, George H. Segal, New York, N. Y.; 13, Carl Bonhardt, New York, N. Y.; 14, Louis Zemo, Elberon, N. J.; 15, Howard V. Carroll, New York, N. Y.; 16, Robert Wolfson, New York, N. Y.; 17, Ralph W. Zarr, New York, N. Y.; 18, George Harvey, Brooklyn, N. Y.; 19, Alfred Knipling, New York, N. Y.; 20, John M. Mitchell, Greenwich, Conn.; 21, William F. Thompson, New York, N. Y.; 22, Alexander Thomson, New York, N. Y.; 23, Amiello Piantedosi, New York, N. Y.

Duane W. Moore, of Bayonne, N. J., who now stands in fourth position, is the winner of the gold medal offered for the greatest number of points in the monthly mileage contest for July. Similar medals are offered for the months of August and September.

## Spring Seat Device for Bicycles

BICYCLISTS who travel over other than smooth asphalt roads will be interested in the spring seat device recently invented by Laurens Krumpelmann, of Lyons, Iowa. This device consists of a long flat spring, clamped between two fixtures attached to the top tube and carrying the saddle on a downwardly-inclined rear bar. Near the end of the spring is fitted a clip to attach to a plunger working within the hollow seat post tube.

The fixtures are hollow, but have fillers of wood arranged below the points where the spring enters and metal fillers above the spring. The metal fillers are controlled by set-screws so that the spring is clamped between them and the wood pieces. Cross bolts are used to retain the wood fillers in place. Shocks to the bicycle will be absorbed by the play of the spring in rear of the fixtures, and the weight of the rider as well as the power of the spring can be adjusted by altering the position of the rear fixture along the top tube of the bicycle. Thus, the device can be set readily to take the weight of any rider. The patent is No. 1,145,493, and was issued on July 6, 1915.



### CYCLERY IS CLUB QUARTERS

Modesto, Cal.—Johnson's Cyclery, which has the agency for the Pierce and Iver-Johnson models of bicycles, is the headquarters for the Modesto Wheelmen, a live organization of cyclists in this city. Walter Johnson, the proprietor, is secretary of the club, while Bill Ingham is president and Lloyd Lowe is road captain. The club is preparing to hold several runs in the near future.

Proprietor Johnson finds the demands for the higher-priced bicycles is greater than that for the cheap ones. He states that bicycles sales have been beyond his expectations so far, and thinks that 1915 and 1916 will both be "boom" bicycle seasons.

### RACING AT CRYSTAL BEACH

Buffalo, N. Y.—Aug. 14.—A two-mile open event, the first bicycle race held this season at Crystal Beach, Buffalo's Coney Island, was pulled off today in conjunction with a series of other athletic contests. The fans were much excited when Eddie Levy took a spill in the third heat and carried five other riders with him. Fred Schell won the first heat, while E. F. Bundt won the third and Jos. Schieder won the second and final heats; time, 4:43.

### WRIGHT IS NOW IN CHARGE

Lodi, Cal.—Fenton E. Wright is now in sole charge of the Superior Cyclery, his partner, E. L. Van Buskirk, having taken over a machine shop under the name of the Van & Hanson Machine Works. The Superior Cyclery sells Tribune and Iver-Johnson bicycles, sales of which so far have totalled 75 new mounts and 25 second-hand ones.

### IS CYCLE HEADQUARTERS

Tacoma, Wash.—The Washington Cycle & Supply Company, of which Otto Richter is manager, has a nice shop on Commerce street, which is the headquarters of bicyclists in this city. The Dayton bicycles and motorcycles are handled.

## Third Reduction in Goodyear Bicycle Tires

AKRON, Ohio, August 10.—Effective at once, the Goodyear Tire & Rubber Co. announces another reduction in Goodyear-Akron Single Tube Bicycle Tires, making the third within eighteen months that the company has voluntarily made. "Our total reductions in the eighteen months amount to 33⅓ per cent.," says E. R. Stilwell, manager of the Goodyear Bicycle Tire Department. "We are giving the dealers the benefit of our greatly increased sales and our efficiency in production.

"Instead of manufacturing many different sizes of tires to satisfy a variety of tastes in individual customers, we have standardized a 1½-inch size. Our tire-makers are not compelled to change equipment several times daily in order to run several different sizes. By getting out a standard size they are able to produce a maximum quantity on daily output.

"You can now obtain a pair of Goodyear-Akron Guaranteed Single Tube Bicycle Tires for five dollars. The Goodyear-Akron tires have been selected as standard on all Smith Motor Wheels for the season of 1916. Another noteworthy triumph of Goodyear-Akrons is their selection as standard equipment on Miami Motor Bicycles for the coming season."

### FOURTH C. R. C. A. RUN

The fourth of a series of Sunday club runs of the Century Road Club Association, New York Division, was held on Sunday, August 15, leaving Columbus Circle, New York City, at 9:30 in the morning and proceeding to Midland Beach, Staten Island, where the wheelmen went in bathing.

A heavy piece of timber was soon found near the beach and was promptly turned into the seat of war, two picked sides attempting to gain a foothold on the slippery surface. After a "fierce battle" of over an hour, which was watched by many bathers, the raft disappeared in the custody of a lonely "soldier" and soon was seen about one hundred yards from shore, defying all to "come after it."

The start for home was made at 9:30 p. m., and New York City was again reached at almost 11 o'clock, after an eventful ride along the dark and traffic-laden roads. Those on the run were as follows: Captain George Steppello, A. R. Jacobson, Charles Martin, Charles Piana, Ernest Kuno, Lucien Wetzel, Alexander Whytock, Peter Wollenschlager, William Sauer, Sylvain Segal, Robert Post, Harry Whiteman, William Buggeln and Andrew N. Segal.

### MINERS WANT CYCLE PATH

Vancouver, B. C.—Coal miners living at Nanaimo and working at the South Wellington mines, are petitioning the British Columbia Government for the construction of a cycle path between the two towns. The reasons given in the petition are mainly to the effect that automobilists hog the Government road with scant regards for the bicyclists. They force the latter to ride the rough road margin, with the result that many falls and a number of injuries have been sustained.

# Rodger Praises California Roads

SAN FRANCISCO, Cal.—"California's fame will go down in history for many things—gold, fruit, the Panama-Pacific Exposition, climate and some others besides, but as a motorcyclist I want to say that California should be given the palm for combined good roads and scenery," said Frank B. Rodger, publicity manager for the Harley-Davidson Motor Company, of Milwaukee, Wis., during his stop-over in this city while he was en route from Sacramento to Los Angeles.

"In the Middle West," continued the publicity booster, "where we have scenery we have no roads, and where we have good roads we have no scenery. Here you have both in combination. J. D. Fraser, manager of the Appeal Mfg. & Jobbing Co. Frisco branch, along with Albert Maggini and Dudley Perkins, our representatives here, have been guilty of a conspiracy to get me so attached to California that it will be impossible to leave. Every day they tempted me to stay over another day. The many tourists coming in here from all parts of the United States have added to my tribulations.

"Walter Davidson, president and general manager of our company, returned to the factory just before I left. He told me of lots of things that I must be sure to see. On top of that was a long list of things that Arthur Davidson said positively must be taken in. Everyone else adds to these lists, it seems. It is impossible to see everything in San Francisco, so the visitor leaves with the idea that there is much to tempt him back again. This is particularly true of motorcyclists.

"But scenery will keep, and as you Californians are constantly improving your roads, the combination will be even better in the future. At the F. A. M. Convention, Director Pixley stated that there had been $18,000,000 appropriated for good roads in California, of which $11,000,000 had already been expended. He said that $15,000,000 more was to be voted. This certainly sounds fine to a rider—especially when he has a little opportunity to see something of your Western scenery."

Mr. Rodger announced that he would go to Fresno from this city, calling on Ben Bresee, as well as A. L. Bruschi, of Bruschi & Pierce, San Diego agents for the Harley-Davidson. He stated that Harley-Davidson men on the Pacific Coast were as persistent as they were back East.

# Costuming the Lady Rider

(Continued from page 11.)

well-fitting coat, is the one most generally approved. Why not a similar one for motorcycling?

**Forming Public Opinion**

As other requisites I would include the closely fitting cap, matching the suit, to protect the hair; goggles to keep away the unbecoming riders' squint; gloves; and plenty of soft handkerchiefs slightly powdered, if desired, to wipe off the dust. The large well-filled powder box should be carefully lost along the country roadside.

Every woman rider should remember that it is her duty to make the sport generally popular, especially for those women who are deterred from joining the lists because of public opinion based upon just such criticisms as I have made. She should also bear in mind that she owes a return payment to the sport which gives her so much in the way of health and enjoyment.

Here's to motorcycling: To its plucky women and gallant men riders—sweethearts, husbands and wives! Nor should we forget the kiddies; put them in the sidecars. And let all be well dressed.

## Lightweight Mount Has Good Points, Says "Ixion"

"IXION," one of the best-known writers on motorcycle subjects in England, in discussing the lightweight situation in *The MotorCycle*, had the following to say:

"I see that Mr. Henry Ford has told the American traders that they will never really tap the potential motorcycle market till they perfect lightweight machines, and that they are artificially constricting their output by concentrating so exclusively on the high-powered heavyweight twin. If this is true of America, with its frightful town-to-town tracks and indifferent city roads, how much more is it true of England, with her highly developed roadways! For many a long year I contentedly tooled about on machines scaling between two and three hundredweight. Last winter I hardly ever mounted anything over 150 pounds; and I find that I have almost lost my zest for the heavyweight. I admit that it runs far more smoothly than the best lightweight and that the absence of fuss which characterizes its 35 m.p.h. gaits and the greed with which it eats up hills are strong points in its favor. But, nevertheless, my lightweight experiences have inspired me with a marked distaste for hauling a three hundredweight machine out of its shed, or hoisting it up on to its stand, and, whenever a run is in prospect, I have to fight down an inclination to select the baby two-stroke, and to leave the monsters rusting in their garage. If this applies to a veteran speed merchant like myself, how much stronger must similar inclinations be in the breast of a rider who has but few sporting instincts and few speed memories?"

### MADE UP FORTY MINUTES

Toledo, Ohio.—Alfred Oberwegner, Roy Carns and Bob Trowbridge, who rode short-coupled Hendersons on the relay from Toledo to Bryan in the recent transcontinental motorcycle dash, object to the statement that they lost time on their leg of the coast-to-coast trip. They point out, to the contrary, that the President's message reached them four hours behind schedule, and that they made up forty precious minutes of the lost time in the run from Toledo to Bryan.

### MORE MOTORCYCLES NEEDED

Louisville, Ky.—It is understood that the police department is considering the purchase of four more motorcycles for use of the local officers. The city now has two machines in this department, and a recommendation was made by one of the officials some time ago that more machines were needed.

Have you seen the "149" Diamond Chain with recessed rivet heads?

The chain that is known for its supreme strength and wearing qualities.

Your dealer or jobber has this chain in stock.

If not, write us.

**The Chain with Rollers that DO NOT BREAK**

**Diamond Chain & Mfg. Co.**
**Indianapolis, Indiana**

Digitized by Google

# Make the most of your motor's power!

Don't risk losing some of that power through a faulty transmission. Get the chains that transmit the largest percentage of motor-power to the rear wheel.

## "The Coventry" Chain

***"The Motor's True Mate"***

"The Coventry" Chains have been proven to be the strongest chains in the world. Their strength is a matter of scientific calculation and construction. No heavier than the ordinary, yet they can resist a breaking strain of 5700 pounds.

*Write for the free booklet "The Motor's True Mate"*

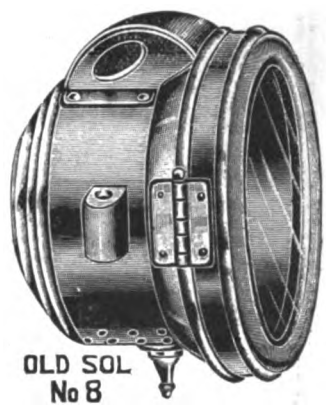
# Light—
## And Lots of it!
### Either Gas or Electric
### Bicycle or Motorcycle

**You get the best of each in the old reliable line of "OLD SOL"**

**We manufacture lighting systems for automobiles, motor boats, motorcycles, carriages and bicycles. Also for ordinary hand use. We show here the favorite "Old Sol" No. 8. Price $6.50. At your dealer's.**

**HAWTHORNE MFG. CO.**
**BRIDGEPORT, CONN.**



# MESINGER
## Air-Cushion Saddle

No saddle contains such remarkable quality features as does the Mesinger. Positively the lowest saddle position of any saddle made—by fully one inch. A centre compression that deflects saddle back an equal distance on each side—all sidesway eliminated.

### Lowest Saddle Position
### No Sidesway—Air Springing

And, finally, a springing system unique in its remarkable ease and comfort. Powerful coil springs enclosed in a steel barrel, with air space at bottom, which effectively cushions all shocks.

*Write for detailed information*

**H. & F. MESINGER MFG. CO.**
**144th Street, Austin Place, New York**

Here, at last, is the perfect puncture repair. It takes a minute and a half to permanently seal the worst puncture with the SAMPSON FEATHER-EDGE INNERTUBE PLUG. You need no patches, no sticky cement.

**Sampson Feather Edge Innertube Plug**

Just insert plug with forged steel tool provided with kit, snap off threaded bolt and you're through. WE GUARANTEE THE SAMPSON PLUG TO MAKE A PERMANENT, SATISFACTORY REPAIR. Money back any time if you want it. Price, including forged steel tool, six plugs of various sizes in stout canvas wallet—$1.50.

SAFETY FIRST EMBLEM

PRICE 75c.

Join the great national campaign by displaying one of these popular emblems on your machine. Attractively finished in green and white enamel. Base highly polished nickel.

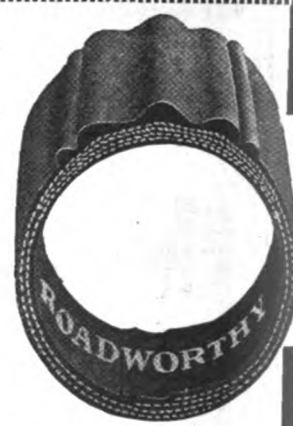
# JUMPED at the CHANCE



One big buyer and seller of cycle supplies jumped at the chance of purchasing a part of our BIG TIRE BARGAIN at the remarkably low prices asked. Many a bicycle dealer can do likewise and make a substantial profit. **But Act Now.** Don't wait till they're gone before deciding to buy.

Fourteen different brands, **all strictly first quality,** are represented in this bargain lot and money can be made by either selling them or using them for replacement. By purchasing **many thousand** pairs direct from the factory we were able to obtain them at a very low figure. We offer them at an unprecedented price. Write for our Tire Special, it will give you an idea of the wonderful value offered by these tires.

# The Miller Triplex Side Seat

Price $25

You cannot beat the Triplex for demonstrating purposes; it places the prospect in exactly the right position to hear every argument and see every demonstration. He is at your side and you talk to him face to face. Then, too, the riding qualities of the Triplex—its classy appearance and convenience attract many prospects and convert them easily into buyers after they have once ridden in it.

Don't take our or anyone's word for it! Try it and convince yourself of the selling possibilities of the Triplex.

Why not drop us a line today asking for Illustrated Booklet and New Proposition.

OUR BARGAIN BULLETIN IS READY—send for it.

**HAVERFORD CYCLE CO.**

# The Motorcyclists' Choice

## CORBIN-BROWN SPEEDOMETER

*"The Speedometer of Absolute Accuracy"*

They choose it because it possesses many features that fit it better than any other speedometer to meet the requirements of active, rigorous service.

They know that its centrifugal principle assures absolute, unerring accuracy the year round in any temperature.

They know that its simple construction is an assurance of strength, durability and uninterrupted service.

They know that its specially constructed flexible shafting minimizes friction, reduces wear and absorbs the jars and vibrations of the road.

They know that its hand is steady, its dial clear, its numerals distinct and its guarantee of one full year of service fair and genuine.

—And knowing these things they specify the Corbin-Brown and equip it to their motorcycles.

Each year it registers more miles for motorcycles than all other makes of speedometers combined.

Investigate the Corbin-Brown. Write for catalog.

Cleveland $150

# What The Cleveland Organization Means To Dealers

Public demand unmistakably points to the light motorcycle of low initial cost and upkeep.

To motorcycle dealers this trend offers **the one big opportunity**—a vastly increased number of prospects—for more sales—bigger profits.

But remember that not all the manufacturers will have the quality of product, financial resources, manufacturing facilities, to enable them to meet the keen competition that is sure to arise. And fewer still will be able to become leaders in the light motorcycle field.

Also remember that only a few dealers in each community will be affiliated with the leaders.

Your success as a dealer depends largely on your selection both of the machine and the manufacturer. Tie to the manufacturer who will be a **permanent, dominating factor in the industry.**

The automobile dealers who are making money today are the ones who a few years ago tied up with the present day **big volume** manufacturers.

Consider this — The Cleveland Motorcycle Manufacturing Company is the outgrowth of two of the largest manufacturing concerns in Cleveland.

## The Cleveland Light Motorcycle

is a *new idea* in this country. Abroad, the Cleveland type is the *biggest success* in the industry.

To our dealers the Cleveland Light Motorcycle will be a continually growing asset.

We are with you to stay.

Wire or write today.

*We will exhibit at Chicago and New York Motorcycle Shows.*

Single cylinder, 3-port, 2-stroke motor.

Wheelbase, 53".

Frame of heavy gauge seamless steel tubing.

Low, substantial and effective spring fork.

Two speed spur gear transmission with sliding jaw clutch.

Float feed single jet type carburetor.

Final drive by roller chain from counter shaft to rear wheel.

Bosch high tension magneto.

Motor lubricated by mixing oil in gasoline. Gears lubricated by running in oil bath.

Contracting brake band operated by foot pedal.

Extra heavy tires, double-tube clincher, 26 x 2¼.

Bowden wire control from handlebar to compression release throttle and auxiliary air.

Spark position controlled through linkage from lever on frame.

Gears shifted with right foot.

# Co-Workers in the Cycle Field

## The Morrow Coaster Brake is especially adapted to *"Motorwheeling"*

MORROW dependability and rugged construction make it the ideal coaster brake for this new cycling pleasure.

The Morrow has the greatest braking surface of any brake made.

It is always under perfect control and provides a coaster that allows absolute freedom of action—yet the slightest pressure on the pedals brings into play a mighty force in that rear hub shell that holds the rider out of danger's way and makes "motorwheeling" a safer and more pleasurable sport.

***These two bicycle attachments go hand in hand to help you sell more bicycles, Mr. Dealer***

## Eclipse Machine Company, Elmira, N.Y.

# Berling Magneto

BECAUSE the new Type-S Berling Magneto has been *built* to answer every requirement of the new light-weight model. Moreover—ten thousand of these Berlings have already made good. Low price, sure-spark-at-all-speeds, weight-of-less-than-5-lbs.— rugged construction, and simplicity—they are the keystones in the Berling Arch of Ignition-Victory. That Arch spans the motorcycle manufacturers' path to Light-weight Success.

### Rapid Interrupter

The quick, snappy action of the interrupter is the same at all speeds. The centrifugal force (instead of being a detriment) actually insures its positive action.

### Full Spark on Retard

The special construction of the field gives a fat spark at all positions of the timing lever. This means more power on hills and steady pulling at low speeds.

### Water, Dust & Oil-Proof

The solid frame protects the vital parts of the magneto without gaskets, or packing. The terminals fit snugly, but can be removed easily without the use of any tools.

### One-Piece Frame

Combines the base, top, pole pieces and end bearing in one rigid unit, not affected by wear or vibration. This construction assures permanent alignment of field and armature.

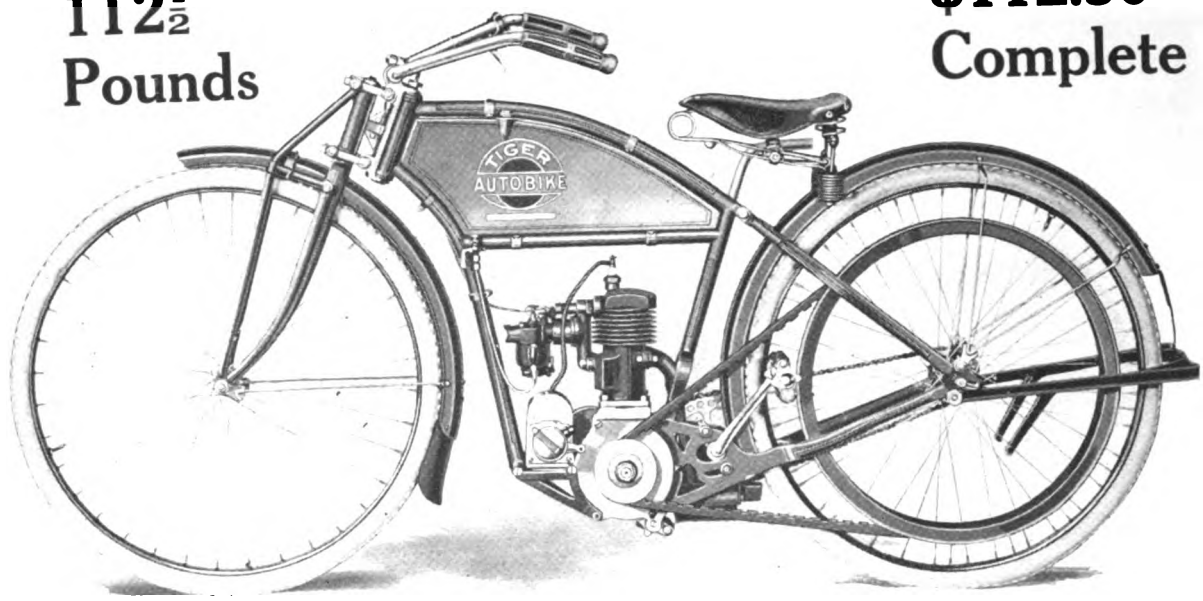
**112½**
**Pounds**

**Price**
**$112.50**
**Complete**



# Absolutely the Fastest Selling Motorcycle Ever Built—

## Runs *140 Miles* on *One Gallon* of Gasoline —3 to 50 Miles Per Hour *On One Control*

Here's the new motorcycle—with **enormous advantages**—that has captured **in one week** some of the largest selling agencies in the country.

A **surprise**—because during the **seven years of its development** announcements of engineering progress have been kept out of the press. Now the **factory is** ready! The Tiger Autobike is ready, after years of severe tests—**a matured product.**

**Think of it**—the cheapest transportation on earth! With the Frederickson Engine, it becomes the "Ford" of motorcycles—a motor that leaves the heavy, carbon-making 4-cycle **far behind!**

One little lever on the handle controls both cut-out and gas—ride at a walk or at 50 miles per hour, with a press of the right hand. Nothing to learn—just mount and ride!! As easy to manage as a bicycle!

A beauty—with **handsome proportions**—only 112½ pounds because of simplicity—only one-third as many component parts as other standard motorcycles—only 3 moving parts in the engine. **Rugged as rock**—for tough going, **hard climbs,** thick city traffic. More flexibility and serviceability than ever before known!

The Tiger Autobike **compels business**—sells itself. An enormous advertising campaign will tell the public in a few days!

## The Lightweight Wonder Leaps Into Popularity

—Wherever any demonstrations have been shown in the last few days they have produced orders!

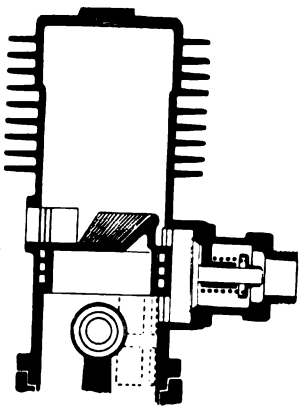
Dealers know what the advent of this motorcycle means—that motorcycle users are going to **prefer** a machine at **one-third the weight** and **one-half the price** —clean and troubleless!

They **know** that bicycle riders can now afford a high grade motorcycle!

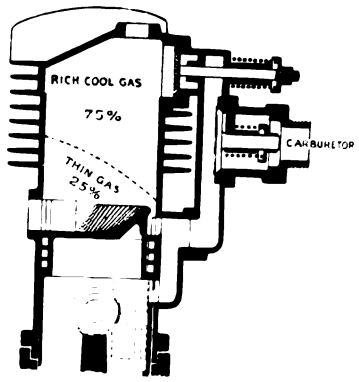
They **know** that thousands upon thousands of more people will now turn to the motorcycle—to the Tiger Autobike—as the cheapest transportation **for their daily needs.**

Digitized by Google

Usual type of 2-Cycle Motor —Dead Gas in Top of Cylinder



Frederickson 2-Cycle—Note Large Exhaust



# The Frederickson Motor

## —Enables Operation at *One-Tenth of a Cent a Mile! Can Be Operated by Anybody the First Time Out. Develops over 4 H. P.—Has Only Three Moving Parts*

FIRST—the Frederickson Motor **is not a departure from standard practice.** The vital difference is a valve in the head which puts the new mixture in the **top** of the cylinder and generates gas in the manifold.

You **cannot** make the Frederickson motor "backfire." A continuous stream of **COLD** gas plays on the spark plug and **keeps the cylinder and plug from overheating.** THE SPARK PLUG NEVER GETS RED!

This gives an **instantaneous explosion,** very essential for high speed work.

**CLAYTON FREDERICKSON**

**—Who Has Reduced the Cost of Motorcycling**

**and at the same time vastly increased the economy, pleasure and popularity.**

**He has really put the motor in motorcycling—because his 2-cycle engine is the basis of the wonderful lightweight and low price of the high grade Tiger Autobike.**

**His reputation as a wizard with aviation engines of wonderful efficiency at low weight will now be surpassed by his reputation in the motorcycle world.**

**It's the Frederickson Motor that works as well at the last kick as at 1,000 R. P. M.—something that has astounded motorcycle men, used to motors that stall below 50 R. P. M.**

## Note Above Illustration of Principle

—in comparison with the complicated carbon-making 4-cycle, which **weighs twice as much,** and the usual 2-cycle.

The carburetor of the Frederickson Engine is at the **top.** The gas is drawn into the manifold and **then forced into the top of the cylinder.** As the piston opens the exhaust port, the new gas rushes right into the top of the cylinder, without waiting for the piston to open up the intake port—as in other types of 2-cycle motors.

**SPECIAL:** This motor is so simple it does not require an experienced repairman to make adjustments—**everything is right in plain sight!**

## Simple Lubrication!

The **oil** is mixed with the **gasoline, one** part oil to nineteen of gasoline. Therefore, the inflow of gas into the cylinder **regulates** the inflow of lubricating oil. When your motor is working with full throttle **you are getting a full supply of oil**—and at lower speed you are getting a **proportionate amount.**

Absolutely no worry about lubrication—the motor oils itself **automatically!**

## Free of Carbon!!

Think of that—the cold gases are blown around the spark plug at about 12 pounds initial pressure, which perfectly **scavenges** the cylinder, leaves no trace of carbon! This cannot be accomplished in any other type of motor—either 4 or 2-cycle—and in the 4-cycle always **one-fifth of the dead gases remain in the cylinders.**

## Fully Covered by Patents

The Frederickson Motor is thoroughly protected by strong patents and we will protect ourselves and our dealers against any infringement of our mutual rights under these patents.

## A Real Guarantee

We guarantee the Tiger Autobike to be free of imperfections, either of materials or workmanship, and will replace any part found faulty, within the period of one year, without charge. No further explanation of this guarantee is needed—it stands for what it promises and we stand behind it.

## SPECIFICATIONS

**Model 1916 Tiger Autobike**

**MOTOR:** Single cylinder, two-stroke motor. Bore $2\frac{1}{2}$ inches. Stroke 3 inches. Tests $4\frac{1}{2}$ horsepower at 1100 R. P. M.

**LUBRICATION:** Oil mixed with gasoline which insures positive lubrication in proportion to speed of motor.

**IGNITION:** High tension magneto, gear driven. Oil and dust proof.

**CARBURETOR:** Improved float feed with auxiliary air-valve.

**MUFFLER:** Highly efficient pressed steel construction. Direct cut-out.

**FRAME:** Same gauge and quality of seamless tubing used in heavyweight machines.

**FRONT FORKS:** Specially designed front fork, easy riding and guaranteed to stand all strains.

**CONTROL:** Complete control with one lever. Fixed spark.

**HANDLE-BARS:** Nickel steel seamless tubing of original design.

**BRAKE:** Coaster brake in rear hub.

**WHEELS:** 28 inches. Best quality spokes and rims.

**TIRES:** 28 x 2 inches.

**STAND:** Heavy folding type locks to rear guard when not in use.

**SADDLE:** Heavy, comfortable saddle.

**FINISH:** Tiger yellow, black striping. All exposed metal parts nickeled.

**WHEEL BASE:** 48 inches.

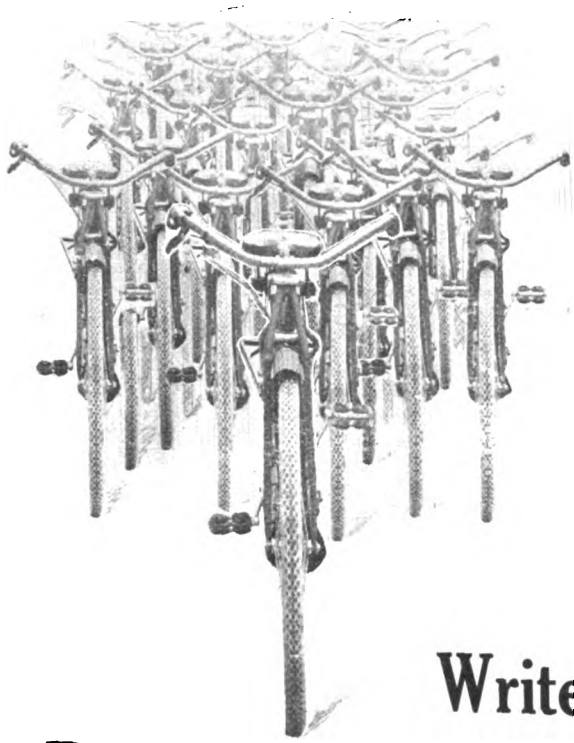
READ WHAT A BIG DEALER SAYS OF "TIGER" DEMONSTRATION:

"From the instant I got on the Tiger it proved a revelation to me. It has *everything*. This is the biggest thing that has ever happened in motorcycling—producing a 112½-pound motorcycle at $112.50. As a rider, I *much prefer* the Tiger to the heavy type machines—and actually would purchase it at a great deal higher price, in comparison with others. Take it from me—you've got more than the biggest seller—it's really the 'Ford' of the motorcycle business."

# Thousands of "Tigers" Ordered By Prominent Dealers This Week



—before this, **the first announcement,** has been put into type! They are going to give the motorcycling public in their territories the **best machine** at the **lowest price**—all the superiorities made possible by the Frederickson Engine! They are not just "going after" the biggest motorcycle business. **They are going to make it come to them!**

## Low Selling Price Large Profit

The price—$112.50—not only gives the purchaser **enormous value** and **wonderfully low operating expense,** but it gives the dealer **a substantial profit.**

The details of our selling proposition are **very attractive** to all motorcycle firms. We could sell thousands of "Tigers" allowing a **lower margin to the dealer,** but we are equipped for **big production** and **are basing our liberal terms to our merchants on a large output.** "Tiger" Agencies will be at a **big premium** before October 1st.

## Write for Details of

# Biggest Money-Making Motorcycle Agency Proposition!

# Bicycle Tires Again Reduced

$2.25 Each — Smooth Tread $2.50 Non-Skid

The usual price of other high-grade bicycle tires is upward of $4.00 each. Of course, there are lower grades and prices, but poor tires bring only trouble.

Now comes Goodyear-Akron with the third price-cut in eighteen months, saving the user in all one-third former prices. This is due to the demand for Goodyear quality that has more than *doubled* our sales the past year.

The new Goodyear-Akron price is $2.25 each for the smooth tread, $2.50 each for the Non-Skid.

And these Goodyear-Akrons are fully guaranteed.

Goodyears hold top-place in Tiredom. For automobiles and motorcycles they outsell every other make. And Goodyear-Akron Bicycle Tires are made in the same great factory, by the same expert men and methods. They come from the greatest tire plant in the world.

## Don't Accept Less

At the present prices of rubber—with our matchless output—we can give you the utmost in a bicycle tire for $2.25, smooth tread; $2.50 Non-Skid. So insist on this tire and this new low price. Any dealer can supply you from stock, or get you the Goodyear-Akron at once from a nearby Goodyear branch.

GOODYEAR AKRON

THE GOODYEAR TIRE & RUBBER COMPANY, AKRON, OHIO

Makers of Goodyear Fortified Automobile Tires and Blue Streak Motorcycle Tires

# These Bicycle Tire Ads

## —To Millions of Readers—Tell the Story of Goodyear's Three Great Price Reductions

Dealers! Proceed right now to cash in big on the increased demand for the Goodyear-Akron Bicycle Tire.

In one short year its sale has risen 119 per cent. For here is a quality tire at just about half of what the usual high-grade tire costs. And it's the easiest-selling bicycle tire on the market—the *guaranteed* tire that wins and holds trade for thousands of dealers.

Our prices are low, due mainly to mammoth output. Goodyear-Akrons are made in the world's largest tire plant, where up to 15,000 pneumatic tires are made per day.

### Prices Maintained Profits Protected

We don't attempt to "force" the trade by offering various discounts. We have one price to all dealers—one price to all consumers.

We keep these tires moving, constantly multiplying the demand. All dealers secure our one best price without buying heavily. They need not overstock—there's a Goodyear branch within quick shipping distance.

Our masterly advertising educates riders to Goodyear quality—and *to paying one standard price*. By turning stocks quickly, dealers never have to cut prices on Goodyear-Akrons, demoralize their trade and sacrifice their profits.

The advertised price and the Goodyear-Akron quality enable dealers to use this tire in winning against mail-order competition.

### Today! Get Our Sales Plan

The coupon brings full details—how we give our dealers valuable sales assistance, local selling plans and advertising material.

Hundreds of dealers are making big gains by the aid of Goodyear selling service. And never was there a better time for you to start than now, when we're announcing our new low prices to millions of readers. Mail the coupon today.

# "Chain Tread" Tires for Motorcycles

THE "Chain Tread" Tire is today the sensation of the Automobile World.

The "Chain Tread" Tire for motorcycles has the same heavy automobile construction,—the same strong fabric,—the same road-resisting rubber,—and the same practical, anti-skid tread as the "Chain Tread" automobile tire.

Following the example of the leading automobile manufacturers, motorcycle manufacturers are rapidly adopting the "Chain Tread" Tire as standard equipment.

You can buy "Chain Tread" Tires from good dealers everywhere.

The Motorcycle Visitors Are From Right to Left: Baker, Neustadt and Esler.

# Blazing a Motorcycle Trail Through the Panama-Pacific Exposition

*By J. ESLER*

**The Accompanying Photographs Are the First to Be Published Showing a Motorcycle Party on a Tour of the Exposition Grounds**

FOR a motorcyclist to tour the Panama-Pacific Exposition is not as simple a matter as would appear at first thought. When E. G. Baker, the old "War-horse," suggested the tour to the writer, "Hap" Alzina and Bert Neustadt, of the Hendee Branch, little did we think of the difficulties we would have in securing permission to make the trip. I was delegated to get permission from the Fair management for two sidecar outfits to make the trip, and after several visits to the Press Bureau I was able to secure the necessary credentials through the courtesy of Mr. Wright and Mr. Perry, of the Division of Exploitation.

We were instructed to be at the emergency gate, at the Fillmore street entrance, before 8:30 Tuesday morning, and were told that we would have to be out of the grounds by nine o'clock, and to make our arrangements accordingly. Leaving the Hendee branch, on Van Ness Ave., about 8:30 with Neustadt driving one sidecar outfit and Alzina the other, and the the writer and Baker as passengers, we halted before the emergency gate about 8:45, presented our credentials, and after walking through the turnstiles we were allowed to ride into the grounds and see all the wonderful sights on our motorcycles.

**Permit Given to Take Photographs**

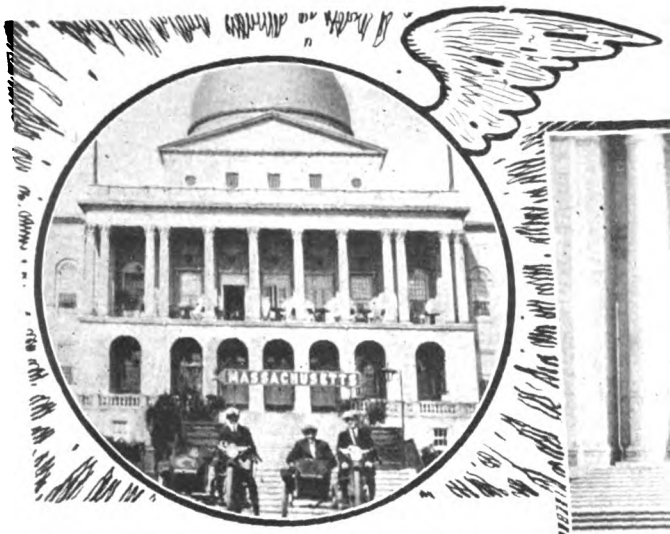
Securing a permit from the attendant near the gate to take photographs, which cost us 25 cents, we headed for the Festival Hall, which is one of the finest buildings on the grounds. We found here one of the greatest organs in the world. Some of the best musicians have appeared here.

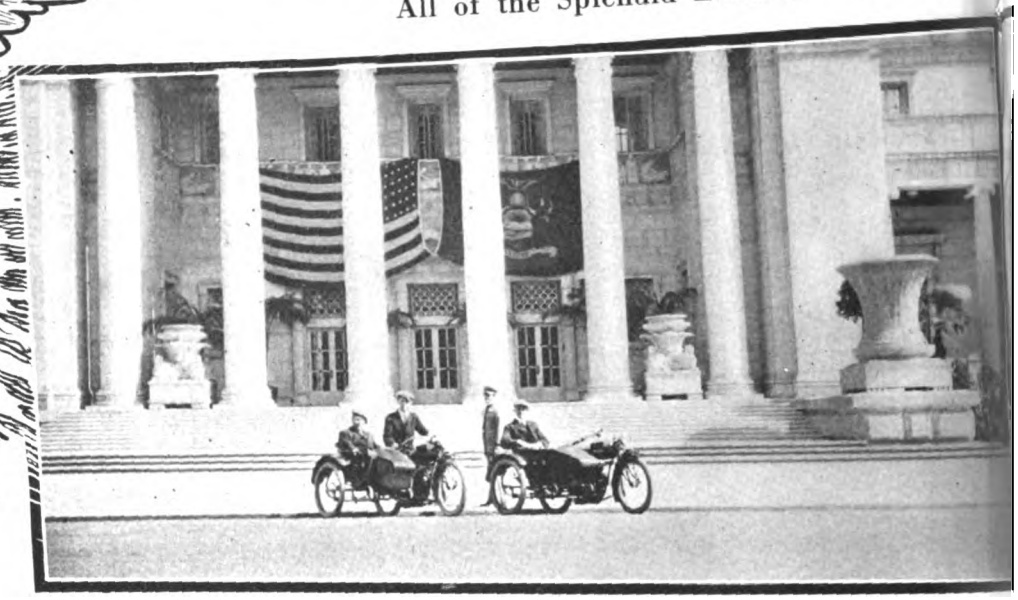
On our right was the Palace of Varied industries, where we found many exhibits that showed in a general way

Digitized by Google

# What the Motorcyclists Found

## All of the Splendid Exhibits Were Quickly





Above, the Motorcycle Party, Before the Massachusetts State Building at the Exposition. Right, In Front of the New York State Building

finest and most artistic products of the various manufacturing industries. The leading nations of the world were represented by samples of their best work, and even Germany and Austria made a fine showing, notwithstanding the difficulties that attended the shipment of the exhibits since the war began. Famous porcelains from Denmark, and rugs and tapestries from the Balkan States made very artistic exhibits. Several of the large American manufacturing concerns had complete exhibits, such as the Waltham Watch Co., showing the processes of watch manufacturing, while the exhibit of the Butterick Co. showed fashions from every country in the world.

We next visited the Manufacturers' Building and spent some time going through the wonderful Japanese exhibit, showing the arts and crafts of Japan in detail. There was also a fine exhibit of Italian marbles, and many of the leading American industries were represented by complete and clever displays.

### The Beautiful Tower of Jewels

Emerging from this building we paused before the Tower of Jewels. This wonderful tower is 450 feet in height, and the reflecting jewels with which it is decorated were imported especially from Austria for use at the Exposition. At night searchlights play on this tower, and the sight is one long to be remembered.

We next entered the Horticultural building; over five acres of floor space in the building proper and nine acres of outside grounds are included in this exhibit. Rare orchids vie for attention with palms from Cuba over two thousand years old. Cuba has a very elaborate display of palms and ferns, while in the economic section all fruits that are shown are in box quantity. Holland has a very complete exhibit, as well as several of our own States.

### Samples of Color Photography

On our right we entered the Liberal Arts Palace, where we viewed a wide range of subjects from photography in colors, as shown by the Eastman Kodak Company, to the $100,000 typewriter of the Underwood Typewriter Co., which weighs twenty-eight tons, is 21 feet wide, 15 feet high and prints letters three inches in height. The operator sits several feet forward of the large machine and uses an ordinary typewriter, which is connected in detail with the larger instrument. There are also exhibits of the wireless companies, and a very complete exhibit for the United States Government.

In the Education Building we found exhibits by all the leading schools and colleges in this country and many foreign countries. Even Japan and China had very complete representation. The Department of the Philippines made a very creditable showing along educational lines, and the progress of the country since Uncle Sam has been in charge is shown to have been marvelous.

Following the Lagoon, we stopped at the Palace of Fine Arts, where pictures by famous artists all over the world were on exhibition. The guide told us that the building contained 102 galleries, in which were hung over 4,000 canvases and more than 2,000 prints.

Then we visited the Food Products Building, where the United States Government has a very complete exhibit, showing the chemical and nutritive values of various foods. Many of the larger manufacturing firms of the country were represented by complete exhibits, one company showing the national dishes of the various countries.

### In the California State Building

After leaving this building we paid the California State Building a visit, and found many fine exhibits from all over the State. We visited the Palace of Agriculture, where we found complete exhibits of agriculture and agricultural machinery from this country and many foreign countries, and later entered the Transportation Building, which interested the boys more than any other feature because the various motorcycle manufacturers were represented there.

The Indian exhibit was in charge of George W. Sherman, and showed all the late models. A machine in translucent red in a frame with a black velvet background was very attractive and created considerable favorable comment. The Harley-Davidson exhibit, in charge of H. C. Garner, showed all of the models, while next to it was the Excelsior display, in charge of Neil Cochran. The Dayton had a complete exhibit, and featured their fire-fighting motorcycle apparatus very prominently. This was in charge of Mr. McClellan. In this building were also exhibits of the various transportation companies of the country, including some of the leading railroads, and we spent more time here than in any of the other buildings.

### Inspecting the Palace of Mines

The Palace of Mines showed a very complete U. S. Government exhibit. Special prominence was given to mine rescue work, while the U. S. Steel Corporation showed the process of steel-making from the rough ingot to the finished product.

The next building was the Palace of Machinery, where there were many wonderful exhibits from all over the world. Printing presses, engines of various kinds and heavy machinery of every type made the building a very interesting one to the riders.

We decided that we had had enough of the exhibits, and wanted to get a little amusement, so we took a trip up the Zone. While we did not take time to visit any of the attractions, we particularly noticed the Panama Canal Concession, which is an authentic model of the Canal and has created a great deal of interest. We made a return trip down the Zone, following the Avenue of Palms, to the Foreign Buildings.

We visited the buildings of several of the larger countries, Japan, France, Canada and Sweden. The Canadian Building was particularly interesting, as the exhibit struck us as being complete in every respect.

### Barred from the Presidio

The various State buildings attracted our attention, especially that of New

Digitized by Google

# On Their Tour of Wonderland

## Seen by the Visitors in Their Sidecar Outfits

Left, Esler, Baker and Alzina Before the Indian Village at the Exposition; Above, On the "Marina"; Cruiser "Milwaukee" in the Distance

York, and the Pennsylvania headquarters with the Liberty Bell. At the end of the Avenue we found the Massachusetts State Building, which was a copy of the old State House of Massachusetts. Virginia was represented by a duplicate of the home of Washington at Mt. Vernon.

We next made a quick run to the race track, which we found to be fast, and returning we wanted to go through the Presidio, but found that the government refuses to allow motorcycles to enter the grounds. Any other kind of vehicle can do so.

On our return trip to the Fillmore Street entrance we passed through the Court of the Universe. The statues in this Court typify the various races. We next entered the Court of the Four Seasons, featured by its statues, Summer, Fall, Winter and Spring. Leaving this Court, we slowly rode toward the Bay, where we followed the Marina to the hangar of Art Smith, the aviator. Here we took several photographs, including one showing several of Uncle Sam's battleships, and one of the submarines that were anchored nearby.

As it took us several hours to make this trip, we were stopped occasionally by the Exposition Guards to explain our mission on the grounds, but as our credentials were always found in good order, they allowed us to proceed after examination. We could not stay for wonderful illuminations at night or the great display of fireworks, and even had to pass up the daredevil flights of Art. Smith, the corkscrew aviator. We had "done" the exposition (fairly well) in one-tenth the time it would have taken us by any other method, and we were not fagged out, as would have been the case otherwise, thanks to the sidecar outfits.

# Choosing a Suitable Pair of Goggles

ONE of the best-known eye specialists in the United States said not long ago: "The two worst enemies that an automobilist has for his eyes are himself and the man who sells him goggles." This is doubly true of motorcycle riders for several reasons, the first of which is that they are more frequently using goggles than are the motorists. The second reason is that they do not wish to pay so much as the car-occupants for protecting their eyes. A third lies in the desire of the salesman to get rid of the goggles for a price, without regard to their suitability for the purchaser.

It ought to be said in justice to the dealer, as a class, that he does not intentionally try to force something unsuitable on the rider in the goggle line. He or his shopman may not know the damage which will result to the eyes of the purchaser through the wearing of improper goggles. The rider is partly to blame for an incorrect pair of eye protectors, as a little trial will quickly convince him of the suitability or otherwise of any pair.

In selecting a pair of goggles try out one with clear glass or celluloid lenses first. Not every eye can stand amber or the other tints frequently supplied. If in doubt as to what color lenses to get, borrow a pair with clear glasses and try them out for two or three hours, then see how your eyes feel. If they smart or burn, use amber lenses. If the eyes act similarly with tinted glasses on first trial, use clear glasses.

One of the best little devices yet brought out in the goggle line is an upper sector of green in each lens. This, with clear glasses, gives the wearer a reserve in case of brilliant sun, snow, alkali desert or other extraordinary light conditions with the clear portion of the lenses for ordinary use. These goggles cost a few cents more than the common or garden variety, but they are worth it.

In trying out goggles, if there is a feeling of oppression around the eyes, crying or a stinging sensation, more ventilation is needed. The goggles should be changed for a better pair, or perforated on the under and upper side of the lenses. The perforations should be small in size—needle holes or slightly larger will do—as if too big, dust will filter in, to the discomfort of the wearer.

The goggles should fit close to the face, so as to allow no dust to get to the eyes. The supporting band, when used, should be just tight enough to keep the goggles in place, for the wearer is courting headaches and eye strain if the band is too tight. The goggle with spectacle bows is a nice one, but if the wearer should come off, his goggles will leave him. The bows are there to snap or bend in case of accident, and the type that has a band around the head is therefore preferred by the writer. Chinese mandarin spectacles for motorcycles belong in the boulevard class of accessories along with the duck-hunter's hat and the sport-shirt.

To get most of these desirable things in a goggle means that it will cost more than 29 cents at retail. But a man's eyes are his most valuable asset, and they certainly are worth 50 to 75 cents at the least—the price of a pair of eye protectors which will give good satisfaction without eye strain to most motorcyclists. Cut out a few Meccas or Lottie Lees and put the difference in a pair of good goggles and enjoy riding in all kinds of weather.

### VISITED INDIAN FACTORY

Springfield, Mass.—Among recent visitors to the Hendee plant were T. B. Harvey and S. H. Getz, both of Pittsburgh, Pa. The pair left the Smoky City on their Indians and came to Springfield, via Philadelphia, Atlantic City, New York and Hartford. They will go from here to Buffalo, where they will take the boat to Detroit and afterward ride to Pittsburgh. Getz works in an automobile accessories house.

# That Coast-to-Coast Sidecar Trip

## How Lee Amsbrey and I Got Into New Mexico

By A. G. HERRING

Herring and Amsbrey Sidecar Outfit in Camp Near Glorietta Pass, N. M.

TRANSCONTINENTAL motorcycle trips are fastly becoming common these days, but I venture to say that the experiences which Lee Amsbrey and I ran across stamp our sidecar journey from coast to coast as a stunt of distinct individuality. To be sure a great part of our jaunt had nothing extraordinary about it. We started as most aspirants to transcontinental fame do—with a letter from the mayor of Binghamton, N. Y., to the mayor of San Francisco, Cal., which was handed to us on the day of our departure late last September. And while grinding our way to Chicago nothing of great moment occurred, except perhaps the fact that I had an opportunity to see how very many relatives my partner Amsbrey had. It was after we had paid our respects to the Windy City and had left it that the interesting adventures started to break.

### The Trip to Chicago

I can, therefore, dismiss with but a few words that leg of our journey which took us to the great metropolis of the Middle West. Leaving Binghamton on the morning of September 19, we first stopped at the town of Auaqua, where we had dinner at the home of Amsbrey's sister. Here we remained a while and then proceeded to Andes to turn in for the night. The next day's journey was marked by a trip through the beautiful Catskill mountains and into the scenic Hudson valley. At ten o'clock that night we entered the city of Poughkeepsie, N. Y., at which point we found it necessary to make some repairs to our two-speed. New York City was our destination for the following day's ride and we got into the big city without any trouble.

Lee Amsbrey's relatives certainly came in handy while en route to Buffalo. At their homes we stopped during the nights and were invariably treated to splendid meals. From the Bison City to Cleveland was an easy trip and we enjoyed it thoroughly. At Toledo we were the guests of President Coffman, of the F. A. M. The rain caught us on our trip into Chicago and we were forced to seek refuge, while but a short distance from the Windy City, in an old decrepit barn. We slept in the barn that night and dreamt of the great motorcycle show which was then in progress in Chicago. The next day we saw that show. Only one puncture and a few broken spokes were the entire mechanical trouble we had had on the trpi thus far.

Gosh, that surely was some show at Chicago! Amsbrey and I liked it so well that we spent a week at the exhibits, looking them over and over again. We'd have stayed longer if the show had lasted more than a week. But with the show over, our minds centered on something which made us get into our outfit and hustle along. Amsbrey had another relative living at Osage, Ia. And that relative, Lee told me confidentially, had planned a great time in our honor.

### Meeting the Pest Gumbo

It took us from four to five days to reach Osage, and there was no little trouble getting there. The greatest pest we had ever met up to this time was "gumbo." That's the rather picturesque name of a certain kind of mud which has the pernicious habit of rolling up under the mudguard and sticking to the spokes; it seems to weigh about one pound to the square inch. Gumbo was encountered over a stretch of road nineteen miles in length and it required just nine hours to traverse the distance.

We arrived at Osage on October 26 and stayed there for three weeks. There were parties almost every night and during the day we were invited to automobile trips to points of interest about the town. After this long vacation we resumed our journey, and continued on to Dixie. Cold weather began to set in. An icy hurricane was blowing after we had left Dixie and were bound for Humboldt, Ia. Snow was fastly falling when we were greeted by the members of the Ft. Dodge Motorcycle Club. We had thus been traveling for several days under our first real hardships, for at times the thermometer came mighty near registering below the zero mark.

### Repairs and a Shave

The next important city we reached was Omaha, Neb., after two days of hard riding over frozen and snow covered roads. On our way into the city, the spring on the sidecar broke and we had to use a two by four and wire it under the body. Two days of sight-seeing were spent at Omaha, during which time a new sidecar spring was secured. Lincoln, the capital of the State of Nebraska, was passed through and then Minden, where we were greeted by a couple of youngsters at the post office with, "Hey, mister, you need a shave!" While we were placing ourselves at the mercy of tonsorial artists, the local garage men were putting the sidecar combination into shape and found that the frame of the motorcycle had been cracked. With all repairs completed we left in a heavy fog on a Sunday morning.

Digitized by Google

### Snow and Zero Weather

We traveled through and stopped at a number of small towns; nothing extraordinary happened. We had a few punctures and came across a prairie dog village in which thousands of the little canines could be seen standing at the top of their mounds and dodging in and out of their sand homes. The city of Denver was attained in the midst of a heavy snow storm. We spent two days there trying to thaw out; the weather continued cold and windy while the snow kept piling up on the ground. But we decided to make a break and left Colorado's metropolis behind us. We had hardly covered twenty miles when the snow made further progress impossible. Lee and I, therefore, stopped at the town of Louviers. The next morning there were two feet of snow on the ground and the mercury was playing tag with zero.

A great deal of time was being lost and we felt that we ought to risk plowing through the snow rather than spend another day at Louviers. Up into the mountains on toward Palmer Lake, near Pikes-Peak, Lee Amsbrey and I, numb with cold, kept the old engine working and finally reached the lake, where we stopped to replenish our supply of gas. Next we entered a beautiful valley which wound along the precipitous walls of the huge mountains that towered above us, and led us into Colorado Springs. We entered a restaurant at the Springs and I ordered up some Chili. Amsbrey, who seemed to be absorbed in deep thought, absent-mindedly told the waiter that he would "have the same." After eating some of the dish which was set before him Amsbrey said that he began to feel uncommonly hot.

"And what do they call this fodder?" he asked, unbuttoning his coat.

"Chili," I replied laughing.

"Gosh! That darn stuff is hot enough to make Satan smile."

After dinner we left for Pueblo, and arriving there spent the night in that

**A Stop at the Local Motorcycle Agency in Albuquerque, N. M.**

town. The jinx seemed to accompany Lee and I as we left Pueblo, for the chain broke, the two-speed refused to work and water, getting into the carbureter as we were fording a river, froze. It was getting darker and colder every minute and we had no light. Shelter had been asked for at a ranch, but was refused. While within a few miles of the town of Walsenburg, we came upon a fort and greeted the soldiers, who insisted upon playing a strong searchlight on us until Amsbrey and I reached the town.

### A Perilous Ford

Coming upon the Santa Clara river, which we had to ford, we had no idea as to how deep it was and just splashed right into it. When we reached the middle of the stream the water had reached the level of the carbureter and flooded it. The engine stalled. The farther half of the river was frozen quite hard, so that I, with the exercise of a great deal of caution, was barely able to crawl over the ice and onto the shore. Amsbrey followed me. Finding a long piece of wire, Lee managed to get back to the machine and fastened the wire to it. Then both of us set to work trying to pull the combination ashore, but the step of the sidecar would catch on the edge of the ice and down would go the whole outfit. Finally a man came along on horseback. Seeing our predicament, he fastened the wire to the horn of his saddle and succeeded in getting the horse to pull the machine out of the river. With the outfit on dry land once more, we spent some time in thawing out the carbureter and were soon able to get the engine working again.

### Through Raton Pass

After a few days of difficult traveling we managed to reach the city of Trinidad, Col., where we stopped awhile and then left for Raton, New Mexico, through the Raton Pass. The grades leading through the pass were steep and adobe mud made the going hard, but we succeeded in reaching Raton, which is located at an elevation of thousands of feet above the sea level. The view was beautiful from this vantage point, for we were able to see the valleys and mountains for miles and miles around. Going down from Trinidad was dangerous, for the grades were extremely steep and the turns were often sharp and abrupt.

Getting into the valley below Amsbrey and I found that the snow was three feet and in some places four feet deep. With Lee in the saddle, I found it necessary to get out of the sidecar and push the outfit through the drifts. We were soon again ascending the mountain and finally arrived at San Jose, New Mexico, where we stopped at a place kept by a Mexican and had some more Chili, black coffee and tortilla, after which we retired. The next morning the journey was continued westward.

Late in the afternoon we came upon the camp of two genial prospectors from whom Lee and I were able to get some water. Amsbrey asked if there was a town nearby, but neither of the prospectors could give any definite information.

**(To be continued.)**

# MATHEWS' TEAM WINS AT TOLEDO

## Indian Pair Captures Hundred-Mile Relay at Fair Grounds —Merkelites Are Second

TOLEDO, O., August 23.—The Indian team consisting of Shorty Mathews and Fred Meyers won the 100-mile relay at the half-mile fair grounds track in this city yesterday afternoon. Mathews crossed the line first for his team; about one hundred yards behind came C. F. Pineau, of the Jones-Pineau Flying Merkel team. Third place was obtained by L. S. Taylor, of the Taylor-Verrill Indian team. The time for the 100 miles was 1:54:21, somewhat slower than that made by Jones-Pineau a few weeks ago.

The relay race was close and exciting all the way. The Mathews-Meyers team held the lead steadily for the first few miles, but the Jones-Pineau pair were right on their heels, and were dangerous at all times. Reliefs were frequent in the early stages. At 12 miles Jones shot ahead of Verill, with Mathews still in the lead. The 25-mile mark saw "Shorty" going great guns, and still in first position, with Jones and Taylor coming next. There was no change in the order up to 50 miles.

Meyers then relieved Mathews, and Pineau began to creep up. At 60 miles, with Mathews riding, Pineau was so close that the Indian rider opened wide, thus saving his lead. At 75 miles "Shorty" had chalked up 1:25:14 on the time schedule, with Jones riding second, and Verrill third. Verrill here suffered motor trouble, and the team lost precious time in putting in Taylor. It was getting dark by this time.

Meyers was riding in the 91st mile, when his motor died at the head of the home stretch. Mathews was shot out in relief, but the team's lead was now very scant, so Mathews rode his mount wide open, taking chances. He finished in 1:54:21, with Pineau and Taylor second and third for their respective teams.

The Mathews-Meyers team will get the handsome silver cup offered to the winning team, in addition to the cash prizes. The following teams were entered in the relay race: Mathews-Meyers, Verrill-Taylor and Herrold-Fox, all on Indians; Jones-Pineau, Flying Merkel; Fletcher-Myer, Harley-Davidson; Marks-Sudduth, Thor; Wilkins-Forbes, Excelsior; Stohan-Bailey, Yale. Only two Indian teams and the Flying Merkel pair finished.

### EMPIRE CITY RACING PROGRAM

On the Empire City track, on Labor Day, in connection with the Greater New York Fair and a big athletic meet, there will be staged three amateur motorcycle and bicycle races. The distance for the motorcycle events will be five miles and ten miles respectively. The bicycle race will be a five-mile handicap.

Among those already entered in the bicycle race are Franklin Fisher, of the Twenty-third Regiment, who will ride from scratch; Joe Crowley, Hollywood Inn, forty yards; J. Bellow, Empire City Wheelmen, forty yards; J. Nunzati, Empire City Wheelmen, sixty yards. The race will be open to all amateur riders, and handicaps up to two hundred yards will be given.

The prizes for both the motorcycle and bicycle events will be gold, silver and bronze medals.

### ELLIS OUT TO BEAT RECORD

Yonkers, N. Y., August 24.—George A. Ellis, the newly appointed F. A. M. commissioner for the State of New York, will try to break his own record for a twenty-four-hour run. He will start on midnight, September 18, from Columbus Circle, N. Y., and ride through the State. The course of the run has not yet been selected. Ellis at present holds the twenty-four hour record, having covered 638 miles, and he will endeavor to raise the mileage to the 700 mark.

### POLICE ORDER FOUR

Louisville, Ky.—The police department of this city has just placed a contract with the Century Cycle Co., local Indian agent, for four 1915 machines to be fitted with several of the 1916 improvements. The mounts will be all of the single-geared type as they are for use on streets.

# MOTORCYCLES IN "WAR IN INDIANA"

## Military Spectacle to Fea'ure Modern Methods of Warfare - Aviators Will Drop "Bombs"

INDIANAPOLIS, Ind., August 24.—The motorcycle is to be given a place in the military spectacle being produced on Labor Day in Indianapolis under the head of "War in Indiana," for the benefit of the fund for the erection of the new city armory in the capital. Carl Fisher, of the Indianapolis Motor Speedway, who is taking active charge of the arrangements for the maneuvers, has asked State F. A. M. Commissioner Jack Carr, to have at least one hundred motorcyclists to take part. The riders will be costumed in regular military dress and will be stationed at various points around the track to act as dispatch bearers for the troops.

"War in Indiana," instead of being the usual military exhibition of drills, making camps, etc., is to be, as nearly as possible, a reproduction of the methods of warfare now employed in the European war. There will be trench fighting, attacks through barbed wire fences, long range artillery duels and rapid-fire guns in action. There is to be an aviation squadron trained by DeLoyd Thompson for scout duty, while Captain George Bumbaugh will drop "bombs" from a dirigible balloon. European villages will be erected, which will be destroyed by shell fire. Barney Oldfield and Howdy Wicox will drive armored cars around the track, such as are being used in the wars in Europe.

The battle front will be from one-half to one mile in length. It is said that the battle is to be the largest ever staged in the United States. Two thousand five hundred men, including members of the Indiana National Guard and troops of the United States cavalry will be engaged in the production.

To participate in the war maneuvers a rider must become a member of the F. A. M. and wear regular military costume. Moving pictures that will be shown in every city in the country will be taken of this exhibition.

# JOHNS STARS AT PORTLAND MEET

## Takes Three Out of Four Events —Berreth (Harley-Davidson) Accounts for Ten Mile

PORTLAND, Ore., August 23.—In spite of the roasting hot sun that kept burning down on the Rose City speedway, Don Johns, astride his Indian, showed the way over the tape in three out of four events which were held here yesterday afternoon. Johns carried away the ten, five and twenty-five mile races and finished in each event in good time.

The second ten-mile stripped stock race for 7 hp. saw Berreth, Harley-Davidson, romp home the winner in 8:53. Langman, Indian, finished second, and McDonald, Harley-Davidson, third.

Berreth was second across the tape in the initial ten-mile event, and in the twenty-five-mile open, the first of which was captured by Don Johns in 8:10 and the second in 21:07. McDonald brought down third money in each of these races.

In the five-mile affair Johns' winning time was 4:14. Langman, Indian, was right on his heel, he in turn being hotly pursued by Berreth.

In one of the races "Dusty" Farnum threw his front tire and sustained some severe bruises when his machine turned over on him. The first scheduled race of the day was cancelled on account of the lack of 4 hp. machines, all the other events being for 7 hp. The consolation race was also called off, for all of the entrants managed to get some of the bacon. The attendance at the speedway was very small, due to the sultry weather.

### SUGGESTS F. A. M. AMENDMENT

Toledo, O.—President A. B. Coffman, of the F. A. M., announces that Gus Castle, director of the South Atlantic district, has suggested an amendment to the constitution and by-laws. The amendment states that the South Atlantic district is too large for one man to cover thoroughly, and suggests that the States of Maryland, Virginia, West Virginia and Kentucky, with the Federal district, be added to the North Atlantic district. This will leave seven States: North and South Carolina, Georgia, Florida, Alabama, Mississippi and Tennessee, in the South Atlantic district.

### BAKER LEAVES FOR VANCOUVER

Los Angeles, Cal., August 24.—Erwin G. Baker, accompanied by Paul Derkum, left at noon today to ride to Vancouver, B. C., where he will start on his International Three-Flag Record trip. Derkum will ride with Baker through Southern California. It is intended that other Indian riders will convoy the "War Horse" on his passage northward to the British Columbia city, after Derkum leaves him a short distance from San Francisco.

### GREGG WINS MATCH RACE

Pittsburgh, Pa., August 23.—Wallace Gregg, riding a 1914 "Indian" 2-speed, defeated Lou Crist on a 1915 3-speed "Harley," in a special match race from Pittsburgh to Bedford and back yesterday morning. An all night rain, which continued until after the race, hampered the riders, considering which Gregg's time of 5 hours and 5 minutes for the 200 mile ride over the mountains was good. Crist, handicapped by three blowouts, finished 25 minutes after Gregg Gregg did not have an altogether sweet time of it either, for he had three nasty spills, in one of which he put his clutch control lever out of business. The purse, $200, and about $600 in bets changed hands as a result of the race.

### EIGHT EVENTS FOR READVILLE

Boston, Mass.—Eight events are scheduled for the Labor Day meet at Readville Park track, September 6. Two of these will be professional feature events: a 25-mile 30½-cubic-inch class and a 50-mile 61-cubic-inch class. The other professional events are a ten-mile, two five-miles, and a three-mile for sidecars. There will be a three-mile novice and a ten-mile amateur, the latter for 61-cubic-inch motors, stripped stock.

### NOT AN ASSAULT BY FORCE

Louisville, Ky.—In an opinion handed down by Judge Thomas R. Gordon on August 19, an accident in which a person is injured by being run down by a motorcycle cannot be designated as an assault by force and arms under the statute governing that feature of assault and that the owner of the motorcycle cannot be sent to jail in default of payment of a judgment obtained against him.

# R. F. D. RULING IS TO BE MODIFIED

## Messrs. Hendee and Davidson Held a Conference With Post-Master Burleson

WASHINGTON, D. C., August 25.—At this writing it is practically certain that Postmaster Burleson, after today's conference with Messrs. George M. Hendee and Walter Davidson, representing the Motorcycle Manufacturers' Association, will modify his recent order prohibiting the use of motorcycles and bicycles in the R. F. D. postal service. It can safely be stated that the use of sidecars and vans will be permitted, and it is quite possible that still better arrangements will be made.

Although the motorcycle manufacturers have brought no pressure to bear upon the situation, the effect of the attitude of thousands of carriers has already been felt at Washington. As a result, the department officials, showing a commendable disposition to handle the problem in fairness to all, has made an investigation, particularly with reference to the use of sidecars and van attachments. Today's conference, beginning at 11 o'clock this morning, between Messrs. Burleson, Hendee and Davidson is generally expected to result in a material modification of the order recently issued by the department.

### DEALERS TO HOLD LABOR DAY RACE

Chicago, Ill., August 22.—The twelfth annual Labor Day road race is now a reality. The cycle dealers of this city have come together and have planned a 20-mile affair for that date over the Rogers Park course.

There has been much talk about the Labor Day race, but not a single club out of the 19 cycling bodies in Chicago cared to get behind and give the affair the necessary impetus. Fred Nelson, the bicycle dealer on South Michigan avenue, laid the matter before the Dealers' Association finally, and that body promptly started things moving. Entry blanks have been mailed to every amateur rider in the city as well as in the country surrounding Cook County, and if former races are any indication, the entry list will be a large one.

A big list of prizes has already been worked up.

# Sacramento Committee Upholds Hess Protest

BELOW is given the text of the protest prepared by John Hess, Excelsior rider, of Sacramento, Cal., for consideration by the F. A. M. Competition Committee as a whole, against the awarding of the Bosch Trophy and the F. A. M. amateur championship to Thomas Liggett, Indian entrant, in the F. A. M. convention races at Sacramento. Referee John L. Donovan declared Liggett to be the winner of the Bosch cup according to the point system approved by the Bosch Magneto Co., but Hess argues that some of the points credited to Liggett were not legitimate. Hess states his case as follows:

"1. That the referee gave to and credited to said Liggett points that he was and is in no way entitled to and not earned by him.

"2. That the giving and crediting said points was and is contrary to the meaning, reading and understanding of Section 6 of Article 7 of the Competition Rules, which is as follows:

"Section 6. Competitors may resort to pedaling at any time, unless the contrary is stated on the entry blank or programme, but a rider must cross the finish line under power in order to be considered as having completed the contest.

"3. That said Liggett did not finish or cross the finish line under power or in any manner whatsoever.

"4. That said Liggett removed his machine wholly and entirely from the track for a long time previous to appellant finishing and crossing the line under power and that appellant was the only rider to so cross the finish line under power, as required by aforementioned rule.

"5. That appellant was the only rider in competition and riding on the track at the time of the conclusion and finish of the race, which was the Fifty-Mile National Amateur Championship.

"6. That under the code of points as provided by the Bosch Magneto Company the appellant has the highest number and is the true and rightful winner of said trophy and is entitled to the possession of the same.

"7. That the referee in awarding the said trophy took into consideration facts not a part of the specifications as declared by said Bosch Magneto Company and said facts and considerations were and are contrary to the expressed meaning of the manner of determining the winner.

"8. That the method of determining the winner as declared by the Bosch Magneto Company are as follows:

"The winner is determined by the Bosch Point System as applied to the National Amateur Championships and no other restrictions other than the standard F. A. M. rulings are in force.

"9. That the decision of the referee was and is not a standard F. A. M. ruling.

"10. Appellant, therefore, respectfully requests that the members of the entire Competition Committee, legally qualified to act herein, make due investigation of claims of the appellant, and the same being found true and in accord with the rules of the F. A. M. and the declaration of the Bosch Magneto Company as to the determination of the winner, adjudge the appellant to be the winner of the Bosch Trophy and order the same into his possession."

## COMMITTEE UPHOLDS HESS

Sacramento, Cal.—The special committee appointed by the Capital City M. C., of Sacramento, to consider the advisability of appealing from the decision of Referee Donovan concerning the awarding of the Bosch trophy, has submitted its report, in which it declares that Hess is entitled to 31 points while Liggett's score should be 26. The original announcement credited Liggett with 31 points, but the committee states that five points must be deducted from this score owing to the fact that this rider was disqualified by the referee in the 5-mile race for riding a motorcycle which did not belong to him.

The report of the committee, which was made up of Lee Borland, W. M. Langley, Ben Bolt, R. Orpinela and F. M. Woodson, states that Hess "should be declared the legitimate winner and rightful possessor of the trophy in question."

## PROTEST BLOCKED BY RULES

Chicago, Ill.—Competition Chairman John L. Donovan, of the F. A. M., after having studied the protest of John Hess, Excelsior rider of Sacramento, Cal., against the awarding of the Bosch Trophy to Liggett, states that the protest in no way complies with Article 16, Section 1, of the F. A. M. Competition Rules. The section states that protests "respecting any other cause of dispute" (after mentioning piston displacement, etc.) shall be made in writing within 30 minutes after the conclusion of the last race, and must be accompanied by a fee of $5. The question of Hess' status was not brought up till the end of the second day of racing (July 25), nothing having been said at the end of the first day (July 24). The formal protest was not received by Mr. Donovan until August 21.

Touching on the point raised in the Hess protest that Liggett removed his machine from the track, Mr. Donovan states that Liggett and his mount were at all times during the race on the track, as was Lueders and his mount also. The awarding of the places in the 50 mile Championship race was done by the chairman at his discretion, following the custom in long distance motorcycle events.

"Article 7, Section 1, points out that Liggett is the National amateur champion, according to F. A. M. rules," says Chairman Donovan. Hess was unable to give satisfactory evidence of ownership of the machine he used, the Chairman further states.

**TAKEN AT TACOMA SPEEDWAY ON AUGUST 15 DURING 300-MILE CLASSIC**

# Harley-Davidson Clan in Picnic

Upper Left, A Dead Heat in the Girls' Potato Race; Upper Right, "They're Off" in the Men's Sack Race; Center, Those Who Participated in the Outing—The Children Were by No Means Left at Home, As Front Row Shows; Below, Near the Tape in Ladies' Sack Race for Twenty Yards

MILWAUKEE, Wis., August 20.—The employees of the office force of the Harley-Davidson Motor Company held their first annual meeting at Army Lake, an affair immensely enjoyed by everyone from the office boy up to Prexy Davidson. In fact, the heads of the concern had just as much fun out of the affair as did their employees.

This was shown in the men's three-legged race where Walter Davidson and William S. Harley, chief engineer, showed that they could do effective team work in other things than making and selling motorcycles by capturing a place in the event. Arthur Davidson, sales manager, and William A. Davidson, works manager, were there, too, and they all brought their families. Many of the children shown in the foreground of the group picture, are from the Harley-Davidson families.

The party went to the picnic ground in two special trolley cars. The committee members had arranged an excellent program of games and this, interspersed with swimming and boating, made the day one long to be remembered by the Harley-Davidson clan. It is needless to say that the Harley-Davidson office picnic will be an annual affair hereafter.

One of the bright features of the day's entertainment was the music furnished by Staff Photographer Osborne's orchestra. Osborne, besides being one of the best photographers in the business, is the greatest banjo player in Milwaukee and the music furnished by his trio kept the crowd in the best of spirits all day long.

The main cortege, forty-five strong, left the South Michigan avenue agency at 5:45 in the morning and were joined at various places on the road by other Harley-Davidsonites. It was a happy crowd that parked their mounts at the Beach, and all hands turned in for a swim as soon as the preliminaries were settled. After the swim, baskets with lunch were brought out and everyone fell to. Impromptu sports followed, and toward evening all returned to Chicago, after having voted the affair a big success.

## HARLEY-DAVIDSONITES' PICNIC

Miller, Ind.—Harley-Davidson riders from Chicago gathered at the Beach on August 22, after traversing the 35 miles of indifferent roads from the Windy City to Miller under the guidance of C. H. Lang, Chicago representative for the Silent Gray Fellow.

## ENDURANCE RUN AT DECORAH

Decorah, Ia., August 19.—A motorcycle endurance run of one hundred miles will be held on Sunday, August 29, under the joint auspices of the Decorah M. C. and the Decorah Public Opinion. It is estimated that more than twenty-five riders will participate in the event.

# How the Show Helps the Jobber

## Business Insight Demands That He Step Forward and Seek His Patronage on Broad Lines

*By Fred I. Willis*
*Former President National Bicycle Jobbers' Association*

THE bicycle jobber should exhibit at the motorcycle shows, as well as all other favorable industrial shows, because the jobber should express an independence and let his business stand out with such prominence as to reach the dealer-agent and make him recognize that the jobber is just as alert to the business conditions as the manufacturer himself.

It is a mistaken idea that the jobber should not advertise. Advertising that gets his name favorably and prominently before the buying public is of as much value to the jobber as it is to the dealers themselves. The jobber's province is to distribute mechandise that is collected throughout the various parts of the country, and to carry them in suitable quantities for quick delivery in a given locality. And it is just as important to advertise the fact that he has these goods to sell as it is for him to have the goods on his shelves for sale. He cannot expect to deliver these goods to the dealer without letting the world at large know where his place of business is, what his stock consists of, and that he is alert to the present day marketing conditions.

A jobber who will conduct his business on legitimate jobbing lines will soon realize that the dealer will make his a depending supply house, and order goods almost daily and consistently from his favorite jobber.

It is true that a jobber cannot specifically advertise the individual goods that he has for sale, but by exhibiting at such a national exposition as the Motorcycle Show, he can let the world at large know that he has a dependable line of goods, and that service is his chief asset.

### The Personal Element

We often hear that personal friendship has no place in business. If this was ever true it is not true today. The large or small merchant who can put the personal touch into his business is the merchant that is succeeding today, and by exhibitions of this magnitude the purchasing dealer can get into very close communication with the heads of the companies with whom he desires to do business. This factor is the all important one that the Motorcycle Show gives to manufacturer, jobber and dealer alike.

Whether we are so called large or small merchants, we appreciate the personal touch that gets the business and the fact that all concerns enter heartily into the support of an exhibit of this magnitude brings closer this personal relation that all wideawake merchants are courting at the present day. The dealer who stays at home and feels that there is nothing for him in an exhibition of this character is looking upon the narrow view of real commercial life, and he should awake to the fact that the wideawake merchant is the one who studies the conditions at home as well as abroad.

Time, money and energy should go to the promotion of an industry that we believe in, and from which we make our daily livelihood. It is entitled to our loyal and never-ending support. That the jobber may come in personal contact with his customers, become better acquainted, know their wants, their likes and their dislikes, and meet and greet them personally, and thank them for the part that they had in building the jobber's business is why the jobber exhibits at a show of this kind.

# Show Lists Are Growing Rapidly

FOLLOWING are the applications so far received by Manager Coffman for space in the Chicago Motorcycle, Bicycle and Accessory Show:

American Wood Rim Co., Onaway, Mich.
Aurora Automatic Machinery Co., Chicago.
Autobike Co., Chicago.
*Bicycle News*, New York.
Bosch Magneto Co., New York.
Cycle Mfg. & Supply Co., Chicago.
L. H. Cornish, Stamford, Conn.
Diamond Chain & Mfg. Co., Indianapolis.
Duckworth Chain & Mfg. Co., Springfield, Mass.
Eclipse Machine Co., Elmira, N. Y.
Emblem Mfg. Co., Angola, N. Y.
Elcelsior Cycle Co., Chicago.
Excelsior Motor Mfg. & Supply Co., Chicago.
Flxible Side Car Co., Loudonville, O.
Great Western Mfg. Co., La Porte, Ind.
Harley-Davidson Motor Co., Milwaukee.
Hawthorne Mfg. Co., Bridgeport, Conn.
Hearsey Willis Co., Indianapolis.
Hendee Mfg. Co., Springfield, Mass.
Henderson Motorcycle Co., Detroit, Mich.
Jones & Noyes, Chicago.
Kokomo Rubber Co., Kokomo, Ind.
*Motorcycling & Bicycling*, Chicago.
**Motor Cycle Illustrated**, New York.
Miami Cycle & Mfg. Co., Middletown, O.
Persons Mfg. Co., Worcester, Mass.
Rogers Mfg. Co., Chicago.
Reading-Standard Co., Reading, Pa.
A. Schrader's Son, Inc., Brooklyn, N. Y.
A. O. Smith Co., Milwaukee, Wis.
Splitdorf Electrical Co., Newark, N. J.
Harry Svensgaard Sales Corp., Detroit, Mich.
Van Cleef Bros., Chicago.
Victor Auto Parts Co., Cincinnati, O.
Wald Mfg. Co., Sheboygan, Wis.
G. H. Westing Co., Indianapolis Ind.
Pope Mfg. Co., Westfield, Mass.
Askew Saddlery Co., Kansas City, Mo.
Roller Saddle Attachment Co., Boston.
Cleveland Motorcycle Mfg. Co., Cleveland, O.
Houghton Side Car Co., Marion, O.
Haverford Cycle Co., Philadelphia.
Aniana Society, High, Iowa.
Prestolite Co., Indianapolis, Ind.

### LIST OF NEW YORK SHOW EXHIBITORS TO DATE

The applicants for space in the New York Show to date are given below. Additions to these lists will be announced by Manager Coffman as fast as the space is contracted for. The list:

American Wood Rim Co., Onaway, Mich.
Autobike Co., Chicago.
Aurora Automatic Machinery Co., Chicago.
*Bicycle News*, New York.
Duckworth Chain & Mfg. Co., Springfield, Mass.
Eclipse Machine Co., Elmira, N. Y.
Emblem Mfg. Co., Angola, N. Y.
Flexible Side Car Co., Londonville, O.
Great Western Mfg. Co., La Porte, Ind.
Harley-Davidson Motor Co., Milwaukee.
Hawthorne Mfg. Co., Bridgeport, Conn.
Henderson Motorcycle Co., Detroit, Mich.
Hendee Mfg. Co., Springfield, Mass.
Kokomo Rubber Co., Kokomo, Ind.
*Motorcycling & Bicycling*, Chicago.
New York Sporting Goods Co., New York.
The Root Heath Mfg. Co., Plymouth, O.
A. Schrader's Son, Inc., Brooklyn, N. Y.
A. O. Smith Co., Milwaukee.
Splitdorf Electrical Co., Newark, N. J.
Harry Svensgaard Sales Corp., Detroit, Mich.
Pope Mfg. Co., Westfield, Mass.
Miami Cycle & Mfg. Co., Middletown, O.
Cleveland Motorcycle Mfg. Co., Cleveland, O.
**Motor Cycle Illustrated**, New York.
Bosch Magneto Co., New York.
Haverford Cycle Co., Philadelphia.
Excelsior Motor Mfg. & Supply Co., Chicago.

### FAVOR EARLY SHOW DATES

Referring to the selection of early dates for the Chicago and New York motorcycle, bicycle and accessory shows, a number of letters expressing approval have been received by Manager A. B. Coffman. A typical one, forwarded recently by the Toledo Rubber Co., through Manager F. A. Alford, is printed below:

Mr. A. B. Coffman,
414 Ohio Bldg., Toledo, Ohio.

Dear Sir.—In reference to our preference as to show date, we are in favor of having the Jobbers' and Manufactur-

# In the Racing Realm

## CHICAGO CLASSIC WILL BE THRILLER

### "Red" Parkhurst After Preliminary Spins on Whirlwind Saucer "Sees" Record Falling

MILWAUKEE, Wis., August 23.—"Red" Parkhurst and "Curly" Fredericks are back from the Windy City where they took some preliminary spins to test out tires on the two-mile whirlwind saucer, in anticipation of the 300-mile classic to be held there September 6.

"Well, how does she look," "Red" was asked.

"Ooooh, zowie," and "Red" held up one hand that told more in its silent action than words can portray. "The guy that wins that Chicago race is going to ride the fastest 300 miles that he ever rode in his life.

"There is no limit to that track in the way of speed possibilities. Nobody is going to shut off anywhere, any time and nohow. The fellows who have been down there all ride the track the same way from start to finish. You don't have to change positions in riding a bit. The machine sets upright all around the track.

"The greatest difficulty that most of the riders will have will be keeping awake. The smooth track, mile after mile, without a bump to relieve the monotony, is going to put the rider to sleep along about the 250th mile and then he will have an awful time fighting the numbness that begins creeping over his whole body, first his hands, then his feet, finally his back.

"It will simply be a case of pound the scantlings mile after mile. There ain't going to be anybody in the slow class either, for the suction on that Chicago speedway is something awful. I really believe a fellow can keep in the pace of the man ahead of him even though he is 75 feet behind. Ninety miles an hour will be the low average at Chicago. If a fellow can't make that he's gone before he starts.

"I think that Chicago will lower the mark set at Tacoma by Armstrong because the so-called straightaways at Tacoma are not really straight. They have slight bends in places that detract a fraction of a second from a fellow's time. At Chicago the riders sweep by the grand stand at absolutely the fastest speed because they are just coming out of one of the bowl turns and are coming down hill.

"Do you think the motorcycles will come anywhere near the time set by the automobiles?" we asked real innocent-like.

"Red" smiled that big boyish grin of his. "We won't do it if we don't have to.

"Well, I got to keep moving," and the big lanky redhead stepped on the pedal of one of the gray battleships that have carried the lovable, good natured Parkhurst into the limelight in more than one big event.

"You see," said "Red," "I'm conditioning," and he glanced at the speedometer. "Five hundred and twenty-miles in two days. That ain't so bad, is it? If I win at Chicago I want to be wide awake when I do it.

"Let's go down to Lake Geneva this afternoon, Curly. That'll ring up another hundred miles or so."

### LOUISVILLE SPEEDWAY PROMISED

Louisville, Ky.—Louisville motorcyclists are in a fair way to have their dreams of many years realized in the building of a new two-mile speedway south of the city, adjoining the Douglas Park dirt track, which is used principally for four-legged racers. The proposed track will be of the saucer design and will be surfaced in wood, and of the same general design as the new track at Chicago. Arrangements are about completed whereby articles will be filed incorporating the Louisville Automobile Speedway, with a capital stock of $250,000.

The enterprise will be backed by Carl G. Fisher, one of those in control of the Indianapolis Motor Speedway; Louis Seelbach, president of the Seelbach Hotel Company, the largest concern of its kind in Kentucky; P. J. Hanlon, former vice-president of the American Tobacco Company; Basil Doerhoefer, a local capitalist, and Frank Fehr, a wealthy brewer. Three hundred acres of flat land have been purchased or leased south of Douglas Park, and it has been announced that contracts will be let inside of sixty days for the grandstand and track. George L. Martin, of the real estate firm of Mueller & Martin, is the promoter of the speedway.

### HOLIDAY RACES FOR HARRISBURG

Harrisburg, Pa., August 23.—An interesting program of races has been arranged by the Keystone Motorcycle Club of this city to be held on Labor Day, September 6. The race meet will take place on the Lebanon Fair grounds track. Entry blanks will be mailed to all of the important clubs of the State. Individual riders desiring blanks should communicate with Secretary C. H. Uhler, 1317 Derry street, Harrisburg, Pa. The races will be held under an F. A. M. sanction.

## SAVANNAH RACE PLANS ON FOOT

### Club Bristling with Action—Hold Melon Outing, Fight Legislation, Go After Stars.

SAVANNAH, Ga., Aug. 21.—Thirty-five members of the Savannah Motorcycle Club enjoyed their first watermelon cutting of the season last Tuesday night when they rode out on their machines to Winters Garden, where the melons awaited them. The melons were on ice for three days. So cold and refreshing were they, that at the next meeting of the club another outing of this kind will be announced.

Riders of Savannah and vicinity must come to the assistance of the club now if they expect to ride their motorcycles in 1916 without buying a tag from the state. The present session of the legislature came to a close last Tuesday and nothing was done on the bill that was presented to have the tax on motorcycles reduced to $2.

The present injunction suit will come up in the supreme court within the next sixty days. The Savannah M. C. is making arrangements to send their lawyer, Charles Donnelly, to Atlanta to fight to a finish. Of course, should the supreme court rule against the motorcyclists, then the case will be appealed by the club to the United States Supreme Court. In this way the present injunction suit will probably be in the courts for a year or more.

To call upon the riders in person and try and get them to enter the third Grand Prize 300 mile race here on Thanksgiving day, the Savannah Motorcycle Club has appointed George Porter, first vice-president, to represent the club at Chicago, when the 300 mile event will be held Labor day.

While the club has not as yet officially announced the event, it will probably be forthcoming just after the big event in Chicago. The sending of Mr. Porter as a personal representative of the club practically assures the event, which will no doubt be received with great interest.

### SIX RACES AT ELLSWORTH

Ellsworth, Kan., August 31.—Over a thousand spectators attended the motorcycle races which were held on Sunday, August 15, on the local track under the auspices of the Central Kansas M. C. Six events were run off. The three-mile open was captured by Johnson, Indian, in 3:43, while the three mile stock went to Henry, Indian, in 3:48. Johnston also accounted for the five-mile handicap

Digitized by Google

event in which Warner and Henry, both mounted on Indians, captured second and third positions respectively. Warner sailed in first in the one-hour race, covering forty-eight and one-half miles in that time. The three-mile amateur race saw Medcaff, Indian, cross the tape the winner in 4:06. Warner showed the way home in the sidecar race, run in one-mile heats, and was closely followed by Johnston.

### MIXED RUN FOR PASSAIC CLUBSTERS

Passaic, N. J.—Members of the Passaic M. C. of this city are planning to hold a 150-mile boulevard run, with endurance features. The course as now projected will consist of 100 miles of good roads, with the balance of such surface as will tax the best of endurance riders. The run will be restricted to club members only and a sealed time schedule will be adopted. The date has not yet been decided upon.

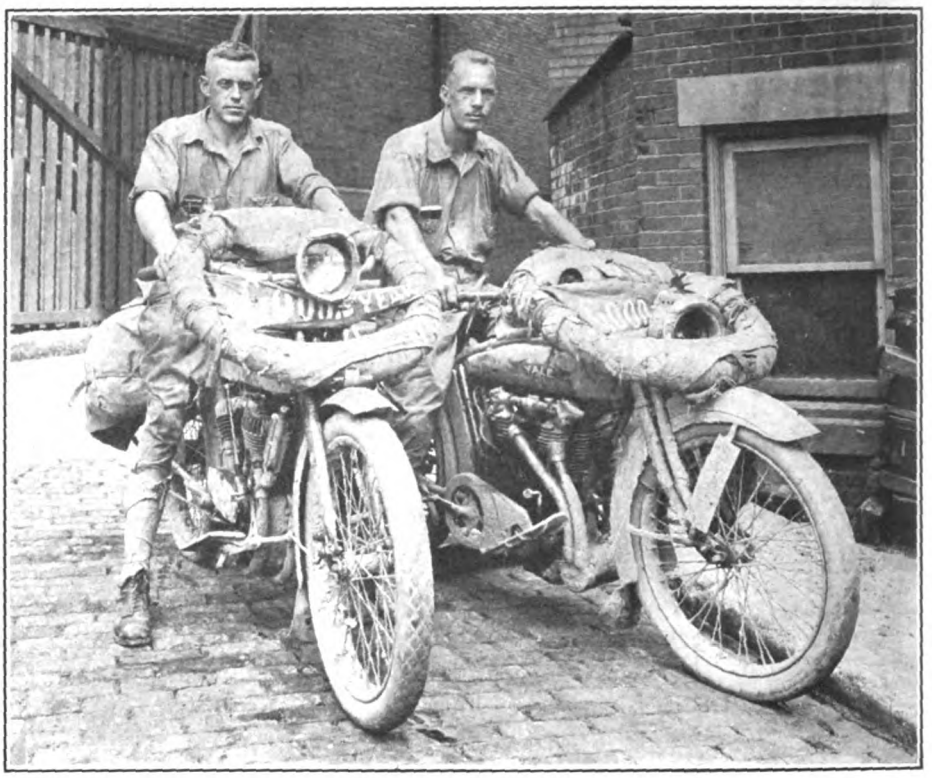
### ORDERS TWO MACHINES

Owensboro, Ky., August 14.—The City Council at its meeting on Monday evening accepted the report of the police committee, and ordered that two machines should be purchased for the use of the motorcycle department. The contracts for the machines were split, one machine going to Henry F. Pardon, the Indian agent at $322. The other contract was awarded to W. F. Richwine, the Harley agent for $329.60. Both orders call for full electric-equipped machines of the three-speed variety.

### WAUSAU CLUB FORMING

Wausau, Wis., Aug. 23.—V. G. Ringle is taking an active part in the organization of a Wausau motorcycle club, which will contain about fifty members in his charter membership. The new club is making arrangements for carrying out a schedule of outings and entertainments that promises to make the organization grow and be prosperous. Wausau has a population of about 20,000 and the roads abounding the city are fair. The club plans to hold races on the Wausau half-mile track

## Akron Riders Finish Their Long Grind

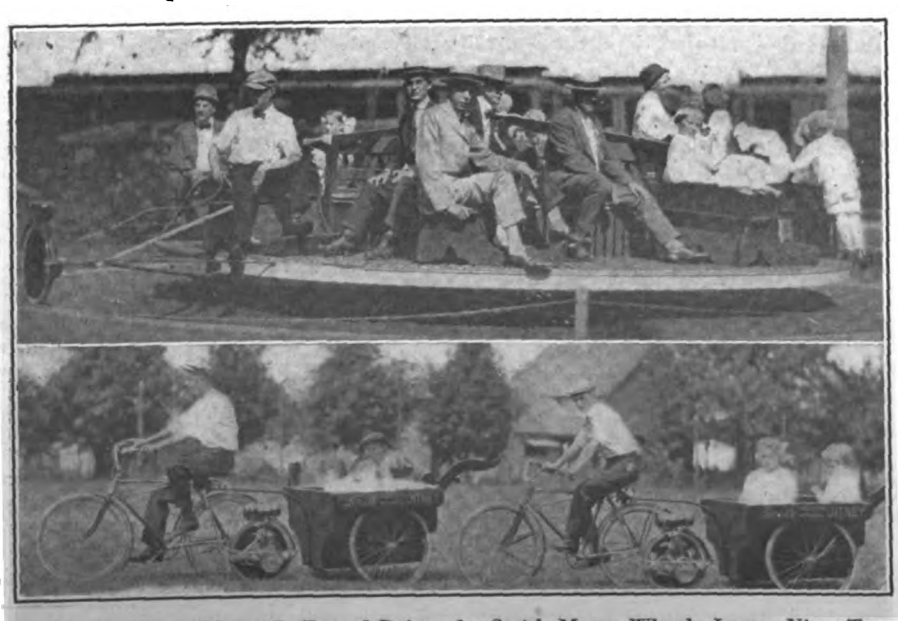


**Sutter and Hageman at Goodyear Factory with Unused Tires on Front of Machines**

Akron, O.—H. A. Sutter and Ed. Hageman, two Akron motorcyclists who rode to the San Francisco Exposition recently, returned to this city after two months and a half of riding. They covered 8,000 miles in all. Their machines were mud-bespattered from riding in the Western and Central States and showed the effects of hard going in other ways. The spare tires, wrapped in burlap on the front of each mount, were, however, not touched.

"We found that the spare shoes were unnecessary," said Hageman, speaking of the long trip to an official of the Goodyear Tire & Rubber Company, when the pair were at that plant. "That is, as far as having to be fitted to the rims were concerned. We both used Blue Streaks, back and front, and all the tires came through triumphantly. We might have used the spare tires as life preservers on some of the roads we passed through in the West." The photograph shows Sutter and his partner in front of the Goodyear plant in this city.

### UNIQUE AMUSEMENTS AT RECENT A. O. SMITH PICNIC



**Upper Picture Shows Merry-Go-Round Driven by Smith Motor Wheel; Lower View Two of the "Motor Wheel Jitneys" Used to Carry the Little Ones on Joy Rides**

### TRADE PEOPLE IN TOWN

Among the trade men who visited New York this week were Walter Davidson and George M. Hendee, on their way to confer with Postmaster Burleson, at Washington; Jim Ash, of the Miami Cycle & Mfg. Co.; A. B. Coffman, of Toledo; H. F. Rogers, of The Rogers Mfg. Co., of Chicago, accompanied by Mrs. Rogers; Jess Campbell, of Boston, and L. J. Mueller, of Cleveland.

### WINNER'S EQUIPMENT AT TACOMA

Tacoma, Wash.—Earl Armstrong, who piloted his Indian to victory in the 300-mile race on the speedway in this city, used a Dixie magneto, V-Ray sparkplugs and Duckworth chains. Otto Walker on his Harley-Davidson had Renold chains, Schebler carbureter, Bosch magneto, Wright sparkplugs. Both Armstrong and Walker used Firestone tires on both front and rear wheels. Don Johns, Indian, was also another Firestone tire user.

### INDIANA MEET POSTPONED

Indianapolis, Ind., August 24.—The racemeet of the Indiana Racing Association, which was scheduled to be held here on Saturday, August 21, has been postponed on account of rain.

# News of the Clubs

### DURABILITY RUN FOR OCTOBER 3

Hackensack, N. J.—The Hackensack M. C., of 149 Main street, this city, will hold its first annual durability run on October 3. This run, covering 204½ miles in all, will be from Hackensack through West Caldwell, Greenwood Lake, Hohokus, Congers and Canterbury and Hackensack. Entry fee is $2, with post entry at $2.50. There will be secret checks in this run.

Six cups are offered. One of these is for the best performance made by a three-man team, all on one make; a second will go to the best three-man mixed team. The third cup will be awarded to the best performer in the pro. sidecar class, and a fourth for the F. A. M. club getting highest score. The two other cups will go to the Hackensack M. C. three-man team getting the best total score and to the best single-geared machine performance. The schedules will be as follows: Solo, side-by-side and tandem mounts, 20 miles per hour; sidecar, 18 miles per hour.

### PUYALLUP CLUB ACTIVE

Puyallup, Wash.—The Puyallup Motorcycle Club during the past six months has been most active and has accomplished much good in getting the riders together in the Puyallup Valley. Quarters have been opened in the Stewart building, where meetings are held twice a month. H. S. Potter, the local speed officer, is the president, Leroy Debolt, the Indian agent, vice president, while A. B. Hickey, Excelsior representative, is the club's secretary-treasurer. Jas. Harlan is first lieutenant; Ben Overhold, second, and B. Forbes, captain.

### NEW CLUB MAKES BRISK START

Indianapolis, Ind.—George Evans, newly-elected president of the Motorcycle Road Club of Indiana, is completing the details of the club's first tour to witness the 300-mile race on Labor day at the Chicago Speedway. Evans is making personal calls on the dealers and riders of the state in an effort to obtain as many entrants as possible in the tour.

John Merz, of Indianapolis, who was elected road captain for the first year, will take active charge of the run to Chicago, and is already appointing his assistants.

Korky Harwood, the new secretary, is on the job with both feet and is preparing the literature that will be mailed to every F. A. M. member in the state and to as many other riders as possible. It is expected that Marion, where Harwood is the Indian agent, will have one of the largest delegations in the run. Marion has two live clubs, both holding charters in the national body.

It is the aim of the charter members of this organization to make a charge of fifty cents to all members joining the club from this time on to help defray expenses.

### GIRLS AND BOYS—FIFTY-FIFTY

Tucson, Ariz., August 23.—No member of the Tucson Motorcycle Club who could not produce a feminine tandem passenger was allowed to participate in the club's first strictly tandem run, which was held Sunday, August 15. Fourteen members qualified, and as many young women enjoyed the day immensely. The run was to Agua Caliente, over splendid mesa roads. There a picnic lunch was enjoyed. On the way back the party ran into a shower and two or three machines went down in the mud, but no one was hurt.

### BUTLER COUNTY CLUB PLANS

Hamilton, O.—The Butler County M. C. has decided to have the next social event a chicken dinner and dance, to be held some time in September. The affair will be for club members only. It was originally intended to have the social event in October, with a dance as a feature of a pleasure run.

### TO HOLD MOONLIGHT RUN

Newark, N. J.—The New Jersey M. C. will hold a moonlight run to Old Mill Pond, Chatham, N. J., on Thursday, September 2. The total distance of the run will be 30 miles. At the Pond, there is an excellent dancing pavilion, and dancing and boating on the lake can be indulged in by the riders. A light dinner will also be a feature of the run.

### RAIN INTERFERES WITH RUN

Bronx, N. Y., August 23.—Rain in and around New York caused the postponement of the start of the New York division of the Bronx Motorcyclists' Association for Savin Rock, near New Haven, Conn. New Jersey, Brooklyn and Long Island riders therefore did not start on the run, as well as the metropolitan contingents. The run will be held August 29.

Several Association members rode to Bridgeport on their own, and in that city met about 50 riders from the Western division. The crowd was entertained by the local club and went on to the Rock, where the New England contingent, 100 strong, was already parking their machines. Those present enjoyed themselves in spite of the non-success of the rally as a whole, and promised to join next Sunday, August 29.

### BRIDGEPORT CLUB IS HOST

Bridgeport, Conn., August 23.—About one hundred out-of-town riders were entertained by the local Excelsior club at its rooms on Sunday, August 22, most of the guests coming from Connecticut. The occasion of the gathering of the motorcyclists was the outing at Savin Rock, which proved to be quite a success. About the middle of September the local club will stage a picnic on one of the big farms just outside of Bridgeport. All motorcycle clubs are invited to attend the affair. Refreshments and drinks will be served.

Those Who Waited at Bridgeport for New York Contingent of Bronx Association; Out-of-Town Riders and Members of Excelsior M. C. Item Above

# Even The Remarkable Dodge City Time Beaten

## Dodge City Time: 3:55:45
## TACOMA TIME: 3:45:27 9-10
## A NEW WORLD'S RECORD
## 79:83 MILES PER HOUR

# INDIAN DID IT!

At Tacoma, August 15, Earl Armstrong on an Indian showed the red machine's championship mettle by covering 300 miles at the rate of 79.83 miles per hour—an average exceeding the Dodge City figures by 3.49 miles per hour.

Don Johns, finishing third, also bettered the Dodge City time, giving a conclusive performance of Indian sustained speed.

So again, with the 1915 racing season advancing, the Indian takes the throne as "Master of Them All."

With the 300 Mile world's record, with the majority of F. A. M. National Championships, with the world's economy record, with the world's non-stop record, the Indian is the one machine that can have justly written upon it the word

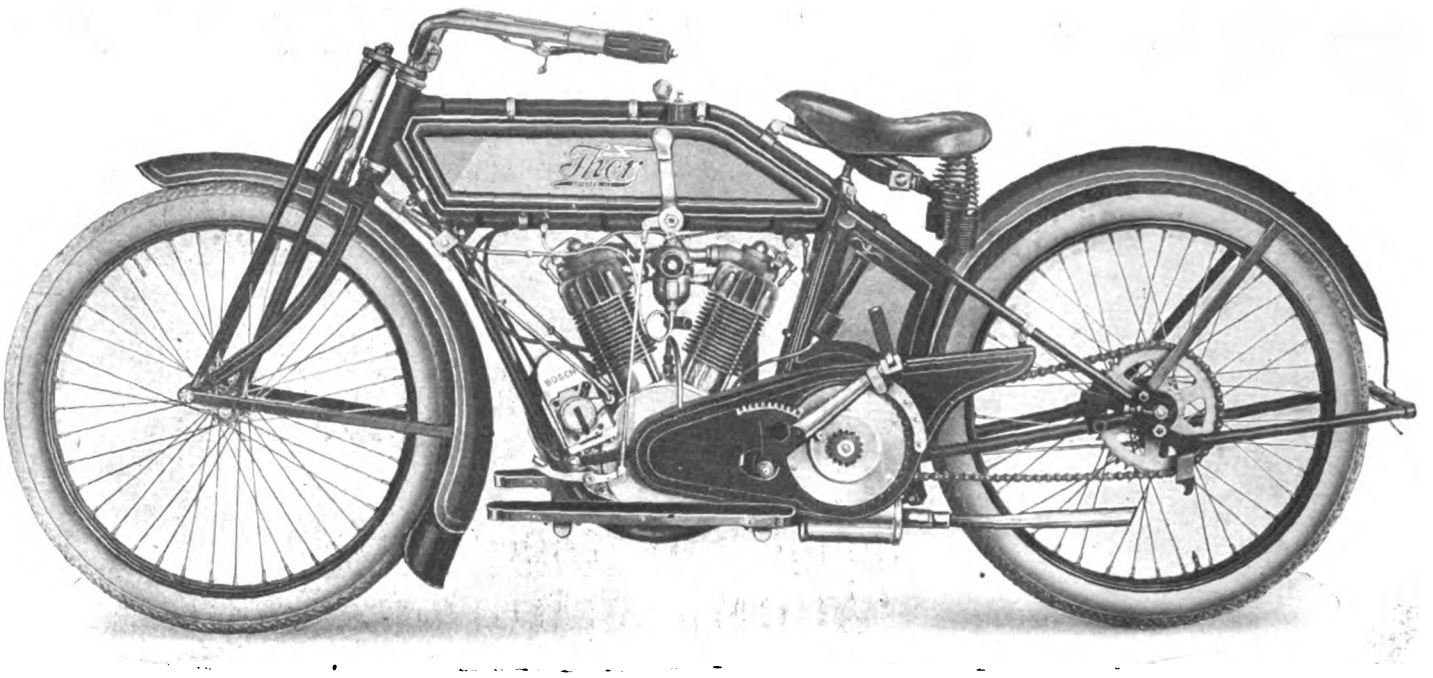
# Two 3-Speed Thor Twins for 1916

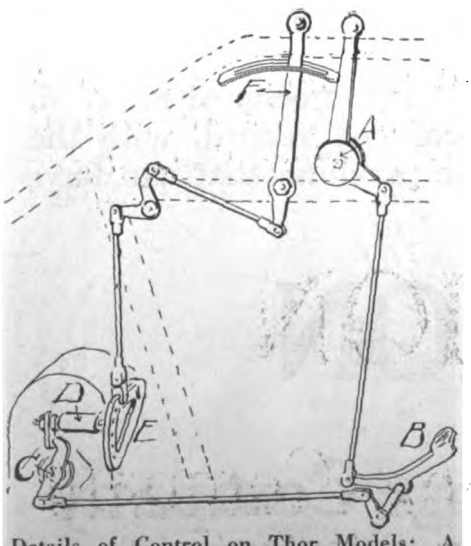


**Lightweight Model 16-V, Showing New Spring Fork, Dual Clutch Control, Foot-Starter and Modified Chain Guard**

TWO new models, each fitted with a three-speed gearset, new clutch and foot-starter and new muffler, are the offerings of the Aurora Automatic Machinery Company, of 1307 Michigan avenue, Chicago, Ill., for 1916. The first of these models, known as the 16-U, is a 12 horsepower twin, while the second, the 16-V, is a light-weight, engined with a twin motor of 38.4 cubic inches displacement and rated at 6 horsepower. It weighs 125 pounds less than the 1915 Thor twin model.

### Countershaft Chain Drive

The 16-U twin is fitted with a motor which is practically identical with that used on the 1915 12 horsepower twin, with the exception of having no undergear. The pedals of the 1915 and previous models are done away with, a kick-down starter being used instead. The drive on this model is of the countershaft-chain type, as the gearset is countershaft mounted.



Details of Control on Thor Models: A, Clutch Lever with Friction Lock; B, Clutch Foot Lever; C, Release Rocker for Clutch; D, Gearshift Lock; E, Shifter Quadrant; F, Gearshift Lever

The gearset is of the sliding gear-dog clutch type, using dog-clutches for the high and low positions and a slider carrying a spur gear for the intermediate speed. The side-shaft, carrying the three side-gears is above the main shaft, the gears and their sleeve rotating upon a fixed shaft running from side to side in the gearbox. The main shaft is borne upon adjustable ball bearings, adapted to care for thrust as well as radial loads. Shifting is by a yoke, on a shaft borne at each end to insure accuracy in operation regardless of wear. The forwardly-projecting end of the yoke shaft carries a quadrant, whose long side is drilled to engage a lock fitted to the end of the gearbox when the gears are in their proper position for any speed for for free engine. Shifting is accomplished by a short ball-grip lever at the right side of the tank, actuating the quadrant through rockers and rods.

### New Dry Plate Clutch

This three-speed gearset is used on both the 16-U and the 16-V models, and the control of the shift is identical on both machines.

The clutch used on both the 12 horsepower twin and the lightweight model is at the left, mounted on the end of the main shaft of the gearset. The driving member is carried on the shaft, while the driven member rides on a sleeve and connects to the primary drive. The clutch is of the dry plate type, with five plates faced with friction fabric. Six spiral springs cause engagement of the plates, the tension of these springs being regulated from the exterior of the clutch. Small plates in the facing, in fact, give access to the adjusting screws for this purpose.

The clutch is operated by a through-rod within the main shaft of the gearset. At the right is a quick-pitch screw upon which acts an L-collar connected to a rocker pedal at the left side. This L-collar has a short foot at its upper part, so that when the pedal is pressed downward and forward, the foot draws back on a spring plunger whose end fits into the drillings on the gear shift quadrant and permits of shifting the gear. This plunger acts as a shift-lock, preventing the gears from being shifted unless the clutch is first disengaged.

### Dual Clutch Control

On the left end of the through-rod there is a mushroom head which acts on one member of a ball-thrust bearing, the latter being in operation only when the clutch is released. The clutch can be operated by a hand lever as well as by the pedal, there being a link between the rear end of the pedal and the short arm of the clutch lever mounted conveniently on the left side of the frame. This lever is fitted with a friction device, so as to stay at any position to which it is moved. A rearward motion of the lever or a forward motion of the pedal gives the released position of the clutch, and vice versa, and the pedal can be used to control the clutch without interfering with the setting of the hand lever.

The gear shift lever, when drawn to the rearmost position on its quadrant, gives low speed; on moving it forward, a neutral, the intermediate speed, another neutral and high gear positions are obtained. There is a distinct neutral point between each speed, thus enabling any speed to be quickly engaged to start. The brake, which is of the band type, is operated by a foot lever on the right side of the machine. The 16-U twin is fitted with long, horizontal footboards providing a comfortable position for the rider without regard to his height or length of leg.

### Other Details

The muffler is new on this model, giving the minimum of back pressure. A tail pipe

Digitized by Google

is fitted, extending along the left side of the machine. Oiling is by the same efficient system used on Thor motorcycles during 1915 and preceding years. The front fork and motor controls, as well as the frame forward of the seat post, have not been changed, but the bottom bracket is of course new to take the gearset. The foot-starter is of the sector and pinion type, the sector being attached to the lever with its hinged pad, while the pinion, ratchet fitted acts on the outer portion of the clutch. A downward motion of the lever and sector, causes the latter to act on the pinion, rotating the motor through the primary drive. A spring takes the sector back to its out-of-gear position, the lever being held in a clip out of the way of the rider's leg, yet ready to be acted on by turning the hinged pad to a horizontal position.

### The Lightweight Model

The 16-V model, of the lightweight class, has an entirely new design of motor. The bore is 2¾ inches, and the stroke 3¼ inches, giving a displacement of 38.4 cubic inches. It is rated at 6 horsepower. The cylinder heads are made detachable, the same inlet over exhaust arrangement used on Thor motors for a number of seasons being retained, with the difference from 1915 construction that the rockers and push rods for the inlets are exposed. The inlet manifold is of the straight line type, as in general Thor construction, and a ¾-inch Schebler carbureter is fitted. Ignition is by Bosch magneto, fitted in front of the motor, with enclosed gear drive. Lubrication is of the recognized Thor type.

### New Spring Fork

The spring fork on this model is new. The movable members have their upper ends acting on a plunger within a cylinder, this plunger being fitted with shock springs above and recoil springs below. The sides of the cylinder are cut away to permit of the entry of the movable fork ends reaching to the plunger. A sleeve within the cylinder prevents the ingress of dirt. The rigid members consist of the main fork sides and a pair of braces, one to a side, reaching from the tips to the upper part of the fork cylinder. The cylinder attaches to the steering head by a substantial clip at the top and to an extenison of the crown at the base. The motion of the movable members is a straight-line one approximately.

The handlebars on the 16-V model are the same design as those on the 16-U twin, but the grips are shorter and the entire assemblage made somewhat lighter to conform with the lighter machine. Clutch control, brake control, starter and chain guard are the same as on the large model. Like its bigger twin sister, the 16-V is substantial in all its parts and will stand hard service. The weight is 125 pounds less than that of the 1915 twin Thor. Prices on this model and on the 16-U twin have not yet been announced.

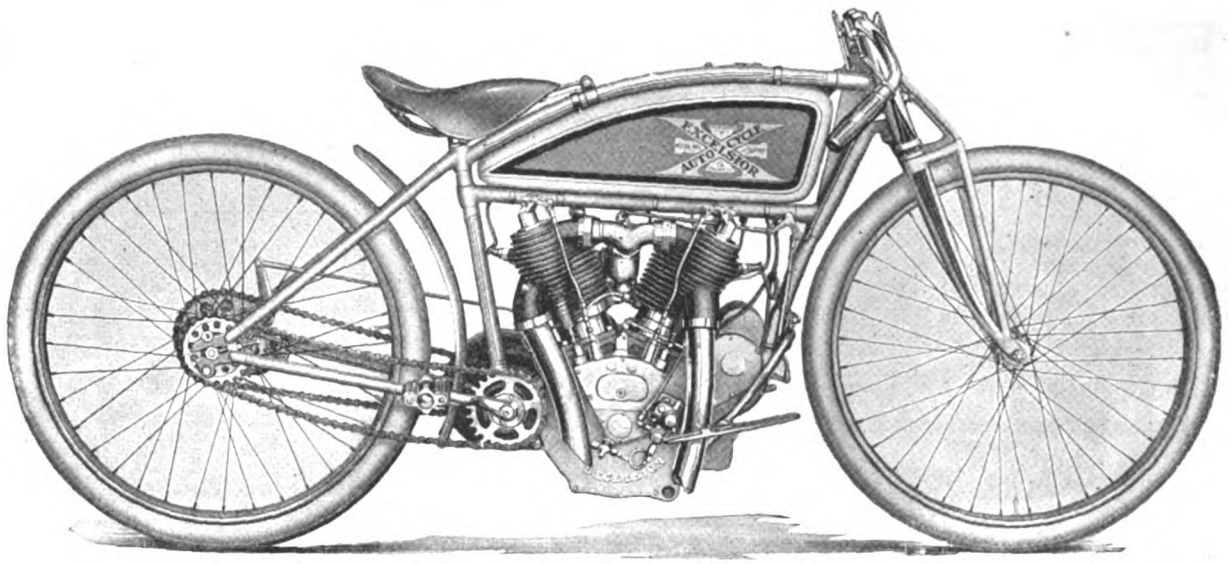
# New Speed Model for Excelsior



**Short-Coupled Twin Model, with Extra Large Valves, Inlet Manifold and Exhaust Pipes and Removable Footboards**

FROM the Excelsior Motor Mfg. & Supply Co., of 3703 Cortlandt street, Chicago, Ill., comes the announcement of a new speed model, the 16 Short Coupled, a machine built for high speeds coupled with great endurance. It is fitted with a twin motor on the general line of the regular Excelsior 61 cubic inch model, but having extra large valves, inlet manifold and exhaust pipes. The motor is finished smooth inside to facilitate the entrance and escape of gases and is capable of sustaining great speed for any length of time. The model is priced at $250.

The 16 Short Coupled model has countershaft chain drive, pedal chain with pedals and a brake operated by foot lever at the left. Ignition is by Bosch magneto, as in regular Excelsior construction, and mechanical lubrication with auxiliary hand-pump is fitted. The carbureter is a Schebler of special design. The frame incorporates the one-piece drop-forged head used on the 15 models, together with the heavy-walled tubing and forward motor bearer. Its lines are very like those of the 15 Short Coupled, with a tank similar to that used on the regular 15 models.

### Frame and Equipment

The front fork is of the truss type, rigid model, with racing handlebars. A rear mud-guard is fitted, running from the line of the seatpost top to below the countershaft level. Removable folding footrests are part of the standard equipment. Color is standard "X" gray with red panels and striping, the characteristic Excelsior emblem being placed on each tank panel. The price complete is $250.

A trial of this model of speed machine by Bob Perry on the Chicago Speedway resulted in Perry cutting 13 seconds from the ten-mile record made by Lee Humiston on an Excelsior at the Playa del Rey track in 1913. Perry made two of the two-mile Speedway laps in 1:12 flat on his 16 Short Coupled mount. Taking the new speed model all in all, it should prove a very worthy successor to the 1915 fast "X."

Attention is called to the fact that the motor used in this model can be fitted to the regular 15-3 frame at an additional cost of $25.

## FIRESTONE ISSUES HOUSE ORGAN

News about Firestone activities, from the factory in Akron to the coasts of the United States is embodied in the first two issues of *The Firestone*, the house organ of the Firestone Tire & Rubber Company, of Akron, O. The first issue is devoted mostly to the factory and the personnel, while the second, or August issue, describes the big picnic for the most part. Interesting in particular to the dealer and Firestone tire user are the valuable hints on safety and other prominent subjects which are to be found throughout the two issues.

## AWARDS IN IRISH TRIALS

Word has been received by the Hendee Mfg. Company, at Springfield, Mass., of the awarding of gold medals to Indian entrants in the recent Irish End-to-End Trials. C. B. Franklin, Indian sidecar combination, received a gold medal in addition to the sidecar prize, while W. H. Freeman, of Dublin, carried off the second prize in the solo division and a gold medal.

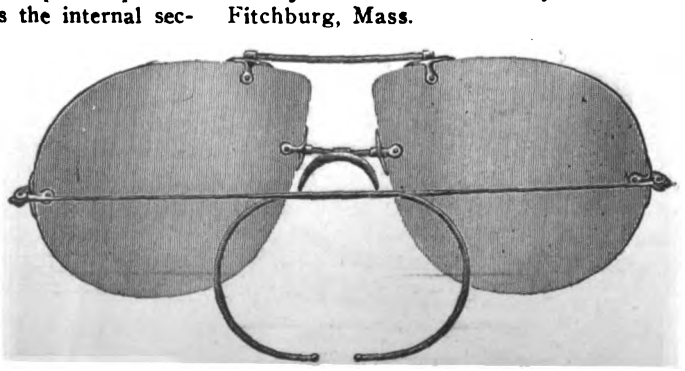
## HAPPY AT DIXIE'S TACOMA WORK

Dan Walls, the genial publicity man of the Splitdorf camp, is rubbing his hands in undiluted gratification at the splendid performance of the Dixie Magneto on the record-smashing Indian that carried Earl Armstrong to victory at Tacoma. "Specially noteworthy," says Dan, "is the fact that through that gruelling 300-mile grind, Armstrong never even had occasion to look at his ignition."

## CHICAGO FLEXIBLE GOGGLE

One of the most recent additions to the line of eye protective devices manufactured by the Chicago Eye Shield Company, of 128 South Clinton street, Chicago, Ill., is a new flexible center goggle, known as the Chicago Flexible goggle. This goggle, the lenses of which are pear-shaped to protect the eyes at all times, has the internal sections of each lens flexible, thus enabling the goggle to conform exactly to the face of the wearer, with ease and comfort.

The folding features of the hinged type of goggle are thus obtained, without the added parts essential to a good hinge design. The lenses are connected by cable temples, while the nose-piece keeps them in their correct relative position and gives a good and comfortable fit without interfering with their bending. The new goggle retails at $2.50 with lenses in amber color. Jobbers and dealers should communicate with the company at Chicago.



**Chicago Flexible Goggle**

## TWO CONTRACTS FOR BOSCH

The Bosch Magneto Company announces that it has just signed contracts with two motorcycle manufacturers for the use of Bosch magnetos on their machines during the coming season. These concerns are the Aurora Automatic Machinery Company, Chicago, Ill., and the Iver Johnson's Arms & Cycle Works, Fitchburg, Mass.

# PURPOSE AND BENEFITS OF THE NATIONAL CYCLE SHOWS

THE value of the approaching motorcycle and bicycle shows, in New York and Chicago respectively, is realized more fully than ever before, if the number of applications for space is any criterion. Although application blanks have been out only a short time, manufacturers and jobbers throughout the country have already proven themselves in sympathy with the plan to conduct the New York as well as the Chicago Show as separate exhibitions, distinct and away from the automobile shows.

### A Good Business Proposition

The great majority of those who have exhibited at previous shows know that they have been vastly benefitted thereby and, in nine cases out of ten, such concerns are only too glad to have an opportunity to exhibit under the favorable conditions produced by the holding of separate cycle shows in the two largest cities in the country. We thoroughly believe that the conditions this year are absolutely ideal, that is, with reference to the time at which the shows are to be held and the close proximity of the two national exhibitions.

### Held At the Right Time

Experience has demonstrated that late Summer and the early Fall is the right time for holding motorcycle and bicycle shows. The success had with separate shows in Chicago has also proven that the best results are thus achieved, as against the former and unsatisfactory arrangement of the sandwiching of motorcycle and bicycle exhibits among those of the automobile manufacturers, by which the former were invariably overshadowed.

### Most Effective and Economical

The Motorcycle Manufacturers' Association has made its arrangements wisely, and not only does the Association deserve the support of its own and allied trades, but all who are interested in the manufacture and sale of motorcycles, bicycles, parts and accessories will find it entirely to their advantage to be properly represented at both Chicago and New York. There is no other way to get into close and intimate touch with so many dealers and other important buyers in so short a time, at so little expense, and under such satisfactory circumstances. The cycle shows, as they are conducted today, are strictly business propositions through which each exhibitor is given many times the value of his small investment.

### Crystallize Trade Sentiment

Then, again, the shows, by bringing together the trade leaders from every section of the country, serve the purpose of crystallizing trade sentiment. The exchange of ideas between men who seldom have an opportunity to meet one another except at the shows, is of itself a good enough reason for holding these annual exhibitions.

### Also Helps the Dealers

Finally, the shows are not conducted for profit, and what profit does accrue is intelligently used to promote the business and help dealers, all over the United States to solve their business problems. In other words, whatsoever funds remain after the expenses of the shows are paid, are devoted to business promotion and to aid dealers in increasing their profits.

### Get In Your Application Now

Applications should be made at once. Drop a line to Show Manager A. B. Coffman, Ohio Building, Toledo, O. We guarantee a prompt reply, and business-like service throughout. Get your application in early, before all the best spaces have been sold. Support the Shows for your own good, as well as that of the cycle industries.

## GOLDEN STATERS RIDE TO JOYLAND

### Procession of Machines Three Miles Long Rolls From Los Angeles to Ocean Beach.

LOS ANGELES, Cal., August 21.—"Come to the Capital of Joyland and you will have the time of your life." Thus spake the committee of the Los Angeles Motorcycle Club. And in answer to the call nearly a thousand motorcyclists journeyed on Sunday, August 15, to Ocean Park on their annual trip to the beach. The line of motorcycles as it rolled over the boulevard was over three miles long.

**Part of the Huge Crowd of Southern California Riders Who Participated in Run, Watching an Interesting Performance in the Bowl at Ocean Beach**

It was a great day. The motorcyclists took advantage of the fine bathing, the visiting concessions and the dancing; throughout the day the Ocean Park officials were very courteous in their treatment of the visitors and placed rest rooms at the disposal of the ladies.

All of the Los Angeles dealers and distributors were on hand, as well as a large representation of riders from every corner of Southern California. Out of town dealers who brought parties of riders with them were Fred Low, James Slaybaugh, Santa Barbara; M. G. Anlauf, Anaheim; Richmond & Jones, S. P. Hunsacker, Pomona; S. D. Palmater, Pasadena; P. A. Murphy, E. D. Maltby, Long Beach.

There was considerable excitement when three horses and two colts running wild joined the parade. Fortunately nobody was hurt, but a Thor rider was just saved from a spill by getting bumped by a horse on the "off" side a second after being shoved by one on the "nigh" side.

### HAWAIIAN MANAGER VISITS 'FRISCO

San Francisco, August 21.—E. K. Paris, general manager for E. O. Hall & Son, of Honolulu, Indian distributors for the Hawaiian Islands, is a visitor in San Francisco. He reports the motorcycle trade in the islands to be in a very satisfactory condition, with prospects favorable for a larger volume of business during the fall and winter months.

### STEINER IS BUSY

Los Angeles, Cal.—Louis Steiner, local Smith Motor Wheel agent, states that he has difficulty in keeping the little motor devices long enough to uncrate, so great is the demand for them. On July 23 he received a shipment of eight, and these were all gone before July 26. Nine more were due on July 28, but Steiner had to order as many more for delivery on that date in order to keep up with demands.

Steiner is now talking to the telegraph and telephone companies regarding the adaption of a Motor Wheel equipped bicycle to their long distance messenger services. He has placed a number with collectors for these and other companies already.

### TACOMA ENFORCES CUT-OUT LAW

Tacoma, Wash.—The City of Tacoma is strictly enforcing the muffler cutout ordinance, and in fining offenders from $15 up for each violation. The ordinance reads as follows: Every motorcycle using an internal combustion engine shall use an exhaust muffler and the same shall not be cut out or discontinued within the limits of any incorporated city within the State of Washington. A number of other cities in the State are enforcing this ordinance similarly.

### CHANGE HENDEE BRANCH STAFF

San Francisco, August 21.—A number of changes have recently taken place in the personnel of the sales force of the Hendee Manufacturing Sales Company of this city. B. Neutsadt, traveling salesman, has resigned his position and will leave soon for Honolulu, to engage in business with his father. A. J. McKinty, who has been in charge of the parts department, has severed his connection with the company to accept a position with the local branch of the Bosch Magneto Company, and has been succeeded by Chas. Meyer.

### HENDEE CLUB AT OUTING

San Francisco, August 21.—The second outing of the Hendee Outing Club took place last Sunday with a run to Warm Springs in Alameda County. There were six in the party—Doc Carlson, Chas. Meyer and M. Leavitt and three ladies. The trip was made in sidecar outfits. The outbound journey was made by way of San Jose, and the return through Oakland. A very enjoyable time is reported by the participants in the outing.

### RECENT SALES BY FINK

Stockton, Cal.—Among recent sales by J. Fink, Harley-Davidson distributor for San Joaquin and Sacramento Valley, were two 1915 twins to the State Forestry Department for ranger service, and a third to the Sonora Telephone Company for "trouble hunting." Practically all sales this season have been three-speed twins, only three singles having been disposed of in all.

### CYCLONE AGENCY MOVES

San Francisco, August 21.—Ludenclos & Henry, northern California distributors for Cyclone motorcycles, have moved from 1506 Market street, to 1592 on the same street, where they have larger and more centrally located quarters, with two street entrances. Dave Kinney, the Cyclone rider, is at the factory in St. Paul, awaiting the completion of a machine which he is to ride in the Labor day races at Chicago.

### MILLER GETS TESTIMONIAL

San Francisco, Cal.—The sales force of the local branch of the B. F. Goodrich Rubber Company, of Akron, O., has presented H. C. Miller, retiring manager, with an elaborate punch bowl and outfit as a testimonial of their esteem. Mr. Miller has been manager of Pacific Coast sales for the past five years and leaves on September 1 to take charge of the sales division of the Diamond and Goodrich brands at the Akron headquarters.

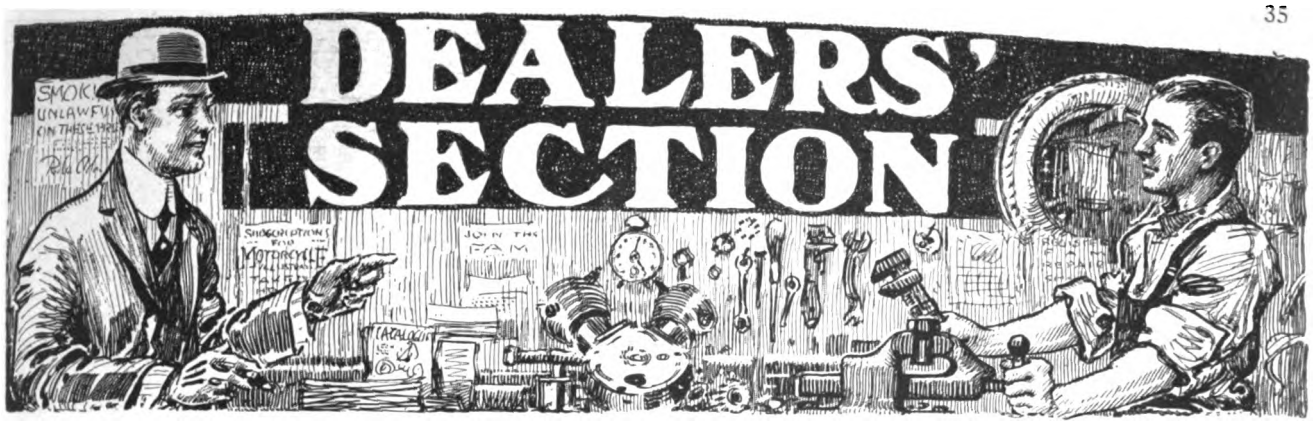
### CLUB ENDORSES C. F. GATES

Los Angeles, Cal.—At a meeting of the Los Angeles M. C. on August 10 a resolution was adopted endorsing the candidacy of Charles Fuller Gates for the position of F. A. M. Commissioner for southern California. A copy of the resolution has been forwarded to Vice-President C. S. Pixley, of the F. A. M.

### FAULKNER SELLS THREE

Oakland, Cal.—George A. Faulkner, Harley-Davidson distributor in this city, has just sold a 1915 model to the Pacific Gas & Electric Corporation, as well as one to the H. C. Capewell department store and a third to the Jackson Furniture & Carpet Establishment.

Digitized by Google



### FORD SELLS HIS SIXTY-FIFTH

White Plains, N. Y.—W. A. Ford, Harley-Davidson distributor for Westchester County, has sold his sixty-fifth Silent Gray Fellow for 1915. His second-hand sales have amounted to 12 twins and two singles of various makes. "Westchester motorcyclists do not take to the sidecar as much as they should," said Ford, in a recent interview, "and I have only disposed of about eight new cars so far." Ford is going to erect a new concrete headquarters for next season, in order to care for his steadily-growing motorcycle trade and his Westchester representation of two makes of automobile. He will retain his present quarters on Lexington avenue for some time to come.

### SALES PICKING UP, SAYS FRASER

San Francisco, Cal.—Jack Fraser, of the local branch of the Appeal Mfg. and Jobbing Company, Harley-Davidson distributors, states that sales are rapidly picking up in his territory and that many of the riders who put off buying new mounts until after harvest are getting them now. Some riders are holding back until the 1916 models appear, he says. The bicycle is selling nicely around Frisco, but there is a growing demand for the highest grades of wheels that has necessitated a number of re-orders, owing to the company not having sufficient on hand or on order. Fraser is strongly in favor of a machine which will be of lesser power and price than the present big twin, for 1916.

### A BOOMLET IN BUFFALO

Buffalo, N. Y., Aug. 13.—This has been one of the most quiet motorcycle season's in many a year for the local dealers, weather conditions having been extremely unfavorable. But despite this state of affairs, Neal, Clark & Neal, the Bison City Indian agents claim that a boomlet has made its appearance at their doors. They assert that the last three weeks have been extremely good. Every new machine they had in stock was disposed of in addition to the large number of second handed machines. They also report that during the past week they sold nine sidecars.

### LAYTON VISITS NEW YORK

H. B. Layton, Indian dealer from Spartansburg, S. C., is visiting New York City on a business trip this week. He reports business conditions in the South as somewhat slow, but looks forward to a very fine season for 1916, in view of the increasing popularity of the pastime. This popularity has been fostered by Layton and H. Gibson, the Spartansburg Harley-Davidson agent, by means of runs and a race meet given recently. At the meet, a crowd of 1,500 saw the races, and sales were made as a result of the competition. Spartansburg, says Layton, has 20,000 inhabitants, most of whom are colored people.

### TO SHOW AT STATE FAIR

Columbus, O.—The Belt-Barr Motor Company, Indian distributors for Central Ohio, will have a large display at the annual Ohio State Fair, to be held at the Columbus Fair Grounds, during the week of August 30. The display will be in Machinery Hall. It will consist of a number of solo machines and several sidecar combinations.

# DEALERS' SECTION

### McKAIG ON VACATION RIDE

Springfield, O.—James H. McKaig, Indian dealer in this city, is now in the White Mountains of New England with Charles T. Henderson, on a summer vacation. The pair stopped over in Springfield, Mass., to visit the Hendee factory on their way to Crawford Notch, N. H.

McKaig and his riding partner covered 803 miles in three days, leaving here on Sunday and arriving in Springfield, Mass., on Wednesday. They expect to go 2,500 miles before coming home, taking in Boston and Portland, Me., on the way.

### AFTER MOTOR WHEEL RECORD

Lou Guterman, of the Wm. H. Cahn Company, Eastern distributors for the Smith Motor Wheel, announces his intention to establish a New York-to-Chicago motor wheel record. Guterman will leave New York some time in September, with the object of reaching Chicago at the time of the opening of the National Motorcycle Show. This will be the first attempt to make so long a trip with a Smith Motor Wheel, and Guterman, who expects to ride day and night, hopes to cover the distance between the two cities in about a week.

### IN PROBATION OFFICER'S SERVICE

Oscar Brant, manager of the motorcycle department of the New York Sporting Goods, Indian distributors in New York City, has just sold a twin model to the Jewish "Big Brothers" Association. This machine is to be used by a probation officer to round up juvenile delinquents and to carry the officer to court, etc. The officer who uses the mount states that he is already covering five times as much territory as when using street-cars and the subway and that his work has been reduced to a minimum.

### SOLD THIRD TO HIGHWAY DEPT.

Lodi, Cal.—Graffigna Brothers, local Harley-Davidson agents, have just sold a third three-speed twin to the San Joaquin county highway department. This machine, like the two others, will be used by road patrols. All sales by the Graffignas so far have been three-speed twin models, and the big farmer population in San Joaquin county has been buying motorcycles of this type in considerable numbers. The bicycle sales from Graffigna agency, at 108 North Sacramento street, have been greater up to the present week in 1915 than in the corresponding period in 1914. The Dayton and other high-grade bicycles are regularly carried.

### RETURN FROM LONG TRIP

Paterson, N. J.—Roy Havenstrite, of the W. Edw. McDougall Co., Harley-Davidson distributors, recently returned from a 935-mile trip through Pennsylvania, Maryland and Virginia, taken in company with Thomas Lee. The two riders on their three-speed twins covered the distance in seven days, having stopped over at Lee's home town in Kent's Island, Md., for three days on the way. They were gone ten days in all.

### ALASKAN MOTOR WHEEL DEALER

Seattle, Wash., August 11.—Another Alaskan dealer has been added to the Smith Motor Wheel list. Thomas Keel, Fairbanks, Alaska, has been appointed agent there by Ellis Bros., Seattle, Wash., and the initial order was for four machines.

### BERRYMAN TAKES ON CYCLONE

Washington, August 16.—Local agency for the Cyclone has been secured by John S. Berryman, a pioneer Washington dealer, and that machine will be handled in conjunction with the Pope line which Berryman has carried for several months.

### BOYD & WILLIAMS MOVE

Denver, Colo.—Boyd & Williams, local Indian representatives, have moved from 1252 Broadway to 1313 Broadway. The partners have better facilities for handling trade and have more storage space in the present location.

### VETERAN EXCELSIOR AGENT

Modesto, Cal.—C. R. Weeks, operating the Weeks Cyclery at 921 Tenth street, has just celebrated his sixth anniversary as representative of the Excelsior motorcycle in Modesto. He has had a large electric sign fitted in front of his building and finds the publicity thus obtained to be a considerable factor in increasing his business. In addition to his motorcycle representation, Weeks has the agency for the Pope line of bicycles. His leading bicycle brand at present is the Clipper, retailing for $30.

### NOW GODFREY & GILMORE

Bakersfield, Cal.—B. R. Gilmore has purchased the motorcycle business of Godfrey & Baer, in this city, and has changed the firm name to Godfrey & Gilmore. The firm will continue to sell the Excelsior, and has added the Pope, Eureka and Excelsior line of bicycles. Gilmore's old store at Taft, Cal., will be under the management of H. E. Gerner.

## Describing Two of Portland's Highly P

PORTLAND, Ore.—Among the hustling shops in the Northwest are those of the F. P. Keenan Company, at 190 Fourth street, and the Motor Cycle Repair Shop, at 89 Broadway, this city. The Keenan company, whose personnel is seen in front of the doorway at the left, is agent for Pope motorcycles, as well as holding the distributing agency for the Pope line of bicycles for the entire Northwest. As in all Pacific Coast stores of the first class, a full line of both motorcycle and bicycle accessories and sundries is kept on hand at all times.

The Keenan establishment is the headquarters of Pope enthusiasts in Portland and the surrounding parts of Multonomah and Washington Counties. Bicycling is fostered as well as motorcycling and every assistance is given to patrons as regards touring. Maps and detailed route books are provided and the latest road information is posted.

The Motor Cycle Repair Shop, of which Charles W. Howard is the proprietor, devotes its energies mostly to

# DEALERS' SECTION

### SAVANNAH TRADE CONDITIONS

Savannah, Ga.—Much enthusiasm among motorcycle dealers has arisen by reason of the statement of the bankers of the South that they will support and finance farmers on their cotton crops this year. The decision made by the financial men was arrived at during the recent Bankers' Convention at Galveston, Tex.

As a result of this decision, farmers who have had to make an uphill fight of it will now be looked after. It is figured that money will be plentiful, but while the cotton output will be reduced, the prices per bale will be larger than in 1914. Motorcycle dealers in Savannah and other cotton centers will benefit accordingly.

The Balfour Hardware Company, Indian representatives in Savannah, have sold 30 machines so far this season, as compared with 65 in 1914. R. R. Oakman, an Indian agent, announces that he will retire at the end of this season. He has sold 15 machines only. J. L. Hetzel, Excelsior agent, has disposed of six, as compared with 25 in 1914, while Cleary, who handles the Thor, has only sold about half-a-dozen twins and singles. There is a good chance for a live man to take up the Indian for 1916, trade men say. Rumor has it that "Bobby" Walthour, the crack pedal cyclist, may take over the Savannah Wigwam representation for the coming season.

### PAULSEN IS ACTIVE

Tacoma, Wash.—T. Paulsen, who handles the Henderson and Thor in Tacoma, is planning Sunday runs when not busy in the shop or demonstrating. The runs laid out by Paulsen are always well attended, and are characterized by the large number of Hendersons and Thors spinning along the road in company.

### SMITH MOTOR WHEEL AGENCY

Los Angeles, Cal.—Located at the junction of Main street and Broadway, where the motorcycle and automobile sections begin to mingle, the Smith Motor Wheel is housed in very attractive quarters since its removal from farther south. J. A. Benson, who is distributor for southern California, has built up a good list of agents. Louis Steiner is in charge of the local end of the business and in addition to the Smith Motor Wheel carries a line of bicycles and accessories.

### WERNER HAS FINE SEASON

Passaic, N. J.—Joseph B. Werner, local Harley-Davidson representative, has sold fifteen of the Silent Gray Fellows so far this season. He also disposed of nine separate sidecar combinations. Werner is well pleased with his 1915 showing, which is far in excess of that made last season.

### MADE SEVEN COMMERCIAL SALES

San Francisco, Cal.—Maggini & Perkins, who handle the Harley-Davidson in this city, have just sold sidevan outfits to the Sierra Meat Market, the Pig'n Whistle Candy Store and the New Phoenix Meat Market. They have also delivered four three-speed twins to the Pacific Telephone & Telegraph Company, for use in the trouble department.

### NEW ZEALAND DEALER TO VISIT U. S.

E. G. Lees, proprietor of the Nonpareil Cycle & Motor Company, of Palmerston North, New Zealand, will be in this country in the early part of September. His object is to secure agencies for American goods for New Zealand consumption, in the motorcycle and bicycle lines. Mr. Lees will visit the different motorcycle and bicycle shows, as well as make personal calls at a number of factories. He can be addressed care of Messrs. Thomsen & Co., 90 Wall street, New York, after August 21.

### COOK WITH AUTO FIRM

Buffalo, N. Y., August 20.—A. D. Cook, formerly with Neal, Clark & Neal, has resigned his position with H. L. Peters, the Bison City Harley-Davidson agents, to accept a position with the Ford Motor Car Company as salesman.

### KIPP IN DETROIT

Detroit, Mich.—Herb Kipp, Indian distributor in Toronto, Can., was a recent visitor in Detroit and called at the Detroit store of the Indian. Mr. Kipp, after taking in the Detroit sights, left at ten o'clock one Sunday morning and arrived in Toronto at six o'clock, in time for supper, a distance more than 300 miles.

### PICNIC SET FOR AUGUST 29

Louisville, Ky.—Kline Brothers, Harley-Davidson agents for this city, announce that the 1915 Harley picnic will be held on Sunday, August 29 at the Zehnder farm near St. Mathews. It is expected that 150 riders will take part in the picnic. Baseball and other sports are to be held.

## ...perous Sales and Repair Establishments

...repair work. Located on North Broadway, one of the thoroughfares on the principal touring routes in the Northwest, the proprietor has found the carrying of gasoline and oil to be most profitable, and the sidewalk installation shown in the photograph on the right is kept busy during the touring season supplying the needs of motor vehicles of all kinds. Oil in any quantity is carried, and thus the needs of automobilists, motor truck man or motorcyclist can be filled at once.

The most improved machines and small tools, combined with quick and accurate work, has set up a reputation for this shop which has brought plenty of custom, not only in Portland, but from the smaller towns in the surrounding counties. The shop employees are picked men, familiar with all models of motorcycles and consequently, the work is of the highest class. "It pays to keep the right sort of men in our employ," says Proprietor Howard, "as our books show at the end of each season. We made a reputation and we are going to live up to it."

# Of a Personal Flavor

O. P. Hand has been appointed director of publicity for the Burd High Compression Ring Company, makers of Burd piston rings, at Rockford, Ill. Mr. Hand was formerly advertising manager for a large Minneapolis hardware concern.

Cliff Knoble has been appointed assistant advertising manager for the Hyatt Roller Bearing Company, of Detroit, Mich. He was formerly with the National Cash Register Company.

Ralph H. Upson, of the Goodyear Tire & Rubber Company, of Akron, O., has been honored with a place on the Advisory Committee of the Naval Board. Upson won the international balloon race which started from Paris in 1913, and has since given much time to devices for the application of airships and aeroplanes in warfare.

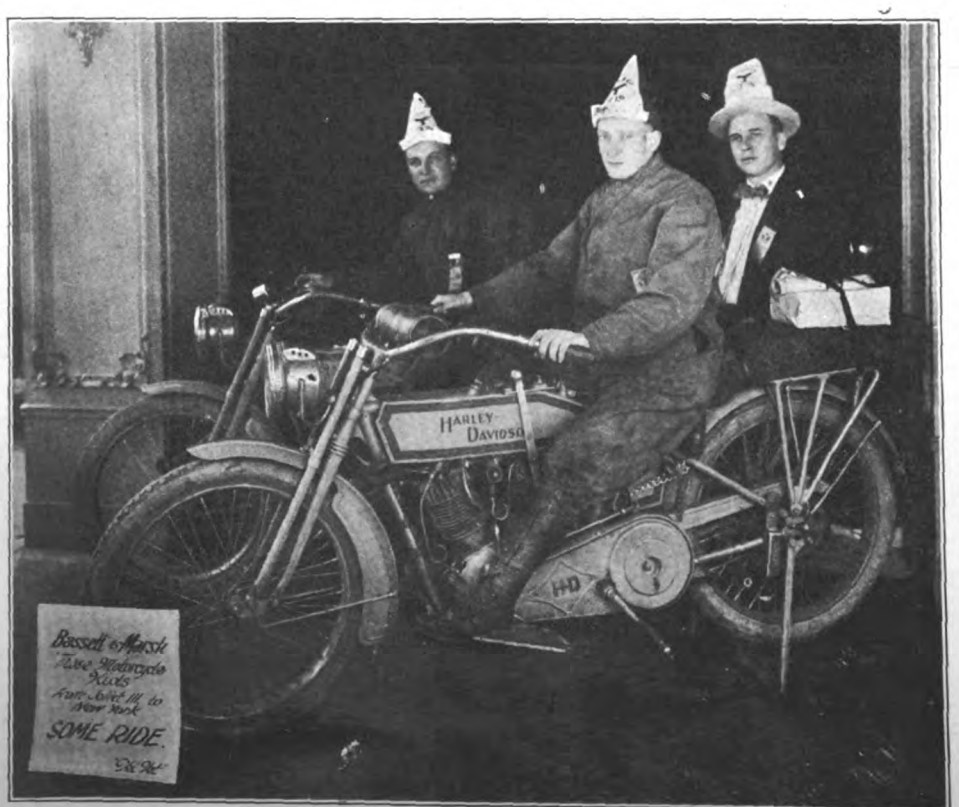
A. H. Stuber, foreign traveling representative for the Motor Wheel Division of the A. O. Smith Company, is now in the West Indies. He will cover the islands and then go through Central America.

Walter Davidson, president of the Harley-Davidson Motor Company, of Milwaukee, Wis., until recently was about the only one of the Harley-Davidson family who did not care much about fishing or hunting. When he returned from California and announced that he had caught a 32-pound yellow tail off the Catalinas, his remark was received with smiles by the other members of the clan. It was not until the trophy, ready mounted, was hung up above Mr. Davidson's desk that his story was believed. The yellow tail measures 46 inches in length, and Prexy Davison's reputation as a fisherman is now firmly established.

William S. Harley, chief engineer of the Harley-Davidson Motor Company, of Milwaukee, Wis., recently demonstrated that breaking clay-pigeons was another sport at which he was in the first rank. During the shoot of the Parker Gun Club at Milwaukee, Mr. Harley was high gun, with 92 out of a possible 100. He thus showed that he was as handy at bringing down Blue Rocks as live ducks, for his gunning trips always mean a big bag of wildfowl.

Stuart S. Hostetter has resigned his position as head sales correspondent with the Prest-O-Lite Company, of Indianapolis, Ind., and affiliated himself with Hurst & Company, of that city, as manager of the sales and advertising department.

## RODE TO NATIONAL DISPLAY MEN'S CONVENTION



Bassett and Marsh, Advertising Men, Who Came On Their Machines From Joliet, Ill., to New York to Participate in Big Gathering of Publicity Specialists

## FAVORS EARLY SHOW DATES

(Continued from page 24)

ers' Motorcycle and Bicycle Show as early as possible. To our way of thinking the most suitable time for this show is between active seasons, and, inasmuch as considerable solicitation of spring orders during the months of October and November takes place, it would be better to have the show before such solicitation began. The month of September is about as quiet a time of the year as can be had, with the exception of the week between Christmas and New Year's, and on account of the undesirability of this latter date we do not favor that.

The extremely seasonable weather in September would be an additional advantage. The writer recalls with distinct disgust the weather which attended the show last year in October, and while October is usually a beautiful month, yet it is beyond the realm of certainties in the matter of weather.

With best regards, we are,

Very truly yours.

(Signed) THE TOLEDO RUBBER CO.,
F. A. Alford, Mgr.,
Motorcycle and Bicycle Dept.

## MINIATURE DESERT IN WINDOW

Los Angeles, Cal.—When Wells Bennett got a hunch for a desert window featuring the Excelsior his "think tank" produced a real idea. He beat it out into the wilderness and gathered a bunch of three or four varieties of cactus and greasewood, bought a load of sand, and got in with a shovel and fixed her up right. Then Willis A. Rowe, the Excelsior agent at San Fernando, came across with a bunch of rattlesnakes and gopher snakes that made it the real thing. The result has been a crowded sidewalk in front of Girton-Hoffer's window.

## TOOK NINE FOR ALASKA

Seattle, Wash.—Ellis Brothers, distributing the Smith Motor Wheel in this city and vicinity, recently landed a nice order when Thomas Keel, of Fairbanks, took nine of the bicycle boosters to be shipped to Alaska on August 26. The brothers operate the "Daylight Shop" at 1030 Jackson street, this city, handling the Dayton and Reading Standard motorcycles, as well as the Dayton bicycle.

## AGENCY FOR FIVE CITIES

Modesto, Cal.—C. D. Johnson and E. E. Parsons have taken the agency for the Harley-Davidson for Modesto, Empire, Oakdale, Salida and Tracy. They have opened the Harley-Davidson Cyclery at 914 Commercial Way as their headquarters. Their latest sale was a three-speed twin to J. T. Towson, Stanislaus county motor patrolman.

## PETERSON SELLS FIVE

Tacoma, Wash.—E. E. Peterson, representing the Excelsior in this city, has all he can do to keep up with the repair work coming to him. His sales of Excelsior models numbered five during the first week in August.

Digitized by Google

# Ohrt World's Amateur Champion

NEWARK, N. J., August 23.—Hans Ohrt, the blond-haired rider from San Francisco and holder of the national amateur cycling championship, annexed the World's Amateur Championship here on Sunday afternoon by decisively beating Arthur Spencer, of Toronto, and Frank J. Whitney, a Newark boy who rides for the New York Athletic Club. The race was at one mile and Ohrt was the victor by about two lengths.

Ohrt rides for the Olympic Club, of San Francisco, and is but 20 years old. When Ohrt swept by the grandstand a winner he received a great ovation. He was handed a large bouquet of flowers and draped with a silk scarf.

Whitney made his bid to win the race a lap and one-half from home and went into the last lap of the race far in the lead, but by the time he reached the middle of the back stretch, Ohrt drew up on him and with Spencer on his wheel they passed the Newark boy. Spencer gave Ohrt quite a hard fight for the last half lap, but the cyclist from the "Golden Gate" pushed his pedals at top speed and shot down the home stretch a winner.

In the first semi-final, Ohrt eliminated Cobert and Weimar. In the second Spencer was a winner over Krushell and Lang, while in the third Whitney won out over Taylor and Grimm. It was Taylor who pressed Ohrt for first place in the national championship and it came as a great surprise to see him eliminated in the semi-finals. Eddie Kane and Walter White, two of the best amateurs at the local track, were eliminated in their respective heats.

The trial heats of the professional world's championship were also contested and were ridden at a half-mile with practically all of the stars qualifying. The finals will be ridden on Sunday afternoon when the world's professional champion will be determined. Those who qualified were Frank L. Kramer and Harry Kaiser, who will represent America. Alfred Goullet, Alfred Grenda, Reginald McNamara and Robert E. Spears will ride for Australia. Francesco Verri and Cesar Moretti will try to bring the Italian colors to the front, while Iver Lawson will be the representative of Sweden. The only "stars" to be eliminated in the trial heats were Jackie Clark, Frank Cavanagh, Joe Fogler, Thorwald Ellegaard and Marcel Dupuy.

Iver Lawson and Frank Cavanagh celebrated their return from Chicago by winning the one-mile team match race from Dupuy and Egg as well as Moretti and Verri. The cyclists who have just returned from the Windy City accomplished the trick in two straight heats, Lawson doing the sprinting each time while Cavanagh was there to give him a great "pull."

Bob Spears retained his Brassard title, defeating Francesco Verri, Italy, in the one-mile match race which carries with it a reward of $50. Spears went into the last lap leading and looked like an easy winner, but, taking the first turn, Verri got started and gave Bob a hard fight right up to the left pole on the back stretch. Then once more Spears drew away from the Italian rider, only to have to battle with him again in the homestretch, but the Australian displayed the greater amount of speed and won out. The summaries:

Hans Ohrt

World's Championship (professional).—Heats at half-mile: First heat won by Robert E. Spears, Australia; Jackie Clark, Newark, second. Time, 1m. 22⅖s. Second heat won by Reginald McNamara, Australia; John Schlee, Newark, second. Time, 1m. 11⅗s. Third heat won by Frank L. Kramer, East Orange; William Hanley, San Francisco, second. Time, 1m. 20⅘s. Fourth heat won by Francesco Verri, Italy; George Cameron, New York, second. Time, 1m. 16⅕s. Fifth heat won by Alfred Grenda, Australia; Fred Hill, Boston, second. Time, 58⅘s. Sixth heat won by Harry Kaiser, New York; Cesar Moretti, Italy, second. Time 1m. 5⅗s. Seventh heat won by Alfred Goulett, Australia; Raymond Eaton, Elizabeth, second. Time 1m. 15⅖s. Eighth heat won by Iver Lawson, Salt Lake City; Donald McDougall, Newark, second. Time, 1m. 5⅘s. Repechage heat won by Cesar Moretti, Italy; Fred Hill, Boston, second. Time 1m. 1⅘s.

World's Championship (amateur).—Heats at half-mile final at one mile: Won by Hans Ohrt, San Francisco; Arthur Spencer, Toronto, second; Frank J. Whitney, Newark, third. Time, 2m. 35⅕s. Last eighth-mile 12⅗s. First semi-final won by Ohrt. Time, 1m. 13s. Second semi-final won by Spencer. Time, 1m. 26⅘s. Third semi-final won by Whitney. Time, 1m. 28s.

One-Mile Tandem (professional).—Won by Alfred Grenda, Australia and Fred Hill, Boston; Menus Bedell, Lynbrook, L. I.; and William Cobrun, Newark, second; George Cameron, New York and William Hanley, San Francisco, third; Robert Spears, Australia and Reginald McNamara, Australia, fourth; Jacob Magin, Newark, and Norman Hansen, Denmark, fifth. Time, 2m. 32s.

Two-Mile Invitation (amateur).—Won by Hans Ohrt, San Francisco; Fred Taylor, Newark, second; Arthur Spencer, Toronto, third; Edward Kane, Newark, fourth. Time, 4m. 53⅗s.

Three-Mile Open (professional).—Won by Reginald McNamara, Australia; Alfred Grenda, Australia, second; Frank Corry, Australia, third; Robert Spears, Australia, fourth; William Hanley, San Francisco, fifth. Time, 5m. 59⅗s.

The Brassard at one mile (professional).—Robert Spears, Australia, versus Francesco Verri, Italy. Won by Spears. Time, 2m. 57⅕s. Last eighth-mile, 12⅕s.

Miss-and-out (professional).—Won by George Cameron, New York; William Hanley, San Francisco, second; Raymond Eaton, Elizabeth, third; Jacob Magin, Newark, fourth; Norman Hansen, Denmark, fifth. Time, 4m. 50s. Distance, two miles, two laps.

One-Mile Team Match (professional).—Won by Iver Lawson, Salt Lake City, and Frank Cavanagh, Newark; Marcel Dupuy, France, and Oscar Egg, Switzerland, second; Cesar Moretti, Italy, and Francesco Verri, Italy, third; First heat won by Lawson and Cavanagh. Time, 2m, 18⅗s. Second heat won by Lawson and Cavanagh. Time, 2m. 33⅗s.

One-Mile Invitation Handicap (amateur).—Won by Jerry Nunsiata, Empire City Wheelmen (30 yards); Edward Byron, Australia, (scratch), second; Alfred Baker, Nutley (35 yards), third; Eric Paetz, Germany, (25 yards), fourth. Time, 2m. 1s.

---

Newark, N. . J., August 20.—Frank Kramer is today only two points behind Alfred Goullet in the race for the American bike championship.

Foul riding and rough riding made Kramer's task at the Newark Velodrome last night a hard one. In the semi-final, in which Goullet was eliminated by the champion, the Australian ran Kramer off the track on the last lap, which gave him a lead of ten lengths.

## Italian Volunteer Cyclists Off to Front

ROME, Italy, August 15.—Quite a number of contingents of volunteer bicyclists are leaving this city at regular intervals for the Austro-Italian front. The cyclists are paraded before the headquarters of the Ministry of War, and there subscribe to the oath of service, afterward being reviewed by one of the general staff. Upon the completion of the ceremony, they ride off to the railway station, or take to one of the main highways leading toward Siena. The riders are in full campaign kit—gray uniform, with black, stiff leggins, regulation infantry rifle and cartridge belt arranged to take clips. The haversack is carried from the shoulders, while the pack is divided along the handlebars and under the top tube of the cycle. Goggles are worn by all.

These volunteers receive a rousing send-off from the town-people, being saluted with "Evvivas" and showered with flowers. They will serve as despatch bearers between brigade and division headquarters in small units, or as mounted infantry in large bodies. Many of the volunteers are veteran amateur bicyclists, while others are professionals, but one and all are offering their services to their country with the full knowledge of what they are doing.

The bicycles used by the volunteers are of British and Italian make, and are rigid in the frame, as compared with the regulation army mount, with its folding construction. The folding cycles, allotted to the Bersaglieri and line infantry cycle detachments at the beginning of the war, are all in service, and only the factory-built machines are now available. Each of the mounts furnished to the volunteers is fitted with two hand operated brakes, one by cable to a drum on the rear wheel, and the other direct to shoes on each side of the front rim. Coaster brakes are unknown.

### TERMINAL WHEELMEN ENTERTAIN

Stockton, Cal.—Over 200 riders from the San Francisco Bay district, including wheelmen from San Francisco, Oakland, San Jose and the northern district around Sacramento, as well as from the San Joaquin Valley section, attended the watermelon feast given by the Terminal City Wheelmen of Stockton. More than 200 melons disappeared in short order and everybody had a big time.

The Terminal City Wheelmen are now conducting monthly road race meets and making a success of them. The club officers: Frank Klotz, president; J. Brady, vice-president; Walter Jones, captain; George Gorham, treasurer; William Thompson, secretary.

# AMATEUR TEAM RACE EXCITING

### Hoffman and Munson Take Simon Pure Ten-Mile—Drobach Wins Champ. Event

CHICAGO, Ill., August 23.—Herman Hoffman and Myron Monson, the first a member of the Chicago Cycling club and the second a member of the Conquer Athletic Club, won the ten-mile amateur team race at the Riverview Velodrome last night. After the finish was over it was announced that Egisto Davini and P. Guidotti, the Italo-American Cycling Club team, had won the race, while Hoffman and Monson were not placed. The rules called for no change in the last mile, and Davini and Guidotti had broken that rule, and upon protest of other riders they were disqualified. Hoffman and Monson were then placed first, as they had finished second in the final sprint, their scorer claiming that they were on even terms with the leaders. Ernest Kockler and Bert Nelson, the Riverview Cycling Club team, ran second, and Charles Minnetti and Ed Kays, also from the Riverview Club, were the third team to finish. Twelve teams started and all but one finished.

Peter Drobach, the South Boston paced star, took a hand at sprinting last night and captured the Western championship for the professionals at two-thirds mile. Martin Ryan finished second; Charles Piercey was the third man to cross the tape, and Lloyd Thomas finished fourth. The standing in the race for the Western title is as follows: Thomas, 9 points; Piercey, 7 points; Ryan, 6 points; Lawson, 6 points; Cavanagh, 6 points; Drobach, 5 points; Walker, 3 points; Madden, 2 points.

The third-mile handicap for the professionals saw Eddie Root, the Boston Swede, come to life as a sprinter. Root won from Floyd Krebs, Steve Senhouse, Albert Krebs and Bob Diefenbacher in the order named. The time was 36 seconds. Charles Piercey disposed of Gus Wohlrab, the Jersey City rider, in a mixed match race, taking the sprint heat at two-thirds mile and the pursuit race at a mile. John Bedell, the Long Islander, who divides his time between sprinting and following the motors, defeated Norman Anderson, the Dane, in two heats of a five-mile motor-paced race in rather handy fashion. Summary:

Two-third-mile Western championship, professional—Won by Peter Drobach, South Boston; second, Martin Ryan, Newark; third, Charles Piercey, Australia; fourth, Lloyd Thomas, San Francisco. Time, 2:14.

One-third mile handicap, professional—Won by Eddie Root, Boston, 25 yards; second, Floyd Krebs, Newark, 35 yards; third, Steve Senhouse, Australia, 55 yards; fourth, Albert Crebs, Salt Lake City, 50 yards. Time, 36 seconds.

Mixed match race, professional—Won by Charles Piercey, Australia; second, Gus Wohlrab, Jersey City. Piercey won sprint heat at two-thirds mile in 2:13 2-5 and one-mile pursuit race in 2:06.

Five-mile motor-paced race, professional—Won by John Bedell, Long Island; second, Norman Anderson, Denmark. Bedell won first and second heats. Time, 7:02 and 7:01 2-5.

Ten-mile team race, amateur—Won by Herman Hoffman, Chicago, C. C., and Myron Monson, Conquer A. C.; second, Ernest Kockler and Bert Nelson, Riverview C. C.; third, Charles Minnetti and Ed Kays, Riverview C. C.; fourth, Willie Kell and Louis Kuehl, Chicago C. C.

# WILEY TRAVELS IN 50-MILE RACE

## Beats Out Seres After Losing Seven Laps by Puncture in Motor-Paced Event

BOSTON, Mass., August 18.—George Wiley, of Syracuse, demonstrated his fitness as titleholder for the American middle distance championship tonight by beating out Georges Seres by four and a half laps in the fifty-mile motor-paced event, after losing seven laps on a puncture. The crowd went wild over Wiley's riding in this race, and many said that the riding on all sides was the best performance of the season behind motors. The third entrant in the race, Clarence Carman, finished three miles behind Wiley. He came through in spite of a leg bandaged from ankle to hip, because of his fall last Saturday night.

Victor Linart, the fourth man in the race, was thrown by a puncture in the thirteenth mile, but remounted and started to ride out. He was unable to finish owing to his bruises, however, and soon retired.

Seres gave his best exhibition behind pace on this occasion. In the seventh mile he jumped away from Wiley and held the lead until the twenty-first, when the Syracuse flier pulled up on the bank and passed him, but dropped back when his rear tire punctured. This cost him seven laps.

Carman had a puncture and was miles behind and Linart retired on account of his bruises, and it was up to Wiley to regain lost ground and beat the Frenchman. The fun started in the twenty-fifth mile. Seres fought Wiley off for five laps, losing pace, and then jumping up to it until it got too hot, and he fell back. When he slowed down Wiley took the opportunity to regain three of his laps, and did not let up until, in ten miles more of riding, he came into the stretch on even terms with Seres.

Again Seres fought for five laps to hold the lead, but the American champion let out another burst of speed that shook his opponent, and then to the finish it was easy sailing. Time, 1:09:08 1-5.

In the two-mile professional lap race, Pat Hogan took first money again for the fourth time in two weeks. L. C. Rollins, of Everett, was second, with Willie Turville, of Revere, third. Warren Holbrook, of South Boston, won the half-mile professional from the 85-yard mark, with Hugh McPartland, of Boston (65 yards), second, and Dennis Connolly, of Everett (50 yards), third. Tim Sullivan, of New Haven, and Tom Connolly, of Everett, tied for fourth place in their first appearance in professional racing.

The summaries:

Five-mile open amateur race—Won by Fred McKenzie, Revere; John Barry, Cambridge, second; Elmer Duncan, Everett, third; John Fardig, Orient Heights, fourth. Time, 11:43 1-5.

Half-mile professional handicap race—Won by Warren Holbrook, South Boston (85 yards); Hugh MacPartland, Boston (65 yards), second; Dennis Connolly, Everett (50 yards), third; Hardy Jackson, Revere (80 yards), fourth. Time, 55 4-5.

Mile invitation amateur race—Won by Kenneth Plummer, Revere; Fred Hansen, Revere, and Lewis Hill, Revere, two laps each; Mike Barber, Brighton, and Fred McKenzie, Revere, one lap each. Time, 2:13 4-5.

Two-mile professional lap race—Won by Pat Logan, South Boston, 51 points; L. C. Rollins, Everett, 40 points, second; Willie Turville, Revere, 32 points, third; Tim Sullivan, New Haven, and Tom Connolly, Everett, tied for fourth. Time, 4:6 1-5.

Fifty-mile motor-paced race—Won by George Wiley, Syracuse; Georges Seres, Paris, second.

"IN TIME OF PEACE PREPARE FOR WAR!" SAYS BOB LAWSON

**The Veteran Cyclist at Santa Monica, Cal. He Will Soon Complete His Trip Through Southern California and Proceed to New York**

## N. E. W. Ready for Ten Mile Road Race

THE annual ten-mile handicap road race of the New England Wheelmen of New York will be held over the Floral Park, L. I., course, on Sunday, September 12. In case of rain the race will be run on the following Sunday. There will be thirty place prizes, headed by an Iver Johnson racer and including seven pairs of tires. Five time prizes have been hung up, the feature being a Victor phonograph. The total value of the prizes is said to be $300.

All entrants will be handicapped by the official committee of the Interclub Amateur Cycle Road Racing League. Entries will close with D. J. McIntyre, chairman of the racing committee, 3759 Barnes avenue, Bronx, N. Y., on September 7, at eight o'clock in the evening. The race starts promptly at 10 a. m. on September 12, and no post entries will be received. To the club having the largest number of entries a handsome silver loving cup will be presented.

**New England Wheelmen on a Sunday Cycle Run**

### WELLMAN IS BANKRUPT

Sheepshead Bay, N. Y., August 23.—William H. Wellman, the manager-owner of the Sheepshead Bay Velodrome, who recently severed his relations with the Cycle Racing Association because of financial difficulties, has filed a petition in voluntary bankruptcy. No plans have yet been announced as to the disposition of the Velodrome.

### TAKE ON MOTOR WHEEL

Dinuba, Cal.—Vetta Brothers, motorcycle and bicycle agents in this city, have taken the Smith Motor Wheel representation for Dinuba and vicinity. They report an increase in the sale of bicycles, both with and without the motor attachment.

# THOMAS AHEAD IN WESTERN SERIES

## Battle for the Western Championship Close—Kockler Still Capturing Races

CHICAGO, August 22.—Eddie Madden, the fleet Newarker, handed Gordon Walker, the Australian, a fine surprise package in their match race at a half-mile on Saturday night at the Riverview Velodrome. Riding from the rear in the first heat Madden jumped by the Antipodean in the last lap and was never headed, winning by three lengths. In the second heat Madden again forced Walker to the front. In this heat Madden waited until the stretch and nipped Walker at the tape.

Charlie Piercey, another native of the Antipodes, captured the two-mile Western championship for the professionals, beating Lloyd Thomas, Martin Ryan and Gordon Walker in the rush to the tape. The standing at the present time is as follows: Thomas, 8 points; Cavanagh and Lawson, 6 points each; Piercey, 5 points; Ryan and Walker, 3 points each; Madden, 2 points.

The professional handicap at one-third-mile went to Ned Young, the Salt Lake City rider who became a father during the week—a boy, thank you—and second place went to Bob Diefenbacher, both having 50 yards. Steve Senhouse, the Australian, copped third place and Albert Crebs was placed fourth. In the ten-mile handicap motor-paced race, in which Eddie Root, the Boston Swede, allowed Norman Anderson, the Dane, a half-mile handicap, the former won by gaining back the distance and then leading the Dane by fifty yards.

Ernest Kockler, the star of the Riverview Cycling club, won the "miss and out" for the amateurs, while Olaf Lodal, the Dane, won the half-mile handicap for the same class. Summary:

Half-mile handicap, amateur—Won by Olaf Lodal, Danish-American A. C., 70 yards; second, C. Schroeder, unattached, 85 yards; third, H. Hendrickson, unattached, 95 yards; fourth, George Klasen, Danish-American A. C., 35 yards. Time, 56⅘ seconds.

Miss and out, amateur—Won by Ernest Kockler, Riverview C. C.; second, Willie Wohlrab, Jersey City; third, Fred Samlow, unattached; fourth, Andrew Andresen, Conquer A. C. Time, 3:34. Distance, 1⅔ miles.

One-third-mile handicap, professional—Won by Ned Young, Salt Lake City, 50 yards; second, Bob Diefenbacher, San Jose, 50 yards; third, Steve Senhouse, Australia, 60 yards; fourth, Albert Crebs, Salt Lake City, 45 yards. Time, 35 seconds.

Two-mile Western championship, professional—Won by Charles Piercey, Australia; second, Lloyd Thomas, San Francisco; third, Martin Ryan, Newark; fourth, Gordon Walker, Australia. Time, 3:58.

Half-mile match race, professional—Eddie Madden, Newark, vs. Gordon Walker, Australia. Won by Madden in straight heats. Times, 1:45 and 2:20.

Ten-mile handicap motor-paced race—Won by Eddie Root, Boston, scratch; second, Norman Anderson, Denmark, half-mile. Time, 13:31.

### SHERMAN LEADS IN CRESCENT CHAMPIONSHIP RACES

Baltimore, Md., August 23.—Welby Sherman was again the victor in the twenty-five-mile club championship race of the Crescent Bicycle Club, Sunday, August 22, Fred M. Sanborn finishing second, Langdon M. Sanborn third, Walter Doersch fourth and Wm. H. McAvoy fifth. The race after the first two miles resolved itself into a three-cornered duel between the first three men, L. M. Sanborn, however, being put out of the battle for first place by a puncture nine miles from the start.

Sherman and F. M. Sanborn then continued together to a point two miles from home, where Serman, by a clever and well timed sprint, opened up a gap which Sanborn was unable to close, finishing with a lead of 100 yards. Standing of the first five men to date: (1) Welby Sherman, 19 points; (2) Langdon M. Sanborn, 14 points; (3) Fred M. Sanborn, 13 points; (4) Wm. H. McAvoy, 7 points; (5) Walter Doersch, 2 points.

### INCREASE FOR POORES

Fresno, Cal.—Poore Brothers, who represent the Appeal and Dayton line of bicycles, report a 10 per cent. increase in their business so far in 1915 as compared with the corresponding period of 1914. They sell for both cash and time payments.

## C. R. C. of A. Century and Mileage Competition Report

THE Century Road Club of America has just issued a report showing the standing of its members in the century and mileage competition up to July 1. The report of the chairman of the roads' record committee, Noble O. Tarbell, of Lake Geneva, Wis., follows:

### National Century Competition

1, J. Zabelicky, New York; 2, E. J. Gerard, N. Bergen, N. J.; 3, W. T. C. Yorke, Philadelphia, Pa.; 4, W. J. Lock, New York; 5, A. L. Everard, Ridgefield Park, N. J.; 6, K. F. Hart, New York; 7, L. A. Fraysse, New York; 8, Abe Rief, Brooklyn; 9, E. Taborelli, West Hoboken, N. J.; 10, Wm. Muller, New York; 11, J. G. Schmidt, Ridgefield, N. J.; 12, Wm. Goll, New York; 13, A. J. Hubbard, Brooklyn, N. Y.; 14, J. H. Eisenberg, Brooklyn, N. Y.; 15, L. Zabelicky, New York; 16, H. B. Hall, Whitestone, L. I.; 17, F. H. Peterson, Bloomfield, N. J.

### National Mileage Competition

1, H. H. Hintze, Newark, N. J.; 2, W. T. C. Yorke, Philadelphia, Pa.; 3, J. Zabelicky, New York; 4, L. A. Fraysse, New York; 5, E. Taborelli, West Hoboken, N. J.; 6, E. H. Gerard, North Bergen, N. J.; 7, W. J. Lock, New York; 8, Abe Rief, Brooklyn, N. Y.; 9, N. O. Tarbell, Lake Geneva, Wis.; 10, A. L. Everard, Ridgefield Park, N. J.; 11, W. J. Schneider, New York; 12, E. I. Perreault, Malden, Mass.; 13, J. Eisenberg, New York; 14, C. G. Perreault, Malden, Mass.; 15, E. Stegeman, West Hoboken, N. J.; 16, Wm. Muller, New York; 17, C. E. Nylander, New York; 18, C. B. Walker, Brooklyn, N. Y.; 19, J. G. Schmidt, Ridgefield Park, N. J.; 20, H. B. Hall, Whitestone, L. I.; 21, L. Zabelicky, New York; 22, T. W. Davis, Peoria, Ill.; 23, E. E. Fraysse, West Hoboken, N. J.

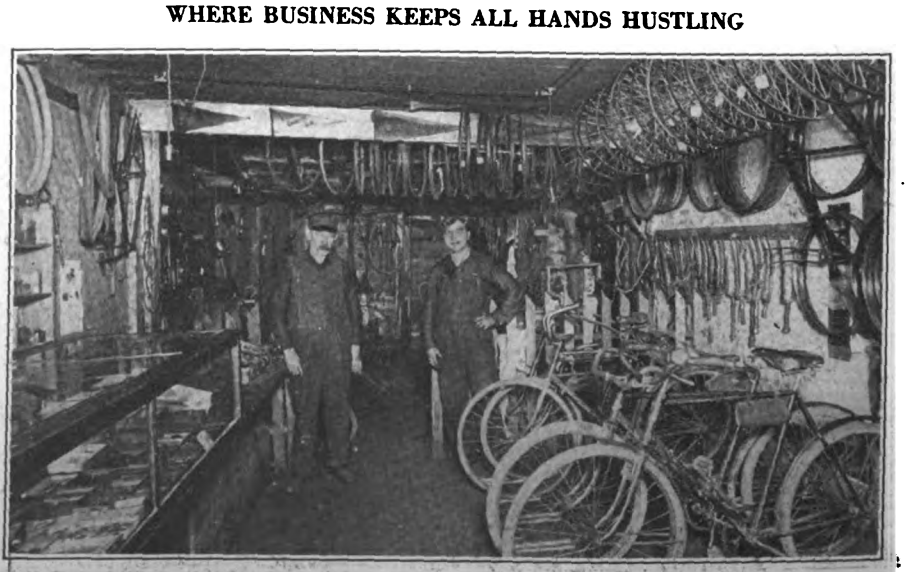
### CRESCENTS WILL SEE GETTYSBURG

Baltimore, Md., August 23.—On Sunday, August 29, the Crescents will hold their annual century run to the National Battlefield of Gettysburg, leaving the Fulton avenue entrance to Druid Hill Park at 4 a. m. Although this is a hard run, due to the distance and the hilly roads, the hills have no terrors for the Crescents. Captain Langdon M. Sanborn and Color Bearer Wm. T. Wright, who will be in charge of the run, expect a good turnout if the weather permits.

### CLARK OPENS A STORE

Oakland, Cal.—O. B. Clark has opened an up-to-date bicycle supply establishment at 2007 Grove street under the name of the California Cycle Supply Co.

### WHERE BUSINESS KEEPS ALL HANDS HUSTLING



Joe's Bicycle Store at 266 Taylor Street, Portland, Ore., an Establishment That is Kept Busy All Season—The Genial Proprietor Is at the Left

### SOUTHWEST LIKES R-S BIKES

Los Angeles, Cal., Aug. 23.—"No, that's only a few. Wait till you see the lot that is on the way to us now. We're selling more Reading-Standard bicycles in Arizona and southern California, where we distribute, than ever before," said Edward Lebell, manager of Pacific Motor Supply Company, Los Angeles. "It makes me feel good, because I came near not having any. A few years ago when we had our first big growth in motorcycle business I got tired of the small two-wheelers and fired every bike out of the store. Then we learned that in order to sell a lot of motorcycles we didn't have to fill up the whole salesroom floor, and as we had the space I put in some bicycles again. We are certainly doing a fine business in them now."

### WALD SHOP SOLD

Sheboygan, Wis., Aug. 24.—The bicycle shop of the Wald Company, located at 325 North Eighth street, has been sold to A. Goedeke. Goedeke has been employed at the North Eighth street store of the Wald Company for the past four years. Pawsarat Brothers, former managers of the store, involved in the sale, will devote their entire time to the manufacturing plant at North Eighteenth street and Martin avenue, Goedeke intends to conduct his store along the lines of a general bicycle business.

### CYCLISTS ELECT IN FRESNO

Fresno, Cal.—The Raisin City Wheelmen, of Fresno, have elected Joe Dunlavey secretary-treasurer, and Wendell Peterson president for the 1915 season. The club will hold an Australian pursuit race in the latter part of August, under the direction of Arthur Handgian, the recently-elected road captain, at Fresno Park.

### STORK PAYS YOUNG A VISIT

Chicago, August 19.—Ned Young, the Salt Lake City cyclist now performing at the Riverview Velodrome, was around the track today all wreathed in smiles despite the fact that the races were called off last night on account of chilly breezes. The reason for the said smiles was the fact that Dr. Stork, ably assisted by Dr. Richard M. Roach, the track physician, called at Ned's house yesterday afternoon and left a nine-pound boy, said boy being husky enough to be a bicycle rider.

### BIKE BUSINESS IN DALLAS

Dallas, Tex.—E. J. Cortines, president of the Cortines Supply Company, reports good bicycle business. "We are not making any unusual records," said Mr. Cortines, "but the demand is steady from day to day. Last week we sold twenty-five Pierce wheels and did about as good the week before. Payments are satisfactory and indications point to a lively fall trade."

### SOLD NINE IN ONE MONTH

Pasasic, N. J.—Louis Lipchitz, a prominent bicycle dealer and a member of the Passaic Board of Assessors, reports the sale of nine Smith Motor Wheels within a month. "There is a steady demand for stock bicycle," said Lipchitz recently, "and we are in a position to take care of everybody in that line."

### FORM Y. M. C. A. BIKE CLUB

Saginaw, Mich., August 23.—Dr. Frank A. Poole, boys secretary of the Y. M. C. A., has issued a call to all association boys who own bicycles to form a boys' bicycle club. A membership of 40 is expected, and it is planned to have a series of trips to towns in the vicinity, going as far as 25 or 30 miles and returning the same day.

### WEEK-END ST. LOUIS RUNS

St. Louis, Mo., August 23.—The members of the St. Louis Cycling Club went on the regular Saturday run from Blair Monument to Ballwin. A large crowd turned out for the Sunday run, the destination of which was Eureka. The cyclists started out at eight-thirty in the morning and returned early in the evening.

### ADDS BICYCLE DEPARTMENT

Dinuba, Cal.—J. D. Woodhouse, Harley-Davidson agent at Dinuba, has added a bicycle department to his establishment. He handles the Miami line of wheels.

### THRIVING CHICAGO CYCLE HEADQUARTERS

Interior of Store of Earle Harlon, at 5205 North Clark Street, One of the North Side's Biggest Establishments—Everything in the Bicycle Line is Stocked

### NEW GOODRICH TIRES ANNOUNCED

SAN FRANCISCO, Cal.—The new bicycle tire line-up for the 1915-16 season has just been announced by the Bicycle and Motorcycle Tire Department of the B. F. Goodrich Rubber Company, at 401 Mission street. The star tire of the line is the Great Black safety tread, a bicycle tire with black tread and white walls, and one that is running mate to the Coal Black Tread motorcycle tire.

When the first lot of Goodrich samples arrived from the Akron factory, F. L. Ryan, J. H. Rodda and J. P. Schiller, of the Bicycle and Motorcycle Tire Department in San Francisco, opened the case with due ceremony. The photograph shows the trio of tire boosters at work on the sample case.

Messrs. Ryan, Schiller and Rodda are all very enthusiastic over the new line. Orders already received indicate that Goodrich bicycle tire business on the Pacific Coast for the coming season will greatly exceed that of past season.

### WANT MODERATE-PRICED WHEELS

Modesto, Cal.—President E. A. Ingham, of the Yale Cyclery, at 914½ Tenth street, this city, reports that the bicycle demand in his territory seems to run toward the cheaper wheel ranging between $25 and $30. He has sold a number of Pierce and Dayton high-grade mounts this season, nevertheless. Practically all bicycles are sold on the time-payment plan, with $5 to $10 down and from $10 upward per month thereafter. The Cyclery is an exclusive bicycle shop, no motorcycles or other vehicles being handled.

### BICYCLE IMPORTS IN BAHIA

Imports of bicycles into Bahia, Brazil, during 1914 were valued at $1,076, while during the year 1913 the value was $1,771. The difference is said to be due to the withdrawal of German bicycle representation, and the slacking up of British exports to South America caused by the European war. Data as to the value of American machines imported during both years is not obtainable.

# Our Canadian Letter

## Toronto Happenings

TORONTO, Ont., August 23.—No applications for the annual motorcycle championships of the Canada Motorcyclists' Association having been received, Chairman Walter Stoner, of the association's competition committee has under consideration a plan to hold the national titular meet in Toronto under C. M. A. auspices on or about Thanksgiving Day. A meeting of the executive is to be held in one week's time when this and other matters will be discussed.

There have been few race meets in Canada since the holiday on July 1, with the exception of the contests on the local saucer in which Canadian riders do not participate for various reasons. Steps are to be taken to encourage a revival of the dirt track sport.

Another matter which will receive attention will be the professionalizing of Wilfred Morrison in a so-called motor-wheel race early this season. Morrison, an amateur, rode with Tommy Smith, a local professional, but there was no prize and the event was only called an exhibition.

A decision by Magistrate Cohen of the Toronto Police Court has caused considerable concern among local riders. He has made a ruling that not only must a motorcyclist stop for standing street cars, but it shall be necessary that the trolley pass on ahead before the machine can proceed. The first rider who ran foul of this interpretation was Harry H. McLean, who possesses a bicycle with a 20-pound Cyclemotor attachment. He was fined $5 without costs.

It is expected that at least ten Buffalo bicyclists will compete in the two bicycle events on the card of the Exhibition race-meet at Toronto on Saturday, September 11. Probably over 75 cyclists will appear on the local half-mile track for the brace of sprints.

### RECRUITING FOR PROVISIONAL CORPS BRISK

Ottawa, Ont., August 23.—Recruiting for the third Divisional Cyclist Corps to be raised in Canada during the present war has been very brisk. In fact the applicants for service have been so numerous that the recruiting officers have been able to make selections of preferable men. Candidates who have had backwoods or exploring experience and who can ride a bicycle as well have been chosen whenever possible. It is understood that the entire unit of over two hundred cyclists, including officers, has been secured although announcement about the corps was made only two weeks ago.

According to official statements issued, it is the intention to reorganize the corps of Guides so that this permanent branch of the service will be entirely equipped with bicycles instead of horses, as heretofore. In other words the bicycle is to supplant the equine in the scouting department of the Canadian forces. This change is to be made almost immediately.

## C. W. A. WILL HELP RIDERS AT FRONT

### Important Session Held at Toronto —Will Amend Racing Rules to Prevent Professionalism.

TORONTO, Ont., August 23.—A very important session of the Canadian Wheelmen's Association was held in the Queen's Hotel on Saturday, August 21, with President Louis Rubenstein of Montreal in the chair. The appeal of the two racing men, Norman Webster and Pat Brown, and the trainer, W. Larkin, from the decision of the association's executive to suspend them for alleged misconduct in connection with the dispute between the cyclist and the local board track, was heard, with the result that it was unanimously decided to raise the suspensions immediately. At the same time a protest against F. A. O. Johnston, a member of the executive and also an official at the Toronto saucer, which had been entered by one of the riders, was dropped.

Owing to considerable talk of professionalism among the racing men, the association officers conducted a thorough investigation, but absolutely no traces of money-grabbing by the amateurs were discovered. Evidence was submitted not only by the riders but by the board track management and by several officers of the C. W. A. who are in direct control of the racing. President Rubenstein gave notice of motion, however, to amend the racing rules so that promoters will be compelled to display all prizes at a track for any bicycle race-meet. This motion will receive consideration at the next annual meeting.

It was decided to raise a fund with which to provide comforts for the Canadian bicycle riders at the front. Over eighty dollars was collected at the meeting and several large amounts were promised. President W. Marr of the Bicycle Riders' Association announced that the racing men who are staying at home would assist in this movement. It is expected that the campaign will result in the raising of at least $500.

### INDIAN PICNIC POSTPONED

Toronto, Ont., August 23.—The big Indian picnic arranged by the Hendee Manufacturing Company, Limited, and the H. M. Kipp Company, Limited, local agents for the Indian, for Saturday, August 21, had to be postponed on account of rain. The picnic, which was to have been held at Eldorado Park, a summer resort not far from Toronto, will probably attract four hundred motorcyclists when it is held on the 28th inst., the date to which it has been postponed.

### DEALERS FAVOR ROAD RACE

Toronto, Can., August 23.—It has been practically decided by the Toronto Dealers' Association that no motorcycle endurance run will be conducted by the organization this year, but efforts will probably be directed toward the holding of a bicycle road race this fall. The officers of the Toronto Motorcycle have announced that the club is not in a position to carry through an extensive reliability trial this season and the club members have been confining to weekly Sunday runs and individual trips.

### BAD WEATHER HIT RACING

Toronto, Can., August 23.—Over half of the scheduled race meets at the Toronto saucer during August were postponed on account of indifferent weather. For the remainder of the season meets are to be held on Saturday nights of each week only.

# Champion

"TOLEDO MADE FOR THE WHOLE WORLD'S TRADE"

## How We Developed Reliability

Champion Reliability didn't "just happen."

Test after test in motorcycle engines was made before we finally developed that unfailing, big, hot spark.

We tried out Champions at every speed and brake load. We made them endure every possible hardship in the motorcycle engines they were built to serve.

The result is evidenced by the lasting Champion popularity among motorcyclists.

Riders everywhere demand Champions.

Do not accept a substitute. Look for the name "Champion" on your spark plug porcelains. It stands for Reliability—Dependability—Endurance.

**The Champion Guarantee** Perfect satisfaction to the user—free repair, replacement or money back.

## Sidecar Invaluable, Says Saleswoman

FORT WORTH, Texas.—Miss McPherson, traveling representative for the Postum Cereal Company, at Battle Creek, Mich., spent three weeks recently in this city canvassing for Postum products. The Burton Supply Company furnished Miss McPherson with an Indian sidecar combination at the start of her campaign, with a mechanic to care for the rig, and she commenced her round of calls.

Very shortly it developed that the combination was much more mobile than the street cars or buggy outfits which she had used for six years, and after a period of three hours, Miss McPherson's calls were all made. She thus saved some eight hours by the use of the motorcycle and sidecar. On leaving Fort Worth, she procured a list of Indian representatives in the other cities to which she was going and announced her intention of using Indian sidecar combinations on all occasions. She frankly stated that it would be greatly to the advantage of her company to employ a sidecar wherever it could be obtained.

Miss McPherson, Postum Demonstratrix (in Center), with Sidecar Combinations Used in Sales Campaign in Forth Worth, Texas. Picture Taken at Local Indian Agency

### MOTORCYCLE MADE CAPTURE EASY

Passaic, N. J.—The motorcycle played an important part in the capture of a murderer. In a dispute between members of the Riker and Fredericks families at Delawanna, one of the Rikers shot and killed the head of the Fredericks family. Notice of the event was sent to the Acquackanonk Township police station and Motorcycle Policeman Frank Van Houten rode the three miles to the scene of the crime and arrested Riker before he had time to get away. Riker is now in Passaic County jail awaiting trial.

### A BOOM IN TAIL LIGHTS

Louisville, Ky., August 14.—The local motorcycle shops have had trouble during the past few days in securing enough tail lights to supply local riders. The demand for rubber tubing, copper piping, etc., has also increased in leaps and bounds. This condition is due to recent activity on the part of constables in this section.

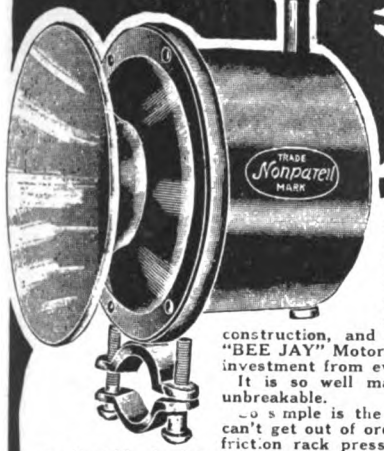
# Think of the Price Last



Examine THIS horn, compare its efficient warning note with any other motorcycle signal — consider its lightness, compactness, appearance and simple and durable construction, and you'll find that the "BEE JAY" Motorcycle horn is a sound investment from every view point.

It is so well made as to be almost unbreakable.

So simple is the "BEE JAY" that it can't get out of order. A spring release friction rack presses a ratchet against an adjustable diaphragm, and presto—a harsh, growling roar is created.

Now think of the price, $2.50, and you'll wonder how such a motorcycle horn can be procured for this low cost.

The "BEE JAY" is light, weighing only 21 ounces.

Dealers—get in touch with your jobber at once. Your horn sales will take a decided jump with "BEE JAY" in stock.

NONPAREIL HORN MFG. CO.
73-75 Wooster St., New York

## *Always Ready, the—*

**CORBIN**

# DUPLEX COASTER BRAKE

At all times and in any situation the powerful grip of the Corbin Duplex can always be relied upon.

It is this power of grip and reliability of action that has made the Corbin Duplex the most popular and successful brake on the market.

Furthermore the Corbin Duplex is extremely simple to operate. By merely a pressure of the foot instant or gradual control may be gained as the occasion demands. When coasting, the rider's feet remain at rest on pedals, in proper position to apply brake.

In construction, the Corbin Duplex is strong and durable. Its large ball-bearings reduce friction and produce an unequalled smoothness of running. By utilizing the maximum of brake surface the maximum of power and control is secured.

Specify the Corbin Duplex. Equip it to your old wheel. Order one for your new.

Sold and equipped by dealers everywhere. Write today for catalog.

# ON THE WAY! The Greatest M

A **tremendous countrywide interest** followed our big Four-Page Announcement to Motorcycle Dealers last week—**the wires were kept hot!**

When the sensational features of the Tiger Autobike are placed before the general public—as they will be immediately by a long list of publications circulating to millions everywhere—the demand for Tiger Autobikes will come by **leaps and bounds—will surpass anything that ever happened in the motorcycle field.**

## The Cheapest Transportation on Earth

Operates for **ONE-TENTH of a cent a mile!** Goes 140 miles on one gallon of gasoline. Runs 3 to 50 miles per hour on one control—**wonderful flexibility!** Anybody can get on the Tiger Autobike and ride right off—**as easy to handle as a bicycle.** The **convenient** motorcycle! Only **one-third** the component parts of standard heavyweight machines! Clean! Carbonless! Portable! Handsome design—finished high lustre tiger yellow with black striping. For everybody's everyday use.

The popular need at last realized in a motorcycle!

## SPECIFICATIONS

**MODEL 1916 TIGER AUTOBIKE**

*MOTOR — Single cylinder two-stroke motor. Bore 2½ inches, Stroke 3 inches. Tests 4½ horsepower at 1100 R. P. M.*
*LUBRICATION—Oil mixed with gasoline which insures positive lubrication in proportion to speed of motor.*
*IGNITION — High tension magneto, gear driven. Oil and dust proof.*
*CARBURETOR — Improved float feed with auxiliary air-valve.*
*MUFFLER — Highly efficient pressed steel construction. Direct cut-out.*
*FRAME—Same gauge and quality of seamless tubing used by heavy-weight machines.*
*FRONT FORKS — Specially designed front fork, easy riding and guaranteed to stand all strains.*
*CONTROL—Complete control with one lever. Fixed spark.*
*HANDLE-BARS — Nickel steel seamless tubing of original design.*
*BRAKE—Coaster brake in rear hub.*
*WHEELS—28 inches. Best quality spokes and rims.*
*TIRES—28 x 2 inches.*
*STAND — Heavy folding type locks to rear guard when not in use.*
*SADDLE — Heavy, comfortable saddle.*
*FINISH—Tiger yellow, black striping. All exposed metal parts nickeled.*
*WHEEL BASE—48 inches.*

# otorcycle Demand Ever Known!

The Frederickson Motor is the **foundation** of this superb simplicity and economy. Tested by Clayton Frederickson—the inventor of aviation engines—and technical colleges **for six years, it is a matured product**—new only to the public. ONLY THREE MOVING PARTS! One-third the weight of the heavy 4-cycles.

Here is the 2-cycle that, running at 1100 R. P. M., develops 4½ H. P. and that gives full power on the **last kick.** Not a departure from standard practice. With a valve in the head of the cylinder and the carburetor at the top, the new mixture is forced into the top of the cylinder—**can never "back-fire"—always cool—spark plug never gets red!** Instantaneous explosions for high speed.

The 12-pound pressure of gas keeps cylinder **free of** carbon!

Mixing oil with gas gives automatic lubrication. All adjustments in plain sight means no experienced repairman needed. All parts standard, supplied by any accessory store. **Troubleless! Foolproof! Fully protected by strong patents and our guarantee.**

Dealers who have demonstrated the Tiger Autobike wear big smiles, realize it means enormous sales **to all classes and kinds of people.**

**PRICE**
**$112.50**

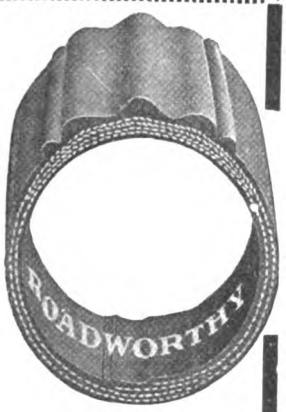
# JUMPED *at the* CHANCE



One big buyer and seller of cycle supplies jumped at the chance of purchasing a part of our BIG TIRE BARGAIN at the remarkably low prices asked. Many a bicycle dealer can do likewise and make a substantial profit. **But Act Now.** Don't wait till they're gone before deciding to buy.

Fourteen different brands, **all strictly first quality,** are represented in this bar-

gain lot and money can be made by either selling them or using them for replacement. By purchasing **many thousand** pairs direct from the factory we were able to obtain them at a very low figure. We offer them at an unprecedented price. Write for our Tire Special, it will give you an idea of the wonderful value offered by these tires.

# The Miller Triplex Side Seat

Price $25

You cannot beat the Triplex for demonstrating purposes; it places the prospect in exactly the right position to hear every argument and see every demonstration. He is at your side and you talk to him face to face. Then, too, the riding qualities of the Triplex—its classy appearance and convenience attract many prospects and convert them easily into buyers after they have once ridden in it.

Don't take our or anyone's word for it! Try it and convince yourself of the selling possibilities of the Triplex.

**Why not drop us a line today asking for Illustrated Booklet and New Proposition.**

**OUR BARGAIN BULLETIN IS READY—send for it.**

**HAVERFORD CYCLE CO.**

**You'll find all that's worth while in our 1915 Catalog and Trade Price List**

# Think of the Price Last

Examine THIS horn, compare its efficient warning note with any other motorcycle signal — consider its lightness, compactness, appearance and simple and durable construction, and you'll find that the "BEE JAY" Motorcycle horn is a sound investment from every view point.

It is so well made as to be almost unbreakable.

So simple is the "BEE JAY" that it can't get out of order. A spring release friction rack presses a ratchet against an adjustable diaphragm, and presto—a harsh, growling roar is heard.

Now think of the price, $2.50, and you'll wonder how such a motorcycle horn can be procured for this low cost.

The "BEE JAY" is light, weighing only 21 ounces.

Dealers—get in touch with your jobber at once. Your horn sales will take a decided jump with "BEE JAY" in stock.

**NONPAREIL HORN MFG. CO.**
73-75 Wooster St., New York

# The Winner!

## The Blue Streak Motorcycle Tire

### Now in the Lead With Riders and Dealers

This year again Goodyear Blue Streak Motorcycle Tires have swept the field in the world's great contests for speed and endurance. They've smashed all former records for one mile, 100, 200 and 300 miles.

These famous Goodyear Blue Streak racing tires are now made for road riding, too. They have introduced Beauty, Luxury and *Class* into motorcycling.

And we're advertising Blue Streaks to millions of readers all over America. So they are gaining hosts of riders every month. They're gaining *volume* and handsome profits, too, for good live dealers.

### Like An Automobile Tire

Blue Streak Motorcycle Tires are built with four plies of extra strong fabric, a breaker-strip and the famous All-Weather tread. This tread—like that on Goodyear Fortified Automobile Tires—is tough and extra thick. So it resists punctures and multiplies mileage. We build it extra wide, so it grips the road securely when turning sharp curves. The swagger blue circle 'round the middle gives this creamy-white tire a touch of inimitable beauty.

The Inner Tubes can't leak. They're made like Goodyear Laminated Inner Tubes for automobiles—many thin layers of faultless rubber, vulcanized into one. They're 30 per cent heavier this year than last.

In these and other ways we're spending $50,000 extra for betterments in Goodyear Motorcycle Tires this year.

### Service Station Offer to Dealers

Write today and learn how we make your place a Goodyear Service Station. Get the intimate facts about our plan that's helping thousands win more trade in every line they handle. A postal brings it. Send *now*—today—and ride to profits on the Blue Streak tide.

### New Victories!

Memphis, Tenn.—200-Mile Endurance run, Memphis to Jackson, Miss., and return. Leon Taft won, W. F. Beck second. Both winners used Goodyear Tires. 90 per cent of entries equipped with Goodyears. None of these had any tire trouble whatever, despite deep mud and rain.

San Jose, Cal.—Goodyear Blue Streaks made a clean sweep of every event in a great card of races here. Every winner rode these tires. 2-Mile F. A. M. National Championship, Creviston won; time, 1:30 4-5. 5-Mile Professional, Creviston won; time, 4:09. 5-Mile Amateur, Leggett won; time, 4:51 3-5. 5-Mile Amateur, Leggett won; time, 4:42 4-5. 10-Mile Professional, Johns won; time, 8:21. 5-Mile Novice, Zettle won; time, 5:03 2-5. 5-Mile Free-for-All, Johns won; time, 4:10 3-5.

Milwaukee.—State Fair races. 5-Mile non-port won by Verrill on Blue Streak Tires; time, 4:21 1-5. 10-Mile non-port won by Carroll on Blue Streak Tires; time, 8:44 3-5.

Akron, Ohio.—Races at Silver Lake Park. 5-Mile Open, Barclay won, Taylor second, Jones third; time, 6:07 2-5. 10-Mile Open, Jones won, Amos second; time, 12:27. 3-Mile Match, Taylor won, Pineau second; time, 3:44 2-5. 15-Mile Open, Jones won; time, 18:31. All above winners rode on Blue Streak Tires.

Toledo, Ohio, August 9.—5-Mile Open, Verrill won, Jones second, Pineau third; time, 5:33. 100-Mile relay, Jones and Pineau team won; time, 1:54:00—a new world's record. Goudy broke track record and set new world's record for half-mile; time, 31 4-5 seconds. All winners rode Goodyear Tires.

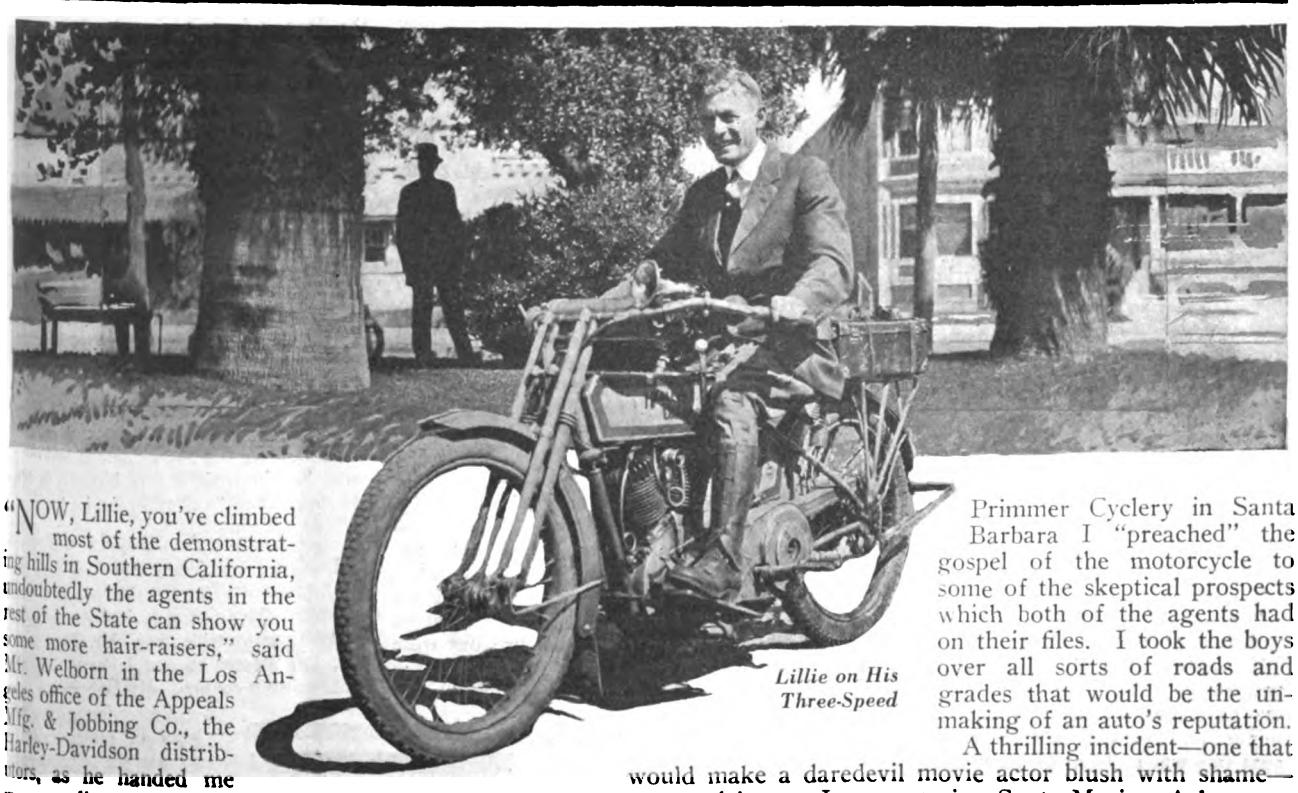
# A Motorcycle Missionary's Trip Through California

By H. A. Lillie



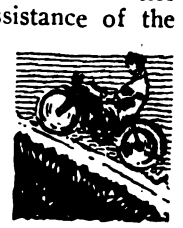
*Lillie on His Three-Speed*

"NOW, Lillie, you've climbed most of the demonstrating hills in Southern California, undoubtedly the agents in the rest of the State can show you some more hair-raisers," said Mr. Welborn in the Los Angeles office of the Appeals Mfg. & Jobbing Co., the Harley-Davidson distributors, as he handed me my route list. As I went out of the office to walk to my three-speed machine, Vice-President "Bob" Sayre said a few laughing words about California's being a large State. That was just what I liked about it—an immense territory in which to travel as the Harley-Davidson missionary; to show the fellows located in almost inaccessible nooks and corners what a modern three-speed motorcycle could do.

My trip, which began in the early part of last May, was to take me over a territory eight hundred miles north and south—up State and back and criss-cross, all on my machine. So out on the San Fernando boulevard I rolled, easy as on a Sunday jaunt, and in due time came to rough going and grades, over the mountains into Ventura. At this point where Walter M. Jones is the dealer and at the Primmer Cyclery in Santa Barbara I "preached" the gospel of the motorcycle to some of the skeptical prospects which both of the agents had on their files. I took the boys over all sorts of roads and grades that would be the unmaking of an auto's reputation.

A thrilling incident—one that would make a daredevil movie actor blush with shame—occurred just as I was entering Santa Maria. A late season rain that had lasted three days was still pelting down.

I easily got across the Santa Maria River, which was rushing past four feet deep, by placing my machine aboard a wagon, shown in one of the accompanying illustrations, and was safely brought to the other side of the mad stream. But a few hours later I came upon another ford and this time I found a team of horses and a rope to tow vehicles to the opposite bank. I declined the assistance of the driver, for I saw a hopeless job ahead of me trying to balance a two-wheeler in tow. He then pointed out a railroad trestle to which many motorcyclists had recourse during last spring.



"That trestle," said the driver, "is three-quarters of a mile long. A block signal

Digitized by Google

At Left: Kind of Road Work Which the State Is Doing in "No-Man's-land," Where Ranches Are Miles Apart. Above: Little Mirror Lake in Humboldt Pass.

drops four minutes before the train hits the bridge. A train's due in 20 minutes."

**And the Block Signal Fell**

Would I cross the trestle in time? I took a chance and lost a good part of the twenty minutes in getting to the ties. Bumping the ties was like a very rough electric massage—for the timbers were a generous distance apart. Two-thirds of the way over I heard a dim shriek, the locomotive whistle. I looked up and the block signal fell. It was a race against time. I rode the grimest race of my life and just as I got to the bottom of the grade leading from the trestle the train whizzed by at a sixty-mile an hour clip. Whew! Some close shave.

H. A. Lillie in the Fruit Belt

"Come on, Lillie," one of the Johnson boys greeted me after I arrived at Soledad, and told them of my trestle thriller, "I've eighteen prospects, told 'em you were coming and they're looking for you."

We went out and found the boys here and there at work in the hay fields and alfalfa patches. We did some stunts in sand and showed them how to ride. Within two days some of them had made up their minds and bought new machines. My next stop was at Monterey Bay where Reed and Parlier handle the local agency. I was surprised to find that, though they lived in a very small town, they did a thriving business because both of these progressive merchants go out on the ranches after sales. In San Jose I was welcomed by the Powell Bros., who through the liberal service which they extend to riders, have built up a brisk trade.

**City Boys Eager for Rides**

Reaching San Francisco, after having had the pleasure of demonstrating for Maggini & Perkins, two of the livest and most thorough-going agents in the coast metropolis, I met J. D. Fraser, the 'Frisco Appeals Company manager, and he certainly kept me busy. The prospects insisted upon seeing the three-speed put through all kinds of stunts imaginable. They got all they wanted.

**Bad Going Over Mountain Roads**

Into Eureka I found one hundred and forty-five miles of the worst mountain roads that I had yet encountered on this missionary trip. I was frankly told that I would never get through. But I knew that with a three-speed no 'dobe mud and mountainous grades over which horses could drag would stop me from making at least twelve miles an hour. I plowed through from range to range and met seven unfortunate automobiles that were suffering from various characteristic ailments. When I had placed sixty odd miles between myself and Eureka I was in the midst of a virgin forest of giant trees—forest into which the sunshine never penetrates. Here the 'dobe mud was soft and sticky, but I managed to drill through it.

"Gasoline? Sixty cents a gallon. Highway robbery? Wal, ye got to hev it, ain't ye?"

That's what an old postmaster and gas vender wheezed through his ugly nose, when I found myself out of gasoline shortly before reaching Eureka. But I had a bet on at Ukiah, a town some distance out from San Francisco, that I would get through in twelve hours. I, therefore, permitted myself to be "soaked." Natives seemed to have a grudge against strangers. At the "hotel" I was charged seventy-five cents for a meal that I wouldn't sell to a dog for a dime! I lost most of my grouch before getting into Eureka, and when I arrived I telephoned to Ukiah and won the bet.

Interested Lumber Jacks in Westwood

While demonstrating at Eureka I showed some of the fellows how much money they could save by using a motorcycle. A trip from San Francisco to Eureka by train costs eighteen dollars; by motorcycle a man can travel the distance at an expense of about five dollars. He can make it a pleasant two-day trip and camp out in a beautiful country, if he wants to. That argument made a hit with prospects.

Leaving the Greek-named town behind I crossed the range again and rolled through the beautiful and prosperous agricultural valleys to the east and visited the towns of Calistoga, Napa, Sonoma and Vallejo. Dealers throughout that district have had a good season and everything points to a splendid harvest that will put money into the jeans of many motorcycle prospects. The men on the ranches I found were eager to see the motorcycle demonstrated and are prone to regard the horse as a relic of some bygone age.

The Harley-Davidson interests at Vallejo are taken care of by A. Hellerman who is very keen on giving his riders the best possible service. He has a locker for every fellow who stores his machine at the store and adequate lavatory facilities, thus enabling the riders to wash up.

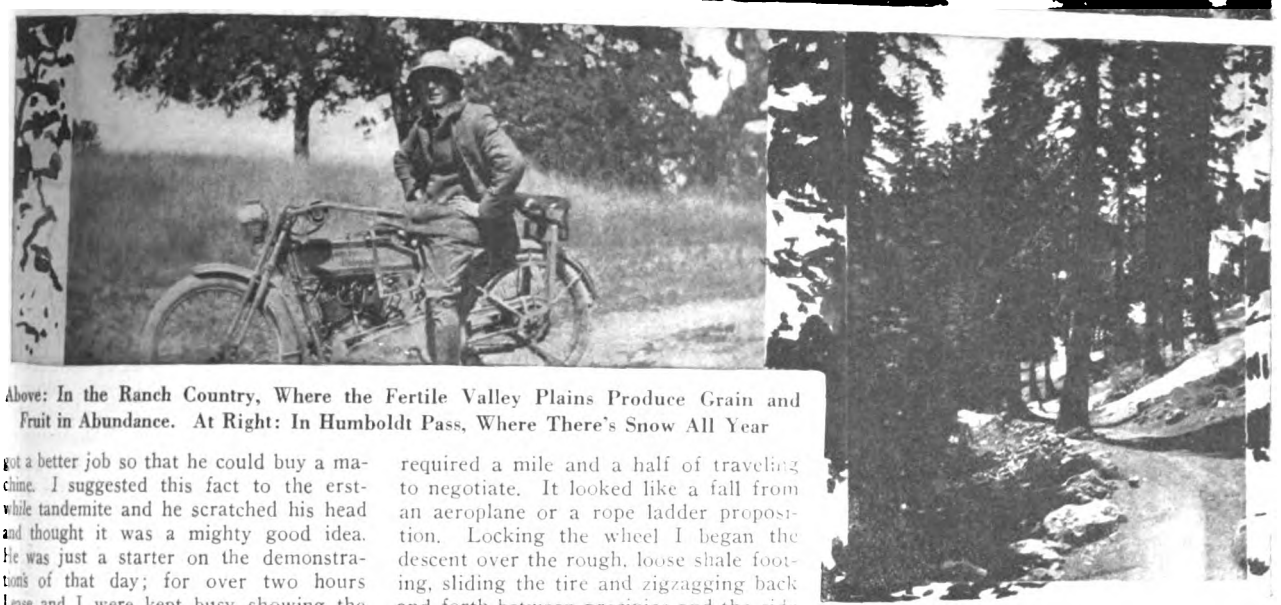
The next leg of my journey was over into the Sacramento Valley. In looking over my route sheet to determine what towns I was to stop at, I first fully realized what a large State California is. I had already traveled thousands of miles and only covered half the trip the office had laid out for me. Southern California, big as it is, seems no more than "a drop in the bucket."

**Visiting the Mining Towns**

I was well entertained by Graffigma Bros. at Lodi, and after treating me to a hearty western dinner they invited me to accompany their outside man, Mr. Lease, on a trip to Westpoint and Jackson through a gold mining country. At Jackson we found a typical mining town with plenty of saloons such as one may see in the western drama shown frequently in moving pictures. The mines were working at full blast and lots of bright young chaps crowded about the new machine I was riding. The only motorcycle in town proved to be an old 1909 model.

One miner was given a demonstration on the tandem that made him yell as though his head was coming off. It was evident that he enjoyed his ride immensely, but when he discovered what the price of the machine was, he figured that he would have to save eight years to buy a mount. However, I found on my trip many a boy who went out and

Digitized by Google



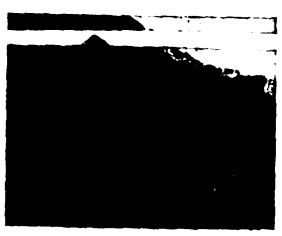
Above: In the Ranch Country, Where the Fertile Valley Plains Produce Grain and Fruit in Abundance. At Right: In Humboldt Pass, Where There's Snow All Year

got a better job so that he could buy a machine. I suggested this fact to the erstwhile tandemite and he scratched his head and thought it was a mighty good idea. He was just a starter on the demonstrations of that day; for over two hours Lease and I were kept busy showing the miners what a three-speed machine could do in the valley and up the mountain side. Here's something important I discovered at Jackson: The easiest to a girl's heart is by buying a motorcycle. I actually believe that the girls who rode on my tandem became real fond of me.

The next day Lease and I made for Westpoint which lay up the mountain. This was the day when the jinx hit me hard. The road was so bad that people at the hotel in Jackson said that we couldn't get through. It was composed of fine sand, often one and a half inches deep, with sharp rocks at the base. The road was narrow and clung to the side of a very precipitous mountain, with plenty of slides, switchbacks and other horrors. If a fellow slipped off the side, it would require a gang of men and a thousand feet of rope and perhaps two days' time to get the remains of the accident. My tire kept slipping and I pulled my valve stem off fourteen times. We negotiated the grade and got into Westpoint after having an interesting encounter with a monster rattle snake which we deprived of its rattle.

**Riding to a Lonely Power House**

Putting out their share of machines from as well-equipped a store as any rider would want to find in a town of its size, I met Rock & Young, the dealers at Marysville, hustling after business. They sent me on the hardest ride of my entire trip over thirty-five miles of mountain roads to a lonely power house in the Feather River Canyon, where several fine fellows were working. Rock accompanied me on part of the trip, but after five miles decided to transfer to the stage coach. That left me alone to complete the ride.



Carrying Machine Over Santa Maria

I made thirty miles up and down a rocky mountain road that did everything but wind itself into a spiral. Finally I saw a white dot that turned out to be the power house; the road dropped down two thousand feet to the house in a lot of switchbacks that required a mile and a half of traveling to negotiate. It looked like a fall from an aeroplane or a rope ladder proposition. Locking the wheel I began the descent over the rough, loose shale footing, sliding the tire and zigzagging back and forth between precipice and the side of the mountain. When one spot in the tire became too hot, I would slip the brake for a fraction of second and let a new spot get on the shale. By using compression and brake, I succeeded in crawling down and met the station boys.

**Doubt Machine's Power**

When I had finished my demonstration everybody thought that I would not dare to return to Marysville on my motorcycle. They invited me to camp at the power station over night or else take the stage back to town. I realized that the most important part of my demonstration would be to ride back by motorcycle and thus prove to them that I could actually climb up the tough grades on my machine. I promised to telephone to the power station from a point five miles out. They thought that it would require about forty-five minutes for me to get there under my own power, for some of the grades were forty per cent. When I got to the telephone station I rung the fellows up and they told me that I had been gone just twenty-two minutes.

Ranchman Trying Out Three-Speed

Other interesting towns at which I stopped were Oroville, a good-sized lumber town, where the fellows were found using a lot of old models; Fresno, with its active and successful Ben Bresee, the local Harley-Davidson agent, and Bakersfield where Geo. L. Snider, better known as "Three-Speed Snider," tends to the wants of the local enthusiasts. Coming south over the desert I was in splendid physical condition; my weight had dropped from one hundred and sixty pounds to one hundred and forty. I was glad to get past the Tehachepi and ride through Bouquet Canyon beside running water, and along the gloriously beautiful San Fernando. At last I saw Los Angeles in the distance and was happy to roll once more into the best motorcycle town of them all.

## Carrying a Suitcase Properly on the Sidecar

ONE of the problems that confronts the touring sidecarist is the transportation of a suitcase to the satisfaction and comfort of both driver and passenger. This problem has grown somewhat acute in 1915, by reason of the widespread use of the sidecar as a passenger-conveying vehicle, and it threatens to become more so in 1916 if some far-sighted manufacturer does not furnish a solution.

The most generally-used and by far the easiest way is to toss the suitcase in the sidecar, on the passenger's lap, or on his or her toes. The passenger of either sex is not generally pleased with this arrangement, especially if the journey is a long one, with rough roads to be traveled at intervals. Another method, seen on an Indian combination on New Jersey roads, carries the bag on a wood rack bolted to the sidecar chassis, but this, while strong enough, has its disadvantages.

The rack is fitted behind the axle and the suitcase or bags strapped on top of it. While the load is quite secure, the principle is wrong, as the extra weight is not sprung and the machine and its passenger and driver get undue vibration.

A third method consists in bolting angle iron pieces to the under side of the body and riveting a steel plate to their projecting ends. The suitcase is strapped on this plate. The arrangement is good, as the load is sprung, but it is a question whether the car-springs would stand up for any length of time under the added weight.

Our English cousins enjoy any number of sidecar accessories that we are doing without at present and are very badly in need of.

# Injecting the "Pep" for Speed Work

## Pointers on Tuning Both Singles and Twins

By WILLIAM JOHN BEACH

HAVING had a somewhat lengthy experience in connection with motorcycle engines of every type, as well as the best of facilities for experimenting, a few of my experiences and ideas on the subject may be of interest to readers of **Motor Cycle Illustrated**. I do not propose to give away any of the fine points of the game, but will, as we proceed, give riders who are after efficiency a good starting point.

My knowledge of the subject has not been gained from books. I can say without fear of contradiction, that I never read a paragraph on the construction or efficiency of engines in my life. What I know has been accomplished by actual study and experience.

I must admit that I have been very closely associated with some of the best men in England during a visit which I made to that country. Hugh Mason, the famous N. U. T. exponent, and myself were closely associated during his display of dogged determination to get speed out of his little rat of an engine. We tried it out on the road and experimented at Brooklands track together.

### Engine Performances Vary

I might say at the start that engines are queer beasts. The timing and adjustments which give terrific speed in one engine may not go in another engine of the same manufacture and of the same bore and stroke. This fact I have proven repeatedly. I have had engines develop terrific speed when they came fresh from the manufacturer—such engines require humoring, as they usually blow the lid clean off. I have had a brand new 350 cc. (25 cubic inches) engine hum along the road to the tune of 62 miles per hour and have felt certain that I had struck something that was going to turn out real "hot stuff," but, alas, all alterations and experiments would not improve it.

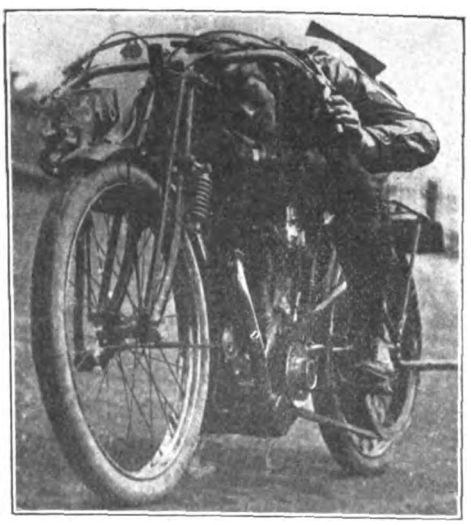
Some engines will never go, no matter what you do and how much time is spent on them. The fate of such engines should be one good crack with the heaviest hammer lying around. I have seen engines, also, that promised great things on the road, but three laps (10½ miles) on Brooklands track has finished them. Their cylinders were blue down to the fastening bolts, and they were badly warped and very much out of it thereafter.

The great success of an engine depends largely on the cylinders. A soft cylinder casting spells no speed in many cases. The best cylinder that I know of came from Belgium, where the foundries seem to be "top notchers" for air-cooled cylinder work.

### Favors Steel Cylinders

Now comes the question of whether it is necessary to cast cylinders or not. From my experience with steel cylinder engines with overhead valves, this type of cylinder appears to be the goods, and to my small way of thinking has a great future. When it is agreed that cast iron is a good bearing surface, I think that all the good points of the cast-iron cylinder have been put forward.

While on the subject of cylinders, I cannot help but notice that many firms constructing motorcycle engines obviously believe in ornamenting the cylinders with quite a number of fins. My experience has taught me that a considerable number of



W. J. Beach, the Australian, on N. U. T.-J. A. P. Twin Making One of His Records in 1,000 c.c. Class

these fins or flanges collect heat and do not dispose of it.

### An Australian Construction

It may be interesting to know that I once designed a 350 c.c. (25 cubic inch) horizontal-opposed cylinder engine, and as this took place in Australia, I was up against it as far as cylinders were concerned. As the engine was to be an all-Australian engine, I tried a little experiment in its construction. I had the cylinders turned from the solid according to the drawing, less the fins. I then had fitted copper rings in a most ingenious manner, and the way in which these rings disposed of the heat was really astonishing. But to build engines in my country from a commercial point of view, in this manner or in any other, would be as hopeless as trying to skate to the moon.

While on the subject of horizontally-opposed engines, I might say that this type, to my way of thinking, is the ideal one. A machine fitted with such an engine may be put on the stand and run at 1,000 revolutions per minute, while a coin placed on the lamp bracket will remain there. No special motorcycle fitted with this engine is necessary to accomplish this. I once saw an opposed engine placed on a work bench and run at 3,000 revolutions per minute without being bolted down.

### Outside Flywheel Desirable

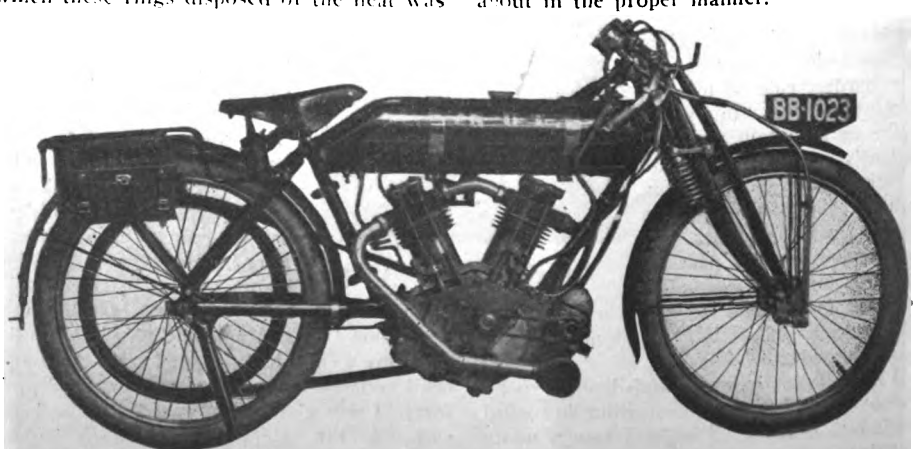
The idea of an outside flywheel of large diameter has always appealed to me. I never could see the wisdom of rotating heavy flywheels and counterweights in a bath of oil. Oiling the flywheels will not increase the speed or pulling power, but tends to greatly decrease both.

As a cheap and efficient type of engine I think there is much scope for a two-stroke opposed type, but let us hope that the transfer passages will not be cast on the cylinders as is the present practice. Instead, a detachable transfer should be employed. A great blob of a transfer passage cast on a cylinder must bring about distortion, but with the separate passage this change of form by heat cannot take place.

Referring to pistons, I have found that two rings are sufficient. I have had no experience with steel or aluminum pistons and so cannot express an opinion about them.

### Overhead Valves for Speed

I am naturally a great advocate of overhead valves for speed work, and cannot possibly imagine engines being built with side-by-side valves, considering all the good points of the overhead arrangement. Engines having four valves per cylinder and ports at the bottom of the stroke do not appeal to me much, as two valves can be made to give the desired result if gone about in the proper manner.



N. U. T. Twin Built to Beach's Specifications for Colonial Speed Work—It is Fitted with an 8 h.p. J. A. P. Overhead Valve Twin Engine and Is Pedalless

Digitized by Google

Coming to the subject of carburetion, I feel that there is much room for improvement in this direction. I am prepared to admit that there are some carbureters better than others, but we are a long way off from having a perfect one. Personally, I use a special little apparatus fitted between the carbureter and the induction pipe which gives me great results, especially for high speed work.

Good results and long life of an engine are greatly assisted by proper lubrication. I cannot suggest anything better than the Vacuum Oil Company's products for the purpose.

**Balance and Synchronization**

Many riders imagine that the real secret of speed lies in the timing. This is not so much the case as the average rider imagines. Perfect balance is the real secret, and in the case of twin or multi-cylinder engines, in synchronization and balance is the business. Naturally, the valve timing must be that which is going to give the best results, but as some engines run better with overlap than do others, nothing but determination and lengthy experiments will give the best results from a timing point. If the following timing will be observed a good starting point will be had:

Taking the inlet valve first, this should open approximately 2 m.m. (0.078 inch) down on the intake stroke, and should be kept open for the full stroke and preferably over that. The exhaust should open 6/7 down the firing stroke and close approximately 2 m.m. over center. This timing is a good starting point, but nothing except experimenting is going to give the best results. In the case of the twin-cylinder engine, the game is to get the valves in the back cylinder opening and closing at exactly the same position as those in the front cylinder. Alterations in the opening and closing of valves are naturally accomplished by working on the bell-cranks or rockers, but much may be done at the tappets.

If one cylinder is timed faster than the other, it is often possible to get the pair to synchronize pretty closely by knocking the timing wheel on the crank pin one way or the other.

**Valve Position Device**

Even in these days I have seen experts driving down a compression tap with a spoke to find out where the piston is. This method at the best of times cannot be overaccurate. It is not necessary to even soil the fingers to find out when valves are opening and closing if you know how. I can tell to the fraction of the smallest measurement how much faster times one cylinder is than the other, and can also tell when the valves are opening and closing without having to fish down a compression tap or take the timing cover off. I use special devices for the purpose, but anybody who confesses to have a knowledge of engines should be able to think out a device to give this information. It is easy when one bears in mind that the piston reciprocates and the flywheels have a rotary motion.

Having said a little about valve timing, balancing and synchronizing, the timing of the magneto must not be forgotten. This is a problem to a certain degree, as some engines will take more lead than others, but the following may be observed and found useful: For ordinary touring purposes, fully retard the magneto and allow the break to take place when the piston is at the top of the stroke. For speed work, fully retard the magneto and allow the break to occur with the piston down 2 m.m. from the top of the stroke.

**Mr. Beach is one of Australia's best known motorcycle experts, and his long experience in tuning motors, both in his own country and in England, fits him admirably to discuss the speed possibilities of motorcycle power plants for American riders. He holds several records for speed on Brooklands track, having obtained astonishing results from small single and twin motors of 25 and 30½ cubic inches. Mr. Beach is at present in this country and is desirous of associating himself with an American motorcycle manufacturer.—Ed.**

**Ratings of No Value**

It is high time we ceased talking of engines being of so many horsepower. How does anybody know the power of an engine unless it has just come off the test bench? We can certainly talk of the capacity of an engine and imagine it should or is developing a certain horse power, but whether it is or not, is an entirely different question. I have seen an engine of 350 cc. (25 cubic inches), rated at 2¾ horsepower, develop 13 horsepower on a brake test. Again, I have seen a 1,000 cc. (61 cubic inch) engine develop only 4 horsepower.

Coming to transmission, I favor the belt, but am prepared to admit it is not so positive as the chain. Nevertheless, the belt has the advantage of being a most flexible drive, one that is clean and quickly adjusted. The life of an engine is greater with belt transmission than with a chain transmission. This latter feature should count for something. I could keep on writing for a week on this subject and tell of many little "dodges" to overcome complaints that arise to the average rider, and I may have another article later.

## Fastening Presto Tank with Straps in Emergency

THE somewhat heavy weight of a Presto tank makes it necessary that the bolts on the brackets which come with the tank be set up very tightly, which increases the chances that one of them will snap. This was my experience on the road some time ago, and for a time it looked as if there would be some difficulty in holding that tank in place. It rested between the head of the machine and the reinforcement across the handlebars. I had a heavy strap on the luggage carrier, and it occurred to me that this might be made to serve as a temporary bracket. The strap was a long one, and I found it an easy matter to lash the tank firmly in place between the two sections of handlebar tubing, though it did not touch either.

Later on the other bracket bolt also snapped, and a second strap was called into use. I rode the machine several hundred miles with the Presto tank thus strapped on, and had no trouble whatever. The leather tended to stretch slightly, and it was necessary to tighten the straps up a hole or two occasionally, but that was all. Finally the straps were replaced by substantial brackets of a sort that made the snapping of bolts impossible. But it strikes me that the idea is worth passing along; someone else may find it as handy as I did.

## Acetylene Flame Form Indicates Its Condition

CLEAN acetylene burners mean good light, and consequently freedom from accidents due to the flame popping out or the light going bad. The form of the flame gives an excellent indication of its condition; when all right it should have the general shape of a hoe-blade turned upside down as viewed from the front and should be shaped like a cold chisel when seen end-on. The characteristic whitish color of the acetylene flame should be present; if yellow, the gas may be poor (when generators are used in some cases) or the burner passages may be furry with tar or soot. A spitting flame means moisture in the piping, and draining should be seen to.

A burner that whistles spells clogged passages and the burner wire should be used.

## Correcting Slip in Different Types of Clutch

SLIPPING clutches, especially on sidecar machines, are sources of great annoyance in interfering with the proper operation of the machine or outfit. The obvious procedure when signs of slipping occur is to take up on the clutch members, but this may not be effective, particularly in multiple disc types.

"Wet" disc clutches—those which run in oil—may slip from having too much oil in the casing. This will prevent the plates or discs from squeezing out the oil between them when the clutch is engaged. The obvious remedy is to reduce the quantity of oil, and if necessary to clean off the discs with kerosene. But care must be taken not to run this type of clutch dry, or the discs will burn and become of no value, laying the outfit down on the road in extreme cases.

"Dry" disc clutches—which do not run in oil—should be examined for moisture of any sort and dried out, if slipping cannot be corrected by adjustment. If oil or water gets on the fabric discs, it can be absorbed by Fuller's earth.

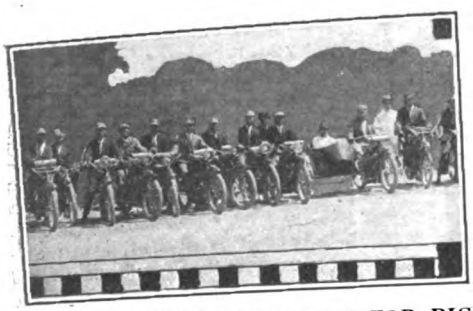
Participants in Big Picnic at Fort Collins, Colo., Given by Lloyd & Mayer Auto. Co., Indian Agent, on Recent Sunday



### INDIAN SPEEDSTERS LEAVE FOR BIG RACE AT CHICAGO

Los Angeles, Cal., August 30.—Don Johns and Marty Graves, the Indian speedsters, left this city in company with Mrs. Graves yesterday for Chicago. Johns and Graves will enter the big races on the Speedway in that city on Labor Day. Erwin G. Baker and Earl Armstrong left this morning bound for the same destination.

### BRONX—SAVIN ROCK RUN OFF

Bronx, N. Y., Aug. 31.—After postponing the run to Savin Rock for two consecutive Sundays in August, the Bronx Motorcyclists' Association has decided to cancel the trip altogether. Conflicting dates with other meets and runs is given as one of the causes of its abandonment.

### MEET FOR DECORAH CLUBSTERS

Decorah, Iowa.—The Winnishiek County M. C. will hold a race meet at the local track on September 11, to be followed by a dance on the same evening. The meet will be for $100 purses. On September 12, there will be a 150-mile run by club members. Applications for entry in the meet should be addressed to H. B. Montgomery, the secretary, in this city.

### FENTRESS SEES EASTERN DEALERS

F. O. Fentress, of the Fentress-Newton Company, of Detroit, manufacturers of F-N tandems, backrests and other accessories, spent a day or two this week in the Metropolitan district, visiting Irving Beck, eastern representative, and F-N dealer in this territory. Mr. Fentress intends to make a trip to the Pacific Coast after the Chicago show.

### SAVES LIVES IN FLOODED TEXAS

Washington, D. C., Aug. 30.—The terrific wind and rain storm which recently swept Galveston, Houston and other cities in Southern Texas gave the United States Weather Bureau an opportunity to prove the motorcycle's practical value and, according to reports from Washington, the bureau certainly made good. In Galveston, more lives were saved by the storm warnings than by the costly sea-wall. The observer sent motorcyclists along the coast to warn persons of the approaching danger. These modern Paul Reveres, astride their motor-driven two-wheelers, covered a large expanse of territory in a remarkably short time, and it is admitted by the Weather Bureau officials that the warnings thus given saved hundreds of lives. The motorcycle just fitted into the emergency, and materially helped the Weather Bureau in carrying out its life-saving efforts.

# SMASH RECORD IN 200-MILE RELAY

## Perry & Goudy Cover Double Century in 2:58 on Excelsiors at Columbus Meet

COLUMBUS, O., August 30.—Perry and Goudy, forming an Excelsior team, were the winners of the 200-mile relay race at the Driving Park here yesterday. Their time was 2:58, a record for the distance. Stokes and Montgomery, Excelsior team, were second, with Stokes about one mile behind Perry at the finish, while Myers and Verrill, Indian, were third. A mixed team, Davis, Indian, and Woodland, Harley-Davidson, came fourth. The meet was held by the Interstate Racing Association.

Five teams started in the long-distance relay event. These were Perry and Goudy, Excelsior; Myers and Verrill, Indian; Stokes and Montgomery, Excelsior; Ellis and Sargeant, Indian; Davis, Indian, and Woodland, Harley-Davidson. Only one mishap occurred during the double century, this being a skid by Woodland which ended in an involuntary dismount. The Harley-Davidson rider soon resumed the saddle and went on with the grind. Ellis and Sargeant went out at 150 miles.

Sweepstake prizes were awarded to the winning team at 50, 100 and 150 miles. The century mark was negotiated in 88:15 and the 150 miles by Perry in 134:24⅗. As a "curtain raiser" a five-mile event was run off in heats, Perry gobbling the final in 4:25, with Stokes second and Goudy third. The track was in fine shape and the attendance was large.

### MADE WHITE MOUNTAIN TRIP

Jersey City, N. J.—Ralph Donalson, the Harley-Davidson competition rider, in company with George Griffiths, has just returned from a two-weeks' trip through the White Mountains with his sidecar combination. They went first to Albany, then over through the Berkshires and on to Portland, Me. In the latter place a halt of three days was made. The actual tour of the White Mountains occupied nearly a week, the pair exploring the country pretty thoroughly. On reaching Jersey City, the speedometer showed 1,100 miles for the entire trip. "There was plenty of rain," said Donalson, "and it came in one-day cascades, as a rule. We weighed the rig at the finish and it scaled 900 pounds, when dry. Some pull for a twin motor, especially in the mountains."

### 16 ENJOY MOTOR WHEEL RUN

Huntington Beach, Cal.—Smith Motor Wheel riders to the number of 16 made this place the terminus of a run last week. The dealers' section of the party included Charles Belts, of Fullerton; W. G. Kern, of Anaheim; Carriker & Crowell, of Orange, who organized the run; Geo. Post, of Santa Ana, and J. A. Benson, of Los Angeles. Benson and his Los Angeles followers returned via Seal Beach, totalling 110 miles for the day.

### ROTH TO QUIT RACING

Altoona, Pa.—George Roth, "The Flying Dutchman," will quit racing at the end of this season. He will, however, continue to represent the Pope in this city. Roth was one of the first motorcyclists in this section to go on the track, and was holder of the Blair County championship trophy until the recent win of that cup by Abe Cohen, another Altoonan. Roth's speeding is not confined to summer by any means, as he is one of the pioneer motor-sled builders in the industry and uses this means of transportation when the snow is covering the ground.

### SVENSGAARD RETURNS FROM TRIP

Harry Svensgaard, of the Svensgaard Sales Corporation, of Detroit, has returned to that city after a trip to Toronto and New York, principally in the interest of his Pullman Side Car. Considering the fact that this is the first year for the Pullman, Svensgaard side car business has been nothing short of remarkable, greatly exceeding his expectations.

Panoramic Photo Was So Long That Artist Had to Cut It Into Four Sections in Order to Show the Entire Party of Motorcyclists

## Creviston Gobbles Big Events At Terre Haute Meet

TERRE HAUTE, Ind., August 29.—Ray Creviston, Indian, captured the ten-mile open, the pursuit race and the 25-mile open event in the meet held at the Fair Grounds track today by the Motorcycle Racing Association. The five-mile consolation race went to L. S. Taylor, Indian, while A. McMillan, also on an Indian, won the three-mile sidecar event. A bicycle race for two miles went to Clifford Best.

In none of the motorcycle events was there any serious competitor to Creviston, with the exception of Pineau, the Flying Merkelite. The ten-mile race ended Creviston-Pineau-Taylor, in 12:09⅗. The 25-mile race was won by Creviston, with Sudduth, Thor, second, and Pineau, third, in 30:35⅕. Pineau stopped for oil and thus lost second place in this event. In the five-mile consolation, Taylor was trailed in by Grelle and Voss in second and third positions, respectively. The time was 6:07⅗.

McMillan, Indian sidecar, won his three-mile event in 4.19, with half a lap to spare. Best's time in the bicycle race was 6:30⅗. The attendance was 2,500.

### KING WINS WINNISHIEK RUN

Decorah, Iowa.—J. King, Harley-Davidson, won the endurance run of the Winneshiek County M. C. starting from this city on August 29. King's score was 1,000 points. Grinna, Indian, and Hutsvedt, Thor, were tied with 994 points for second place. Gillett, Indian, scored 920, while Abbey, Indian, scored 907.

There were twelve starters in this run. Most of the going was over good roads, but part was deep sand, which cut down the scores of most of the contestants. The best Harley-Davidson performance was made by the winner, King, while the best Indian showing was made by Grinna. Vick scored highest for the Excelsior entrants.

### KLAPP SELLS MORE TO POLICE

Pomona, Cal.—Making a flying trip from Los Angeles to Pomona, Geo. A. Klapp sold one of the new short coupled Hendersons to Chief of Police Lyter. Just as a by-product Klapp established a new agency at Pomona and they absorbed enough "pep" from George to enable them to get into the game with a flying start. The agents have already sold three machines. A foreman of a hay baling outfit also bought a Henderson.

# BAKER SETS NEW 3-FLAG RECORD

## Rides from Vancouver to Mexican City in Three Days, 9 1-4 Hours —Former Mark 8 1-2 Days

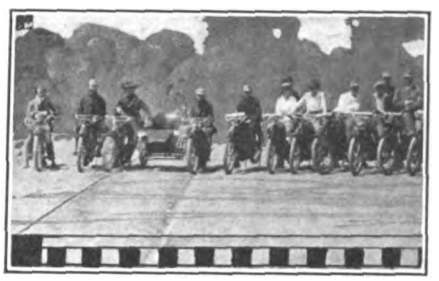
TIA JUANA, Mexico, August 28.—Erwin G. Baker on his Indian arrived in this city at 8:15 p. m., having covered the 1,655½ miles from Vancouver, B. C., in three days, nine hours and fifteen minutes. He was accompanied by Paul Derkum from Saugus, Cal., and James Urquhart, San Diego Indian dealer, from the latter's agency to this city. His average speed was 20.37 miles per hour for the whole trip.

Baker's time from Vancouver to Tia Juana beats the former record by over five days.

Starting at Vancouver at 11 a. m. on August 24, Baker rode for 32 hours to Sisson, Cal., 771 miles, for the first leg of the Three-Flag record run. He did not rest at all until Sisson was reached. After seven hours' sleep at Sisson, Baker was off again on Thursday morning, August 26, and reached Stockton at 10 a. m., where he spent two hours endeavoring to get rest.

Continuing his spectacular ride, the "Old War Horse" passed through Fresno on the way to Bakersfield, being accompanied by "Happy" Alzina, of the San Francisco branch of the Hendee Mfg. Co. Both riders reached Bakersfield at 9:40 p. m. that day. Baker then continued toward Los Angeles alone, but was met at Sagus by Derkum and the pair rode at speed into the Angel City, where they were welcomed by Agent Urquhart. Motion pictures were taken at Urquhart's store, whereupon Baker, Derkum, Urquhart and L. A. Hilton, manager of the local U. S. Tire branch, all shot off for the Mexican border.

A large crowd gathered in this city late in the afternoon to receive the intrepid rider who had traversed California at high speed, but it was not until the twilight came on that Baker and his companions sped into the town and the long grind was over. The run came to an end officially at 8:15 p. m. on August 27. Baker's advent was greeted with cheers and many pressed around him to give their congratulations. A flashlight was taken in order to record the event.



Baker crossed five mountain ranges in his long ride and traversed all kinds of roads. He did not appear excessively fatigued after his three-day and a fraction grind, when he dismounted after the flashlight had gone off and the preliminary handshakes had been gone through with. Derkum's arrangements with the police authorities through Southern California to have speed regulations relaxed, enabled the Three-Flag record-man to travel at his best and made possible the average of 20.37 miles per hour.

After the run was completed Urquhart tendered a banquet to Baker in honor of the event. Baker spoke in strongly-complimentary terms about the machine which he rode. The motor, which was of a new Indian type, was fitted with side-by-side valves, and Schebler carbureter. Ignition was by Dixie magneto, while Duckworth chains transmitted the power to the rear wheel. A Mesinger saddle and lamp made by the Badger Brass Company were fitted, as well as U. S. tires. Following a well-earned rest, the doughty Erwin G. left for Chicago this morning to take charge of Indian interests there.

### BALLS AND BEARINGS IN JUNE 1915

Imports of balls and bearings to this country in June, 1915, were in excess of the imports during the month of May, 1915, the figures showing a valuation of $108,206 for June and $59,618 for May. Both months, however, are below the imports made during June, 1914, when the valuation was $157,298. A loss is noted in the imports during the year ending June 30, 1915, when compared with the same periods ending in 1913 and 1914. Up to June 30, 1915, the figures reached $1,527,732, as compared with a valuation of $1,899,695 for the year ending June 30, 1914, and $2,410,861 during the year ending June 30, 1913. On June 30, 1915, balls and bearings valued at $357,241 remained in the warehouses. As of May 31, 1915, the valuation was $387,474, and on June 30, 1914, it was $504,206.

# New 1916 INDIAN MOTOR Takes Tremendous Test and Makes Startling Record

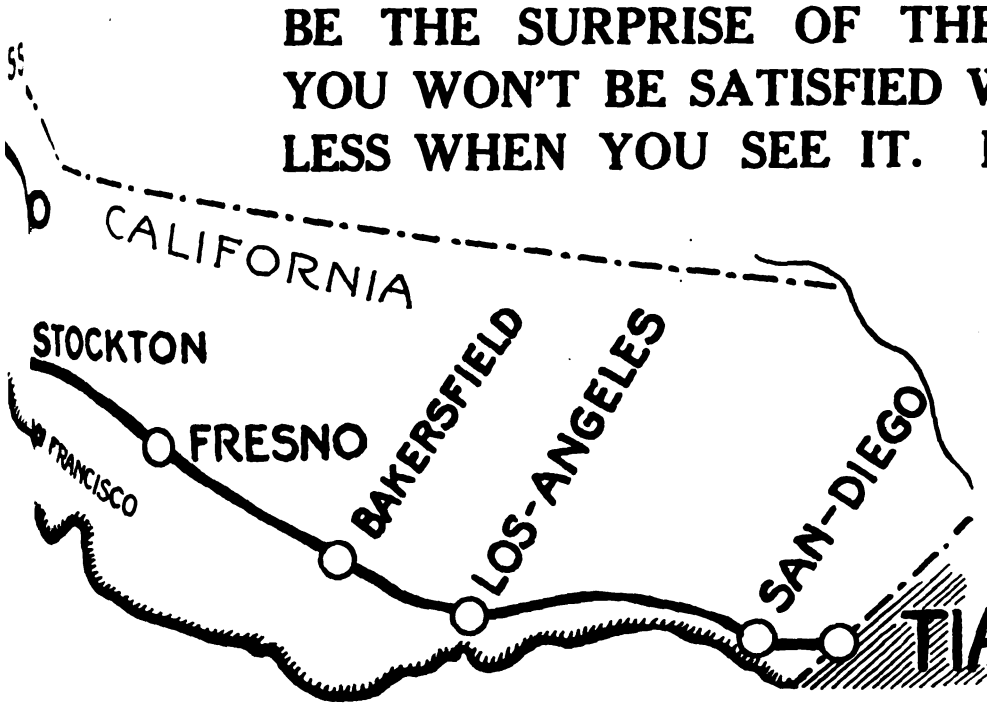
## 1655 1-2 Miles in 3 Days—9 Hours—15 Minutes

On August 24, E. G. Baker, driving an Indian equipped with the new type 1916 Indian motor, left Vancouver, British Columbia. It was the beginning of his "Three Flag Drive" through three countries—Canada, U. S. A. and Mexico. Less than 3½ days later he checked into Tia Juana, Mexico, after a run down the Pacific Coast through the States of Washington, Oregon and California.

Conquering five mountain ranges—dashing through four miles of forest fire—slashing through roads worse than those of his transcontinental ride, "Bake" laid down a record for himself and the new Indian motor which is the truly amazing performance of the year.

Sensation of every city and town through which he passed. Average mileage 475 miles a day. Rate of speed would take him *across the continent in 7 days.*

THE MOTOR THAT BAKER DROVE WILL BE STANDARD ON THE 1916 INDIAN. IT WILL BE THE SURPRISE OF THE 1916 SEASON. YOU WON'T BE SATISFIED WITH ANYTHING LESS WHEN YOU SEE IT. BIG ANNOUNCEMENT COMING SOON!



WAIT!

### RODGER ADDRESSES CLUB

Milwaukee, Wis.—Frank B. Rodger, Harley-Davidson publicity man, who represented the Milwaukee M. C. at the Sacramento F. A. M. Convention, addressed the club at the regular meeting last Saturday night on the subject of Federation and Pacific Coast doings. Mr. Rodger pointed out the benefits that the club and other Wisconsin riders had obtained by Legal Action Chairman Johnson in preventing the increase of license fees in the State, among other things.

He spoke on the barring of motorcycles from national parks, stating that the condition was one for which the riders were themselves to blame. The high speed at which motor vehicles travelled through big California cities was another subject touched on by the genial publicity man, as well as the need of promoters taking down fences in the infields of tracks to prevent accidents. He cited the death of Leuders as a case where the removal of the infield fence might have prevented the accident.

### DOCTOR USES MOTOR BICYCLE

Colesburg, Ky.—Dr. Thomas E. Craig, of this city, who four months ago purchased a Miami motor bicycle, is using the machine to call on his patients in the district. He reports that he has had no trouble of any kind, not even a puncture, and thinks the machine is ideal for his work, which takes him over some very rough country.

### POLICE MACHINES IN SERVICE

Owensboro, Ky., August 30.—The two new motorcycles recently purchased by the police department are now in service, and Chief Bell has notified all motorists to cut down their speed or suffer the consequences.

# MODIFIES R. F. D. CYCLE MANDATE

## At Manufacturers' Request, Postmaster-General Permits Use of Sidecar and Van

AS predicted in the last issue of **Motor Cycle Illustrated,** the committee of the Motorcycle Manufactures' Association, which waited on Postmaster-General Burleson at Washington last week, succeeded in inducing him to modify his order affecting the use of motorcycles and bicycles in R. F. D. service, so that the postal prohibition will not include motorcycles with sidecar or delivery van attachments.

The Motorcycle Manufacturers were represented at the conference by Ignaz Schwinn, of the Excelsior Motor Manufacturing & Supply Company; George M. Hendee and Jesse Edwards, representing the Hendee Manufacturing Company, and Walter Davidson of the Harley-Davidson Motor Company. The committee found the postmaster-general ready to listen to all their arguments, and had no serious difficulty in proving to him the practicability of using motorcycles with side car and delivery van attachments, in the R. F. D. service.

The principal point made by Postmaster Burleson was that, on account of the limited capacity of solo machines, they were not properly adapted to R. F. D. use since the introduction of the Parcel Post. He claimed that this situation had been instrumental in reducing the amount of cooperation secured from R. F. D. carriers in the matter of extending the Parcel Post service. It did not require much time or effort, however, to demonstrate to the postmaster-general the possibilities of the motorcycle with proper attachments, and at the conclusion of the conference he assured the committee that the order would be modified.

The committee desires to state that every courtesy was shown them by the postmaster-general and his assistants, all of whom showed a very commenable disposition to meet the motorcycle manufacturers half way. In consequence, it will not be necessary for anyone interested to write to congressmen or senators in regard to the postmaster's original order.

### CRUDE RUBBER IMPORTS HEAVY

Shipments of crude rubber to this country continue to be large, the month of June, 1915, showing a total of 18,785,812 pounds, 8,893,562 pounds of which came from the United Kingdom. Heavy shipments were also made from the East Indies, a total of 5,109,934 pounds reaching this country during the month. During June, 1915, the total shipments to this country were 9,428,700 pounds, and during May, 1915, the shipments aggregated 16,350,431 pounds. Shipments from Brazil during June, 1915, reached a total of 3,770,543 pounds.

During the year ending June 30, 1915, a total of 172,068,428 pounds of crude rubber reached this country. Of this amount 75,168,236 pounds came from the United Kingdom, 48,753,670 pounds from the East Indies. For the year ending June 30, 1913, the total shipments reaching the country aggregated 113,384,359 pounds, and for the year ending June 30, 1914, figures a total of 131,995,742 pounds.

# Now Incorporated As Westfield Mfg. Co.

UNDER the direct management of Wilbur C. Walker, of Hartford, the Westfield Manufacturing Company, which has acquired by purchase the good will, entire plant and business of the Pope Manufacturing Company, located at Westfield, Mass., will continue the manufacture of bicycles and motorcycles. The new company has been incorporated under Massachusetts laws, and has issued the following securities:

Four hundred thousand dollars 6% serial debenture bonds; $400,000 7% convertible preferred stock and $800,000 worth of common stock.

The preferred stock of the company consists of four thousand shares, 7% cumulative, redeemable at 110. Two thousand preferred shares are issued for cash and two thousand for location in Westfield. Of eight thousand common shares, ten are issued for cash, four hundred and ninety for a location, one thousand for machinery, three thousand five hundred for merchandise and three thousand for bills receivable.

Charles H. Tenney, of Springfield, Mass., will be chairman of the board and the other directors will be Joseph Shattuck, of Springfield; Otto J. Thomen, of Redmond & Co., and Steven C. Millett, of Millett, Roe & Hagen. Redmond & Co. underwrote the preferred stock and Millett, Roe & Hagen took the bonds, all of which have been given over to the investors.

The Pope plant was bought at auction by a syndicate of leading Hartford business men and manufacturers. Mr. Wilbur C. Walker has been connected with the Pope Manufacturing Company's automobile department for years. Mr. Charles H. Tenney is president of the Springfield Gas & Electric Company. Mr. Joseph Shattuck is president of the Third National Bank, of Springfield.

Although the charter authorizes the company "to manufacture, produce, purchase and otherwise deal in guns, amunition, etc.," it is stated on good authority that it is not the company's intention to manufacture munitions of war. The provisions authorizing such manufacture was inserted merely to make the charter broad enough to cover such manufacture should the occasion ever arise. In other words, the new company will devote itself practically entirely to the manufacture, purchase, sale, export and import, as stated in the charter, of "cycles, bicycles, tricycles, velocipedes, motors, motorcycles, etc."

The charter provides that additional common stock may be issued as required for issue to the holders of the preferred shares who may surrender their preferred shares in exchange for their number of common stock.

The holders of the preferred stock are entitled to receive from the net profits of the corporation or actual surplus of the corporation dividends at a rate not exceeding 7 per cent. per annum, from August 10, 1915, payable quarterly, and before any dividends shall be paid or set apart for the common stock and without any deduction therefrom for any United States, State, county, or municipal taxes, which the corporation may be required at any time to pay thereon or be required to retain therefrom.

The dividends on the preferred shall be cumulative and in case of a deficiency in the dividends on that class of stock in any quarterly period, the net profits and actual surplus of the corporation shall thereafter be first applied to the payment of such deficiency, so that no dividends shall be paid upon or set apart for the common stock unless and until the preferred stockholders have received full 7 per cent. thereon for all previous quarterly dividend periods. After full cumulative dividends on the preferred stock for all previous quarterly dividend periods shall have been declared and paid, the remainder of the net profits and actual surplus of the corporation may, in the discretion of the directors, be applied to the payment of dividends upon the common stock or may remain a part of the actual surplus of the corporation subject to its use for any and all proper corporate purposes.

# Chicago Show to Start Lightweight Year

WITH the opening of the doors of the Coliseum on Monday, September 20, the 1916 season, or the "Season of Lightweights," as it will undoubtedly be registered in American motorcycle annals, will be officially inaugurated. At least six of the 100-150 pound machines are expected to make their debut before the Show opens, but the total number to be exhibited will not be known until the curtains are drawn back on the opening night, for some makers are keeping their plans in this direction very secret at present. It is safe to hazard a guess that for the most part the lightweights will be fitted with two-stroke motors and will scale between 95 and 160 pounds.

Shows at Chicago and New York have always been noted for the amount of novelty in both machines and accessories, with Chicago leading in this respect by reason of holding the earliest exhibition each season. The forthcoming shows will be no different from their predecessors in this respect, and the lightweight field will give additional opportunity for ingenuity of design.

### Few Lightweights in 1915

At the last Chicago Show, with the exception of the Indian "Little Twin" there was not a lightweight on view during the whole week. The Smith Motor Wheel attached to a bicycle was the nearest approach to such a mount. But in New York, in the Grand Central Palace, there appeared the Miami Power Bicycle, weighing 110 pounds, with a single cylinder motor, and listing at $125, and the Schickel two-stroke, scaling 99 pounds and selling for $100. A season has passed since these two shows, and had either of the machines mentioned proved to be anything but a success, there would be no lightweights forthcoming for September and October exhibitions in 1915.

The two-stroke motor, which will probably be used to engine most of the little mounts, has never had but one exclusive maker in the United States, and though very simple, has never been properly understood. Norbert H. Schickel, the producer of the Schickel machines, has since 1907 advocated this type of motor, and is therefore the dean of two-stroke motorcycle men in this country.

### Two-Stroke Is Simple

The two-stroke motor is notable for its extreme simplicity, which of course spells reduced manufacturing costs as well as those for raw materials. The fewness of wearing surfaces reduces upkeep figures, also. Owing to there being one impulse per revolution, there is a steady flow of power from the single cylinder two-stroke, approaching very closely the effect obtained by a first-class four-stroke twin motor. It is also possible to operate the two-stroke motor without any oil reservoir, sight-feed, pump or mechanical device, as the oil can be effectively sent into the crankcase with the gasoline through the carbureter. The oil being mixed with the fuel in the fuel tank for this purpose, there is no chance of the bearings running dry, for lubrication and carburetion are effected simultaneously.

Prices, undoubtedly, will be the real surprise of the Coliseum show. Just what they will be, or even what their maximum and minimum limits will be, no one can foretell. It is safe to say that they will be sufficiently attractive, as far as the lightweights are concerned, to put these little mounts in the hand of many during the coming season who heretofore could not afford the outlay for machines of the heavier types.

### Social Side Cared For

While these and many other things will attract the dealer and rider at the Coliseum, the management has also done much for the accommodation of the fair sex. In the northwest corner a Japanese tea garden will blossom forth, and here the girls can congregate and partake of tea, coffee and dainty sandwiches. A smoking and lounging room will be provided for those of the other sex who prefer to discuss their business amidst a crowd of smoke, rather than in the private offices which are to be provided to each manufacturer for the transaction of business of a confidential nature. In this way it is expected the exhibits will be kept quite free of visitors who stay around either to chat or to transact business and interfere with the spectators in their efforts to get a glimpse of 1916's motorcycle offerings.

Indications are that the coming show will be very much larger and better in every way than the last years' exhibit. At that show more than 1,800 dealers registered, and, taking this as a criterion, it is expected that the tradesmen in attendance this year will reach the 2,000 mark. The business transacted on the floor at the last year's show was phenomenal, and with the tire makers lined up for the coming exhibit, with the season advanced a little over a month and with the motorcycle manufacturer ready to make delivery directly after the show, there is not a reason in the world why the coming exhibit should not be a world-beater in the way of stirring up new business.

One of the features of the coming show in Chicago is that it will be to all intends and purposes duplicated at the New York exhibit which is to follow so closely behind it—October 11 to 16. Unlike the New York shows of former years the coming exhibit is to be solely a "two-wheeler" affair. The motorcycle industry has reached a stage where a separate exhibit in New York is really necessary. The "two-wheeler" is a first class show all by itself, and recognizing this fact, the Motorcycle Manufacturers' Association has gone so far as to hire the whole of Madison Square Garden for the week. When it is remembered that that place housed the automobile shows for years the real importance of the motorcycle will be appreciated.

# Show List Is Growing Rapidly

CHICAGO, Ill., September 1.—No less than sixteen motorcycle manufacturers, three exclusive sidecar makers, and eight bicycle manufacturers have applied for space at the Coliseum exhibition which opens on September 20. To these must be added a long list of accessory men from all parts of the country and representative of all lines pertaining to the motorcycle and bicycle.

Following is a list of those who have requested space to date:

### Motorcycle Manufacturers

Aurora Automatic Machinery Company, Chicago, Ill.
Autobike Company, Chicago, Ill.
Cleveland Motorcycle Mfg. Co., Cleveland, O.
Davis Sewing Machine Company, Dayton, O.
Emblem Manufacturing Co., Angola, N. Y.
Excelsior Motor Mfg. & Supply Co., Chicago, Ill.
Harley-Davidson Motor Co., Milwaukee, Wis.
Hendee Manufacturing Company, Springfield, Mass.
Henderson Motorcycle Co., Detroit, Mich.
Joerns Motor Mfg. Co., St. Paul, Minn.
Militaire Autocycle Co. of America, Buffalo, N. Y.
Miami Cycle & Mfg. Co., Middletown, O.
Reading-Standard Motor Co., Reading, Pa.
A. O. Smith Company, Milwaukee, Wis.
Westfield Mfg. Co., Westfield, Mass.

### Sidecar Manufacturers

Flexible Sidecar Co., Loudonville, O.
Houghton Sidecar Co., Marion, O.
Rogers Mfg. Co., Chicago, Ill.
Harry Svensgaard Sales Corporation, Detroit, Mich.
Excelsior Motor Mfg. & Supply Co., Chicago, Ill.
Harley-Davidson Motor Co., Milwaukee, Wis.
Hendee Mfg. Co., Springfield, Mass.

### Bicycle Manufacturers

Emblem Mfg. Co., Angola, N. Y.
Excelsior Cycle Co., Chicago, Ill.
Great Western Mfg. Co., La Porte, Ind.
Haverford Cycle Co., Philadelphia, Pa.
Jones & Noyes, Chicago, Ill.
Miami Cycle & Mfg. Co., Middletown, O.
Arnold, Schwinn & Co., Chicago, Ill.
Westfield Mfg. Co., Westfield, Mass.

### Accessory Makers

Amana Society, High, Iowa.
American Wood Rim Co., Onoway, Mich.
Army Legging Co., Sand Springs, Okla.
Askew-Saddlery Co., Kansas City, Mo.
Badger Brass Co., Kenosha, Wis.
Bosch Magneto Co., New York, N. Y.
Champion Spark Plug Co., Toledo, O.
Corbin Screw Co., New Britain, Conn.
Cornish, L. H., Stamford, Conn.
Cycle Mfg. & Supply Co., Chicago, Ill.
Diamond Chain & Mfg. Co., Indianapolis, Ind.
Duckworth Chain & Mfg. Co., Springfield, Mass.
Eclipse Machine Co., Elmira, N. Y.
Electric Storage Battery Co., Philadelphia, Pa.
Ericsson Mfg. Co., Buffalo, N. Y.
Ero Mfg. Co., Chicago, Ill.
Fentress-Newton Co., Detroit, Mich.
Forsyth Metal Co., Buffalo, N. Y.
Frasse Co., Peter A., New York, N. Y.
Funke Co., H. F. L., New York, N. Y.
Hearsey-Willis Co., Indianapolis, Ind.
Hagerstown Shoe & Legging Co., Hagerstown, Md.
Heissler Storage Battery Co., Chicago, Ill.
Kelly Handlebar Co., Cleveland, O.
Kokomo Rubber Co., Kokomo, Ind.
Frank Mossberg Co., Attleboro, Mass.
New Departure Mfg. Co., Bristol, Conn.
Persons Mfg. Co., Worcester, Mass.
Prest-O-Lite Co., Indianapolis, Ind.
Louis Rastetter & Sons, Fort Wayne, Ind.
Rex Battery Co., Chicago, Ill.
Roller Saddle Attachment Company, Boston, Mass.
A. Schrader's Son, Inc., Brooklyn, N. Y.
E. A. Scoville Co., Manlius, N. Y.
Splitdorff Electrical Co., Newark, N. J.
Standard Welding Co., Cleveland, O.
Stewart-Warner Speedometer Corporation, Chicago, Ill.
Stoll Mfg. Co., Denver, Colo.
Troxel Mfg. Co., Elyria, O.
Van Cleef Brothers, Chicago, Ill.
Victor Auto Parts Co., Cincinnati, O.
Wald Mfg. Co., Sheboygan, Wis.
G. H. Westing Co., Indianapolis, Ind.
Wheeler & Schebler, Indianapolis, Ind.
J. F. Wilson Co., Toronto, Canada.

In addition to the above, the press will be represented by **Motor Cycle Illustrated**, *Motorcycling & Bicycling*, *Bicycle News*, and *Pacific Motorcyclist*.

# In the Racing Realm

### RACES AT TANFORAN RACE TRACK

San Francisco, Aug. 28.—An F. A. M. sanction has been obtained by Messrs. McLinden & Claiborne, automobile, motorcycle and aeroplane racing promoters, for a motorcycle meet at Tanforan race track, near this city, on September 5 and 6, in conjunction with automobile and aeroplane races.

Three events for motorcyclists have been provided for; 5, 10 and 25 mile races for Class B professionals only. Among the local riders who are expected to participate are O'Berg, Fabian and Torres, on Indians, and Zettle, of San Jose, Excelsior, and Burns, of Sacramento, Pope.

### LABOR DAY MEET PLANNED

Yonkers, N. Y.—The Yonkers M. T. C., of this city, will hold a race meet at the Empire City track on Labor Day, September 6. There will be a ten-mile and a 25-mile race, for amateurs only, with three medals offered for each event. Entry blanks can be had of George A. Ellis, care of Mittenthal Film Co., Herriott street, Yonkers. The entry fee is 50 cents.

### LABOR DAY RACES AT NORWICH

Norwich, Conn.—Entries will close on September 1 for the Labor Day races at the New London County Fair, according to a recent announcement made by C. V. Pendleton, Jr., the man in charge at 35 Broadway, this city. The major event will be a 15-mile open for pros., ported motors allowed, 30½ cubic inch only. The first prize will be $85, the second $45, and the third prize $20. The entry fee will be $1.

### PERKINS MAY RIDE AT CHICAGO

San Francisco, Aug. 28.—Earl Armstrong, the clean-up man at Tacoma, it is announced, will go to Chicago to participate in the Labor Day 300 mile race. He will, of course, ride an Indian.

Dud Perkins, of this city, member of the firm of Maggini & Perkins, local Harley-Davidson dealers, has announced his intention of being in attendance on the Chicago races, but it is not known whether he intends to ride or not.

### SUNDAY RACING TEST CASE

Buffalo, N. Y., August 30.—Upon complaint of the Civic League of Albany against Sunday motorcycle races, Samuel L. Robertson, manager of the Buffalo Velodrome decided to make a test case so he opened the gates last Sunday afternoon and sold tickets for the speed events. After the first event between Brownie Carslake, the Australian champion, and Bob Barclay, of Denver, the deputy sheriffs arrested both and ordered the gates closed. Both were later released on a $500 bond each.

On Tuesday night the two motorcycle racers were hailed before a trial jury in the Town Hall of Kenmore, with Justice of Peace Russell presiding. For two hours the lawyers argued and submitted evidence, but it only took the jury ten minutes to return with a verdict of acquittal.

Bart Shanahan, of the district attorney's office, said that the case would be carried to the higher courts.

## RECORDS GO AT MEET IN INDIANA

### Sudduth and Stokes Set New Marks for Ten and Fifty Miles at Local Track

INDIANAPOLIS, Ind., Aug. 30.—W. Sudduth, Harley-Davidson, won the fifty mile race held on the track in this city on August 28, in 45:37, with Glenn Stokes, Excelsior, second, and H. Ellis, Indian, third. Sudduth's time constitutes a track record for the distance. Stokes won the pursuit race, passing all competitors save Dave Kenny, Cyclone, but was getting him when the race was called. In the ten mile event, Stokes again won, his time 8:36⅗, being a new track record. Kenny was second, and Montgomery, Excelsior, third in this event.

In the long race, Stokes led till the 43d mile, when his spark plug terminals got loose and forced him to stop. He lost position to Sudduth, and getting going again assumed the lead once more. A stop on the 4th mile put Stokes in second place, with Sudduth first and Ellis, Indian, third. Attempts by Perry, Goudy, Stokes, Montgomery and Kenny to break mile track record of 49 seconds failed. Following is the summary:

Ten-mile open.—Stokes, Excelsior, first; Kenny, Cyclone, second; Montgomery, Excelsior, third. Time, 8:36⅗.

Pursuit race, twenty miles limit.—Won by Stokes.

Fifty-mile race.—Sudduth, Harley-Davidson, first; Stokes, second; Ellis, Indian, third. Time, 45:37.

### MOTORCYCLE EVENTS AT FAIR

Cincinnati, O.—Harry Max, a local motorcyclist, won the motorcycle-aeroplane, automobile race at the annual fair at Erlanger, Ky., last week. Max distanced his two competitors handily in the two and a half miles of the race. H. Knox, of Omaha, Neb., won the five mile motorcycle race, with F. Quinn, of Covington, Ky., second and H. Feldman, of Newport, O., third. A large crowd of Cincinnatians witnessed the events.

### PLANS SHAPING FOR LOUISVILLE SPEEDWAY

Louisville, Ky., August 30.—George L. Martin, of the real estate firm of Mueller & Martin, who have been working for some weeks formulating plans prior to the incorporation of the Louisville Speedway Company, reports that things are now in excellent shape, and the papers are about ready to file. It is expected that all details will be completed inside of the next week, and actual work will probably start on the two-mile board speedway inside of the next sixty days. Mr. Martin stated that the company would endeavor to get the motorcycle people interested in the speedway, and that motorcycle as well as automobile events would be staged in Louisville.

### LABOR DAY RACE MEET AT SINGAC

Singac, N. J., Aug. 30.—A race meet will be held on Wilkies track here on Labor day, starting at three o'clock in the afternoon. G. Bley, Paterson's speed boy, will meet H. Drummond, of Caldwell, for a purse of fifty dollars in a fifteen mile event. Other races will be a twenty-five mile free-for-all, a twenty mile for singles, ten mile sidecar, and an exhibition by Orie Steele, the Paterson Indian dealer.

### SPEEDY RIDING BY GORDON

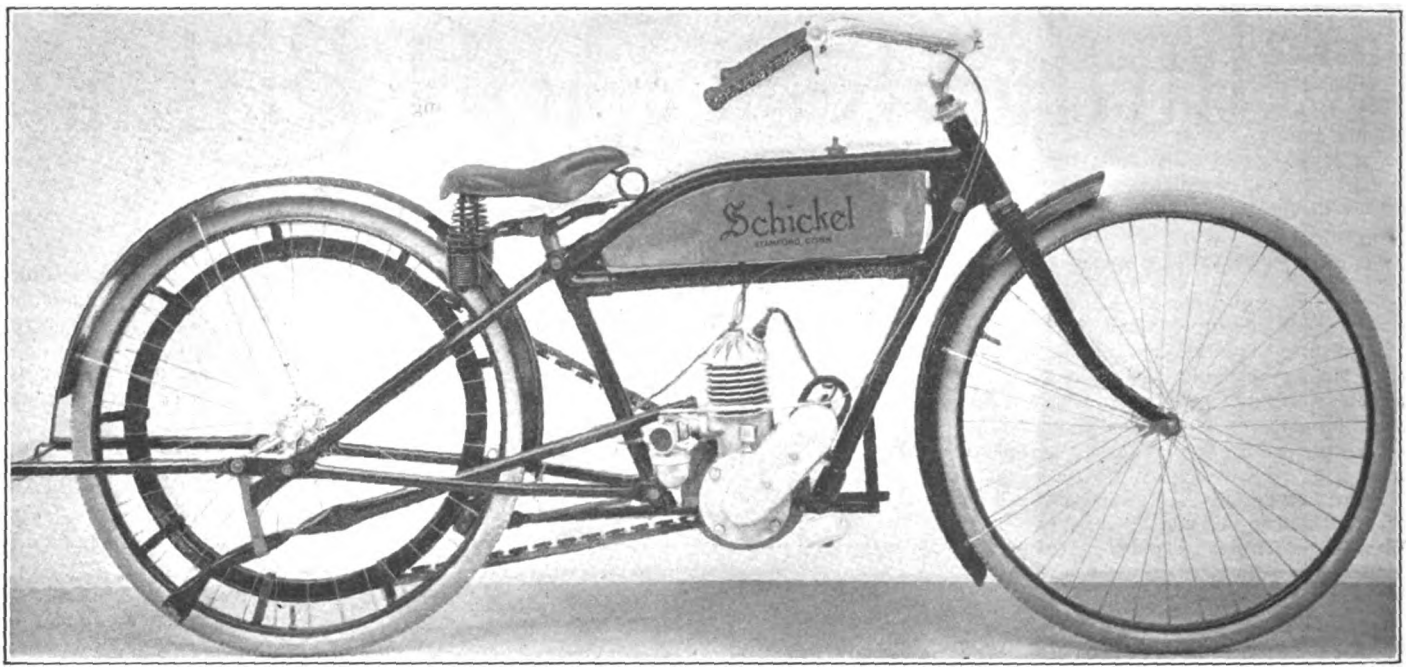
Cincinnati, Aug. 28.—The speediest racing of the season at the Lagoon motordrome occurred last Sunday, when Eddie Gordon won a two-mile dash from Harry Lewis at an average speed of 91½ miles, this being slower only than Marty Graves' 92 miles and Fleckenstein's 93 miles, in 1914. On Wednesday evening, in a trial against time, Gordon broke his own record and equalled that of Fleckenstein by making a mile in 38⅗, which is an average speed at the rate of 93 miles an hour.

### TACOMA SPEEDWAY BOARD TRACK

Tacoma, Wash.—An official statement regarding the record alleged to have been made by Earl Armstrong on his Indian on the Speedway, August 15, is to the effect that no previous dirt track records were broken, and that the Speedway is a board track and not a dirt one.

Digitized by Google

# Few Changes in Schickel Lightweight



**New Two-Stroke Lightweight Showing Dual Handlebar Control, Inclined Magneto, Novel Wheel Suspension and Flattened Exhaust Pipe**

IN consequence of the high development attained since the initial appearance of the Schickel Lightweight in 1915, only a few changes have been found necessary for this product of the Schickel Motor Company, of 59 Garden street, Stamford, Conn., for the 1916 season. These changes, however, have all been made to obtain increased comfort, safety and reliability, and are therefore by no means as minor as would appear at first sight of the new model.

The two chief changes from the 1915 lightweight are in the construction of the cylinder and the suspension of the rear wheel. The cylinder is made with a detachable head, attaching to the body by an ingenious joint on the interrupted-screw principle, and enabling the user to get at the interior of both head and body by a fractional turn of the former. The spark plug is located in the forward part of the head in place of being in the center as in 1915, while the compression release is fitted in the head-center instead of forward in a machined boss.

### Novel Wheel Suspension

The rear wheel is now carried on an upright steel piece extending from the junction of the rear forks and stays on each side. The axle-ends, in addition to fitting into the upper portion of these pieces, are also fitted in the ends of special short rods, threaded for some distance from their rear ends. These rods pass through bosses attached to the rear prolongation of the forks, and are fitted with nuts on both sides of the bosses, thus acting as belt adjusters, by moving the rear wheel in an arc to compensate for stretch and the like. The arrangement of wheel suspension gives a lower saddle position in combination with a change in the lines of the top tube as compared with the model of 1915.

Reverting to the two-stroke motor with outside flywheel, the bore and stroke are 2½ inches respectively, as in the previous model, but the position of the magneto has been changed somewhat. On the 1916 machine, the Berling magneto is inclined in relation to the axis of the cylinder instead of fitting with the magnets horizontal. The exhaust pipe comes off at a greater angle from the horizontal, and is flattened in different planes to give a quieting effect to the gases. It extends well past the rim of the rear wheel in order to carry the exhaust well away from the tire.

### Carbureter and Lubrication

The carbureter is of the float-feed type, with horizontal throttle in place of the special throttle used on the 1915 machine. Lubrication is by the injection system, the gasoline and oil entering the crankcase from the carbureter together and separating therein. Fuel consumption is given at better than 100 miles per gallon. With the carbureter fitted and the simple control used, no pedals are needed, a single push-off with the feet when the rider is mounted being sufficient to have the motor commence its characteristic powerful buzz, and the machine start off rapidly and smoothly.

V-belt transmission is continued for the new season, with block brake acting inside the rear pulley. The long leverage given to the brake-arm, which was remarked upon as more than ample in 1915, has been retained, but there has been an improvement in the pad-end of the arm. This end is doubled and works over a flat guide attached to the left footrest bar, thus ensuring a straight-line movement of the brake arm when in action, and keeping the pad always in a position ready for the pressure of the rider's foot. The stand is pivoted to the rear extension of the fork on each side, and latches in a horizontal position when out of use.

The control of the machine is by means of two Bowden-type lift levers, with friction position-retaining devices, on the right handlebar. The mechanism from these levers runs respectively to the throttle and compression release, and as both are mounted on different sides of the bar on the one fixture, the right hand can readily operate them simultaneously if desired. With these short levers and the brake, entire control is had of the Schickel lightweight, for the magneto has a fixed ignition point.

The frame gives a lower saddle position than in 1915, by reason of the new wheel suspension, and also of a change in the form of the top tube. The saddle is now 28 inches from the ground. The tank in which the charge of fuel and lubricating oil are mixed for passage through the carbureter, is changed in form to fit below the more gracefully-sloped top tube of the new model. The tank is filled through a short standpipe, whose aperture is closed with a priming-gun, and there is a needle-valve for controlling the flow to the carbureter.

### Other Details

The front mudguard is changed in form to better protect rider and mechanism. The forward extension is slightly raised out of the curve of the remainder of the guard. The handlebars are given a different curve, as is the short post connecting them to the steering-post, and the position of the bars is adjustable to suit the rider. Footrests of ample size are fitted. The wheelbase is 52 inches and wheels are 28 inches in diameter, with special tires for this weight and power of machine. Complete the machine weighs 95 pounds. It is priced at $100.

The maker offers the following options for the lightweight: Spring fork which will cost $10 extra; spring seat post, which is listed at $5 extra.

Digitized by Google

# Cyclemotor Makes Its American Debut

ROCHESTER, N. Y.—The formal introduction of an international product, the Cyclemotor, which is an entirely new motor attachment for bicycles, is being made simultaneously at the Industrial Exposition in this city and at the Canadian National Exhibition at Toronto, Canada, and, incidentally, the announcement is made that arrangements have been completed for the manufacture and sale of the device from both American and Canadian factories.

### Will Be Made at Rochester

While the Cyclemotor is primarily of Canadian origin, having been invented and developed in the factory of John T. Wilson, Limited, Toronto, the invasion of the American market means that by far the greater production will be accomplished in the States, where the field is much greater. The American manufacturers will trade under the name of The Cyclemotor Corporation, behind which is a long-established factory of considerable dimensions, and the headquarters of this company are at Rochester. Facilities are ready for the immediate manufacturer of the little motor according to the designs, which have been thoroughly tested and tried during the past two years.

Many of the mechanical features of the Cyclemotor are very unique. The whole outfit, ready to be installed in the frame of a bicycle, does not weigh more than twenty-one pounds, so that it is far from being a burden of weight on the ordinary cycle. The motor is of the single-cylinder, air-cooled, two-cycle, high-speed type, with a piston displacement of only 91 cubic centimetres (5½ cubic inches), making it approximately one horsepower. Ignition is obtained from a specially designed waterproof high-tension magneto and vaporization of the gasoline is secured through an automatic float-feed carbureter. The engine is controlled by a single lever on the handlebar of the bicycle through a wire running to the magneto, and this wire also acts upon a relief valve or decompressor in the cylinder head for starting and stopping purposes.

### Transmission Described

The power is transmitted to the rear wheel through a chain and belt combination, a short roller chain connecting the crank shaft with the counter shaft. The half-inch Spartan round twisted belt runs over large pulleys, insuring proper traction and good belt service, and there is the usual belt tension pulley. The big rear pulley is made of one-piece rolled steel and is fastened to the spokes of the bicycle wheel with special clamps which cannot slip or cause undue strain. The whole device is merely attached to the bicycle by means of screw clamps and it can be installed, ready for the road, in an hour. No alterations are necessary with the bicycle, although it is usual to lower the saddle in order to give better seating position, and to bend the rear mudguard slightly in order to permit wider clearance for the belt.

Because of the very low gearing, twelve to one, and the great engine speed, a minimum of vibration is notice at low road speeds. At twenty miles per hour the tiny engine travels at the rate of 2,700 revolutions per minute. At 33 miles per hour, which was the road speed attained in a special test recently, the r. p. m. of the flywheel were no less than 4,200. Every Cyclemotor is guaranteed to produce power sufficient to travel from two to 20 miles per hour and to take a bicycle up all ordinary grades without human assistance.

### Gasoline and Oil Mixed

A feature of the Cyclemotor is that the gasoline and oil are mixed in the half-gallon tank in prescribed proportions and the tank capacity is sufficient to ride fifty miles. The mixing of the oil and gas makes for proper lubrication of all engine parts at all speeds and it is a fact that all tests so far have shown a minimum of carbonization in the cylinder. A very unique point about the power-plant is the flywheel, which consists of an exposed thin metal disk with a diameter of about ten inches. This has been found to be entirely sufficient for the small engine. The muffler, which is as large as the engine cylinder itself, is integral with the motor and is of the baffle-plate type with long extension pipe running to the bottom of the bicycle frame.

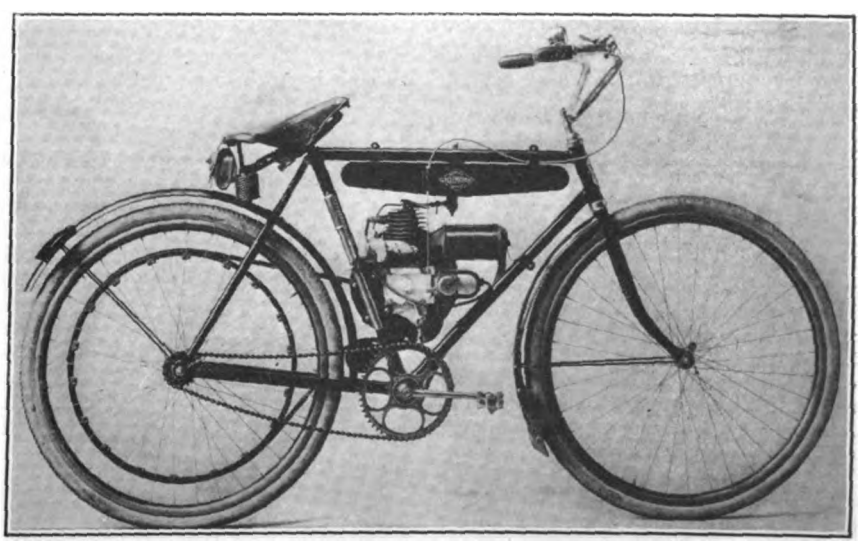
The crankcase is made of aluminum and, as usual with two-cycle construction, the vaporized charge of fuel is drawn into it by the suction of the rising pistons before it is forced through a port into the combustion chamber. The positions of the component parts of the motor are such that the entire power-plant is very compact and easily accessible. There are very few moving parts because the two-cycle design eliminates valves, cams, gears and push-rods, while the oiling system adopted does away with lubricating devices. Another interesting point is that the toughest and most durable connecting link of alloyed steel is used with the belt to overcome trouble with the belt fastener.

Every motor, after being assembled, is "run in" on a testing block, after which it is given a road test in ordinary cycles. The Cyclemotor is so simple and light in weight that its manufacture is comparatively easy and the factory output will soon mount into high figures. It fits nicely into a bicycle—it is neat in appearance and does not give the cycle an unbalanced look. In operation the Cyclemotor produces just a hum of sound because of the high-speed engine.

### Will Exhibit at Shows

Preparations are being made to exhibit the outfit at both the Chicago and New York motorcycle shows this fall and a lively selling campaign will follow during the winter. While the Cyclemotor sells in Canada for $70 f. o. b. Toronto, the price in the States will be only $55 f. o. b.

The officers of the Cyclemotor Corporation are D. M. Anderson, president and general manager, and D. L. Evans, chief engineer. The corporation is capitalized at $500,000.



**Cyclemotor Fitted in Bicycle Frame, Showing Tank, Integral Muffler and Flywheel**

## GASOLINE GOING UP

An announcement of an increase from 17 cents to 18 cents in the export figures for gasoline is declared by refiners to foreshadow higher prices generally to users of gasoline in this country. Within the last four months the retail price has climbed from 9 cents to 14 cents and it is expected that before long it will reach a price of 16 cents per gallon. The export demand is indicated by the statement of one refiner that an order from abroad for 30,000,000 gallons has been rejected.

With the warring nations heavy buyers and a large domestic call from the fast-growing number of consumers, for whom thousands of motorcycles and automobiles are being turned out practically every day, it is no wonder that Pennsylvania crude oil in the last month has jumped from $1.35 to $1.60 a barrel. The selling price of the refined commodity has kept pace with that of the raw product. Dearer gasoline is a genuine war tax upon a peaceful nation, and is one of the heaviest burdens that can fall upon the American public.

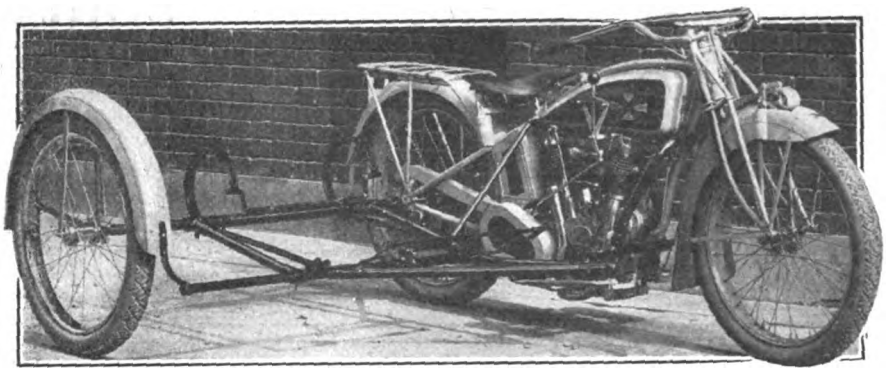
## NEW FRONT BRACE ON PULLMAN SIDECAR



**Pullman Sidecar Chassis Showing Hinged-Joint Rear Connection, Center Means of Attachment and Triangular Front Brace**

IN connection with the latest model of the Pullman sidecar, the Harry Svensgaard Sales Corporation, of 471 Woodward avenue, Detroit, Mich., has brought out a triangular front brace, for attaching the left longitudinal chassis member to the down-tube of the motorcycle so as to relieve the motorcycle frame of all twist or side strain. This brace has a threaded stud for the upper front connection to enter the permanent sidecar lug of the 1915 Excelsior and other frames so fitted, as well as a horizontal crossbar which is clamped to the down-tube just ahead of the motor at the outer end. This crossbar at the inner end terminates in a threaded stud, machined from the solid, passing through the movable lug on the sidecar chassis.

By this construction lateral adjustment is provided for the proper alignment of the sidecar wheel and a fore-and-aft adjustment to conform with the requirements of the motorcycle frame. There is no twist at any point of the frame, as the brace can only be deflected by a distortion of the whole of the latter owing to its form and method of mounting. This is an improvement on the preceding connection used in Pullman construction where any twist was applied entirely to and directly at the frame lug or clamp.

In addition to this new front brace, the Pullman sidecar chassis is fitted with a new rear connection. The left side of the sidecar axle terminates in a radially-corrugated clamp-lug and there is an extension bolted to this. The extension is capable of being adjusted vertically and carries the hinged frame connection at the other end. The construction allows of adjustment of the chassis to adapt itself to the motorcycle frame at the proper height and alignment, while the hinged joint relieves the frame from all distortion. The center brace runs from the seat-post cluster under the sidecar body and thence outwardly to near the center of the sidecar chassis member, where it is properly secured by means of a hinge joint.

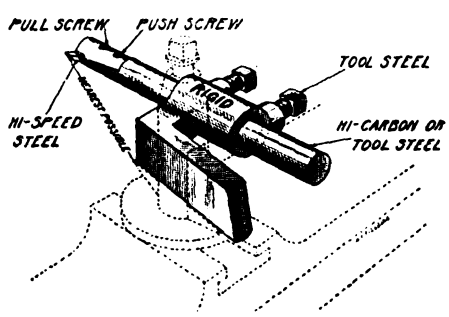
## RIGID BORING TOOLS

Boring sets for tool-posts on engine lathes as well as independent boring sets to fit in slide carriages are manufactured by the Rigid Tool Holder Co., of Baltimore, Md., following the designs of E. F. Gibbs, a practical machinist of Washington, D. C. The Gibbs devices, which are sold under the name "Rigid," are designed to follow out their name when once put in place on the lathe, and afford means of carrying tools for a variety of operations.

The Rigid tool-post set, for boring or thread-cutting, consists of a holder with a tail for clamping in the tool-post on the lathe slide carriage. The major part of the holder is cylindrical and is fitted with two set screws. These screws are of tool steel. A cylindrical bar or carrier of tool or high-carbon steel is clamped within the cylinder and is formed at its forward end to take a cutter, thread-tool, diamond-point or other small tool as desired. This small tool is positioned by means of a push screw and a pull screw, so that it is merely necessary to move one or both of these to set the tool to the desired position with reference to the work.

This set can be had in various sizes, the smallest being with 5/16 x ¾ shank with ½ x 9 x ⅛ cutter and bar at $3 for high-carbon and $3.40 for tool steel bars.

A cutting-off tool to set on the slide carriage is also manufactured by the company, as well as a series of boring tools. The latter fit into the T-groove on the carriage and have a simple means of adjusting the



**Rigid Tool Post Device**

height of the holder and tool with reference to the work. Swiveling means are also provided and means for cutting key-ways can be had. These tools are used in all the U. S. Government departments in Washington, D. C., which is a proof of their value, as all tools used in the Government shops have to pass severe examinations in competition before being adopted. For further information the makers should be addressed at Baltimore, Md. They will answer all inquiries promptly and fully.

## WRIGHT PLUGS WILL BE STOCK ON HARLEY-DAVIDSONS

Numerous important victories won by machines equipped with Wright Spark Plugs, manufactured by the New York Mica & Manufacturing Company, of Auburn, N. Y., has secured for that concern a place of prominence in this field. The latest achievement of the manufacturers of Wright plugs is that of securing the contract of the Harley-Davidson Motor Company for the 1916 equipment on their machines.

## MANY VISIT AT WESTFIELD

Westfield, Mass.—Good weather during the week beginning August 22, resulted in a large number of visitors coming to the big plant of the Westfield Mfg. Co., formerly the Pope Mfg. Co., to see Pope bicycles and motorcycles manufactured. Among the number were H. E. Fourcher, Augusta, Ga.; A. W. Urick, Newark, N. J.; Malcohm T. Heil, Walter Bartholomew, Allentown, Pa.; M. D. Rice, San Juan, Porto Rico; Harry W. Wagner, Allentown, Pa.; H. E. Teevens and J. E. Thompson, both of Woonsocket, R. I.; Ralph Hill and W. R. Rembert of Sumter, S. C.; Ralph C. Cowles, Canton, Conn.; Edwin R. Wilder, Collinville, Conn.; O. Ling, Birmingham, England; V. B. Carter, E. J. Lester, Huntington, W. Va.; Chas. E. Weaver, Cleveland, Ohio; L. F. Maynard and Mead Buck, Glens Falls, N. Y., and J. H. Farrell, of Cristobal, Canal Zone.

## GENERAL EXPORTS ALMOST DOUBLE

The exports of the United States for the month of July, 1915, were almost double the figures for the month of July, 1914. The total exports during July of this year were $267,978,990, as against $154,138,347, an increase of $113,840,042. Imports to this country during July, 1915, were $143,099,620, as against $159,677,291 a year ago.

A gain of 64 per cent. in exports is noted for the first seven months of this year as compared with the same period of 1914. Imports show a loss of 11.6 per cent. for the same period this year, compared with the first seven months of 1914.

For the seven months ending with July, the export balance fell only a little short of being a billion dollars, the total being $960,878,054, against $60,388,789 in the first seven months of 1914.

## LAMMS ADD THREE FLOORS

Baltimore, Md.—Lamm Brothers, the manufacturers of motorcycle clothing, will open up three more floors of their big building at 339 North Gay street, this city. This addition will give the firm an increase in floor area of 11,664 square feet, which will be used for manufacturing their goods.

## CASSEL HAS NEW DESIGN

Preston, Ont.—Lloyd Cassel, a local motorcycle enthusiast, is completing an original design of motorcycle which he calls the "Cassel." He constructed the whole machine himself and he intends to submit several of his ideas to prominent motorcycle manufacturers.

### COUGHLIN OPENS IN BRONX

Bronx, N. Y.—The Harley-Davidson Sales Company of the Bronx had an informal opening of its new headquarters, 922 Washington avenue, corner of Brook avenue and 163rd street, on the evening of September 1. Gene Coughlin, who is in charge of affairs in the new company, played host to a number of rider and trade friends, all of whom admired the arrangement of the premises, and wished success to the new venture.

The establishment has a frontage of 26 feet on Washington avenue, with a double entrance which will permit the ready admission of any sidecar outfit. The front part of the store is given over to the show room and counters and shelving for accessories, with an office for the manager in one corner. The rear part is for storage, with a shop section on one side. The basement is to be fitted up for repair work of a light sort, while the yard adjoining the premises will be used in good weather as an outdoor repair place. A full stock of clothing, accessories and spare parts for the Harley-Davidson will be fitted in a few days, to supplement that now in the establishment.

Coughlin, who has been connected with the bicycle and motorcycle trade since 1907, was formerly manager for the Riverside Motorcycle Garage and the Harley-Davidson Sales Company of New York. He got his first experiences with the Castle Cycle Company, later T. J. Sixsmith, on West 100th street, and has done repair work on practically all makes of machines marketed during the last eight years. He has been in numerous road and track competitions, retiring from the latter branch of sport several years back.

### WILL ATTEND SHOW

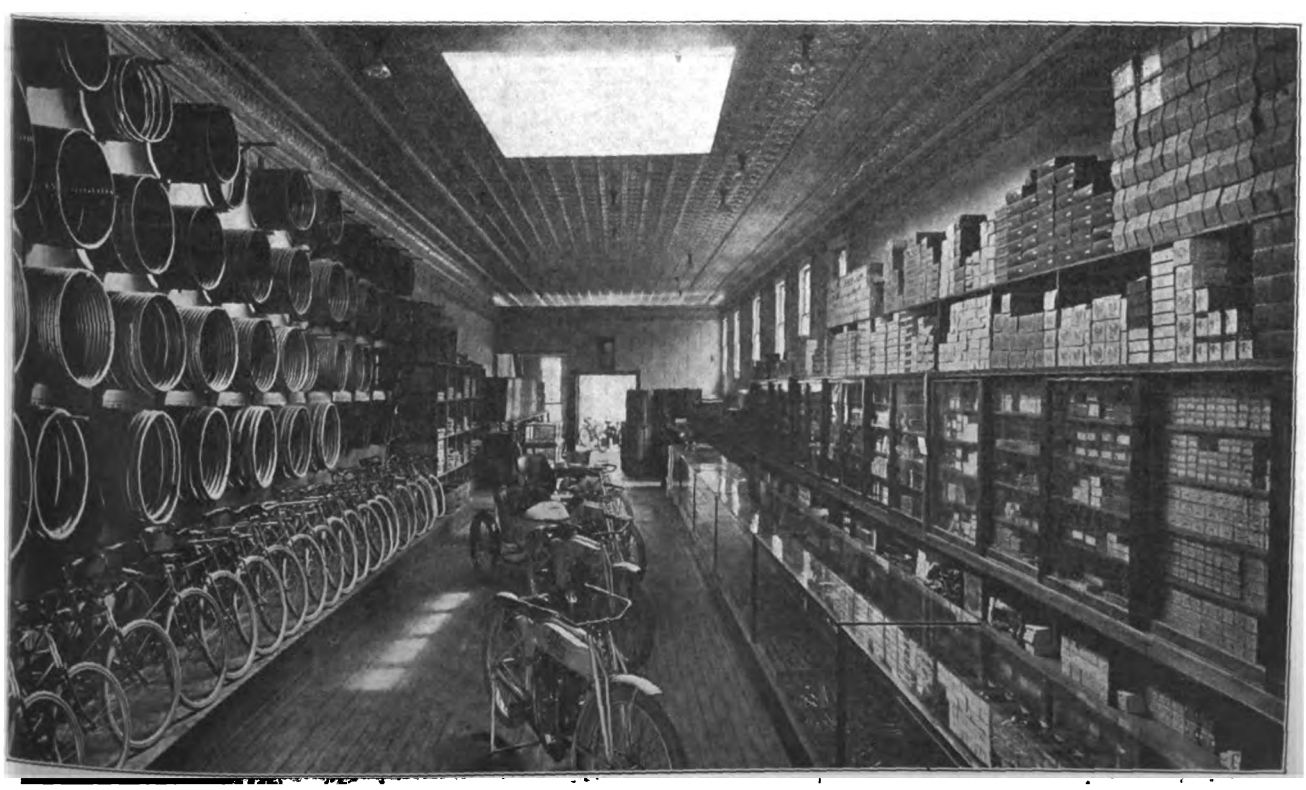
Louisville, Ky., August 30.—R. E. Hickey, manager of the Dow Wire & Iron Company, manufacturer and jobber of bicycle luggage carriers and dealers in bicycles, motorcycles and supplies, has announced his intention of attending the Chicago show, after which he will go East for his vacation.

### GOERKE ON VACATION

Newark, N. J.—After a busy selling season, Walter Goerke, the veteran Indian representative in Newark, is calking off at his mother's bungalow on the shores of Greenwood Lake, N. J. "After seeing red so much," says Walter, "it is a relief to look at green trees and grass." When he gets back to this city he will take a trip to Springfield, Mass., to pay his annual visit to the Wigman to see the new season's models.

### KLINE BROS. CLEAN UP SALES

Louisville, Ky., August 30.—Kline Brothers, Harley-Davidson dealers, have sold the last machine out of their contract for 1915. The total number contracted for was sixty, of which each of the Kline boys reserved one machine for demonstration purposes. It is probable that several more machines will be sold, however, before the 1916 models are on the market. Herb Kline reports that there is more interest in motorcycle riding in the city than ever before.



**Cleanly and Well-Lighted Establishment of R. H. Hofheinz, Representing the Thor at 210 East Commerce Street, San Antonio, Texas. The Proprietor Believes in Having an Extensive Stock on Hand at All Times, As the Picture Indicates**

### STEVENS AND BUSH JOIN

Newark, N. J.—Carl W. Bush, local Harley-Davidson dealer, is going into partnership with P. W. Stevens, the veteran rider of this city. P. Wilmer Stevens is one of New Jersey's pioneer competition and trade men, having made his debut in the game in 1901 on a 2 hrosepower Merkel. He has captained victorious Yale teams in endurance runs for several seasons, notably in the New Jersey M. C. affairs of 1910, 1911 and 1912. During 1913-1914 Stevens had charge of F. C. Cornish's Yale agency, leaving the latter to take charge of a local machine shop. His return to the motorcycle ranks will be welcomed by a large crowd of riders.

### CENTURY CYCLE CO. MOVES

Louisville, Ky.—The Century Cycle Company, which was organized early in 1915 and which established a handsome store at 405 West Broadway, has taken larger and better quarters at 660 South Fourth street. The new building is 30 x 200 feet and a large basement extends under the entire store. The floor space will be divided into about four different departments, which will include the main salesroom, the repair shop, a storage room and a room for second hand machines. The company handles the Indian in Louisville, and a large line of bicycles jobbed by G. H. Westing & Co., of Indianapolis. The store is by far the largest and most attractive bicycle and motorcycle store in this district.

### METZGER STORE COMPLIMENTED

Detroit, Mich., Aug. 23.—When the motorcycle manufacturers were in Detroit a few weeks ago and held a meeting at the Hotel Tuller during the same week that the National Rural Mail Carriers were holding their annual convention, a number of them personally visited the new store of the W. F. Metzger Co., among them being George M. Hendee, Walter Davidson, H. N. Kirk and Jesse Edwards. All of them paid Messrs. Adock and Purrinton many compliments for having given Detroit one of the finest stores of its kind in the United States.

### PARDON GOING AFTER 'EM

Owensboro, Ky., August 20.—Henry F. Pardon, the local Indian agent, is taking advantage of the large wheat and grain crops harvested in Kentucky this season to make a special endeavor to secure the business of the well-to-do farmers in the district. Few of the farmers have marketed their crops so far this season, due to low ruling prices on grain and other commodities. However, the money is undoubtedly there and by means of clever advertising and the offer of time payments Mr. Pardon is managing to get a portion of the delayed business. Four machines were sold last week to farmers in the vicinity of Owensboro.

### UNEXPECTEDLY LANDED A SALE

Phoenix, Ariz., Sept. 2.—Miss Laura Andrews, of Prescott, 18 years old, is the first Arizona girl to own and ride a motorcycle. She has purchased a twin-cylinder Indian from Ben Landis of the local wigwam. "Show me how that machine works," said Miss Andrews, dropping into the motorcycle shop and pointing at the reddest Indian on display there.

Good naturedly Landis explained the uses of the various levers and pedals. He never dreamed that Miss Andrews was thinking of buying the machine for herself and he nearly dropped dead when she said:

"All right, I'll take it if you'll teach me how to run it."

That was late on a Saturday afternoon. The next day Miss Andrews became so proficient that she took Landis on the tank and piloted the machine to Granite Reef, 28 miles from Phoenix, over a twisty canal bank.

### VISITS MOTOR WHEEL PLANT

Milwaukee, Wis.—A. E. Bregent, who represents the Smith Motor Wheel in Montreal, Canada, was a visitor to the A. O. Smith Company's plant on August 16. His main object was to arrange for a quick additional shipment of Motor Wheels, as well as for more rapid deliveries across the border.

Up to August 14, Bregent had sold 81 of the little motor attachments. His rush order at the factory was for 15, making a total of 96 Motor Wheels since July 9. Bregent has as his first assistant Fred St. Onge, the noted trick bicyclist.

### SHOWED RACING MACHINES

Altoona, Pa.—Every dealer in this city had one or more racing machines in his window or on his salesroom floor for a week recently. The Blair County M. C., in order to advertise the race meet of August 29, arranged to have the mounts of the contesting riders on view, along with the name of the owner, his records and prizes. The windows have been pretty well packed all day and motorcycle agents have already felt the good effects of this form of advertising.

### RECENT SALES BY SNIDER

Bakersfield, Cal.—George L. Snider, who handles the Harley-Davidson in this city, has just sold two twin mounts to the Bakersfield police department, as well as six to the employees of the Southern California Edison Company. The latter are used for riding to and from the big power station of the company up in the Kern River Canyon, over rough mountain roads.

### INITIAL ORDER WENT FAST

Altoona, Pa.—Business has been brisk for the last week for the Zeak Motor Car Company, when the first lot of Smith Motor Wheels were unpacked in their showroom. Four of the little bicycle boosters were soon fitted to the mounts of cyclists and the rest of the lot is going fast. The Zeak firm took the agency over a week ago, and are jubilant over their initial sales of the Motor Wheel.

### BERCKHEMER AGAIN IN CAST

Bronx, N. Y.—Ollie Berckhemer, the genial Indian agent at 993 Washington avenue, has had to have his leg put into a plaster cast again, owing to the bones not knitting properly. Ollie was injured in a collision with a mail truck some time back and was discharged from the hospital in a short time, but he removed the cast rather too soon.

Digitized by Google

# DEALERS' SECTION

## ONE BIG STORE FOR HAVERFORD

Philadelphia, Pa.—The Haverford Cycle Company, Excelsior representative, will consolidate the Arch street and the Market street stores under one roof on or about October 1. The first of these stores is at 825-829 Arch street, while the second is at 325 Market street, this city. The new building will be at 503 Market street. Extensive alterations are being made at present, among them being a new terra-cotta front. With the six floors of the new structure at the firm's command, the much-needed space required by the Haverford business in its rapid expansion will be obtained.

## MORE TAKE ON MOTOR WHEEL

Among the dealers who have been recently added to the long list of Motor Wheel representatives in the United States and Canada, are the Arizona-Sonora Motor Sales Company, of Douglas, Ariz.; the Brownie Motorcycle Company, of Enid, Okla., and the Thom-McLerd Company, of Rushmore, Minn. The A. O. Smith Company gives as additions to these four the following: C. Hawn, Boos, Ill.; J. L. Morgan, Brownwood, Tex.; Finch & Co., Hammond, Ind.; R. A. Carter, Tahoka, Tex.; W. E. McCarthy, Stratford, Ont.; A. Asen, New York, N. Y.; R. L. Cowles, Canton, Conn.; Jos. F. Mills, Greenings, Ill., and the Ro-De Corporation of Geneva, N. Y.

## SIGNS FOR HARLEY-DAVIDSON

Bridgeport, Conn.—James T. Burroughs, the veteran dealer at 866 State street, this city, has signed up for the Harley-Davidson representation in this city and vicinity for 1916. Burroughs was for a number of seasons the local Excelsior representative, and is one of Connecticut's pioneer motorcycle tradesmen.

## DEALER THINKS RACING GOOD

Fresno, Cal.—L. H. Weilheimer, junior partner in the firm of Hertweck & Weilheimer, at 2028 Mariposa street, this city, is of the opinion that properly conducted racing is a good trade stimulant. "It creates a large amount of publicity," said Weilheimer recently, "for local newspapers cater to riders in their section by giving them the motorcycle news from all over the country. Almost every rider has sporting blood in him and wants his own men or crowd to win. Local racing conducted with an eye to safety will create a favorable local sentiment."

## SHOWS VALUE IN KNAP'S WORK

Fresno, Cal.—Hertweck & Weilheimer, Indian agents, sold A. B. Knap, the local representative of the San Francisco *Examiner and Chronicle*, an Indian three-speed with sidecar about nine months ago. Knap put it into use at once for delivering his papers, and has found that the sidecar is far and away the cheapest and quickest method he has ever used. As soon as business warrants it, Knap expects to purchase another sidecar rig.

## APPEAL BUSINESS IS BRISK

Los Angeles, Cal.—E. E. Welborn, sales manager for the Appeal Manufacturing & Jobbing Company, of this city, pointed to a stack of orders when asked recently about trade conditions with his company. "We have all that we can take care of without thinking of business as business, and we get them from all directions—these orders. If there has been any slackness, it has avoided our doors pretty consistently."

## DEALER WANTS AMATEUR TROPHY

Passaic, N. J.—An interesting situation has arisen here as to what really constitutes a professional under the F. A. M. rules.

Joseph B. Werner, of this city, the acknowledged winner of the Harley-Davidson cup for amateur sidecars in the recent run of the N. J. Motorcycle Club run from Newark to Wilkes-Barre and return, has not received it as yet on account of a protest being made by another rider.

Werner is engaged in selling motorcycles, and before entering the run, asked F. A. M. Commissioner Roy Pascal whether or not he was an amateur. Pascal informed him that as he has never competed for money, or on a track where admission is charged, he is an amateur pure and simple. According to information at hand, after the protest was lodged, the Newark association took the matter up with the F. A. M. and they reversed the referee's decision.

In the meantime, the cup has been engraved with Werner's name but is still undelivered. While Werner does not entertain any animosity against the F. A. M., he feels that he is entitled to the cup, and if it is not forwarded to him, will protest all races where dealers have been allowed to compete as amateurs.

## TRIES TO SMASH AUTO RECORD

San Francisco, Aug. 28.—C. J. Lutgens, Indian agent at Alameda, recently made an attempt to beat the automobile speed record between San Francisco bay and Los Angeles on an Indian. Notwithstanding the fact that he lost a great deal of time by being misdirected, he made the trip in 18 hours. The automobile record for the distance is 12 hours and 50 minutes. Lutgens will make another attempt to smash the record on Labor Day, and expects to have better success, now that he knows the route.

## MOSTLY BIG TWINS, SAYS "GOLDIE"

Louis Goldsmith, Indian and Yale agent at 92 St. Nicholas avenue, New York, says that 1915 has been a three-speed Indian season so far, with big twins predominating. "Although I have sold 19 little twins since January," said Goldsmith in a recent interview, "the big fellows have far exceeded that figure to date. Yales have gone nicely, the two-speed feature on all of them being a big sales-aid. My accessory trade has been larger than in the two seasons past, and the repair shop has been a good payer."

## 16 INDIANS FOR 'FRISCO POLICE

San Francisco, Aug. 28.—One of the largest and most important sales of motorcycles to be made in many months in this city has just been announced by B. Anderson, manager of the Hendee Manufacturing Sales Company, who has closed a deal with the city of San Francisco for the sale of 16 twin three-speed 1916 Indians, for use in the police department. Delivery is to be made early in October. The sale was made in competition with all of the other leading makes of motorcycles. Forty motorcycles already are utilized by the police department of this city.

# News of the Clubs

### APPOINT FINANCIAL COMMITTEE

Hackensack, N. J.—At the last meeting of the Hackensack Wheelmen, held to look into the club's financial status, Charles S. Fountain, J. L. Fox and Guy M. Dell were appointed a special finance committee to continue the labors of President John C. Hoth, who has been taking care of such matters recently. The advisability of the wheelmen conducting a bazaar in the early fall was considered and referred to the entertainment committee. About 40 members of the club attended the meeting.

### MOTOR WHEEL CLUB FORMED

San Diego, Cal.—The San Diego Motor Wheel Club is the latest in California's big collection of motor sporting bodies. The president is Homer Crum, while Marlan Carmrike is vice-president and C. H. Connelly is secretary-treasurer. J. Parker is the road captain. The club has been organized a few weeks ago and has already planned to hold a race meet.

### HALEDON M. C. GOES FISHING

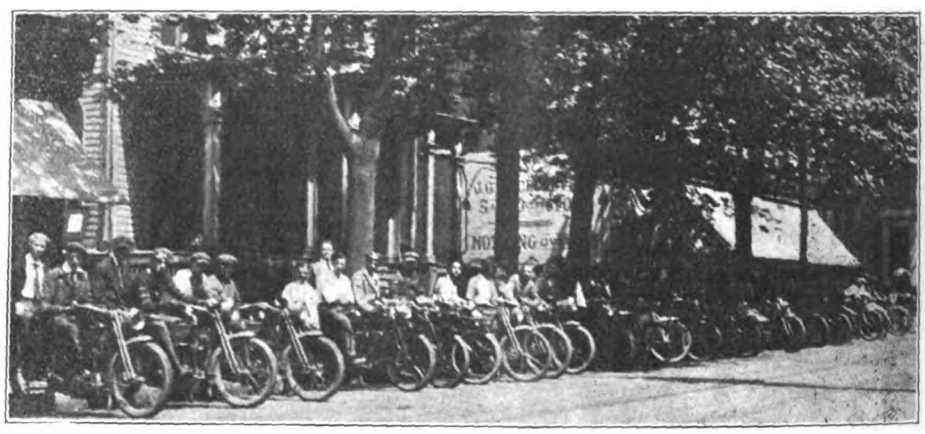
Haledon, N. J., Aug. 30.—Forty members of the Haledon Motorcycle Club participated in a deep sea fishing trip off Sheepshead Bay last Sunday. The clubsters caught a fine mess of sea bass and blue fish, and had a dandy time of it. They came home well sun-burned and with keen appetites for good fish suppers.

### 'FRISCO CLUBS ON SOCIABILITY RUN

San Francisco, Aug. 28.—Sixteen machines made the San Francisco Motorcycle Club run to King's Mountain, in San Mateo County, Sunday, August 22. Of these, six were Harley-Davidsons, two Indian singles, three Indian side cars and one Excelsior single. The party left San Francisco at 9 a. m., and arrived at the summit of the mountain at noon, where lunches were eaten. After resting for some time the return trip was started and San Francisco was reached at 6 o'clock in the evening.

The trip down was a strenuous one, more of an endurance affair than a sociability run, as the roads were rough and sandy and there were many steep grades. Fog hung so thickly between Mountain House and Kings Mountain that it collected on the trees and dripped off onto the roadway like rain, forming muddy pools. Climbing up out of the fog belt to the top of Kings Mountain, a beautiful view was seen.

### LINED UP FOR A PLEASANT SUNDAY OUTING



**Members of the Live-Wire Hackensack M. C. Ready to Start on One of Their Week-End Runs Through Eastern and Central New Jersey**

### DETROIT H-D CLUB ACTIVE

Detroit, Mich., August 28.—The Detroit Harley-Davidson Club is again holding frequent meetings and, if plans do not miscarry, it will hold weekly runs until the weather interferes. The first run was held Sunday, August 15. About 25 riders participated. They met at 9 a. m. in front of the W. E. Wandersee store, 129 Gratiot avenue, and arrived at Ann Arbor, the home of the famous University of Michigan, about 11:30.

They scattered for lunch and met again at three o'clock, arriving in Detroit in time to have supper at their own homes. C. H. Stevens acted as roadmaster. The trip was a very successful one, there being no accidents or trouble of any kind. The regular headquarters of the club are at 129 Gratiot avenue, where W. E. Wandersee has given over an entire floor for club purposes. Mr. Wandersee has given to each member a gold-plated watch fob attached to a leather strap. On the fob is the caption "Harley-Davidson Club."

### EXCELSIOR CLUB ELECTS

Chicago, Ill.—The Chicago Excelsior M. C., at its temporary headquarters, 1111 West Jackson boulevard, elected the following officers at its last weekly meeting: Bert Wallace, president; M. Mines, vice-president; Walter E. Schmuckal, secretary; Frank Snooks, treasurer; John Bowman, captain; Leo Munger and John Claskey, lieutenants. All Excelsior riders are invited to join the new club. Initiation fee is $2, with monthly dues of 50 cents. A dance is to be given soon, to which all riders are invited. The net returns of this affair will be used to get a new club room with all the modern conveniences.

Posed on a Bosch-Equipt Harley-Davidson

# BOSCH

## MAGNETOS USED FOR SIX YEARS BY THE HARLEY-DAVIDSON COMPANY

MUCH can be said about the excellence of construction of Bosch Magnetos, but a good proof of their superiority is found in the fact that most motorcycle makers use Bosch and that one of the largest and best known, The Harley-Davidson Co., has used Bosch regularly since 1910—the year Bosch overwhelmed the unreliable battery and coil systems.

The Harley-Davidson Co. will use Bosch for 1915, of course. This makes it six years of Bosch Magneto Equipment on Harley-Davidsons.

Bosch Magnetos must be good to be so widely and so regularly used. They cost the makers a trifle more, but they positively eliminate puzzling ignition troubles and through their extraordinary reliability and efficiency give the machine a higher value.

BE SATISFIED — The motorcycle you buy can be Bosch-Equipt, too. Insist. — SPECIFY BOSCH

### CLUB PROTESTS ROAD CONDITIONS

Calgary, Alberta.—The despicable state of the highways leading out from the city of Calgary has driven the motorcyclists here, through the Calgary Motorcycle Club, to lodge a complaint with the civic authorities. A large delegation from the club waited upon Commissioner Garden, of the Public Works Department, to ask that temporary repairs, at least, be made at specified places within the city limits so that riding could be accomplished more easily, and he agreed to make improvements upon three of the hills where the roads are badly cut up. It was pointed out that the sand holes on the golf club grade made it impossible for motorcycles to ascend it and he decided to have the whole surface gravelled and rolled. The roads to the south of the city had been recently improved and the trail to Edmonton is in fair shape.

### MOTORCYCLE GUN IN WAR FILMS

Toronto, Ont.—One of the big free features of the Canadian National Exhibition now in progress at Toronto is a set of war films which were released to the fair by the British War Office on condition that they would be burned immediately after the fair is over. One whole reel is devoted to the portrayal of the uses in the present war of a motorcycle machine gun. It is shown being driven across very rough ground into a position from which an attack is repulsed, while other views show how it is driven rapidly to a point where a hostile aerial squadron is making a landing. An engagement ensues between the two motorcyclists and several airmen. The use of the war motorcycle in scouting work is also demonstrated.

### MACHINE IN RESCUE WORK

Niagara Falls, Ont.—Mrs. Emma Schwenk, 70 years old, of Buena Vista, has to thank the motorcycle for her rescue from the rapids above the Falls last Thursday. Horatio Collins, a local motorcycle policeman, was making his rounds soon after daylight when he noticed the woman clinging to a rock some fifteen feet from the shore. Dashing with all speed along the river boulevard he reached the shore and waded out into the treacherous water just in time to catch the woman whose grasp was slipping. In another moment or two she would have been swept down the river and over the cataract.

### TO HAVE FLYING SQUADRON

Montreal is to have a flying squadron of six motorcycle-mounted policemen for the purpose of checking speeders and for emergency purposes. Arrangements are being made to purchase the six machines.

## "U. S. HOT AFTER TRADE"-CLARKSON

### New Zealander in Canada on Business—Hard to Secure English Shipments

TORONTO, Ont., August 30.—"American manufacturers are straining every effort to secure our trade," was the message which J. B. Clarkson, of J. B. Clarkson & Co., Limited, Wellington and Christchurch, New Zealand, brought with him on his annual business trip to Toronto this year. Clarkson, who arrived in Toronto two or three days ago, pointed out that importation from the home market, Great Britain, is practically shut off on account of the employment of transportation facilities for military and naval purposes and because the British manufacturers are so busy with war munitions. He has come to Canada for the purpose of encouraging better commercial relations between the two British colonies, but he draws attention to the fact that the producers of the States are hot after the business.

Clarkson is the Colonial representative for the Douglas motorcycle and for several lines of British bicycles and accessories. It it impossible for him to secure shipments, however, and he is looking into several Canadian propositions. He declares that millions of dollars of money are "loose" in New Zealand—waiting for investment in Canadian or American goods. He advises North American manufacturers to investigate the immense possibilities in the rich New Zealand trade.

Another prominent motorcycle visitor at Canadian points has been Harry Svensgaard, of Detroit, who is making a personal investigation of the Dominion market. While in Toronto he placed an agency for Pullman sidecars with Percy A. McBride.

It has been semi-officially announced that the United Cigar Stores of Canada, Limited, with head office in Toronto, will branch into the sporting goods line and will handle bicycles and supplies.

Two Toronto dealers are now selling the Cyclemotor, the new motor attachment for bicycles. They are George E. Grove, the president of the Bicycle Dealers' Association, and Percy A. McBride.

Deliveries of three-speed, opposed-cylinder, Brough motorcycles, manufactured in England, are now being made here. No other new British machines are in sight.

### SMITH MOTOR WHEEL TOWS 1,207 POUNDS

Fredericton, N. B.—Fred St. Onge, the travelling representative for A. Bregent, of Montreal, was in this city recently with his Smith Motor Wheel demonstrator. As an effective proof of the power of the little cycle booster, St. Onge collected six bicyclists and had them link arms in a row, whereupon he started the Motor Wheel and towed the party along the various streets. The Motor Wheel stood up to the work bravely in spite of the 1,207 pounds of load that had to be hauled. St. Onge's order-book showed the happy results of such a demonstration.

He has been meeting with good success at all points.

## AGSTEN TO TAKE LONG TOUR

Louisville, Ky.—Walter Agsten, an Excelsior rider, who has charge of the tuning and repairing department of the Louisville office of the Rudloph Wurlitzer Company, of Cincinnati, O., has been using his machine advantageously in handling repair work, tuning and orchestra installations in various parts of the state. He recently returned from trips to Lawrenceburg, Frankfort and Lexington. Agsten will leave the city shortly for a vacation tour to Cincinnati, Cleveland, Mt. Clemens, Mich., and other points. He expects to cover about 1,500 miles and will keep a complete record of oil and gasoline used.

## MOTORCYCLISTS ARRESTED

Des Moines, Iowa.—Five motorcyclists were arrested here not long ago, in company with an aviator and an automobile racer, charged with having violated the Sunday law by participating in a matinee race program.

Thomas E. Pickrel, of Marion, Ind., has been appointed an F. A. M. attorney.

## EXPORT TRADE FLOURISHING

Export trade in American-made motorcycles has never been larger than it is at the present time. Nearly every factory in the country has secured a good share of this export business, especially the Hendee Manufacturing Company, the Harley-Davidson Motor Company, the Reading Standard Company and the Henderson Motorcycle Company.

From the Henderson company we learn that they have just completed a shipment of one hundred machines to Holland, while the export business of such concerns as the Hendee and Harley-Davidson has made it necessary for them to continue running their factory at full capacity at a time when, owing to the slackness of the season, they have usually reduced the number of their employees.

## ON RUGGED TRAILS

Victoria, B. C.—Penetrating the rugged wildernesses of the beautifully mountainous Province of British Columbia has been the pastime of two Victoria wayfarers, W. Harris and S. A. Spencer, who adopted the motor two-wheeler for the purpose. They have been a month on what are called roads and they have been in contact with Nature in all her scenic forms. They visited Vancouver, after which they took a dip into the State of Washington, and from Spokane they darted to Rossland, B. C., from which place they motorcycled to Nelson, where they made a practical study of the mines for the nonce. They have used their machines continuously with the exception of the leg from Cedar Falls, Wash., to Chealm, Wash.

## GAME WARDEN A BOOSTER

Passaic, N. J.—Game Warden William C. Klein, of this city, is an enthusiastic motorcyclist, and uses an Indian sidecar continually in running down offenders against the game laws. The Warden is both State and Federal officer, and in an interview the other evening, said that he does not know how he was able to do his work before the invention of motorcycles.

## HORNS AND CHURCH SERVICES

Red Bank, N. J.—Signs are to be hung up in Red Bank, N. J., every Sunday morning at a distance of 800 feet from the churches announcing to motorists that church services are going on and requesting them not to make a disturbance by blowing their horns.

## MOTORCYCLE IMPORTS IN CAPE TOWN

Imports of motorcycles and parts at Cape Town, South Africa, during the year 1914 amounted to $156,278, as compared with $261,726 in 1913. The reduction in value is laid to the European war. Cape Town is the chief seaport serving the entire Union of South Africa.

# Attacking Joe's Junk Pile

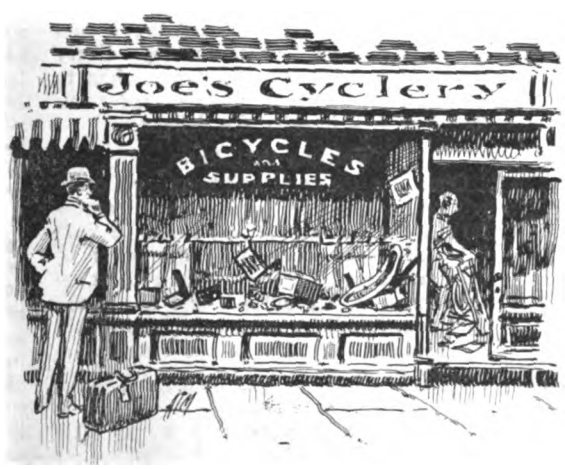
## *Jack Brady, the Vet. Traveler, Points Out the Value of Attractive Window Displays*

THEODORE ROOSEVELT'S now famous speech to the high-brow rookies at Plattsburgh, N. Y., didn't make Secretary of War Garrison feel nearly as sore as Joe felt, when Jack Brady, the veteran traveler, had hardly started his stinging remarks about Joe's junk pile.

"Say, Jack, what the deuce right have you to call my window a junk pile, you rascal?" interrupted the Haledon dealer, in the midst of Brady's little harrangue, which he started in his characteristic way almost immediately after giving the window a thoughtful "once over" and entering the bicycle shop. "If we hadn't been brought up together in the cycle trade like two brothers, I'd have a good mind to . . .

"Sure you would, Joe!" snapped back Brady. "But the big fact keeps staring us in the face that your window looks like a junk heap. That's a fact—and here's another: you're a live-wire and a mighty good hustler. These facts don't jibe. Why don't you fall in line with the real merchants who go in for attractive but simple window decorations and thus boost business?"

Awh, what's the good?" asked Joe and grinned at seeing the genial traveler so very serious.



"THE good? Now, Joe, m'boy, you set up your arguments against effective window displays—set em up like spic and span clay birds in a shooting gallery and if I can't hit your birdies to splinters there's a perfecto waiting for you."

"All right," began the Haledon dealer. "You've acknowledged that I'm a live wire. Thanks. That goes to show that I've got a pretty good trade. I can stand some more, of course, but I'm pretty well satisfied. The fellows are bringing in others, so what's the good of having a window display?

"Then, too," continued Joe, "there isn't much traffic passing my store. There's quite a bit at times, but as a rule the street is rather quiet. Think of all the trouble connected with dressing up a window. You've got to clean the place out every now and then, and that would take up a lot of my time. Those are my reasons for not making much display—now let's have the cigar."

"Hold on, you're a little too quick about asking for the cigar," said Brady, dropping into a chair. "I know you do a good business, but you've acknowledged that you would actually tolerate some more. I believe that a good window display is going to increase your trade. It's a sales booster in addition to the good work your present patrons are doing.

"YOU'VE acknowledged that some traffic does pass your store," continued Brady. "It would be worth your while to have all the people who pass your window turned into sales getters. A good window display, with glittering, shinning machines and accessories neatly arranged, will attract them. They'll know that you sell bicycles and supplies—something that your window does not show at present. Not only will they know and be able to tell others where to get cycles, but you'll be actually creating a demand. You'll have them thinking favorably of bicycles, and by making frequent changes you'll hold their attention and increase their desire to become bicycle owners.

"Haven't you often purchased an article that you did not dream of buying because you saw it well displayed in a good looking window and you simply could not resist? There seemed to be a sort of fascination about the article and you felt that you just had to have it. Thoughtful window dressing turned the trick. Why not make use of it?

"A SLIP shod appearing window," continued Brady, watching the look of interest on Joe's face, "never inspired confidence either in the dealer or his product. One instinctively keeps away from the place that is ill-kept. And the man who owns such a store generally takes little pride in it. It's the fellow whose heart and soul is in his business and whose shop shows it that's most efficient. Fine fixtures and a dandy display count for naught, when the dealer is a dead one. But neat fixtures and well-thought out displays, together with a hustling business policy are the winning combination. And . . ."

"Stop! Say, Jack," broke in Joe, "you've said enough. Those clay birdies of mine look like the ruins of Antwerp. I've never really given any serious attention to window dressing, but you seem to have the right dope. I think that my window could be made an effective sales booster."

"Righto!" concluded Brady. "You can get one of your boys to clean it out, and after dusting off the bikes and accessories you can easily arrange them according to some definite plan."

# Speedy Trip Awheel Through Four States

## How a Crescent Rider Spent a Nine-Day Vacation on His Bicycle

By FRED M. SANBORN

"BEYOND the Alps lies Italy," said Napoleon. "And beyond the Alleghenies lies Pittsburgh and the West," said I to myself. I had never been very far west of Baltimore on a bicycle, chiefly because of the exceedingly poor roads through the mountains. I had been north, south and east, but not west. So this time I determined to follow Horace Greely's advice, "Go west, young man, go west!"

### Regular Tourist's Equipment

Therefore Sunday morning at half-past nine a few weeks ago found me pedalling merrily out of Baltimore, bound for the west, accompanied by two of my clubmates who decided to journey with me a little way out. I was equipped like a regular tourist all right, with a luggage carrier on the rear of my bike, a coaster brake, an extra tire and a sixty-eight gear. And I might say, right here, that all of these things proved their value before I got back.

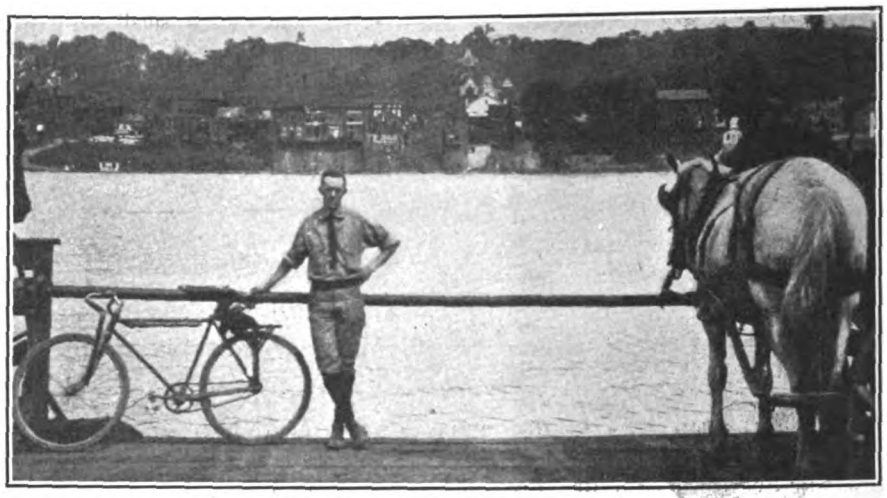
All was well for the first few miles; we struck the long winding hill (well named "The Devil's Elbow) that leads down to the Patapsco and into Ellicott City, my coaster brake soon enabling me to open up a big gap between myself and my companions on the steep grades. Ellicott City, ten miles from home, was soon left behind, and we proceeded onward over the fine State road to Mayfield, where one of my friends wished me good luck and turned his face homeward.

Then the tire trouble started. One of my tires had recently been vulcanized, but the job had evidently been badly done, for the vulcanized portion blew out. After repeated attempts to repair it, I finally decided to stop at Ridgeville and replace it with my extra tire. By this time both our watches and our stomachs notified us that it was time to eat, and we accordingly proceeded to the Eagle Hotel at Ridgeville, where the payment of a small sum of the coin of the realm entitled us to an old fashioned Maryland dinner.

### Sanborn Meets the Jinx

Dinner over, my lone companion bade me goodbye and I resumed my journey alone. Frederick was reached without trouble, but I had not yet gotten out of the town limits, when I felt an ominous bumping of the rear wheel. Investigation developed the fact that the rear tire was badly rim chafed. I tried rubber bands, but useless; I then tried the largest rubber plug I had, but still no repair. Finally, as a last resort, I used a large brass plug —and by a miracle it held.

Once more on the road, I soon struck the long grade leading up to the summit of Braddock Heights, sometimes known as the Catoctin Mountains. This gave me my first good opportunity to test my 68 gear, and it certainly proved to be the real thing for mountain climbing. I sped down the other side of Braddock Heights and twelve more miles through the little valley brought me to the foot of South Mountain. This is a somewhat longer and harder grade than Mt. Braddock and, determining to see



Crossing the Ohio River, West Virginia Shore in Background

just what I could accomplish with my little 68 gear, I pressed on up the mountainside at my best pace.

To my amusement, I found that I could make better time on the hill than some autos, for about midway up I sighted a "flivver" laboring along, evidently making heavy weather of it. I redoubled my efforts, and soon, to my enormous satisfaction, had the pleasure of passing it and "showing the way" up to the top. Every cyclist knows the pleasure it gives him to beat an auto on a hill, and the reader can therefore well imagine my delight.

### Whirling Past Autos

Once over the crest, and knowing I could rely on my brake for a quick stop if necessary, I "let her go" at full speed (a little habit of mine), passing by a number of machines bound my way, to the evident astonishment of the autoists and to the apparent delight of a number of people out for a walk in the cool of the evening. A

At Braddock Heights

tip to the reader—if he would shine as a cyclist—locate your home in this section. You need not be a champion—any fair rider would soon be regarded as a wonderful athlete.

Leaving South Mountain the traveller enters the valley in which Hagerstown is located, and I reached that thriving little town, the destination of my first day's journey, at 7:30 p. m. A good supper, a few minutes spent in reading the Sunday papers, and I was ready for bed. I was up bright and early the next day, and disposing of my breakfast, started out in light spirits. But the old tire jinx was still on my trail. The tire repaired in Frederick went completely to the bad, and as I had already used my extra tire I was compelled to return to Hagerstown and purchase a new one. However, I got started at last at 11 a. m., resolving that henceforth I would equip myself with brand new tires for my trips, regardless of the condition of the old ones.

The Tuscarora Mountains began to loom up now, and fifteen miles of easy riding brought me to their base. This ridge was one of the hardest I struck, about four miles to the summit, and the road rather rough and sandy. From the top I got my first view of the Alleghenies, and what a view it was: ridge after ridge stretching away as far as the eye could see, with the little village of M'Connelsburg nestling down in the little valley before me. How I regretted that I was not able to carry a camera on my wheel big enough to get the magnificent view.

### Pedalling on "Lincoln Way"

At M'Connelsburg I struck the Lincoln Highway, and after stopping a few minutes for a light lunch, I followed on over the good surface of the "Lincoln Way," as they call it, into the Alleghenies. I was now in the State of Pennsylvania, as the speech of the people I encountered soon informed me, for I heard such expressions as "hain't" and "dare he do it" (for "may he do it") and a few other little phrases peculiar to some of the people of the great and glorious commonwealth of Pennsylvania.

After leaving M'Connelsburg I overtook two young men who were walking from Carlisle, Pa., to Chicago. It was getting dark by this time and a storm was coming up, so I decided to stop for the night at the Mountain House, an old fashioned hotel at Sidling Hill.

Digitized by Google

I made an early start again the next morning as I had only covered fifty miles the previous day, due to my late start. A heavy mist hung over the mountains in the early morning which the rising sun quickly dispelled. Twenty miles of travel brought me to the old town of Bedford, Pa., well known for its medicinal springs. Bedford is in the heart of the Alleghenies and from this point on I struck a series of ridges averaging elevations of 2,700 feet. Travelling over the Lincoln Highway to Pittsburg I did not, however, find it as bad as I had expected, for the little valleys between the ridges give the traveller a chance to catch his breath now and then.

**Alternate Riding and Walking**

The grades I found rather long, and although not too steep to ride with a low gear, my experience has been that alternate riding and walking up the big ridges is a great deal easier than attempting to ride them all from the start, as this system, if persisted in, will soon reduce the cyclist to the state where he is compelled to walk them all from the foot.

An interesting feature of travel on the Lincoln Way is the fine spirit of friendly comradeship shown by the travelers. I met many machines going from points east to other points in the west, and in nearly every case the tourists would give me a friendly salute or wave a friendly greeting.

About twenty-five miles from Bedford I came to the main ridge of the Alleghenies. This ridge has a sign near the top reading "Stop and look—this is the grandest view between Philadelphia and Pittsburg." I stopped and looked, and the view is all that it is claimed to be, I must admit. I met two motorcyclists at this point en route from Philadelphia to Chicago. They were having considerable trouble, they told me, with their brake band. I met them again approaching Stoyestown, where I stopped to take a picture of the town, located on the side of a tremendous hill. They had completely burned out their brake band by this time and had to put in a new one.

I lunched at Stoyestown after climbing the hill and found a dessert awaiting me a little way outside the town in the shape of trees bearing cherries and apples. The cherries were ripe, and I surely did consume a quantity of them. From this point on I climbed mountain after mountain, reaching the last one, Laurel Hills, about six in the evening. The descent was a long one and the steepest I found on my entire trip, compelling such continual use of the brake it became very hot.

**Overtook Auto While Coasting**

To give an idea of the steepness of the grades I might mention the fact that I overtook at the bottom an auto that had passed me five minutes before my brake had cooled, and the look on the faces of the occupants of the machine when I overtook them was certainly amusing. Passing on through Ligonier, the site of the first fort built west of the Alleghenies by George Washington and Gen. Forbes during the French-Indian wars, I reached Youngstown, Pa., 78 miles from my starting point, at 8 o'clock, and here I decided to spend the night.

I pulled out early the next day, cheered on by the thought that all of the mountains were left behind me. But I found some hard pedalling from Youngstown, through Pittsburgh, and into a small town some distance from the great iron city where I spent awhile in seeing the sights. Leaving at an early hour on the following day, I was a bit dismayed to find that the roads were very hilly about thirty miles from Pittsburgh. The grades were steep, the curves sharp, and the slow down sign was met with continually.

**On Main Street in Lisbon, Ohio**

I had fixed Canton, Ohio, as the termination of my trip westward, but a hard rain in the mid-afternoon compelled me to change my plans, as the clay roads in this section become unridable for a bicycle within ten minutes after a rain, and I was still thirty-five miles from my destination when the rain compelled me to walk. A three-mile walk in the rain brought me to Lisbon, and as the rain showed no signs of letting up, I was forced to spend the night here.

**Beginning the Homeward Journey**

The following day, as the dirt roads were still wet, though it had stopped raining, I concluded best "to beat it" eastward, and accordingly boarded a trolley for Steubenville, where I found good roads once more. I reached Steubenville at noon, and once more mounting the bike proceeded along the brick road to Wellsburg, where I crossed over the Ohio on the ferry. Over on the West Virginia side I found more dirt roads, rough and hilly in the bargain, but I struggled along, finally reaching Washington, Pa., at 7:30 p. m., pretty well played out, though the mileage for the day was only 33 miles.

Next morning, however, I felt better as I pedalled over the old National Highway, which was very good for a few miles, but later lapsed into a poor dirt road at some points and a rough stone one at others, the entire distance exceedingly hilly. Uniontown was reached at 2 p. m., and here rain overtook me again, compelling me to take the train into Cumberland where I spent the night.

The good Maryland State road gladdened my sight the next day, and I continued my way, cheered and sustained by the thought that home was but two days' journey away. Getting home from Cumberland I found was no cinch, no less than six mountain ridges in succession being encountered, all big ones, running from six to ten miles from one side to the other, with practically no breaks or valleys between any of them. I was sixteen miles from the nearest town when the jinx appeared again.

**Impossible to Steer Bike**

The bottom cup on my front fork broke, and before I became aware of it I had lost all the bearings out of it, the consequence being that the wheel became almost impossible to steer. I didn't know what to do. I hailed a number of passing autos from time to time and requested a lift into Hancock, the nearest town, but every one of the lot refused. Finally I decided to walk. I walked till I became disgusted and then I rode till I became scared. Eventually, riding and walking, I got to Hancock.

**Dealer Helps Him**

Here a storekeeper was good enough to open his store, though it was Sunday, and with his assistance and supplies I managed to patch up sufficiently to enable me to steer the wheel. From Hancock on for about eight miles the road was very level, following along the Potomac River, and you can believe me that the change from mountain climbing was a welcome one indeed. The road continuing good I reached Hagerstown at dusk and after all the supper I could possibly surround I turned in for a good night's rest. And maybe I didn't sleep!

The trip from Hagerstown to Frederick was made the following day without event, the climb over South Mountain and Braddock Heights seeming easy after crossing the Alleghenies. Frederick was the dinner stop, and after doing justice to a good one,

**Resting Up at Hotel**

I was on my way again for Baltimore, reaching home at about half-past five in the evening.

My total mileage for the trip was 536 miles, an average of about sixty a day, and the farthest point reached in Ohio was 322 miles from Baltimore. My trip had taken up nine days.

# Grenda Shatters Two World's Records

NEWARK, N. J., August 26.—Alfred Grenda, the Australian speedster, shattered world's records in the half-mile pro. handicap and in the ten-mile international at the Velodrome last night. Grenda's time for the half-mile was 53⅕, some ⅖ seconds better than that of Jackie Clark, made in 1907. The ten-mile figure of 20:21⅕ which Alf. made last night betters his own record for the Velodrome for that distance by some 8⅘ seconds. The lanky Antipodean actually opened the night's events by clipping a record and closed the evening's bill by shattering another.

The ten-mile international race, as it was billed, was anxiously waited for by the fans, after seeing their pet, the veteran Frank Kramer, take the first semi-final of the World's Derby from Reggie McNamara and Harry Kaiser by a lightning sprint of 11⅘ seconds for the last eighth. Grenda won the long distance event in a driving finish, to the surprise of many who had figured McNamara as the undoubted winner. He shot away on entering the home stretch for the last lap and passed Oscar Egg, who finished second. Goullet, showing signs of being pumped, was third, and Ray Eaton fourth. McNamara finished fifth in order. Time, 20:21⅕.

The Derby semi-finals saw Kramer sprint into first place in the first heat, with McNamara second and Kaiser third. Kramer's time was 1:24⅖. In the second heat Grenda was victor, with Bob Spears second and Goullet third. Time, 1:18⅖. Iver Lawson took the third heat in 1:03, with Cesare Moretti second and Francesco Verri third.

Frank Corry, another Australian, ran off with the miss-and-out and the half-mile handicap, his times being 3:57⅗ and :53⅕ respectively. Jackie Clark, of the Mormon city, took both heats of his match with Iver Lawson, in 1:45⅘ and 1:44⅕ for the ⅔-mile. Hans Ohrt won two out of three heats in the match with Arthur Spencer, the Canuck, in the amateur class, while Eddie Kane, of Newark, was victor in the mile amateur invitation.

Following are the summaries:

Miss and Out (Professional)—Won by Frank Corry, Australia; second, William Hanley, San Francisco; third, Jacob Magin, Newark; fourth, George Cameron, New York; fifth, Ernest Jokus, Newark. Time, 3m. 57⅘s.

One-Mile Invitation, Handicap (Amateur)—Won by Thomas Fitzsimmons, South Orange (scratch); second, Charles K. Browne, Newark (120 yards); third, Andrew Schroth, Newark (100 yards); fourth, Anthony Attardi, New York (25 yards). Time, 1m. 59s.

Half-Mile Handicap (Professional)—Won by Frank Corry, Australia (55 yards); second, Fred Hill, Boston (40 yards); third, Robert E. Spears, Australia (15 yards); fourth, Menus Bedell, Lynbrook, L. I. (35 yards); fifth, Raymond Eaton, Elizabeth (25 yards). Time, 53⅘s.

One-Mile Invitation (Amateur)—Won by Eddie Kane, Newark; second, Fred Taylor, Newark; third, Frank J. Whitney, Newark; fourth, Hans Ohrt, San Francisco. Time, 2m. 21⅘s.

World's Derby (Professional); Semi-Final Heats at Half Mile—First semi-final won by Frank L. Kramer, East Orange; second, Reggie McNamara, Australia; third, Harry Kaiser, Bronx. Time, 1m. 24⅖s. Last eighth mile 11⅘s. Second semi-final won by Alfred Grenda, Australia; second, Robert E. Speers, Australia; third, Alfred Goullet, Australia. Time, 1m. 18⅖s. Last eighth mile, 12⅕s. Third semi-final won by Iver Lawson, Salt Lake City; second, Cesare Moretti, Italy; third, Francesco Verri, Italy. Time, 1m. 3s. Last eighth mile, 13⅖s.

Two-Thirds-Mile Match Race (Professional); Iver Lawson, Salt Lake City, vs. A. J. Clark, Newark—Won by Clark; second, Lawson. First heat won by Clark. Time, 1m. 45⅘s. Last eighth mile, 12s. Second heat won by Clark. Time, 1m. 44⅕s. Last eighth mile, 12⅕s.

Two-Thirds-Mile Match Race (Amateur); Hans Ohrt, San Francisco, vs. Arthur Spencer, Toronto—Won by Ohrt. First heat won by Spencer. Time, 2m. Last eighth mile, 13⅕s. Second heat won by Ohrt. Time, 1m. 40s. Last eighth mile, 12⅖s. Third heat won by Ohrt. Time, 1m. 40⅖s. Last Eighth mile, 12⅘s.

Ten-Mile International Race (Professional)—Won by Alfred Grenda, Australia; second, Oscar Egg, Switzerland; third, Alfred Goullet, Australia; fourth, Raymond Eaton, Elizabeth; fifth, Reggie McNamara, Australia. Time, 20m. 21⅕s.

## AFTER COLUMBUS CYCLE TITLE

Columbus, O., Aug. 30.—Charles Louthan, the amateur bicycle champion of this city, who is generally known as the "speed king" of Columbus, has just made public his challenge to all cyclists in the State of Ohio to ride in a series of events to determine the "simon pure" title holder for the State. Louthan is willing to ride at any distance from one to one hundred miles. All those willing to accept the challenge should communicate with H. Harger, 291 West Poplar street, Columbus.

CHARLES LOUTHAN

## Great Western Announces 1916 Salesmen and Distributors

LA PORTE, Ind., Aug. 30.—In making its announcement of the salesmen force and the distributors for its bicycles during the 1916 season, the Great Western Manufacturing Company states that the sales staff will consist of C. A. Lonn, A. E. Lonn, H. A. Shaffer, G. A. Winslow, Jay Kanney, B. W. Donnell, Jr., P. M. Jenks, J. H. Kinney, Mr. McKee, C. L. Smith, J. C. Wright and E. H. Leng. The company has also arranged for the distribution of its machines through the following concerns: Morley Brothers, Saginaw, Mich., distributors for Michigan on Crown, America and Adlake bicycles; Morley-Murphy Hardware Company, Green Bay, Wis., distributors for Wisconsin on Crown, America and Adlake bicycles; Farwell, Ozmun, Kirk & Company, St. Paul, Minn., distributors for Minnesota, North and South Dakota and Montana on Crown bicycles.

Janney, Semple, Hill & Co., Minneapolis, Minn., distributors for Minnesota, North and South Dakota and Montana on America and Adlake bicycles; Brown-Camp Hardware Company, Des Moines, Iowa, distributors for Iowa for Crown, America and Adlake bicycles; M. L. Foss, Denver, Colo., distributors in Colorado for Crown, America and Adlake bicycles.

The James Bailey Co., Portland, Maine, distributors in Maine for Crown, America and Adlake bicycles; Canton Hardware Company, Canton, Ohio, distributors for east-central Ohio on Crown bicycles; Wagner Hardware Company, Mansfield, Ohio, distributors for America bicycles for east-central Ohio; Stratton & Warren, Memphis, Tenn., distributors for wetsern Tennessee and Mississippi; Townley Metal and Hardware Company, Kansas City, Mo., distributors for western Missouri, Kansas and Oklahoma, for Crown, America and Adlake bicycles.

The 1916 catalogs are now ready for mailing and will be sent to anyone upon request. The Crown, America and Adlake catalogs will be furnished to distributors in sufficient quantities for their requirements, with their names embossed on the cover.

## PRODUCING MORE CYCLES THAN IN LAST YEAR

BUFFALO, N. Y., August 20.—Percy Pierce, president and general manager of the Pierce Cycle Works, reports that in comparing their business as a whole with that of a year ago, his firm is producing 34 per cent. more bicycles.

"July and August are very dull months in the bicycle manufacturing end," said Mr. Pierce. "Nevertheless, we find a decided improvement over that of a year ago. In August, 1914, our production was 89 and this August, the first 20 days, our orders call for 388 bicycles, or an increase of 299, or 434 per cent.

"Where in the past we have found dealers with plenty of stock to carry them through July and August, this year we find their shelves are bare. Take, for example, the Bicycle Supply Company, the Pierce distributors in Salt Lake City, Utah. During the entire year of 1914 they only disposed of 60 Pierce bicycles; this year they have sold 275 without a single one left in their store. A few days ago they wired an order for ten, to be sent by express. The following day they wired again asking if the bicycles were on their way. And this is only one of the instances that has come to our attention."

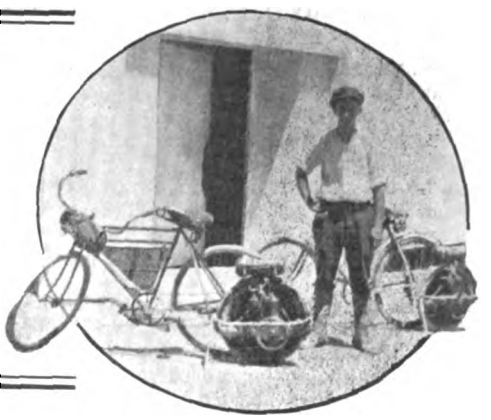
# To the Summit of Mt. Wilson

∴ By ∴

# Motor Wheel



*On the Summit of Mt. Wilson, 6,000 Ft. High*

*Before the Famous Carnegie Observatory*

WHAT is undoubtedly the severest grade-conquering test to which a motor wheel has ever been subjected has recently been made by three young motor wheel enthusiasts from Los Angeles, Cal. They performed what was generally considered an impossible feat for a bicycle power attachment—the feat of climbing the spiral highway up Mt. Wilson, a peak of the Sierra Madre range, which circles its way around the mountain in grades varying from ten to twenty-one per cent. for a distance of nine miles until the summit is reached. The summit is six thousand feet above sea level.

### Warned Not to Try It

Though friends warned them in advance that their venture would only prove futile, F. A. Burnwood, Walter Poole and the writer set out from Los Angeles at nine o'clock one morning, mounted on their motor wheel bicycles, with the vowed purpose of breezing up the Mt. Wilson highway or dying in the attempt. They started with a grim determination, but soon found that a grim determination wasn't at all necessary. For as they took grade after grade of the beautiful roads which lead from their home, past Highland Park and Annandale Country Club in the foothills of the Sierras, they were so inspired with the confidence that their undertaking would be a success that, had any one happened along with wad of currency to wager against them, they'd have staked their last dollar.

Leaving the Country Club behind, the second leg of their journey took them upward to a higher elevation where the splendid Altadina homes are located. Now they were in the base of the mountains where the startling novelty of the journey really began. The Los Angeles motor wheeling trio found the road which clings to the side of Mt. Wilson a triumph of man's work in even grades and safe locations.

### Beautiful Views Revealed

As the motor wheelists were well on in the ascent the views became ever more interesting and inspiring at every turn. Magnificent depths of space and beautiful panoramas, growing gradually wider and wider, revealed themselves with a majesty and dignity that thrilled the cyclist with a mingled feeling of awe and respect. But as they purred skyward, even the most timid of the trio felt a perfect sense of security and comfort because of the ample road bed and its solid construction.

Wherever their eyes rested the scene was one new to the riders, as their mounts carried them higher and higher with the tenacity of a bulldog and the gentle ease of a flowing stream. They beheld the wonderful sight of tall snow-capped peaks that towered above them like the gray heads of huge giants; while beneath their wheels gushing brooks were heard at intervals, leaping madly down the pine-studded mountainside. In the valley, out from the slopes far below, cities could be seen scattered about—big and little dots that broke up the monotonous verdure of the bright green country rolling off into the distance where

**Rounding a Hair-pin Turn**

the Pacific was prettily shimmering in the sunlight.

Every now and then the motor wheelists came upon an automobile party which would always look in astonishment at the outfits negotiating the grades with less trouble than their bulky machines. Those among the autoists who appeared to have the real sporting spirit applauded heartily.

The summit of Mt. Wilson was attained at noon, when the Los Angeles boys, who were now in a very happy frame of mind—having made the climb without trouble of any kind—enjoyed luncheon at the cosy Mt. Wilson Hotel. Some time was spent in visiting the interesting Carnegie Institute observatory buildings and in feasting their eyes on the veritable paradise of beauty and marvel which stretched in easy direction from all sides of the tall mountain.

### Starting the Descent

About three o'clock, the Smith motor wheelists finally tore themselves away from the grasp of the alluring, and almost transfixing sights about them, and began the descent of the mountain. They coasted all the way, with the gas shut off and the compression held. Obstacles were encountered in the nine miles of coasting for a mountain, however surfaced, always holds out. Gliding along with the quiet swish of the bicycle against the wind, the lads reached the bottom of the road and were once more on sea level.

At the base of the mountain, a skeptical autoist refused to believe that the motor wheels had actually accomplished the feat of pushing up to the summit. And to show that it could be done, and done easily, one of the boys shot up a twenty-one per cent. grade. The autoist grunted. But not so the friends of the Los Angeles cyclists—they were delighted and enthusiastic when they heard that the one cylinder, one and a half horse power demon, the motor wheel, had actually defied and forced into humble submission nine miles of steep mountain grades.

---

## LONDON'S BLIND CYCLE MAKER

London, Eng.—One of the cleverest cycle builders and repairers in the trade in England is blind. He is Walter Wonnacott, who has a cycle agency in London. When Mr. Wonnacott lost his sight about twenty years ago he became a cycle agent, and later took up the building and repair of cycles.

"After all, the sense of touch," he said recently, "is just as necessary in handling a cycle as the sense of sight. You must touch the tire to find out if it is hard or soft; you must touch to discover the adjustment of the wheels, the tension of the spokes, and the tightness of the nuts. And as I carry a bicycle in my head, so to speak, it is easy enough for me to run my hands over a machine, just as a vet. does over a horse—and there's no danger of being kicked, either."

## C. R. C. A. CARNIVAL IS AGAIN POSTPONED

The third annual pleasure run and monster carnival of sports, being promoted by the New York Division of the Century Road Club Association, which was to have been held on Sunday, August 29, was postponed for the second time, on account of inclement weather, and will be held next Sunday, September 5, leaving Columbus Circle, New York City, at nine o'clock a. m., sharp.

The first prize for the three-mile handicap race, a feature of the carnival, will be a pair of "Advanced Palmer" tires, and the first prize for the one-mile open race is a pair of Palmer tires, donated by the B. F. Goodrich Company. A silver loving cup, donated by the Pope Manufacturing Company, will be awarded to the owner of the best decorated bicycle, and another silver loving cup to the club making the best appearance.

Entries, costing fifty cents, which include entry to all of the five races, should be made with Andrew N. Segal, chairman, 1842 Seventh avenue, New York City, up to next Saturday night.

## CRESCENTS WILL STAGE HANDICAP

Baltimore, Md., Aug. 31.—The Crescent Bicycle Club has decided to hold an open handicap road race at an early date in October on a good course situated not far from the city and at a distance of about twelve miles. This race will be open to all amateurs, and a fine list of prizes is being arranged by the club officials. Liberal handicaps will be given to those riders who have never participated in a road race before, thus giving them an equal chance with the more experienced riders. The number of prizes will probably be such that nearly every finisher will receive a prize of some sort. Entry blanks will be out in a few days and will be placed in the hands of all local dealers.

## BALTIMOREANS ON BIKE TOUR

Passaic, N. J.—Charles C. Warwick and James S. Duffey, of Baltimore, Md., are in this city visiting friends and relatives. The young men are employed by the Maryland Casualty Company, of that city, and decided to enjoy their vacation by means of a bicycle tour. They made the 400 mile trip without any accident and from reports, enjoyed every moment.

# PIERCEY TAKES WESTERN TITLE

### Finishes With Eighteen Points in Five-Mile Championship—Thomas Is a Close Second.

CHICAGO, Aug. 26.—Charles Piercey, the Australian, annexed the five-mile Western championship for the professionals on Wednesday night, August 25, at the Riverview Velodrome. This was the last race of the series of five to decide the Western title, and by taking the event Piercey annexed five points, making a total of twelve all told, he being one point in the advance of Lloyd Thomas, the San Francisco lad. The final standing is as follows: Piercey, 12; Thomas, 11; Lawson, Cavanagh, Ryan and Walker, 6; Drobach, 5; Madden, 2, and John Bedell, 1.

The Australian pursuit race for the professionals proved to be one of the best events of the night. After a gruelling ride of over five miles Bob Diefenbacher, the San Jose rider, rode all of the eight men down. Joe Kopsky finished second and Ned Young third. Gordon Walker, the Australian, had a rather easy victory in his mixed match race against John Bedell, the Long Islander, the Antipodean taking the sprint heat and then leading Bedell by ten yards at the finish of the one-mile pursuit heat. Peter Drobach defeated Martin Ryan in a fifteen-mile motor-paced match and incidentally shattered two of the marks for the local track. At ten miles Drobach was leading, and he covered the distance in 13:29, against the old mark made by himself of 13:31. Drobach covered the fifteen miles in 20:03, the old mark, also held by himself, being 20:18.

One-sixth-mile record trial—Won by Charles Minnetti, Riverview C. C., 17⅗ seconds; second, tie between Ernest Kockler, Riverview C. C., and George Klasen, Danish-American A. C., 17⅘ seconds; fourth, Roy McWhirter, North West S. C., 18 seconds.

Two-third-mile handicap, amateur—Won by R. Van Der Palt, Belgian-American C. C., 130 yards; second, W. Andresen, Conquer A. C., 115 yards; third, Paul Kell, Chicago C. C.; fourth, H. Hendrickson, unattached, 135 yards. Time, 1:17⅘.

Australian pursuit race, professional—Won by Bob Diefenbacher, San Jose; second, Joe Kopsky, Bohemia; third, Ned Young, Salt Lake City; fourth, Gus Wohlrab, Jersey City. Time, 12:03. Distance, 5 miles 367 yards.

Five-mile Western championship, professional—Won by Charles Piercey, Australia.

## BELGIAN "REFUGEES" WHOSE FAVORITE SPORT IS BICYCLING

The Start of a Recent Racemeet of the Belgian-American Club in Chicago

## WHERE SCHOOL LADS USE BIKES

Greensboro, N. C., August 28.—The splendid condition of the roads in this section has made bicycling very popular among the younger folks and numerous children are seen daily wheeling to and from school. The accompanying illustration shows one of the lad who uses his wheel each day as a means of conveyance to and from his home. Though the youngster is only twelve years old, he has ridden his Motobike over 2,000 miles without a puncture or mishap of any kind.

## NOVEL STUNT ON DAYTON BICYCLE

Broadway, Va., Aug. 30.—Riding over heavy grades along the State highway here, W. A. Welch, a local bicycle enthusiast, succeeded in covering eleven miles in forty minutes, holding the detached handle bars of his bicycle in one hand and waving a flag in the other during the entire distance. Mr. Welch performed this stunt as the result of a wager he made that he could run ten miles in forty minutes and not use his handle bars during the performance. He, therefore, bettered his own estimate of the distance he could cover on his sturdy Dayton two-wheeler by one mile, and now challenges anyone to beat his record with the same conditions obtaining.

## WILL SEE "WHEEL ABOUT HUB"

Alderman Louis Rubenstein, of Montreal, president of the Canadian Wheelmen's Association, is arranging to visit Boston on September 9, 10 and 11, for the purpose of taking part in the annual meeting and "Wheel About the Hub" of members of the League of American Wheelmen. Alderman Rubenstein's original L. A. W. membership card was No. 9, and he can recall many bicycling incidents of the early eighties. He was one of twenty-eight members of the Montreal Bicycle Club who competed in the annual championships at Springfield, Mass., in 1883, when the delegation carried off third prize in the competition for the best uniformed club. It was about two years later that he was instrumental in the formation of the Canadian Wheelmen's Association of which he has been an officer for several decades.

### YOUNGSTER'S GOOD WORK

San Diego, Cal., August 30.—From Los Angeles through San Diego to Tia Juana, Mexico, a distance of one hundred and forty-eight miles, in fourteen hours of actual riding time, is the record made by the youngster shown in the accompanying illustration. His name is Earnie Edwards and he is just fifteen years old. Earnie uses his Atherton equipped Iver Johnson every day on his way to and from school and is one of the best long distance riders in Los Angeles.

### CIVIC RECEPTION FOR SPENCER

Toronto, Ont.—Preparations are being made to give Art Spencer, the youthful Toronto bicycle star, a civic reception upon his return from Newark early in September. Officials of the Toronto Bicycle Riders' Association have the arrangements in hand and it is planned to give him a big welcome. The Toronto newspapers have printed columns of bicycle news during the past six weeks in the greater part of which young Spencer has been featured.

The management of the Canadian National Exhibition have made arrangements, it is declared, to bring Hans Ohrt, the new amateur champion, to Toronto to meet Spencer in a series of match races at the Exhibition Field Day on Saturday, September 11. About sixty entries have already been received for the one mile open and the three-mile handicap which are the bicycle features of the card, the prizes for which will be diamond scarf pins. Entries close on Saturday, September 4.

The fifty cyclists forming the London, Ontario, company of the Divisional Cyclist Corps have arrived in Toronto and are in training along with the Toronto quota. Another company is expected from Calgary in a few days.

### DAYTON CYCLISTS AT OUTING

Dayton, Ohio, Aug. 28.—The annual outing of the Dayton Bicycle Club was held on last Thursday afternoon at Halcyon Hall, some 200 members participating after motoring, riding or driving to the scene of the affair. The weather was ideal, and the crowd enjoyed one of the club's famous chicken dinners in the open, under the supervision of Chef Bosler and his staff of cooks.

# CARMAN CAPTURES REVERE FEATURE

## Beats Walthour and Collins at Boston—Connolly and Herbert Win Tandem

BOSTON, Aug. 29.—The hour motor-paced race at Revere Cycle track last night brought a finish between Clarence Carman and Bobby Walthour that was worth seeing. Carman won the race, making 43 miles, with Walthour 1½ laps behind and Elmer Collins 4½ laps in the rear.

Walthour started out to lead the bunch all the way and was easily successful for the first 20 miles, when Carman set out to pull down Bobby's lead, which he succeeded in doing, but was unable to pass until there were but two minutes to run. Then Walthour, with the idea of cutting past Collins and getting another lead on Carman, tried to pass Collins, lost his pace, and gave Carman the chance he had been waiting for to spring into the lead. Jimmie Moran was in the race until the 24th mile, when a blowout dumped him for a bad fall on his right shoulder.

Tandem racing seems to be gaining popularity here, and the crowd was given a dandy handicap mile-and-a-half event last night. L. C. Rollins and Tim Sullivan rode from scratch. Tom Connolly and Fred Herbert, riding their first professional tandem race from the 30-yard mark, started a fierce spurt at the end of the mile and got well into the lead; the Turville brothers went after them strong and pulled up alongside on the bell lap but were beaten by a wheel.

Tim Sullivan, of New Haven, with 95 yards, won the 1¾-mile professional handicap with a finely timed sprint, and Saxon Williams, of Buffalo, won the 5-mile professional by getting into the lead and plugging away the whole distance. The summary:

One and Three-Quarter Miles Professional Handicap Race—Won by Tim Sullivan, New Haven (90 yds.); Hugh McPartland, Boston (105 yds.), second; Tom Connolly, Everett (120 yds.), third; Fred Herbert, Fall River (70 yds.), fourth; Frank Droback, South Boston (80 yds.), fifth. Time, 3m. 29⅘s.

Half-Mile Amateur Handicap Race—Won by William Cupit, Roxbury (95 yds.); Frank Keenan, Revere (90 yds.), second; W. M. Lane, East Boston (80 yds.), third; Lewis Hill, Revere (110 yds.), fourth; Ned Chandler, Boston, (15 yds.), fifth. Time, 58⅘s.

Five-Mile Open Professional Race—Won by Saxon Williams, Buffalo; Pat Logan, South Boston, second; L. C. Rollins, Everett, third; Tom Connolly, Everett, fourth; Fred Herbert, Fall River, fifth. Time, 11m. 35⅘s. Charles Turville, Jr., Revere, winner of most laps.

Amateur Miss-and-Out Race—Won by Ned Chandler, Boston; John Barry, Cambridge, second; John Fardig, Orient Heights, third; Bert M. Jones, Revere, fourth. Distance, 1½ miles. Time, 3m. 24⅘s.

One-Mile Invitation Amateur Race—Won by Mike Barber; Harry Moore, Everett, second; Frank Keenan, Revere, third. Time, 2m. 22⅕s.

One and One-Half-Mile Professional Tandem Race—Won by Tom Connolly, Everett, and Fred Herbert, Fall River; Willie Turville and Charles Turville, Jr., Revere, second; L. C. Rollins, Everett, and Tim Sullivan, New Haven, third; Dennis Connolly, Everett, and Frank Drobach, South Boston, fourth. Time, 2m. 58⅘s.

One Hour Motor Paced Race—Won by Clarence Carman, Jamaica; Bobby Walthour, Atlanta, second; Elmer Collins, Lynn, third. Distance 43 miles.

### LINART IS MOTOR PACED WINNER

Boston, Mass., Aug. 30.—Victor Linart, the justly celebrated Belgian motor pace rider, was the winner of the big three-cornered race with George Wiley and Georges Seres, the French rider, at the Revere saucer on Wednesday night, August 25. The three speed marvels had a battle royal, with Linart hard pressed for the big end of the purse. Wiley took second place from Seres by the smallest of margin.

Wiley made the pace up to the seventeenth mile. Seres then took command and set a hot pace until Linart caught him in the twenty-sixth mile. Thereafter the Belgian was in front. The summary:

One-mile handicap, professional—Won by S. Williams, Buffalo, 85 yards; T. Connolly, Everett, 75 yards, second; H. McPartland, Boston, 60 yards, third; P. Cotter, Wakesfield, 115 yards, fourth. Time, 1m. 56⅕s.

Half-mile handicap amateur—Won by F. Hanson, Revere, 110 yards; E. Harrison, Orient Heights, 105 yards, second; C. Robinson, Boston, 60 yards, third; J. B. Rollins, Everett, 15 yards, fourth. Time, 58⅗s.

One-mile invitation, amateur—Won by Mike Barber, Cambridge; Kenneth Plummer, Revere, second; W. M. Lane, third; P. Antonucti, Boston, fourth. Time, 2m. 18s.

Three-mile open, amateur—Won by F. McKenzie, Revere; J. B. Rollins, Everett, second; N. Chandler, Boston, third; J. Fordig, Orient Heights, fourth. Time, 7m. 12⅕s.

Five-mile open, professional—Won by P. Logan, South Boston; L. C. Rollins, Everett, second; H. McPartland, South Boston, third; P. Cutter, Wakefield, fourth. Time, 7m. 55⅘s.

Special match race, professional: First heat—Won by L. C. Rollins; W. Turville, Revere, second; P. Logan, third. Time, 1m. 56⅗s.

Second heat—Won by W. Turville; L. C. Rollins, second; P. Logan, third. Time, 2m. 31⅕s.

Third heat—Won by W. Turville; L. C. Rollins, second. Time, 3m. 44⅗s.

Thirty-mile motor-paced race—Won by Victor Linart, Belgium; George Wiley, second; George Seres, Paris, third. Time, 40m. 54⅗s.

### OLD CHAMPION SLIPS AND LOSES

Taunton, Mass., Aug. 28.—Just for the fun of it Allie Barber, one time the Bristol County bicycle champion, entered the half mile bicycle handicap, which was the feature of the Taunton Clerks' Association field day, held on Wednesday, August 25, and though he weighs two hundred and forty pounds, and has not mounted a wheel in twenty years, Allie came near winning. At it was, his wheel slipped from under him before the tape was reached and a youngster named Handy came in first in 1:16¼. Barber managed to get seventh place, having started from scratch. Second position went to Conant, and third to Carisle. In the half-mile bicycle race, Carisle finished first and Phelan second. Mayor N. J. W. Fish acted as starter, and is seen in the accompanying illustration ready to fire the pistol.

### CYCLIST SUES FOR $2,053

Cincinnati, O.—Albert Pelzel, of this city, has filed a suit against Moler & Stewart, of Mt. Orab, for $2,053, for damages resulting from a collision with the defendant's automobile. Pelzel was riding his bicycle when the automobile ran into him. He claims $2,000 for physical injuries and the balance for damage to clothing and wheel.

### AVAKIAN CYCLERY OPENS

Fresno, Cal.—The Avakian Cyclery, at 203 Cherry avenue, has recently been opened under the direction of A. Avakian. Hudson and Savage models of bicycle are handled.

### IN COMMERCIAL SERVICE

Columbus, Ohio.—Bicycle agents in Columbus and neighboring towns report an extraordinary demand for bicycles. This is due to the fact that they are being used more and more for business purposes.

### BESOYAN BROTHERS OPEN

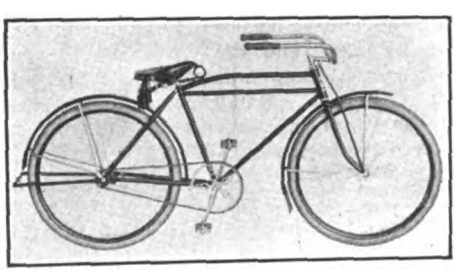
Fowler, Cal.—Besoyan Brothers have opened a repair shop at Fowler under the name of the Fowler Cyclery. The agency for the Miami and Appeal line of bicycles has been secured.

### BRIANS OPENS IN CUTLER

Orosi, Cal.—F. M. Brians has closed his bicycle shop in this city and has opened a new shop and garage at Cutler. He has taken the agency for the Reliance bicycle.

### FOR USE WITH MOTOR WHEEL

Deliveries are now being made by the Excelsior Cycle Company of a new bicycle



**De Luxe Motor Bike, Especially Built for Motor Wheel Attachment**

model which is designed especially for use with the Smith Motor Wheel. The machine is really a modification of the De Luxe Autobike, with heavily reinforced rear forks and stays, the construction of that portion of the frame being particularly adapted to the use of the power unit.

To centralize the driving strain as far as possible the wheelbase is increased to 47 inches and the saddle is lower. The latter arrangement is possible because of the fact that no great amount of pedalling will be done on this model. The equipment includes extra heavy motorcycle studded tread tires, a large motorcycle type saddle, motorcycle pedals, motorbike-braced handlebars with rubber grips, motorcycle type roller chain and any standard make of coaster brake. The finish is carmine to match the finish of the Smith Motor Wheel.

### HARD RUBBER FIRM TO MOVE

Akron, O.—The American Hard Rubber Company, which has its plant entirely surrounded by the buildings of the B. F. Goodrich Company, is negotiating for another site between Campbell and Burtges streets. It has been known for some time that the Goodrich company has been trying to secure the hard rubber firm's plant, and it is held that the move of the latter company will mean an extension of the Goodrich buildings.

### GOODYEAR GETS DELIVERY TRUCK

San Francisco, Aug. 28.—The Goodyear Tire & Rubber Company's branch, of this city, has just received delivery of a big Indian truck, equipped with friction drive transmission. This is the first machine of this type to appear on the Pacific coast, and its performance is being watched with a great deal of interest.

### LABOR DAY MEET AT GALT

Galt, Ont.—A motorcycle race meet is to be held here on Labor Day as a feature of the annual fair. A squad of Toronto's racing men, including Tommy Smith, Roy Thompson, Wilfred Morrison and Moritz will be numbered among the competitors.

# *See the Cycle Sensation of the Century at the Chicago Show*

At the National Chicago Show which opens Monday, September 20th, you can see demonstrated the Smith Motor Wheel, the "little giant of the road," that, while yet in its infancy, already occupies first place as a business builder and profit maker among the best known and most successful cycle men in the country. At the Chicago demonstration you will be able to see for yourself why this truly wonderful bicycle motor has achieved such a remarkable success in so brief a time.

## Smith Motor Wheel

*(Detachable)*

*"The Bicycle Booster"*

And not only will you see the Motor Wheel itself and talk to its sponsors, but you will also meet with hundreds of cycle men who are handling the Motor Wheel and who will tell you what their experiences have been—we will leave the rest to your judgment. ... ....

In next week's issue of this publication, we will tell you the space number of the Motor Wheel exhibit at Chicago and New York. Don't forget the date, September 20th to 25th, and don't forget to see the Smith Motor Wheel, the most talked of business builder in all cycledom.

## CORBIN-BROWN SPEEDOMETER

***"The Speedometer of Absolute Accuracy"***

sets the standard for speedometer service.

This summer on roads in all parts of the country the Corbin-Brown has been maintaining its reputation of being accurate at all times and durable under all conditions.

It has been a source of pleasure and profit to hundreds of automobilists and motorcyclists as well.

It has enabled them to judge the life of their tires, the amount of gasoline and oil consumed, and the speed and general condition of their engines.

It has enabled them to plan their trips with more precision and to enjoy to the fullest the pleasure of automobiling.

Is your car equipped with a Corbin-Brown? If not investigate today. An inspection will convince you that it is the most dependable speedometer on the market. Write now for catalog.

# The Morrow Makes the Motor Wheel More Effective—Safer

Freer coasting—more positive braking—a safety and surety which you never knew before—these are the advantages derived from the presence of the MORROW in the rear hub of your wheel.

To get the most out of your motorwheel's power, to get the smoothest kind of coasting—to glide down the steepest hill with **absolute**—**sure**—control at your instant command—you need the MORROW.

The standard for more than a decade, the MORROW is on most of the wheels in this country. There may be some without it—therefore, insist when you buy your motorwheel that it is equipped with the "safety-first" brake—the MORROW.

Morrow literature is interesting. Why not let us tell you all there is to know about the MORROW? Write today for full literature.

# A 33⅓% Drop in Prices
# A 119% Gain in Sales

## The Year's Sensation in
# Bicycle Tires

Dealers! Riders! This means more money for you both. For manufacturers, too—whose future depends on the "bike's" popularity.

Goodyear-Akron Bicycle Tires are helping you all. A strictly quality tire, mind you, fully *guaranteed*, at about half the price of other standard tires.

GOODYEAR AKRON

**The New Retail Prices**
**$2.25 each for Smooth Tread**
**$2.50 each for Non-Skid**

These new prices are mainly due to multiplied output—quantity production. For as priced the past year, the sales of Goodyear-Akron Bicycle Tires *more than doubled!*

As priced this year—saving the user 33⅓ per cent under what these tires cost some 19 months ago—they will, by modest estimate, gain thousands more riders everywhere.

This means for riders, better tires at very little cost. It means for dealers *—profits multiplied by larger volume!*

**Widely Advertised**

These quality tires at the new low prices are being advertised to millions.

If you are selling Goodyear-Akrons *now*, we have a plan that's guaranteed to "speed up" your sales. Write us.

If you are not, then mail the coupon.

You *may* be able to get along without these winning tires—

But we will give you tested plans to get *ahead* **with** them.

# A Motorcycle Tire Triumph

The "Chain Tread" Motorcycle Tire was welcomed with enthusiasm by motorcyclists. From the date of its introduction, the popularity of the "Chain Tread" Motorcycle Tire has steadily increased. Built strong enough for automobile service, this famous tire gives phenomenal mileage on the speedy, lighter weight motorcycle.

The "Chain Tread" Tire for motorcycles has the same heavy service construction, the same wear-resisting rubber and fabric, and the same practical anti-skid tread, famous as the "Chain Tread" automobile tire which is the sensation of the automobile world.

Profit by the experience of the keen automobile and motorcycle manufacturers, who are increasing the prestige of their products by equipping the machines they make with "Chain Tread" Tires. You can buy "Chain Tread" Tires from good dealers everywhere.

# New Type of Side-by-Side Valve Motor Features 1916 Indian Line

TWO twin models fitted wtih a new type of side-by-side valve motor, a two-stroke single-cylinder featherweight machine, an eight-valve twin and a four-valve single are offered by the Hendee Mfg. Company for 1916. The twins are three-speed equipped, one having a cradle-spring frame, and the other a rigid frame. The featherweight two-stroke has a three-speed gearset, while the eight-valve and four-valve models are for speed work solely. The "Indian Maid" sidecar and the parcel van are of course continued for 1916.

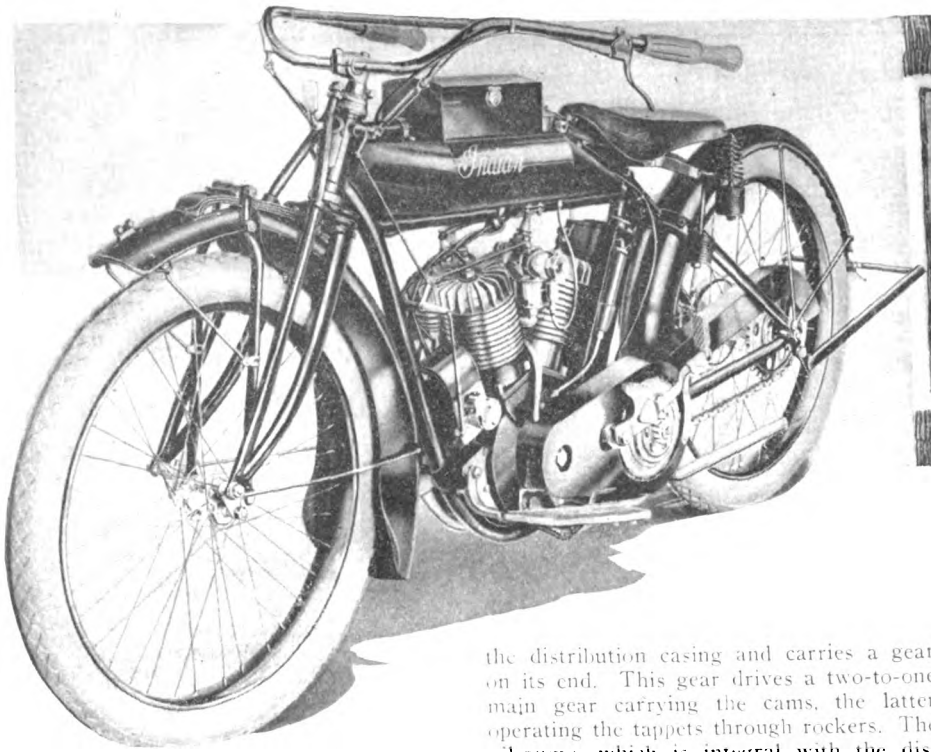
The side-by-side valve motor, known as the Powerplus motor by reason of the great power developed on both brake and road, is a radical change from previous Indian practice. It has the cylinder in one piece, with the common chamber carrying the direct-thrust inlet and exhaust valves, the separable-head and dome carrying the inlet valve and its cage of previous models having been abandoned for the new construction. As the valves are operated directly from the tappets, the overhead rocker, long pushrod and other parts inseparable to the inlet-over-exhaust valve arrangement with their several points at which wear may occur, have been eliminated, and both inlet and exhaust valves on each cylinder are extremely accessible, it being only necessary to unscrew a cap in the top of the chamber to reach either valve. To remove a valve it is only necessary to withdraw the cap, lift a cylindrical guard over the lower end of the valve stem and take out the cotter, when the entire valve and its spring can be withdrawn.

Both inlet and exhaust valves are interchangeable, so that the rider need carry only one valve as a spare. With the elimination of the dome the necessity of at all disturbing the inlet manifold to get at the valves is entirely done away with. The inlet pipe, or rather a threaded extension on its end, screws into a port in the side of the inlet valve portion of the valve chamber, and is undisturbed when any operation is to be performed on either valve. It will be obvious that nothing could be simpler.

Each valve operates within a telescoping guard or cover, made in two parts. The upper part extends from the familiar Indian thimble over the valve-guide to a point slightly above the line of the spring-retaining collar. The other part, made of

New Featherweight Two-Stroke Model, With Combined Clutch, Starter and Gearset

Digitized by Google



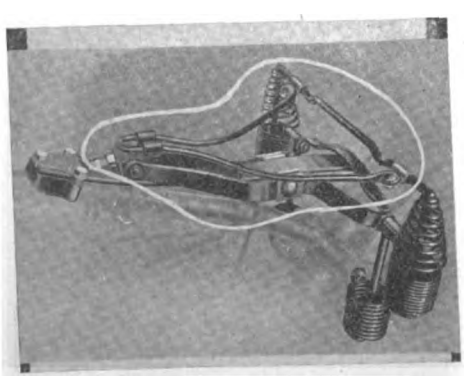
At the left is shown a Quartering View of Model G. This member of the 1916 Indian Tribe is a Three-Speed Twin with Rigid Frame and Equipped with the Company's new Powerplus Motor, Which is Featured by Side-by-Side Valve Construction. This Motor Has the Cylinder in One

heavier material, laps the lower end of the upper one, and screws into an enlarged portion of the tappet guide. It is furnished with a hexagon to permit of its being unscrewed to give access to the valve or to be screwed into place again. Within this cover, in its normal position, are the adjusting nuts on the tappet and the valve collar.

### Oil Leakage Prevented

The tappet guide is coned on its upper surface to drain back any oil which may come through it from the distribution-gear casing. This coned construction, in connection with the telescoping cover, prevents any oil leakage to the outside of the motor, and with the oil-tight crankcase construction, which has been a feature of Indian motors for many seasons, renders the Powerplus twin an exceptionally cleanly motor, it being impossible for oil to make its appearance on any part of the exterior.

Another new feature on the twin motor



**Saddle Suspension on Featherweight**

is in the exterior distribution-gear casing containing all the gears in the train. In previous Indian motors, at least four gears of the valve-operating train and pump drive were housed within the crankcase, but in the Powerplus model all are in the exterior casing, and all readily accessible by removing the casing cover. The right hand end of the crankshaft extends into the distribution casing and carries a gear on its end. This gear drives a two-to-one main gear carrying the cams, the latter operating the tappets through rockers. The oil-pump, which is integral with the distribution gear casing, has its main gear driven from the main shaft.

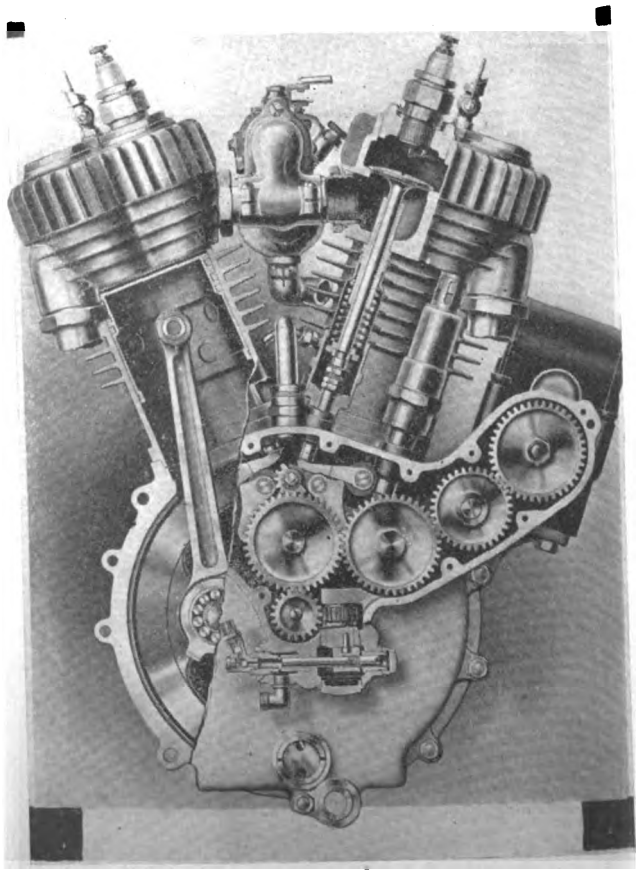
### Pressure Relieving Device

There are four gears in the valve and magneto train, the first being the two-to-one main gear. The second gear, of the same diameter as the main one, has a rotary valve on its shaft, this valve communicating with the crankcase at a certain portion of the stroke. It relieves any pressure in the crankcase through the breather pipe in the distribution case, and effects the ejection of oil in the case above the proper level by way of the same path. The third gear is an intermediate, and the fourth fits on the magneto armature shaft.

The oil-pump, integral with the lower part of the distribution casing, has its pump-chamber horizontal, with discharge connection at an angle and inlet connection from below. There are two ports giving access to the mechanism; one, closed by a grub screw, being used to break up any air-locks that may occur in the chamber, and the other, with a hexagon head, being used to inspect the crank, etc. The crank-case is made in two halves, with vertical joint, as in previous Indian practice, but the magneto-platform is cast integral with the halves at the front in the Powerplus motors. An oil window is provided near the lowest point of the right half and a hollow boss for the pedal-shaft is part of the lowest section of each half.

### New Inlet Pipe and Carbureter

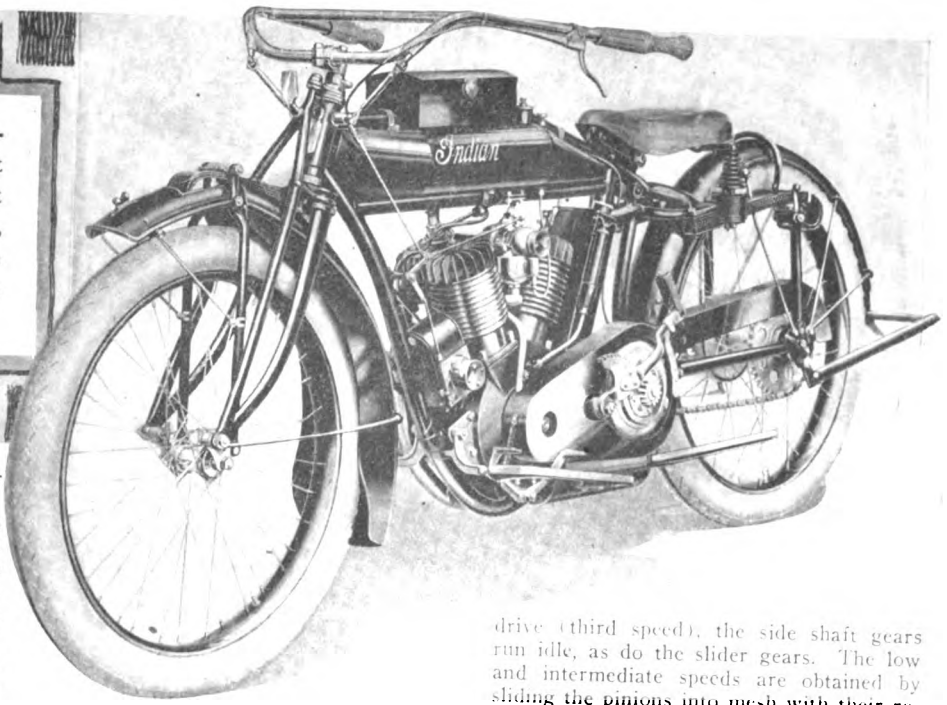
As the eye goes up the motor, the new inlet pipe immediately attracts the attention. Like former Indian pipes it is straight, giving a constant to-and-fro flow of mixture which prevents "holes in the gas," and at each end are extensions which screw into the inlet chamber sides and attach by hexagon nuts to the pipe itself. The carbureter main pipe is curved and clamps over the inlet pipe at its center. The carbureter is a Schebler on both the twin models, the Hedstrom mixing device used previously having been discontinued. The breather pipe comes from the upper interior of the distribution gear casing, curving across between the cylinders and serving to lubricate the primary drive chain. The spark plug for each cylinder is fitted in the inlet valve caps. A new design of priming cup, with inclined cup-section and cover integral with the handle is fitted in each cylinder head. Ignition is by



**Sectional View of the Powerplus Motor**

Digitized by Google

Piece with the Common Chamber Carrying the Direct-Thrust Inlet and Exhaust Valves. The Twin Illustrated at the Right Has the Distinctive Indian Rear Springing, Which Is Continued Without Noticeable Change, in Addition to the New Powerplus Motor and the Three-Speed Gear.



Dixie high-tension magneto, or the Splitdorf Mag Dynamo at an extra cost.

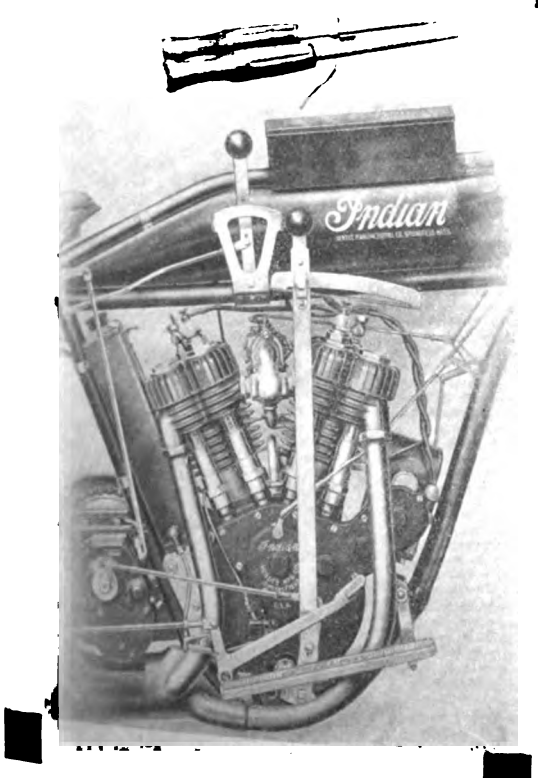
Going to the interior of the Powerplus motor, the pistons have three rings, all above the wristpin. The piston tails are drilled to give the proper lightness consistent with flexibility and endurance, as well as speed. The connecting rods have larger big ends, carrying roller bearings, each with four sets of rolls. Both the wristpins and crankpins are made larger, the latter also being heavier than in the 1915 model of twin motor. The right main shaft is borne by a husky roller bearing, while the left main shaft is of the bronze type. Closer clearance limits are adhered to between the cylinders and the pistons.

### Cylinders Readily Dismounted

The side-by-side valve motor as fitted to the new Indian models allows the cylinders to be readily dismounted without disturbing the crankcase or other kindred parts. The motors, whose bore is 3⅛ inches, and whose stroke is 3 31/32 inches, have a piston displacement of 60.88 cubic inches. The bore-stroke ratio of the Powerplus motor is greater than that of previous Indian models, and the power is also greater. While the nominal rating of such a motor would be 7 horsepower, the actual and sustained power of the new motors has repeatedly been 15 to 18 horsepower.

The long stroke on the new motor gives increased pulling effect, and consequently gear-shifting is reduced to a minimum, as the long stroke motor will carry a heavier load on high gear than will the shorter stroke one. Coupled with this power ability is a remarkable flexibility, ranging from 5 miles per hour to 70 or more. Quick pick-up is a feature of this motor, an acceleration to 60 miles per hour in 30 seconds from a halt having been attained time and time again in the two years of experimenting by the Hendee experts, which this type of motor has been subjected to.

It is from this proof of flexibility, power and standupness that the new Indian motor has been given the name of Powerplus.



Powerplant of Model F

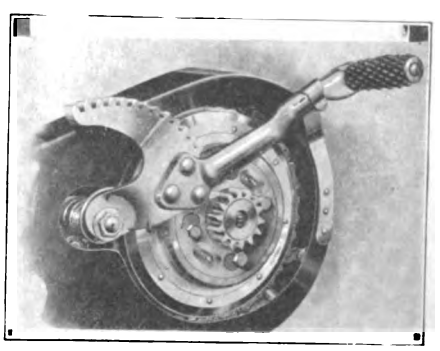
### Improved Three-Speed Gear

Of the two twin models fitted with the side-by-side valve motor, the first, known as Model F, is fitted with a three-speed gearset of improved type. In this new set the low and intermediate pinions are on one slider, instead of having the intermediate on the slider and the low in mesh with the corresponding side-shaft gear. The result is that on high gear, or direct drive (third speed), the side shaft gears run idle, as do the slider gears. The low and intermediate speeds are obtained by sliding the pinions into mesh with their respective side-shaft gears. The slider is operated by a rack, while connection with the operating lever is made through a toothed sector meshing with the rack within the gear box.

The general lines of the gear box itself are the same as those of 1915. The main shaft left-hand ball-bearing is of a slightly different type from that of the preceding three-speed set, and in a recess in the high-speed idler sleeve is a small but effective thrust ball-bearing, to take end thrust. The right hand side ball-bearing takes both radial and thrust load. The clutch operating worm shaft has been strengthened. Gear faces are now of a uniform width throughout, giving increased load capacity on high and low drives.

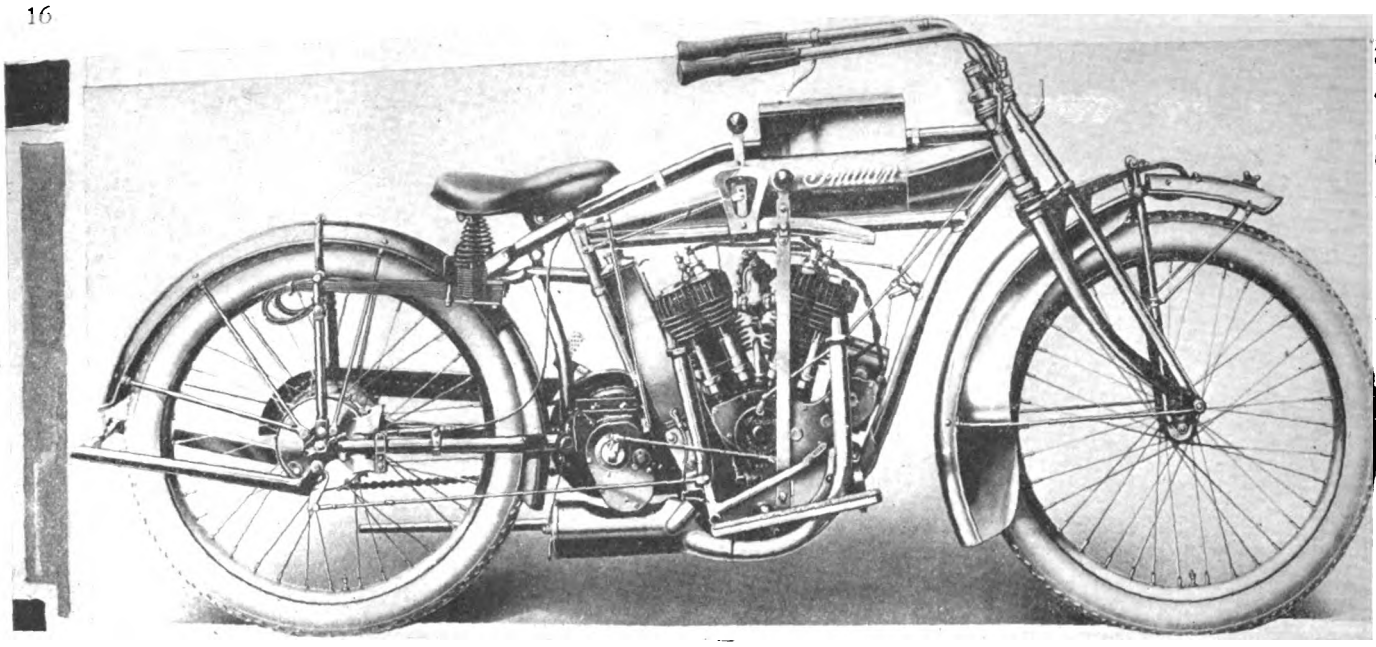
### Greater Silence Attained

The arrangement of the gears in the 1916 set makes for great silence on intermediate and low speeds. The casing is oil-tight under all conditions. Gears revolve in an oil-bath, with splash lubrication ensuring operation under the best conditions. Removable plugs are provided for draining and replenishing the oil supply. The oil level submerges the side shaft, placed below the main shaft. Standard gear ratios are 4:1 on high, 6:1 on intermediate and 10:11 on low. Shifting is progressive, as will be obvious by reference to the illustrations.



Light Pressure Starter

Digitized by Google



**Model F, Three-Speed Twin, Showing New Gear and Clutch Control**

The Model F has the well-known Indian cradle spring frame, and transmission by chains. The Model G, on the other hand, has a rigid frame, but, like the F machine, has the Powerplus motor, countershaft-mounted three-speed gearset of the 1916 type, heavy duty Indian clutch, chain transmission and double brake equipment. The front fork on both the F and G models resembles the heavy duty fork of the 1915 season, except that the outside flanges of the fork sides are omitted and heavier tubing is used instead. On both models the dual clutch control used in the 1915 three-speed models is retained in a modified form; a rocker pedal being fitted at the left side in place of the single-motion pedal. The spring feature of the 1915 pedal is, however, retained so that the rider can use either method of operating the clutch by the foot.

### New Gear Control

The gear control is entirely new. In an upright heavy quadrant moves a ball-ended lever with a lug on the left side. The left side of the quadrant is slotted to correspond with the three gear positions, and also a neutral point, the lug on the lever fitting into the notch corresponding to the speed desired. There is no interlock on the gear control with the clutch, and the lug in the notched quadrant serves to keep the gears in their proper mesh. The shifter, as it is called, is fitted to the right side of the frame, convenient to the rider's hand. The quadrant is carried on a substantial piece directly in rear of the clutch lever sector, the latter having but one connection to the frame, but a connection that is ample for any service.

Referring to the fork on both models, the scroll is double instead of single. Frame details on both F and G machines are unchanged from previous Indian construction. The wheelbase is 55 inches, and 28x3 inch Goodyear blue streak tires are fitted. Standard sprocket equipment is 17 tooth motor, 38 tooth clutch, 21 tooth countershaft, and 36 tooth rear wheel.

### Other Twin Details

Common to both models is the Indian cantilever comfort saddle and the light pressure starter. The clutch has one minor but important change in the retaining of the adjusting screws. A locking ring is used on the outside plate in place of the "dutchmen" fitted in 1915. Pressed steel footboards with pressed steel hangers are used, giving greater strength with less weight. The tank has a big filler cap, permitting of the use of any priming gun. Finish is standard Indian red, with nickel or black japan trimmings. The Model F, with cradle spring frame, is listed at $275, while the Model G is priced at $250. The cradle spring frame type of luggage carrier can be had at $2 extra when ordered with the mount.

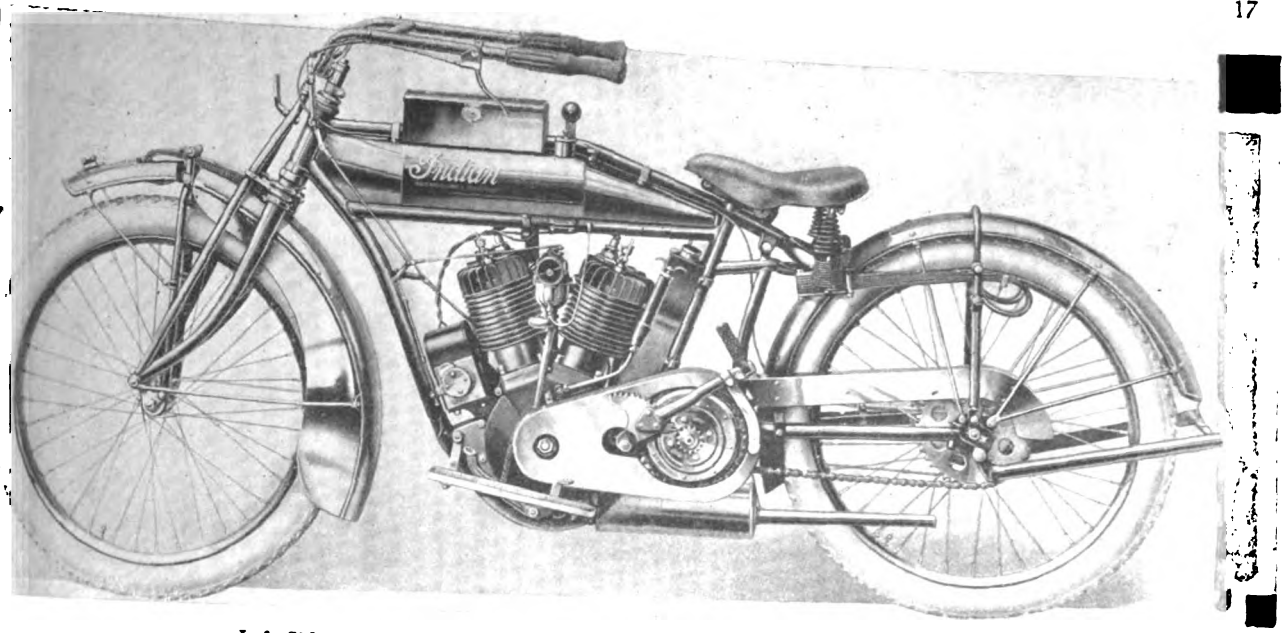
### "Featherweight" Two-Stroke

The two-stroke "Featherweight," Model K, is a new model from front tire to standlatch. It is powered with a three-port, two-stroke single cylinder motor, with a bore and stroke of 2½ and 2¾ inches, respectively. This motor is rated at 2½ horsepower, and has a piston displacement of 13½ cubic inches. It is valveless, the only moving parts being a piston, connecting-rod and crank-disc. It is simple, clean and efficient, as well as silent, the latter quality being obvious when one looks at the muffler used on the model.

The "Featherweight" motor has a flywheel outside of the crankcase on the left side. This means that the maximum power possible will be developed, for there will be no drag of oil as when the flywheel is enclosed in the crankcase. The piston is fitted with a scientifically-designed deflector on the head, and has two rings, both above the wristpin. The transfer passage is cast integral with the cylinder. The inlet port is at the right side of the casting, and communicates with the crankcase interior. The exhaust port is in front, with a curved pipe communicating with the

**Model H-1, the Eight-Valve Twin**

Digitized by Google



**Left Side of Model F, Showing Newly Adopted Schebler Carbureter**

large muffler underneath the motor itself. Ignition is by roller-chain driven Dixie lightweight magneto, fitted at the rear of the cylinder on a platform integral with the crankcase. An improved Indian carbureter especially designed for this motor is used. The machine can develop a speed of 40 miles per hour.

### How It Operates

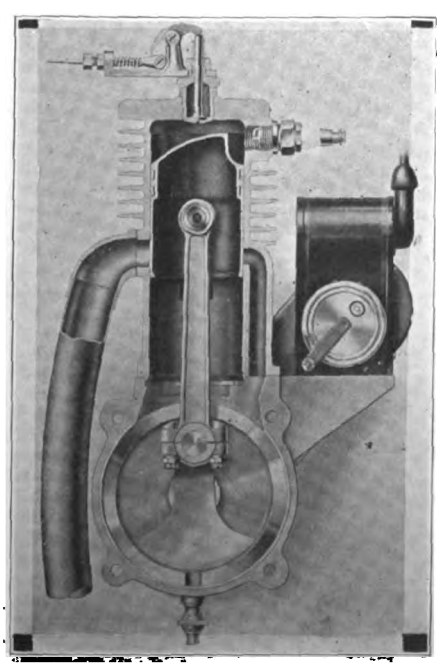
The action of this two-stroke motor is as follows: With the piston at its uppermost point and a compressed charge in the head, the spark causes an explosion. Under this impulse the piston moves downward, compressing a fresh charge in the crankcase. As the piston passes to the bottom of the stroke, it covers the inlet port and opens the exhaust port, when the burnt gases pass to the muffler. On going still further down the piston uncovers the transfer passage, when the compressed crankcase charge of gas shoots above it, being prevented from mixing with the burnt gases by the deflector on the piston head. The piston then commences to rise under the action of the flywheel, compressing the charge above it, and at the same time sucking in through the inlet port a new charge. This new charge will fill the space below the piston, and will be ready for compression on the next down or "power" stroke. It will be seen from this that there is an explosion every revolution in the cylinder. The magneto is driven at crankshaft speed, and the spark-point is fixed, the advance being automatic and varying with the intensity of the spark as the speed increases or decreases.

In order to start this motor some sort of compression release is needed, and the Indian designers have fitted a long-stemmed mushroom valve in the head for this purpose. This valve is operated by a rocker fitted to a yoke on the compression release chamber seen at the top of the motor section illustration, and is actuated by a wire from a hand on the left bar. The spark plug is in an aperture in the rear of the head, the connection with the Dixie magneto being by a loop of cable. It goes without saying that the "Featherweight" motor is amply air-cooled by horizontal body and vertical head flanges.

### Bearers and Gearset Unit

The crankcase is supported in the frame by special bearer plates, which, with the crankcase, form the lower member of the keystone frame used on this model. Inside the flywheel on the main shaft is a sprocket, whose chain leads to a three-plate clutch mounted on the main shaft of a countershaft three-speed gear. The plates are of fabric and steel alternately, the steel plate carrying the primary drive sprocket. The gearset, giving three-speed with direct drive on the high and the side shaft gears idling, is a miniature of the set fitted to the G and F model twins for 1916.

To the left hand outer member of the clutch is fitted the pinion and co-related mechanism for the kick starter, as well as the clutch-operating collar and wolf-teeth. The starter, which is of the sector and pinion type, is carried with the clutch-operating mechanism in a substantial yoke bolted to the front and rear of the gear box. The latter is borne from below the bottom bracket, and has a most simple means of adjustment for chain stretch, etc.



**Section of Featherweight 2-Stroke Motor**

### Clutch Operating Rig

The clutch-operating device is a short shaft with a ball-bearing carried collar at its outer end and a deep flange at its inner. Surrounding this shaft is a collar carrying one set of wolf-teeth, a piece attached to the collar on the clutch-operating shaft carrying the corresponding set. The deep flange engages with the other plate of the clutch.

Now, when the clutch-operating collar is revolved, its wolf-teeth, shaped much like fangs, hence the name, press against the other corresponding teeth on the other piece, forcing the teeth apart and moving the outer plate of the clutch away from the others. This gives free engine position. On moving the collar in the rearward direction, the outer plate closes in on the others under the influence of a spring. An arm on the operating collar is connected to a rocker pedal on the left foot-rest, so that the rider has the clutch under complete control at all times, and engaging or disengaging is instantaneous.

### The Foot-Starter

The starter is made on the same lines as the 1915 Indian foot-starter, with the arm held from rising too high by a curved clip, and the folding pad working in the yoked end. The unit construction of the gearset, clutch and starter facilitates the removal or replacement of this triple portion of the transmissions. Final drive is by chain, the size used on both primary and final drive being 3/16 by ½ inch.

The gears are shifted by a long lever at the right side of the frame, this lever working over a notched quadrant, with slots corresponding to the three speed positions and a neutral point between the low and intermediate. The ball hand grip is fitted to a vertical latch, so it is only necessary to depress the ball when changing speeds to clear the latch and allow it to come up again to lock the gears in the desired posi-

Digitized by Google

tion. This lever pivots on the right foot-rest bar, along with the brake pedal. The gear ratios are: 5:1 on high, 9:1 on intermediate and 16:1 on low.

**Novel Brake Construction**

The brake in the "Featherweight" model is a new design. It is of the double-acting band type, anchored and pivoted at the rear, and having the ends attached to a brake rocker at the front. Being double-acting, it will hold equally well backward or forward. It is very powerful, and in connection with the rocker clutch pedal enables the rider to control the movement of the machine by the feet.

The frame is of the rigid type, made light to correspond with the size and power of the motor. The front fork is of the well-known Indian cartridge type, with the recoil and shock device in an inclined cylinder forward of the crown and the lower fork pivoted at about the rim level. There is no brace tube, the tank being suspended from the top tube, which is inclined at the rear to give a low saddle position. A luggage carrier is fitted as standard equipment, and a stand on the accepted Indian lines is provided. The saddle is the Indian cantilever comfort type, with the foot-rests of rubber-covered construction.

**Two-Compartment Tank**

The tank is one of the most interesting parts of the machine. It is in two compartments, the forward one for gasoline, and the after one for oil. The gasoline tank has a capacity of one gallon, while one quart of oil is the capacity of the rear compartment. Wide filler caps are provided to both compartments. A unique device on the right side of the old compartment is a nickel-plated oil measure, which screws into the tank bottom.

**Measuring the Oil**

The motor uses injection oiling, that is, sends gasoline and oil mixed through the carbureter. The amount of oil per gallon of gasoline is the contents of the plated measure, and there is a needle valve allowing the latter to be filled from the oil compartment. Hence, on refilling with gasoline, the rider need only draw a measure of oil, unscrew the measure from its seat and empty it into the gasoline compartment to ensure the motor getting the correct quantity of oil at all times.

The handlebars on this model are designed to give a comfortable position for most riders without adjustment, but an adjustment is provided in the handlebar clamp as in standard Indian practice. The compression release is actuated by a hand latch on the left bar, while the throttle is operated by a hand lever on the right bar. Short grips are used. Mudguards are of the Indian molded type and beaded. The wheels are fitted with 26x2¼ inch tires of Goodyear make. The wheelbase is 46¾ inches. The weight is 130 pounds. Price is $150.

**Racing Types**

The eight-valve and four-valve racing type models, having four valves per cylinder—two inlets and two exhausts—are known to Models H-1 and H-2, respectively. They are both fitted with special Indian design motors, the H-1 having a twin and H-2 a single cylinder motor. The valves are all in the head and no ports are fitted. The respective piston displacements are 30½ and 61 cubic inches. Both types have their motors especially tuned for speed.

The carbureter in both models is the Indian automatic and ignition by Dixie enclosed magneto. Lubrication is by Indian worm-driven pump, with supplementary hand pump. The handlebars are the adjustable dropped racing type, which have been used with such success on Indian mounts in the past. The control is the standard Indian type. The clutch is the Indian multiple disc, located on the countershaft. A compensating sprocket on direct chain drive is an option, the regular double chain transmission being supplied as standard.

Greater ratios are to order. Tanks are of variable capacity within standard stock limits. There is a needle valve supplied with each tank and filler standpipe with priming gum. The frame is the Indian rigid speed type, and the work may be either the cradle spring type or the Indian truss type. The wheelbase is 53 inches in all cases.

Wheels are 28 inches in diameter with Goodyear blue streak racing tires. An internal expanding band brake is supplied, this being operated by a pedal. A stand is optional. The foot-rests are pedals, and the saddle an Indian racing saddle. The right is reserved by the company to make any change in these specifications that special circumstances may warrant. The price of the H-1 twin is $350, while the H-2 or single is listed at $300.

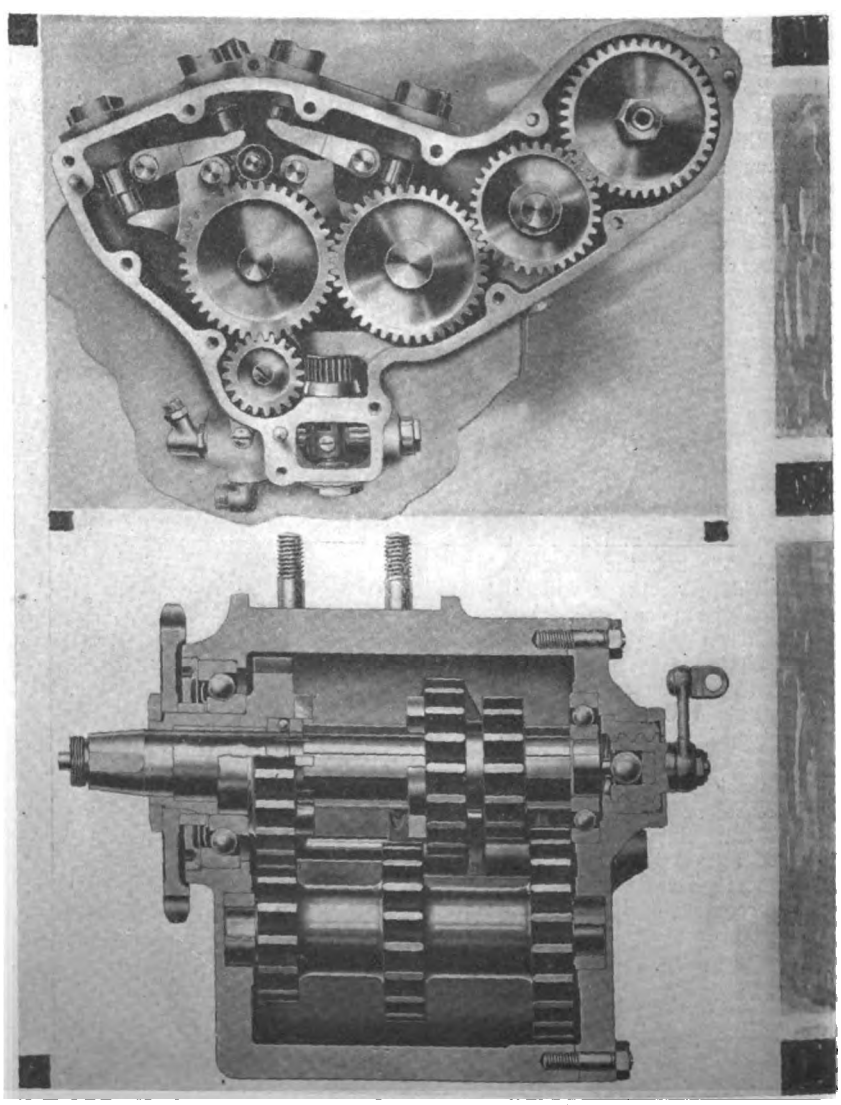
The Indian Maid sidecar, which proved its reliability and popularity in the 1915 and preceding seasons, is continued for 1916. It will be sold at $75. The Indian parcel van is also continued, and is likewise priced at $75.

## BILLINGS & SPENCER ADDITION

Hartford, Conn.—Before the end of September, the finishing touches will be put to the new addition to the plant of the Billings & Spencer Company. The office will be moved over from the old location to the new building, also with the new addition to the recently-acquired plant, formerly that of the Electric Vehicle Company, the Billings & Spencer manufacturing capacity will be greatly increased, as the size of this plant is double that of the old. The new addition is to be of the most modern design and construction. The floor area will be 160,000 square feet.

## CYCLEMOTOR INCORPORATORS

Rochester, N. Y.—The capital of the newly formed Cyclemotor Corporation is placed at $500,000, and the incorporators are as follows: Wilmer W. Salmon, John F. Braam and Lyman E. Dodge, all of Rochester.



**Three-Speed Gearset, Showing the New Arrangement; Above, New Distribution Gear Casing With Train of Gears and Integral Oilpump Below**

# Motorcycle Volunteers to Maneuver with State Troops at Van Cortlandt Park

FOR the first time in New York State the motorcycle will receive official recognition as a military adjunct at the mobilization of State troops to be held in Van Cortlandt Park, September 25. In pursuance of an order issued by Major Gen. John F. O'Ryan, of the National Guard, Captain Lorillard Spencer of the Coast Artillery is organizing a detachment of motorcyclists with a view of demonstrating in maneuvers the practical value of the power two-wheeler in war service. Captain Spencer has sent out a call for volunteer motorcyclists and expects to have 500 riders ready for participation in the Van Cortlandt Park program.

Motorcyclists will be divided into companies as follows: Mounted orderlies for staffs, machine gun companies, transport companies for carrying of ammunition and auxiliary companies for field hospital service. The volunteers will be required to drill on Saturday afternoon, September 18, and the entire day, Sunday, the 19th, and during the formal maneuvers on Saturday, September 25.

## Motorcycle Superior to Horse In Many Cases

From his study of conditions in the European war, and semi-official trials conducted in this country, Captain Spencer is convinced that the motorcycle is entitled to a much more prominent place in the military plans of the United States than it is at present accorded. He expects the Van Cortlandt Park program to demonstrate to the entire satisfaction of the authorities the great value of the power two-wheeler under widely varying conditions of war service. The captain argues that the motorcycle is far superior to the horse for many phases of work, and points out that a motorcyclist is considered 45 per cent. less of a target for a hostile bullet than a horseman.

Attention is called to the fact that the European war has piled up an astounding record of slaughter among horses, and that the scarcity of good horseflesh is already being felt in some sections of this country owing to the heavy shipments abroad. The fact that the motorcycle is having its range of activity extended almost daily along the European battlefronts leads Captain Spencer to believe that it can be made a highly important feature in the general scheme of American preparedness.

A mass meeting of motorcyclists who have volunteered will be held Wednesday evening, September 8, in the Eighth Coast Defense Command Armory at 94th street and Park avenue. The general plan for organizing the riders will be threshed out, and definite arrangements will be made to have the riders on hand for the first drill September 18.

Captain Spencer and his associates are especially interested in the sidecar phase of motorcycle war service, both sidecar machine guns and sidecar ambulances having given remarkable demonstrations of their effectiveness in the present European conflict. It is expected that the adaptation of the motorcycle and sidecar to Red Cross work will prove to be one of the most fruitful branches of army service for the speedy motor unit.

### MAYOR STARTS YONKERS MEET

Yonkers, N. Y., September 6.—Mayor Lenson, of this city, opened the Labor Day races at the Empire City race track, with a crowd of 1,800 motorcycle enthusiasts present. The meet was under the auspices of the Yonkers Motorcycle Touring Club.

There were two events, the first being at ten miles and the second at twenty-five. F. W. Frank, of Purchase, N. Y., Indian, won the ten-mile in 10:07⅘, with J. Wasko, Harley-Davidson, second, and J. Pulza, Indian, third. The twenty-five race was also captured by an Indian rider, Burbank, whose time was 27:03⅕. He was closely followed across the tape by Frask, Indian, and Wasko, Harley-Davidson. There were ten entries in each race.

The splendid support given the Labor Day events has induced State F. A. M. Commisioner Ellis to arrange for a state championship race, which will be staged some time in October.

### MONTHLY PICNICS

Los Angeles, Sept. 1.—A bunch of real funmakers is what the Los Angeles dealers are proving themselves to be in the plans for a series of monthly picnics, open to all southern California riders. The first will be held September 19, with T. E. Berry in charge of the program, and all dealers contributing to the lemonade and prize fund. There will be stunt events, the big feature being a jump in the air from an inclined board, and a tug-of-war with 12 machines, of various makes, at each end. The prize list includes $175 worth of accessories.

### POLHAMUS RESIGNS FROM BOWSER

South Bend, Ind., September 6.—A. Z. Polhamus, chairman of the executive board of the S. F. Bowser Oil Tank & Pump Co., Fort Wayne, has resigned from that position after having served the company in various capacities for twenty-five years.

# DONNY POPE WINS READVILLE EVENT

## Indian Riders Take Big Slice of the Bacon Hung Up at Boston Track

BOSTON, September 6.—The local Indian riders romped off with nearly all the prizes at the Labor Day races at Readville Park today, winning first and second places in every event.

"Donny" Pope, who has proved his metal with many of the cracks in times past, got away with the feature 50-mile professional event, and in so doing bettered the existing 50-mile Readville Park record by several seconds, doing it in 44m. 37⅕s. He did not go to the pits during the whole race.

Pope was ahead practically the whole distance on his eight-valve machine, but was pressed hard by Earle Gove, Indian, until about the tenth mile, when Gove lost a lap in changing machines. Along about the thirtieth, Gove was in again for a change of machines and lost another lap, but when he got back on the track he held Pope to the 47th mile, when Pope succeeded in getting by him for another lap. The race for third place between Forest and Smith, the latter on an Excelsior, was exciting, Smith leading up to a couple of laps of the finish, when he had to put in for oil to finish the race.

Besides winning the feature event, Pope won the 5-mile professional and the 10-mile professional. Earle Gove captured the 25-mile professional event for single-cylinder machines of the 30½-inch class, and was second to Pope in the 5-mile professional and the 50-mile professional. The summary:

Five-Mile Professional—Won by Donald Pope (Indian); Earle Gove (Indian), second; P. A. Crocker (Indian), third. Time, 4m. 19s.

Five-Mile Amateur—Won by Sydney Dean (Indian); Arthur Bouchard (Indian), second; J. Livingston (Excelsior), third. Time, 4m. 39⅘s.

25-mile Professional, Single Cylinder—Won by Earle Gove (Indian); Donald Pope (Indian), second; H. Henrikson (Harley-Davidson), third. Time, 28m. 49⅗s.

Three-Mile Sidecar, Professional—Won by B. A. Swenson (Indian); J. Edwards (Indian), second; R. M. Linnell (Excelsior), third. Time, 3m. 56⅗s.

Ten-Mile Professional—Won by Donald Pope (Indian); J. E. Forest (Indian), second; P. A. Crocker (Indian), third. Time, 8m. 44⅗s.

Ten-Mile Amateur—Won by Sydney Dean (Indian); Arthur Bouchard (Indian), second); C. B. Johnson (Indian), third. Time, 8m. 59⅗s.

50-Mile Professional—Won by Donald Pope (Indian); Earle Gove (Indian), second; J. E. Forest (Indian), third; H. F. Smith (Excelsior), fourth. Time, 43m. 33⅕s.

### 10,000 SEE PITTSBURGH RACES

Pittsburgh, Pa., September 6.—Splendid sport was enjoyed by over 10,000 people, who had gathered on the Shenley Oval this morning to see the motorcycle races which were staged by the allied trade unions of Allegheny county at their Annual Labor aDy Carnival. The meet was run off without a hitch, and nothing developed to mar the pleasure of the crowd. The feature event of the day, the five-mile professional race, was won by A. G. Schmidt, Indian, who covered the ground in 6:36. The summaries:

Five-mile professional—Won by A. G. Schmidt, Indian; second, E. J. McCall, Emblem; third, Lawrence Keys, Harley-Davidson. Time, 6 minutes 36 seconds.

Ten-mile professional—Won by Lawrence Keys, Harley-Davidson; second, George A. Black, Harley-Davidson; third, Frank Brascher, Indian. Time, 13 minutes 32 seconds.

Five-mile race—Won by L. C. Crist, Harley-Davidson; second, H. E. Simon, Indian; third, H. D. Glacken, Harley-Davidson. Time, 6 minutes 31 seconds.

Ten-mile professional—Won by G. A. Black, Harley-Davidson; second, Lawrence Keys, Harley-Davidson; third, E. J. McCall, Emblem. Time, 13 minutes 32⅗ seconds.

### WENGATZ OUTFIT WINS PRIZES

Lincoln, Neb.—Robert Wengatz, with his Dayton two-speed motorcycle, Flxible sidecar and special trailer, attracted much attention in a motor parade here which was made up of more than a thousand motor cars and motorcycles. Mr. and Mrs. Wengatz were awarded a silver loving cup, and in addition they received two hats, a cane, a pair of white kid gloves, 6 pairs of silk hose and $15 in gold, these prizes having been offered by merchants of the city.

Wengatz had the wireless equipment on his motorcycle so arranged that it could be seen sparking while in the procession. Mr. and Mrs. Wengatz have covered 3,384 miles to date on the journey to San Francisco.

### BAILEY JOINS HENDERSON

Detroit, Mich., Sept. 6.—President T. W. Henderson, of the Henderson Motorcycle Co., has announced the appointment of Paul J. Bailey as advertising manager of the four cylinder Detroit machine. Bailey will move his headquarters to Detroit from Toledo, where he has conducted a general

Paul J. Bailey

advertising business for a time. Bailey has had a broad experience in the motorcycle business and is well qualified to assist Henderson dealers in boosting their business.

# BEAT OLD MARK IN HILL CLIMB

## Washington (D. C.) Riders Negotiate Naylor's Hill in Record Time—Hill Race Held

WASHINGTON, D. C., September 6.—The National Capital Motor Cycle Club, of Washington, D. C., held its annual hill climbing contest on Naylor's Hill, on Saturday, September 4 last. The course on which the event was staged is ⅞ of a mile long, has several sharp curves, and the grade rises about 500 feet in the distance mentioned.

Despite these conditions, the hill was negotiated by Victor Dessez, a local amateur in the remarkable time of 46⅖ seconds. He was mounted on an Excelsior twin of the new short coupled type. He was closely followed by A. Zimmerman, on a Harley-Davidson, who negotiated the hill in 47 seconds. The runner up was Tommy Dedge on an Indian, who finished in 50 seconds. Dedge would undoubtedly have made better time were it not for the fact that he was compelled to slow down by a chicken, which insisted on barring his path.

Though the time made by Victor Dessez was better, the first prize will undoubtedly be awarded to Mr. Zimmerman on points, in view of the fact that the machine and rider were of much greater weight. Dunham, Indian, J. S. Barryman, Cyclone, and Wm. Denham, Thor, finished in that order, after Dedge.

As an added event a race up the hill was arranged from a standing start among the place-men in the first mentioned event. The following riders in this event finished: First, Zimmerman, Harley-Davidson; second, Dessez, Excelsior; third, Dedge, Indian; fourth, Denham, Thor.

The time made by Dessez in the first event sets a new record for the hill, the best previous time having been established by Denham a year ago at 49 seconds. The best time in which the hill has been ascended by racing automobiles in contests conducted by the Washington Autobile Club is 58 seconds.

The Washington police furnished a large detail of uniformed men to patrol the course. The meet was electrically timed by a complete set of telegraph instruments installed by several electricians who are members of the club. The following officials were in charge of the event: Referee, Thomas O. Wansleben; starter, W. F. Throop; timers, F. M. Mills and E. H. Hutterly.

### EXPORTS ARE INCREASING

As an illustration of the trade opportunities open to American manufacturers as a result of the war, it is to be noted that we now sell fifty-two cents worth of goods for every dollar's worth we buy from South America, as compared with last year's ratio of forty-four cent's worth of goods sold to South American countries to every dollar's worth purchased by us.

# VERRILL VICTOR AT BISON TRACK

## Indian Star Takes 2 Out of 4 Events Staged at the Buffalo Driving Park

BUFFALO, N. Y., Sept. 6.—Despite the constantly threatening weather a large number of fans witnessed the third race meet of the Buffalo M. C., held at the Lancaster Driving Park last Saturday afternoon and never saw a better set of racers loop a dirt track as they did today.

"Crazy Horse" Verrill proved to be the star daredevil rider of the day by taking two firsts out of the four events, while Brigham Young and Bob Barclay captured the other two events.

In the first lap of the ten mile stripped stock Don Barclay and Brigham Young rode neck on neck, but from the second lap Young led to a triumphant finish. Allyn, who rode second from the second mile, lapping Bickelman in the sixth mile, looked like a sure second until he dropped out in the thirteenth lap. Don and Bob Barclay took second and third places.

From the very start of the ten-mile open "Crazy Horse" Verrill led the large number of riders with Young and Baribeau close at his heels in the order named. In the fifth mile Young and Baribeau exchanged places. The latter dropped out in the seventeenth and Allyn came up third. The finish was Verrill, Young, Allyn.

Allyn led the riders in the first lap of the twenty-five mile open. Young and Allyn exchanged positions for first and second in the second lap with Baribeau and Verrill following in the order named. Verrill jumped from fourth to second place in the third lap, Baribeau remaining third and Allyn dropped to fourth. This position the riders held until the fifth lap when Verrill took the lead and Young, Baribeau, Allyn and Don Barclay following in the order named. No change of positions was made until the sixth mile when Young fell to third, Baribeau taking second, Don Barclay taking fourth and Allyn fifth, which positions the riders maintained throughout the remainder of the race, with Verrill finishing three laps ahead of the last rider. The summaries:

Ten Mile, Stripped Stock—Brigham Young, Detroit (Harley-Davidson), first; Don Barclay, Denver (Indian), second; Bob Barclay, Denver (Indian), third; "Hans" Bickelman, Buffalo (Jefferson), fourth. Time, 12:10⅗.

Ten Mile Open—"Crazy Horse" Verrill, Toledo (Indian), first; Brigham Young, Detroit (Harley-Davidson), second; Oliver Allyn, Buffalo (Harley-Davidson), third; Don Barclay, Denver (Indian), fourth. Time, 12:09⅗.

Twenty-five Mile Open—"Crazy Horse" Verrill, Toledo (Indian), first; Joe Baribeau, Toronto (Indian), second; Brigham Young, Detroit (Harley-Davidson), third; Don Barclay, Denver (Indian), fourth; Oliver Allyn, Buffalo (Harley-Davidson), fifth. Time 31:20.

Five Mile Consolation—Bob Barclay, Denver (Indian), first; "Hans" Bickelman, Buffalo (Jefferson), second; Brownie Carslake, Australia (Indian), third. Time, 7:01.

### RACES AT PRESCOTT FAIR

Prescott, Ont.—Grandstand attractions at the Prescott fair this year will include a series of motorcycle races. The dates are September 14, 15 and 16.

## Houghton Bi-Car for Pleasure and Business

AN adjunct to the bicycle which is certain to attract widespread and favorable attention is the Houghton Bi-Car, marketed by the Houghton Sulky Co., of Marion, Ohio, and illustrated herewith in the commercial van type. The Bi-Car is also offered in the form of a small sidecar with a correspondingly light but sturdy frame. The pleasure type is especially adapted to the use of children, and affords an ideal means of taking the youngster out into the open in perfect safety.

The frame, for either the commercial or runabout types, is of all-steel construction and fully adjustable. There are no joints to loosen or break, the extra wheel is protected by guards and the tread is about 31 inches. The frame capacity is over 200 lbs. The wheels are extra strong, a wide sulky hub is used and the new Houghton "Nail-Proof" tire is supplied. The commercial and runabout bodies are interchangeable. The former is made with a curved reinforced lid and is waterproof. The inside dimensions of the body are 30 by 18 inches on the floor, and 16 inches high.

The runabout body is wide and comfortable, and has a sloping hood. The seat is removable so that a child may lie at full length if desired. Scroll springs are fitted to the runabout. Both bodies are finished in dark blue, with gold striping and the frame work is black. Each Bi-Car is fully guaranteed. The price, for either type, is $16.75.

### PEORIANS HEAD FOR 'FRISCO

Peoria, Ill.—Plans have been completed by four Peorians for one of the largest motorcycle trips ever made by local enthusiasts. They expect to leave this city in a few days for San Francisco. The men are Alexander Tyngstrom, Louis Blackman, Joe Martin and Elmer Beck.

The four will use two Harley-Davidson machines with sidecars. They will carry a complete camping outfit, and hope to average about 150 miles per day. Their equipment includes four sleeping bags, and a waterproof tent to throw over the machines.

# ALTOONA SEES BIG RACE MEET

## "Abe" Cohen, Indian, Takes Every Event on the Card—Dusty Track Made Going Hard

ALTOONA, Pa., September 6.—Every event in sight was cleaned up by "Abe" Cohen, Indian, in the big race meet which was held here on September 4, after having been postponed twice because of inclement weather. There were four events, two being at a distance of five miles, one at twenty-five, and the fourth at three. Out of town riders were small in number, but the local representation was good.

The feature of the day was the twenty-five professional which was originally set at fifty miles and was reduced because of the heavy dust on the track. In the first lap of this race, all of the riders were well bunched, Finn, Pope, being in the lead and hard pressed by Cohen. Finn took a spill in the fourth lap and Cohen went into the lead. The Indian rider held the initial position throughout the rest of quarter century. Keys, Harley-Davidson, was second, several laps behind Cohen, while Markman, Indian, made a good third. Time, 29:22.

The same finishing order as in the feature race obtained in the five-mile handicap, which was accounted for by Cohen in 6:08. Eight riders were entered in the five-mile professional race, the first event on the program. Finn, Pope, gave the Indian rider a hard battle for first place, but had to be satisfied with second honors, while McCall, Emblem, finished in third position. Time, 6:10⅖.

The three-mile match race between Cohen, Indian, and McCall, Emblem, was very closely contested. Cohen never allowed McCall to pass him during the race, but McCall gave him a hard chase. Cohen finished in first position and McCall second. Time, 3:49.

### BAKER LAUDS THE DIXIE

Newark, N. J., September 4.—The Splitdorf Electrical Company, whose magneto was used by E. G. Baker in his record-breaking three-flag run, received the following telegram from the "Old Warhouse," when he completed his terrific grind: "With my nineteen sixteen Dixie equipped Indian motor I experienced no trouble and had the best results on three-flag record run from Canada, across the United States and into Mexico."

### REPORT COMMERCIAL SALES

Pasadena, Cal.—The Park Cycle Co., of Pasadena, has delivered a twin three-speed to Munger & Munger, also a twin to the Lilly Delivery Service. The company is Pasadena agent for the Excelsior. Guy Henry and Edward Loudenclos are the members of hte firm, but Loudenclos has gone to San Francisco, where he has opened a branch for northern California for the Cyclone.

Digitized by Google

### SPRAGUE CLEANS UP AT COSHOCTON

Coshocton, O., September 6. — Cliff Sprague, a local rider astride his Harley-Davidson, cleaned up the three events which were held on the local track on Labor Day, September 6, and broke the record for the local track by capturing the fifteen-mile race in 16:38.

Sprague also walked away with the amateur ten-mile race, in which Cupp's Excelsior, finished second, and Cognion, Indian, third. The time was 13:48. The third event which Sprague won was the twenty-five-mile race for stripped stock machines. Bucher, Excelsior, was second, and Gold, Harley-Davidson, finished third. The time was 29.32¾. The fifteen-mile stripped race saw Boamos, Flying Merkel, breeze in second, and Jim Gold, Harley-Davidson, third.

### WANDERSEE VISITS CHICAGO

Detroit, Mich., September 6.—William E. Wandersee, Harley-Davidson dealer, spent Labor Day in Chicago as the guest of H. C. Scherer, special representative of the factory who was in Detroit on September 4. Mr. Scherer has made a number of appointments in the way of commissioners for the F. A. M. and will shortly appoint one for Detroit.

### CHAMP RACE FOR DETROIT

Detroit, Mich., Sept. 7.—A one hundred mile F. A. M. national championship race will be the feature of the racemeet that is scheduled to be held in this city on September 19, under the auspices of the Interstate Racing Association. The program is composed of two five-mile elimination heats, qualifying those who finish in the first three places in each heat, to compete in the ten-mile final, a novelty race and the one hundred mile championship.

In the case of the championship race there will be cash prizes for those finishing first, second and third, additional sweepstakes to the leaders at twenty-five, fifty and seventy-five miles, and F. A. M. champion medals. Entries will close on September 15. All races are restricted to 61 cu. in. motors.

# RAIN POSTPONES RACE AT CHICAGO

CHICAGO, Ill., September 6.—The big Chicago triple century, which was to have been held Labor Day, on the new Chicago Speedway, was postponed on account of rain. Many fans were on hand to witness the grind on the whirlwind track and were greatly disappointed to find that the race had to be postponed to next Sunday, September 12.

Those who were fortunate enough to get into the Chicago Speedway last Saturday were treated to some pretty elimination trials. It was required that each rider make eighty miles an hour in order to qualify for the big event. Most of the riders purposely managed to come just barely outside of the specified mileage. It was their evident intention to prevent the other fellows from finding out how fast their motors could go. Kemp calculated so closely with his little Henderson that he made the circuit at exactly the rate of speed required.

### GRELLE TAKES VINCENNES CENTURY

Vincennes, Ind., September 6.—The one hundred-mile race, which was held on the local track here today, was carried away by H. B. Grelle, of Logansport, Ind., who rode the single century on his Indian in two hours, eleven minutes and fifty-three seconds. Leslie Allen, of Chicago, Ill., also riding an Indian, finished second, while Henry F. Pardon, a motorcycle dealer of Owensboro, Ky., flashed across the tape third on his Indian mount. The race was staged on a half-mile dirt track.

Clarence Sargent, the Indianapolis State record holder, was fatally injured in a collision with one of the riders. The races were quite well attended, and during the entire one hundred miles there was excitement aplenty for the shouting fans.

### SMITH COMPLETES LONG TOUR

Los Angeles, Cal.—"Firestone," otherwise C. F. Smith, special motorcycle representative of the Firestone Tire & Rubber Company, of Akron, O., has just completed a tour of the principal cities of the country and has been in Los Angeles for a short time looking over matters in general. In an interview with a representative of **Motor Cycle Illustrated,** Mr. Smith said that business was very fine and that the new motorcycle casing which the Firestone firm was marketing was being received in a very gratifying degree by dealers and riders on all sides. He accompanied Stewart Slosson, special Pacific Coast representative, in the latter's sidecar through all the principal cities on the coast, he said, and found that interest in motorcycle racing was much more pronounced in this section than in other parts which he had visited.

"As evidence that the new Firestone casing will stand up under the hardest punishment that it can be subjected to," said Mr. Smith, "take the rear casing used by Otto Walker on his Harley-Davidson at Venice. It came from stock at our Los Angeles branch. Walker used it 900 miles in practice, then won the race with it. Slosson then took it for use in the 340-mile desert classic, then Wells Bennett had it for several hundred miles and Slosson took it for his sidecar rig once more, going to Frisco with it. George Bruschi, the San Diego Harley-Davidson agent, took it from Slosson and rode it home. That casing has easily done 5,800 miles of hard going and is still good for many more."

### ACTIVE TRAFFIC OFFICER

**R. Wagner, of Swissdale, Pa., Police, Who Has Eliminated Speeding in That City**

### F. A. M. STATISTICS FOR AUGUST

Secretary G. B. Gibson, of the F. A. M., announces that the affiliated riders taken into the organization during the month of August numbered 218; unaffiliated, 97; renewals, 235. This statement covers all the states and includes Panama and Canada. The latest card issued at the time of sending out the report was numbered 34,846.

### VANDAMENT NEEDS SIDECAR NOW

Leslie Vandament, known as "Motorcycle Van," who handles the Indian in Greencastle, Ind., announces that he was married at Bay City, Mich., recently, to Miss Leona Moore. "Van" is preparing to hook a sidecar up to his three-speed Indian.

## Thor Shares Honors with Harley at Bakersfield

BAKERSFIELD, Cal., September 6.—Six corking good races were run off on the local track today, in which the Thor shared the honors with the Harley-Davidson riders. There were prizes galore, and the money chasers were right on the job selling some good speed.

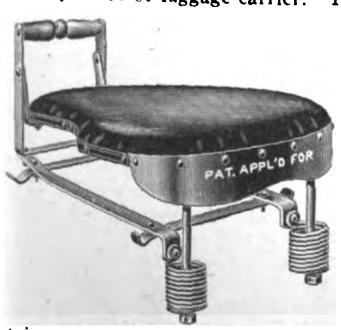
The five-mile sidecar race witnessed the victory of E. C. Tice, Harley-Davidson, who covered the distance in 6:08, with L. G. Ingham, second. The twenty-five dollar prize to the winner of the five-mile stripped stock was accounted for by L. Barliuch, Thor, who reeled off the quintet of miles in 4:22. The ten-mile amateur race was cleaned up by three Harley-Davidson riders in 10:59, they being L. G. Ingham, F. Ward and J. Dryes, who finished in that order.

Tice, the winner of the sidecar race, also romped home with the ten-mile stripped stock and the twenty-five-mile stripped stock. His time for the first event was 9:9⅗, and the second 24⅘. R. Vansandt, Excelsior, and M. Tice, Excelsior, were second and third in the ten-mile, and L. Barluich, Thor, and J. H. Malhany, Harley-Davidson, finished second and third in the twenty-five-mile race. Nearly two hundred dollars were hung up for these two events. In the final race, the fifteen-mile amateur, F. Ward, Harley-Davidson, crossed the tape first in 16:55, while W. Parrish, Indian, took second prize, and T. Stevenson, Harley-Davidson, got the third place. A fair-sized crowd witnessed the meet.

### NEW TYPE OF WALD TANDEM

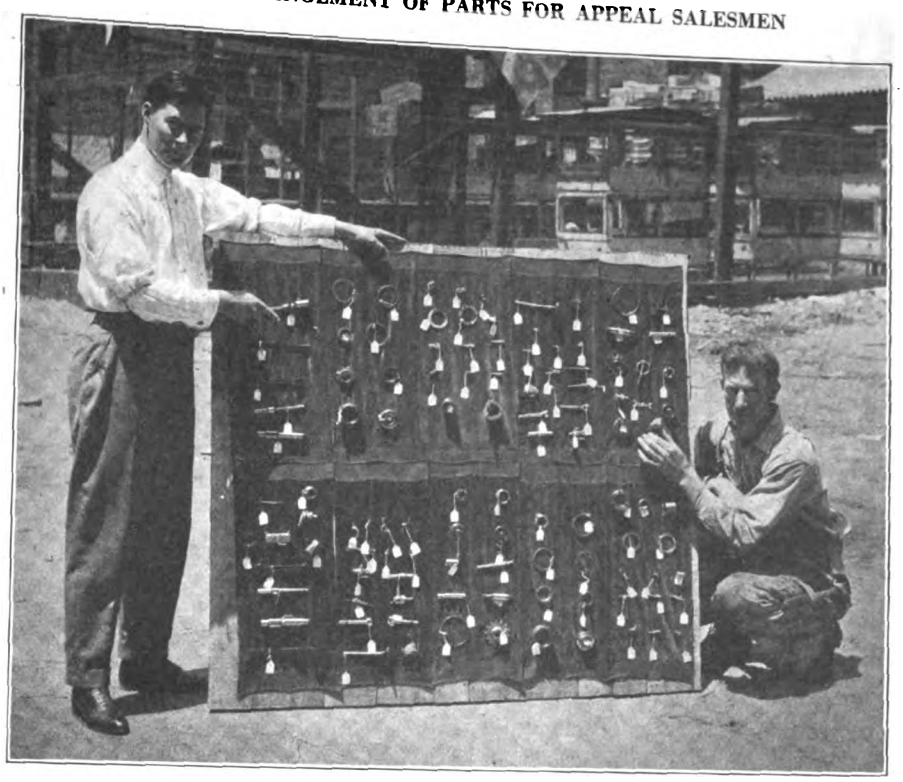
For the benefit of motorcycle dealers who wish to attach tandem seats without removing the rigid luggage-carrier supplied with the machine, the Wald Manufacturing Company, of Sheboygan, Wis., is marketing a type of tandem which combines comfort and sturdiness with an entirely new method of attachment. The Wald tandem permits of a slight fore and aft swinging movement, in addition to the up and down motion of the springs, thus insuring easy riding, but it is amply safeguarded against any side motion.

The rear springs are adjustable, and the clamps which attach the device are adjustable to any width of luggage-carrier. The



seat is upholstered with Spanish leather. The retail price of the complete tandem, including a pair of footrests to fit any motorcycle, is $5.50. Dealers are especially requested to write to the Wald Manufacturing Company regarding their liberal offer, and secure full descriptive circulars.

### HANDY ARRANGEMENT OF PARTS FOR APPEAL SALESMEN



**Layout Carried by Salesmen Consisting of Duplicate Parts of Machines of Various Makes —Twelve Rolls Are Spread Out on Board Showing Display Possibilities**

LOS ANGELES, Cal., E. E. Welborn, sales manager of the Appeal Mfg. & Jobbing Co., Los Angeles, has at last worked out a satisfactory solution of a problem which their salesmen met in carrying samples of motorcycle parts for all makes of machines which they sell. They experimented with indifferent success with various methods of selling parts from catalogues, samples loose in a grip, or traveling case, etc. They found that samples carried loose were shaken up, their finish marred and they were liable to receive other damage, and they failed to carry quickly to the dealer an attractive and visible demonstration of the idea that the drummer had a complete stock.

Now Mr. Welborn equips each salesman with a stock of parts securely mounted on handsome velveteen backing as shown in the photograph. Each sample lot is carried rolled up and can be spread out in an instant on the counter. The dealer will usually order some of the parts he sees, and then will take the trouble to go down the list and order others from it. Mr. Welborn has done considerable experimenting to get the most satisfactory roll and backing. Each man carries six rolls weighing, with the parts, about 10 pounds. The company has three differently equipped sets of six each so that a salesman carries one set on a trip and then exchanges with another salesman, so that on three trips he carries out all the parts which are mounted in this way.

### MILITAIRE INCORPORATION

Buffalo, N. Y., September 6.—The Militaire Auto-Cycle Company of America, Inc., filed a certificate of incorporation at the local clerk's office recently. They are capitalized at $250,000, of which sum Edw. McM. Mills, Ansley W. Sawyer and Robert S. Stevens, all of Buffalo, have subscribed for $10,000 (the amount of paidup stock) in order to begin the manufacture at once of motorcycles, bicycles and all parts and accessories pertaining thereto, also to manufacture and sell automobiles.

The certificate stipulates that 2,500 shares (all common) of $100 each may be issued by the company. The directors elected for the coming year are: N. R. Sinclair, Edw. McM. Mills, William A. Morgan, George C. Miller, of Buffalo, and Gideon Grant, of Toronto.

### GOLD MEDAL FOR DAYTON

Officials of the Davis Sewing Machine Company, manufacturers of the Dayton motorcycle and bicycles, in Dayton, O., were highly elated recently at a letter received from the Superior Jury of Awards of the Panama-Pacific Exposition in San Francisco. This letter reads:

"This is to notify you officially that the Superior Jury after due consideration, has raised the award on your motorcycle from silver medal to gold medal.

Very truly yours,

O. H. FERNBACH,

Secretary of the Superior Jury."

Previous accounts of awards given by the jury stated that the Davis Company had been awarded a silver medal, and it is naturally highly gratifying for the firm to receive the higher award in recognition of the excellence of its product.

### WILL STAGE RUN TO EASTON

Reading, Pa., September 6.—The Reading Motorcycle Club will stage a run to Easton on Sunday, September 12.

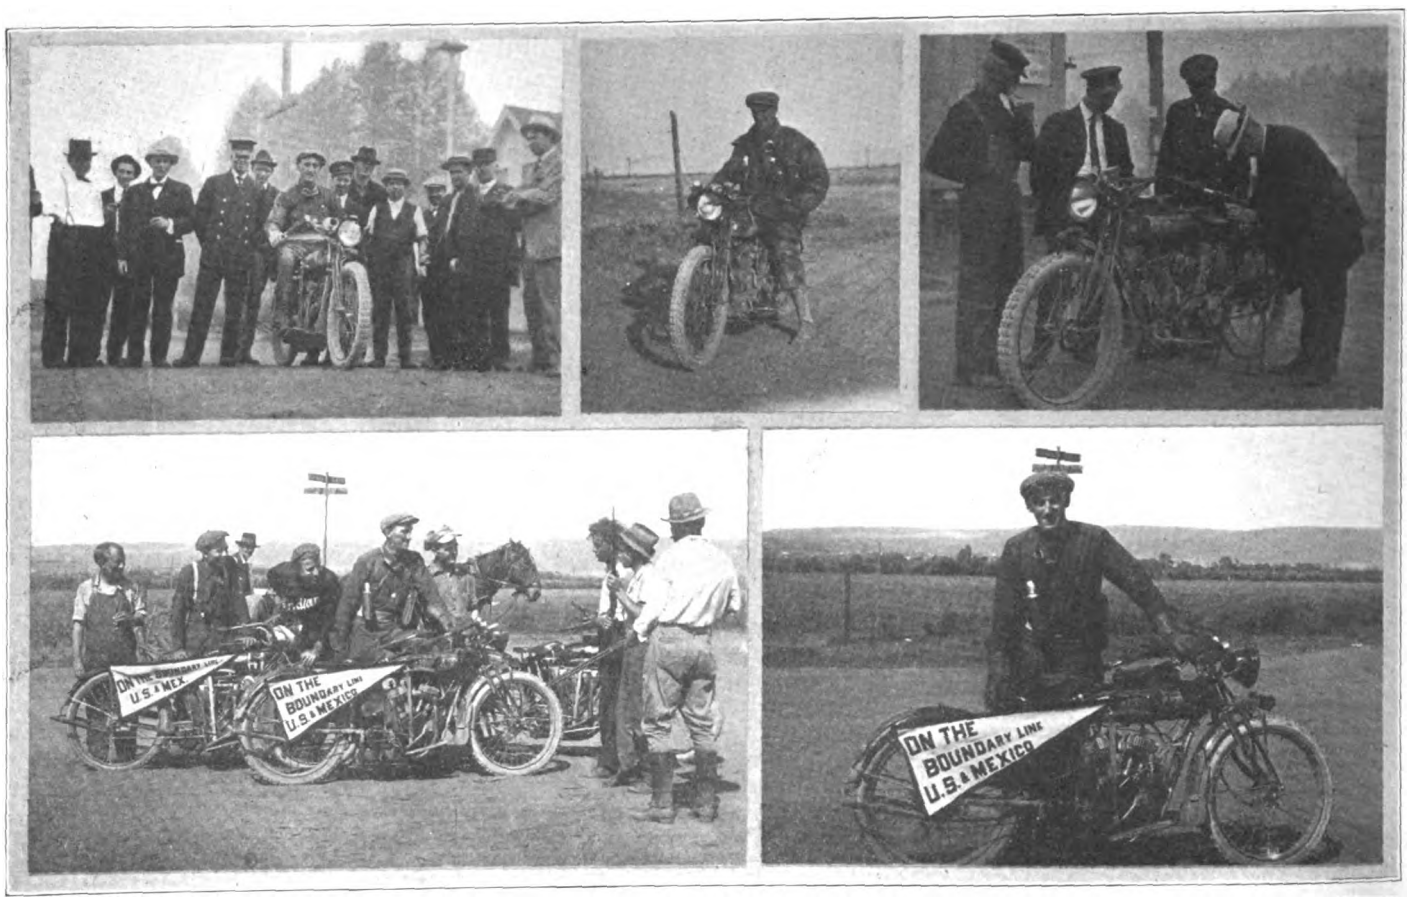
# How I Made the Three-Flag Record

## *Inside Story of the Dash From Canadian Border to Mexico*

**By Erwin G. Baker**



**Upper Row. Left—The Start of Baker's Three-Flag Dash in Vancouver, B. C., Showing Canadian Custom Officials Witnessing the Departure of "Warhorse." Center—Nearing Bakersfield, Cal. Right—Mayor Fuller, of Blaine, Wash., Examining Baker's Mount. Lower Row. Left—Border Guards Giving Baker and Paul Derkum a Rousing Welcome on Their Arrival in Mexico. Right—Near Tia Juana, Just After Crossing the Border Into Warring Mexico**

HAVING established the coast-to-coast motorcycle record, I was anxious to do something of an international character. and after considerable figuring I decided to make a dash from Canada to Mexico along the Pacific coast. Some of my friends cautioned me against such a plan; others urged me to carry it through. I was confident, I felt that my Indian mount was up to the task, and when the Hendee folks O. K.'d my proposition I soon whipped the idea into shape.

I received something of a jar when the Hendee company instructed me to ship my old motor, No. 76, back to the factory and replace it with one of the new 1916 models. I figured that the new motor must be capable or it would not be sent out, but I could not give up old "76" without a pang. I exchanged the motors, and in an impromptu hill-climbing test found that the new motor had something on the one I had sent back. Before the date arrived for the start of the record trial I was so well satisfied that I had forgotten all about my old motor.

### The Start From Pacific Highway

The start was made from a place called Pacific Highway, on the Canadian side of the line, at 11 o'clock on Tuesday, August 24. Some of the officials of Blaine, Wash., including Mayor P. F. Fuller, were present when U. S. Immigration Inspector T. F. Beaudet fired the shot which sent me on my way.

My first stop was at Bellingham, Wash., 26 miles from the starting point, I must say this first jump was not an encouraging one. The road was full of chuck-holes. several culverts had been damaged, and the forest fires which raged in the neighborhood filled the air with smoke so that at times I could hardly keep in the road. I had to run in low and intermediate a number of times, and all in all the job was a tough one. Taking on oil and gas at Bellingham, I set a hot pace southward through pine forests.

The chief of police of Everett, the next town I passed through, was on hand at the outskirts to escort me, and I hit up a clip of 35 per through the streets.

### Quick Work in Seattle

As I entered the outskirts of Seattle I found that my gas was exhausted, but luckily I was able to coast a block and reach a supply station. At the store of Ballou & Wright I added a raincoat to my kit, strapped a "44" around my waist and made a quick getaway, with motorcycle police escorting me to the outskirts. Speed records between Seattle and Tacoma went glimmering, and on the outskirts of the latter city Motorcycle Officer Fred MacCullom, Ray Packard, of the Bailey Co., and Ray Day picked up my pace and rode with me to a point ten miles south of Tacoma.

At Ghehalie more gas was taken aboard, and I whooped it up for Toledo. Here ten minutes was lost in ferrying across the Tacoma river. Then darkness overtook me. The next few miles will be long remembered. I dashed through country little known to me, bumping into chuckholes and whirling through heavily timbered stretches, now and then getting some hub-deep sand by way of variety.

### Across Washington in Eight Hours

About 9 o'clock Tuesday night I sighted the lights of Kalanea and heaved a sigh of relief. It took the ferryman 40 minutes to get me across the Columbia river, which is two and a half miles wide at this

Digitized by Google

point. On the way over I found time to figure a little on my mileage. My speedometer showed 298 miles, and I had been on my way ten hours. My actual riding time across the State of Washington was eight hours. I had spent two hours in my stops for gas and oil, and in eating.

Leaving Goble, Ore., at 9:45 p. m., I was in Portland at 11:15. There was a big crowd of motorcycle fans waiting for me at Ballou & Wright's Portland store. After stowing away a big meal and filling my tanks, I struck the road again, escorted by two motorcycle policemen. A detour was necessary on the way to Salem because of a washout, and I arrived there at 3 a. m. Another big crowd of motorcycle enthusiasts greeted me there.

**Breakfast Stop at Albany**

Five minutes later I was off for Albany, Ore., where I arrived at 4:30 a. m. I ate breakfast there, filled my tanks and started again. The roads were thick with dust, and I had many rocks and chuckholes to contend with. And crooked! Sometimes I feared I might put a kink in my motorcycle in getting around the turns. I reached Eugene at 7:30 Wednesday morning, roared through Roseburg a couple of hours later, and then set sail for Glendale. I was 591 miles from my starting point. The net riding time for the first 24 hours had been 21⅗ hours. Between Roseburg and Glendale I reached the highest point on my journey, almost 9,000 feet. I crossed three mountain ranges before reaching the California state line.

In the mountains a heavy rainstorm overtook me, and I had to battle with mud on the sides of the mountains for ten miles. I arrived in Grant's Pass about noon on Wednesday, took on more oil and gas, ate a few bites and then swooped down the mountain for Medford, which is in the midst of Oregon's famous apple district.

**More Mountain-Climbing**

I reached Medford at 3:10 p. m. and left at 4:20. The giant Siskiyou range loomed in the distance, dusk was fast approaching and I lost no time in getting started. I wanted to reach Sisson, Cal., at the foot of Mt. Shasta before turning in for a little rest. At 4:42 I reached the California state line.

The Oregon mileage was 415, and it had taken me 18 hours and 57 minutes to cross the state. Deducting the time lost in stops for fuel and "eats," the net riding time was 14 hours and 27 minutes. Owing to the bad mountain roads, and the fact that I blew out the fuse on my switch, I had made somewhat slower time than I believed possible. After crossing the California line I rode the next 12 miles in low and intermediate. It was hard going in the darkness, and I had several close calls. I reached Sisson, Cal., at 8 o'clock Wednesday night, having ridden 771.5 miles in 32 hours.

**Fresh Start After a Nap**

I turned in for "forty winks," and was up again at 3:15 Thursday morning. I put on some extra clothing as it was quite cold at the foot of the mountain. Between Red Bluff and Dunsmuir I had 72 miles of low and intermediate work, as the trails leading over the mountain were rough and winding. The only incident worth mentioning on this stretch was a stop to help a badly scared Ford driver get back on the road.

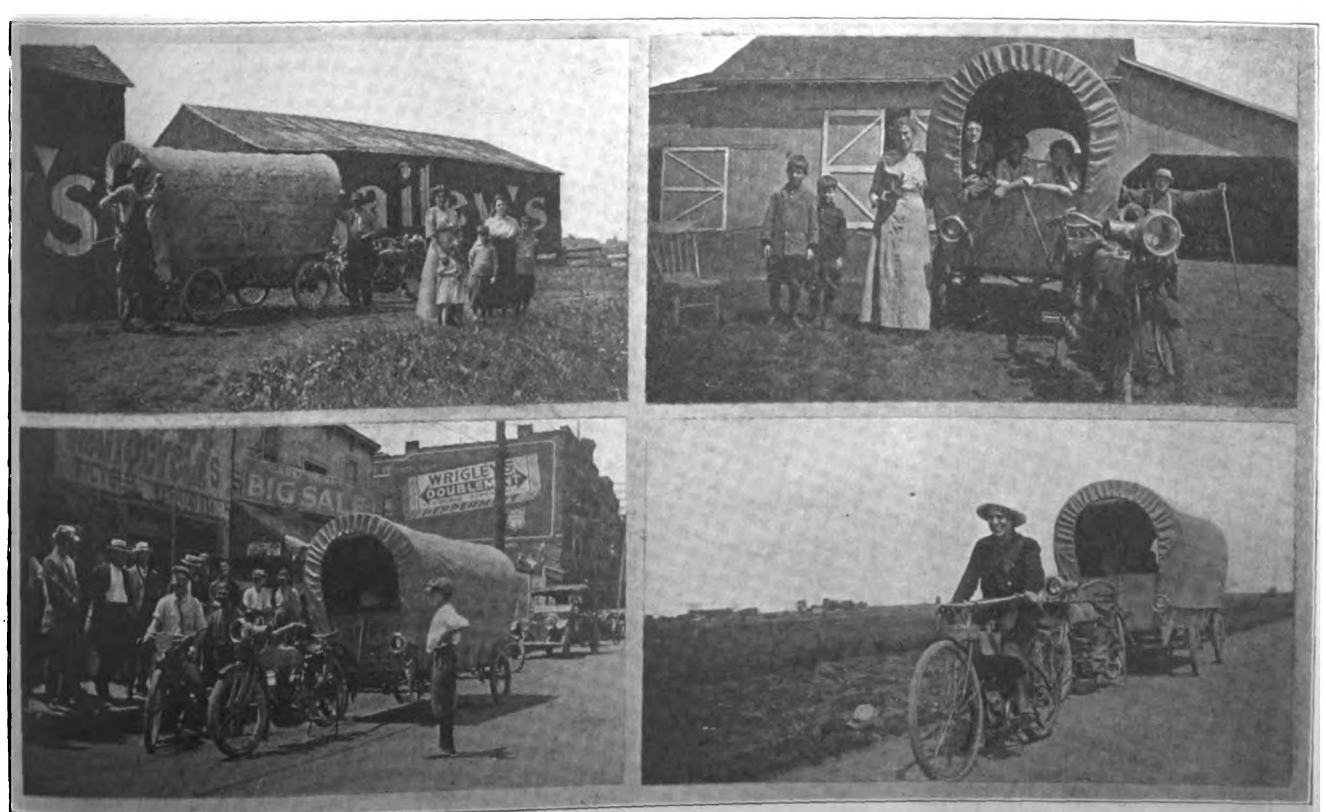
At Kenneth I stopped for gas and then ferried across the Sacramento river. I had lost track of distances between towns, as I was very busy watching the twisting, rutted roads in order to save my neck, but as I neared Redding I found I could open up a little more, and I was soon hitting 60 miles an hour. Noon found me at Chico. Then I whooped on to Marysville, and a short time later struck the State Highway into Sacramento.

**Greeted by F. A. M. Official**

On the outskirts of Sacramento I was greeted by State F. A. M. Referee F. M. Woodson, Leo McCarthy, H. Cameron, of the Indian agency, and several other enthusiasts. They escorted me through the city at 35 miles an hour. The State Highway between Sacramento and Stockton looked inviting, and I covered the 48 miles in 50 minutes. On the road into Stockton I met B. Anderson, manager of the Hendee Mfg. Company's branch in San Francisco, and "Happy" Alzina with a tandem outfit.

After supper Manager Anderson insisted that I get a little sleep. I went to bed but never closed an eye. Later I telephoned for the boys to come up and keep me company. They did, and Anderson and Alzina gave me a regular prize-fighter's rubdown. I left Stockton at 9:40 Thursday night, with Alzina as pilot. A crowd of the boys, in charge of Indian dealer Johnson, met us at Modesto, and other crowds were waiting all along down the San Joaquin Valley,

**GALE PULLING HIS PRAIRIE SCHOONER THROUGH OHIO WITH HIS SHICKEL MOTORCYCLE**



**Upper Row. Left—The Gale Party Stopping for the Night at Cleveland, Ohio. Right—Near Toledo, Where Friends Were Met Who Rode Some Distance with Gale. Lower Row. Digitized by Google

through Merced and Madera to the outskirts of Fresno, where Louis Weiheimer, of the local Indian agency, met us with another squad of rooters.

**On the Way to Bakersfield**

We reached the "Raisin City" at 2 o'clock Friday morning, and left at 3. My lights were out again, but Alzina had a lamp on his machine, and we made pretty good time. From Fresno to Bakersfield the road was dusty, chuckholey, rutty and everything else that it shouldn't have been. We reached Bakersfield at 8:10, and Indian agent Wilkes was on the job with supplies for us and the machines. I bade Alzina good-bye and hit the road again.

Will Risden, at Los Angeles, had wired Wilkes to the effect that I should take the Tehachapi Pass as the Tejon Pass was not rideable, but as the Tehachapi route meant 26 more miles for me I decided to go over the Tejon Pass. I made the 168 miles between Bakersfield and Los Angeles in 5 hours and 20 minutes. I had to ride through the notorious Boquet Canyon, with its innumerable turns and its rocky surface, and for 34 miles I had all the trouble I wanted—and then some. At the mouth of Saugus Canyon "Dare-devil" Derkum met me, and through his efforts I was enabled to ride through southern California at top speed, speed regulations being forgotten for the time.

We roared through San Fernando at 50 miles an hour, and down the valley into Los Angeles at the same clip. Motorcycle cops held up other traffic until we had passed.

**On the Final Dash to the Border**

Going into Los Angeles we were met by C. Will Risden, John E. Hogg and Fred Ludlow, of the Indian agency; Don Johns, the racer; Walter M. Brown, of the Stutz agency, and M. S. Connors, of the Los Angeles *Tribune*.

We soon reached Santa Ana, over the State Highway, and then dashed into San Diego. The route to San Diego is excellent, except for a short stretch near Capistrano, which is rough and sandy. We made good time and 3 hours and 30 minutes after leaving Los Angeles we were in the exposition city.

Jimmie Urquhart, Indian dealer in San Diego, with a staff of assistants and friends, rode with us over the border at 8:15 Thursday night. L. A. Hilton, San Diego manager for the United States Tire Company, and Joe Esler were waiting at the border for us.

I feel that my ride for the Three-Flag record was entirely successful, for I set the time at 3 days, 9 hours, 15 minutes. The best previous time made by a motorcar was something over 8 days. I averaged 40 miles to a gallon of gasoline.

## HENDERSON SHIPMENT TO HOLLAND

Detroit, Mich., September 6.—Export sales are booming at the Henderson factory where the closing of the European plants has thrown an unusual volume of orders from overseas. One order shipped this week consisted of 37 two-speed short coupled models for the Henderson dealer in The Hague, Holland.

This Dutch distributor formerly handled the Belgian F-N also, the manufacture of which has been suspended. He now has a standing order for five machines per week, and on several occasions has cabled instructions for numbers in excess of this. On May 1 he started the ball rolling with a cabled hurry call for 25 machines.

## OFFICIAL HOTELS FOR THE SHOWS

A. B. Coffman, manager of the New York and Chicago cycle and accessory shows, states in a recent bulletin that the Breslin will be the official hotel during the New York show, and the New Southern during the show in Chicago. The Breslin has quoted Manager Coffman attractive room rates, and he suggests that no time be lost by those who wish to reserve accommodations for show week. The same suggestion regarding the wisdom of making early reservations, applies to the week of the Chicago show.

## GORDON RUBBER CHANGES

Columbus, Ohio.—Several important changes have taken place in the organization of the Gordon Rubber Company, of Canton, Ohio. Papers have been filed with the Secretary of State, changing the name from the Gordon Rubber Company to the Gordon Tire & Rubber Company. The company will make both automobile and motorcycle tires and is contemplating the erection of an addition to its plant. The capital stock has been increased from $300,000 to $600,000.

## DISMOUNTED BY COURT ORDER

Alameda, Cal.—Justice of the Peace Johnson, of this city, has inflicted a summary punishment on Roy Laughlin, an Alameda rider, for breaking the speed laws too many times. According to the sentence, Laughlin has to walk instead of riding his machine for a period of sixty days, and is already starting in to serve out his two months of pedestrian exercise.

# DENHAM IS NEW MARYLAND CHAMP

## Wins State Title in Two-Mile Event at Annual Meet of Maryland M. C. in Baltimore.

BALTIMORE, Md.—Disregarding the perils of a track made treacherous by heavy showers, the daredevil riders entered in the annual meet of the Maryland Motorcycle Club took their lives in their hands on Labor Day when they furnished thrills for the enthusiasts who journeyed to Gentlemen's Driving Park despite the threatening weather.

The spectators were given some thrills before the actual racing began when the boys began to warm up their machines. W. H. Denham, one of the most daring riders here, was the first to fall when his machine skidded at the first turn while traveling at a 37-second clip. He was shaken up a little but came back on the track. Carey Mears had a similar experience.

Denham is the new State champion, obtaining this new honor by capturing the two-mile professional event. He easily won the race, coming under the wire considerably ahead of Mears and G. A. Gebhardt, the only other contestants.

The professional sidecar event was the most exciting on the afternoon's card, the entries being so numerous that it was necessary to run it off in heats. The summary:

Professional Sidecar Race—First heat (three miles)—Frank Schenuit (Harley-Davidson), first; Gus Heinz (Harley-Davidson), second; Paul Mamock (Harley-Davidson), third. Time, 4:23.

Second heat (three miles)—Carey Mears (Indian), first; J. Nechamkin (Pope), second; R. H. Merryman (Dayton), third.

Final (five miles)—Gus Heinz (Harley-Davidson), first; Carey Mears (Indian), second; F. Schenuit (Harley-Davidson), third. Time, 7:38⅘.

25-Mile Professional, Free-for-all—John U. Constant (Indian), first; Victor Dessauer (Harley-Davidson), second; F. Craddock (Excelsior), third. Time, 30:44.

Two-Mile Amateur for Stock Machines—J. O. Cox (Excelsior), first; C. Lowenstein (Indian); second; O. Shock (Indian), third. Time, 2:47.

Five-Mile Professional, Free-for-all—F. Craddock (Excelsior), first; P. Dessauer (Harley-Davidson), second; G. A. Gebhardt (Indian), third. Time, 6:05.

Two-Mile Professional, State Championship—W. H. Denham (Excelsior), first; Carey Mears (Indian), second; G. A. Gebhardt (Harley-Davidson), third.

Ten-Mile Professional, Free-for-all—John U. Constant (Indian), first; F. Craddock (Excelsior), second; Victor Dessauer (Harley-Davidson), third. Time, 12:12⅕.

### ST. LOUIS CLUB ON CAVE TOUR

St. Louis, Mo., September 6.—The members of the St. Louis Cycling Club were scheduled to take a Labor Day tour to the beautiful Onondaga Cave on the Meramec River near Leasburg, Mo., eighty miles from this city. This cave was visited by the St. Louis cyclists in 1913 and the trip was pronounced a "treat."

On September 12, the club will stage the "Bicycle Derby," which will consist of a coasting contest, a one-quarter mile spring race, a hill climb and a slow hill climb.

The "Bellefontaine Handicap," the club's annual road race, will be held on September 19. This event will be open to members of the club only. In recent years there seems to have been a decline in the interest which the members have taken in this feature, but the officials of the club look forward to a big entry list for the 1915 "Bellefontaine Handicap."

### B. C. CYCLISTS FOR WAR SERVICE

Vancouver, B. C.—The Province of British Columbia has been asked by the Dominion government to supply a platoon of cyclists for overseas service. Lieut. Cameron, of Vancouver, has been chosen to command the unit; over a dozen men have already been selected from those offering their services and the remainder of the platoon, which will consist of thirty-one all told, will be recruited in the cities of Vancouver and Victoria.

**READY TO PITCH CAMP AFTER A LONG DAY'S RUN**

# MESLE IS VICTOR OF MOTOR-COPS

## Member of Traffic Squad C. Captures Five First Places in Brighton Beach Events

BY winning five first places in the annual motorcycle and bicycle races at Brighton Beach, N. Y., on Labor Day, Officer John E. Mesle, of Traffic C, became the champion cyclist of the New York police department. There were several spills in the motorcycle events, but only one of the motor-cops, Martin C. Moore, of Traffic C, was seriously hurt. Moore skidded on the sand turn leading into the homestretch, and was so painfully scraped and bruised that he was removed to the Coney Island hospital. Summaries:

Five-Mile Race (handicap); open to department machines only—Won by John E. Mesle, Traffic C (scratch); Harry P. Shollen, Traffic C (scratch), second; Henry Yost, Jr., 68th Precinct (200 yards), third. Time, 5:07⅘.

Two-Mile Bicycle Race (handicap)—Won by Adolph P. Selmber, 32d Precinct (scratch); T. V. Hall, 173d Precinct (25 yards), second; William McAndrews, 68th Precinct (150 yards), third. Time, 5:11⅘.

Three-Mile Motorcycle Race (handicap), department machines only—Won by John E. Mesle, Traffic C (scratch); Hans P. Skelly, Traffic C (scratch), second; Henry Yost, Jr., 68th Precinct (120 yards), third. Time, 3:07⅗.

One Mile Bicycle Race (handicap)—Won by William McAndrews, 68th Precinct (75 yards); T. V. Hall, 173d Precinct (15 yards), second; A. P. Schuber, 32d Precinct, scratch, third. Time, 2:25⅘.

Two-Mile Motorcycle Race (handicap), department machines only—Won by Harry P. Shelley, Traffic C (scratch); Howard D. Smith, Traffic C (scratch), second; Henry Yost, 68th Precinct (80 yards), third. Time, 2:10⅗.

Six-Mile Race (open to any motorcycle)—Won by John E. Mesle, Traffic C; Howard D. Smith, Traffic C, second; Harry P. Shelley, Traffic C, third. Time, 5:44.

Four-Mile Race (handicap), department machines only—Won by John E. Mesle, Traffic C (scratch); Harry P. Shelley, Traffic C (scratch), second; Henry Yost, Jr., 68th Precinct (160 yards), third. Time, 4:16⅘.

Ten-Mile Race (scratch, open to any motorcycle)—Won by John E. Mesle, Traffic C; Harry P. Shelley, Traffic C, second; John J. Donovan, Traffic C, third. Time, 10:00⅕.

### FENTRESS-NEWTON INCORPORATES

Detroit, Mich., September 6.—Plans for bigger business than ever have just been completed by the officials of the Fentress-Newton Manufacturing Company, motorcycle accessory manufacturers at 255 West Lafayette avenue, this city. The company recently filed articles of incorporation, the capital stock being $25,000, held by Frank P. Fentress, Joel C. Sage and R. B. Sage, all of Detroit.

Digitized by Google

# Export Figures for Year Show Increase

THE year's figures for shipments made from this country show that during the year ending June 30, 1915, more motorcycles were shipped, with a greater valuation than during the year ending June 30, 1914, and the year ending June 30, 1913. While exports were greater, imports, on the other hand, were smaller. Shipments of bicyles fell off as did also the shipments of bicycles and motorcycles to the Hawaiian Islands, Philippine Islands and Porto Rico. The month of June, 1915, showed a substantial increase in the shipment of motorcycles over the months of May, 1915, and June, 1914. Bicycle shipments during June of this year were below the shipments for May, 1915, and June, 1914. Imports of bicycles and motorcycles show June, 1914, to be far in excess of May, 1915, and June, 1915. Shipments to the Philippine Islands show a most remarkable increase for the month of June, 1915, over the months of May, 1915, and June, 1914. Porto Rico also shows an increase for the month of June, 1915, over the other two months, but Hawaii shipments are below both May, 1915, and June, 1914.

### Motorcycle Valuation Is $1,494,176

Motorcycles to the number of 2,133, and valued at $389,964 were shipped to foreign countries in June, 1915. During June, 1914, the shipments aggregated 596 machines, valued at $119,427. In May, 1915, the shipments reached a total of 1,392 machines, with a valuation of $256,334. The figures for the year ending June 30, 1915, are 8,166 machines shipped with a valuation of $1,494,176. For the year ending June 30, 1913, the figures show 3,983 machines, valued at $749,072, and for the year ending June 30, 1914, a total of 6,410 machines, valued at $1,234,194.

Shipments of bicycles for the month of June, 1915, were below the shipments during June, 1914, and May, 1915, the figures being a valuation of $33,561 for June, 1915, against $40,097 for June, 1914, and $57,299 for May, 1915. The year's figures show the period ending June 30, 1913, to lead the periods ending in 1914 and 1915. The valuation in 1913 was $109,436, in 1914 it was $608,031, and in 1915, $424,892.

It is interesting to note that while in the year ending June 30, 1913, the shipments of motorcycles and the shipments of bicycles were almost on a par, each year since then the shipments in motorcycles have increased and the shipments of bicycles have decreased, the year ending June 30, 1915, showing the proportion to be about three to one in valuation in favor of motorcycles.

### Imports Fell Considerably

Imports fell over considerable when comparing June, 1915, with June, 1914. This year the valuation reached but $3,802, as compared with a valuation of $15,684 for the month of June, 1914. May, 1915, is also in excess of June, 1915, the figures for May being $5,077. The decrease is also noted in the twelve-month periods, that ending June, 1915, showing a valuation of $81,142, as compared with $256,281 for 1914 and $186,980 for 1913.

Remaining in the warehouses as of June 30, 1915, were motorcycles and bicycles to the valuation of $610, the same valuation as existed as of May, 31, 1915. On June 30, 1914, the valuation of machines in the warehouses was $384. Motorcycles and bicycles imported to this country for exportation reached a valuation of but $2 during June, 1915, against nothing for the month of May, 1915, and nothing for June, 1914. During the twelve months ending June 30, 1915, motorcycles and bicycles imported to be exported reached a valuation of only $715. This is compared with $1,076 for the year ending June 30, 1914.

### Decrease in Hawaiian Shipments

Motorcycles and bicycles shipped to the Hawaiian Islands during June, 1915, reached a valuation of $4,969. During June, 1914, the valuation totalled $5,235, and for May, 1915, it was $5,234. A gradual decrease is noted for the year ending June 30 when comparing 1913 with 1914 and 1915. Ending June 30, 1913, the valuation for the twelve months reached $121,314. For the twelve months ending June 30, 1914, it reached $80,457, while for the period ending on June 30, 1915, it was $56,688.

While shipments of motorcycles and bicycles to the Philippine Islands reached a valuation of $11,170 during the month of June, 1915, the figures for the year ending June 30, 1915, show the period to fall below the valuation set for the years ending June 30, 1914, and June 30, 1913. The valuation in May, 1915, reached but $767, and for June, 1914, it was $3,423. For the year ending June 30, 1913, the valuation is shown as $87,385; for the year ending June 30, 1914, the figures show $80,325, and for the year ending June 30, 1915, the valuation reached $37,615.

Shipments of motorcycles and bicycles to Porto Rico during June, 1915, were in excess of both May, 1915 and June, 1914, the figures for this year being $2,822, as compared with $2,606 for June of last year and $1,868 for May, 1915. The yearly figures show 1913 to lead with a valuation of $51,367, as compared with $43,967 for 1914, and $27,377 for the year ending June 30, 1915.

## Allies Get 76 Million Gallons of Gasoline

THAT gasoline has played an important part in the European war cannot be doubted when comparing the shipments during the year ending June 30, 1915, with the shipments during the same period ending in June, 1913, and in June, 1914. France, which received but 3,494,604 gallons from this country during the year ending June 30, 1913, received 32,718,089 gallons during the year ending June 30, 1915. This is also far in excess of the yearly figures for 1914, when 19,608,286 gallons were shipped.

The United Kingdom shows almost five times the number of gallons received in 1915 than in the year ending in 1913. A total of 34,634,679 gallons was exported from this country during the year ending June 30, 1915, as compared with but 6,049,646 for the year ending in 1913, and 25,802,912 gallons for the year of 1914.

Italy has also been a heavy user of gasoline, the figures showing 9,166,088 gallons shipped to that country during the year ending June 30, 1915, as compared with 400,000 gallons in 1913, and 3,538,512 gallons in 1914.

Figures for the month of June, 1915, show heavy shipments to France, Canada and Italy. France received 1,142,518 gallons, compared with 60,000 during May, 1915. Canada received 5,048,451 gallons, as against 3,939,352 gallons during May, 1915, and Italy 1,625,576 gallons during June of this year. While no shipments were made to the Netherlands during June, 1914, a total of 107,787 gallons was shipped during June, 1915. No shipments were made to the United Kingdom during June of this year, while during May there was shipped a total of 2,177,257 gallons.

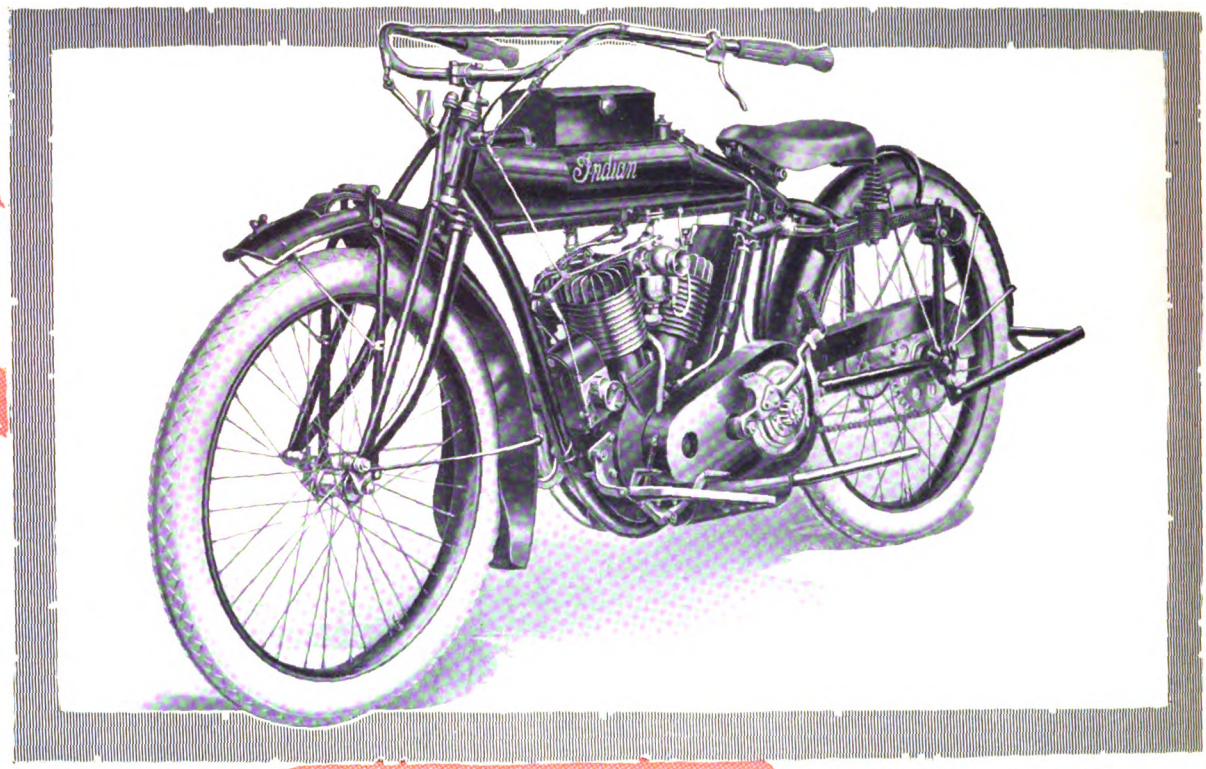
## BRINGING OUT THE NEW INDIAN POWERPLUS MOTOR

1916

—a twin cylinder achievement of such advanced capacities that it raises the motorcycle to a far higher mechanical plane than ever.

—a motor that from now on must displace all old motor ideals for Powerplus performance.

Digitized by Google



*CRADLE SPRING FRAME TWIN WITH POWERPLUS MOTOR. HIGHEST POINT OF MOTORCYCLE EVOLUTION IN THE WORLD. $275.00*

# POWERPLUS!

For 1916 Indian engineering genius lays before you a motor so far ahead of present day ideas of twin cylinder efficiency that it commands the study and attention of every motorcycle man regardless of what his convictions may be as to superlative motor performance.

Clean, supple, silent power—*amazing speed*—simplicity—trouble-proofness—for these qualities in their highest expression the rider must come to Powerplus as the one achievement that actually realizes them.

Glide along at 5 miles an hour with a sure flowing force beneath you—that's the Powerplus sensation in traffic.

Jump to 60 miles an hour in 30 seconds—that's the Powerplus pickup.

Take those formidable hills without shifting a gear—that's Powerplus pull.

And speed! The first stock Powerplus did 72 without any tuning up, right off the assembling rack.

Yet while Powerplus generates and delivers tremendously, its action is that of velvet.

An authentic style of design attracts and holds the eye, draws forth admiration as only the skilful Indian minds of fifteen years' motorcycle building know how to charm by doing things in big, strong yet graceful ways.

*IMPROVED 1916 THREE SPEED*

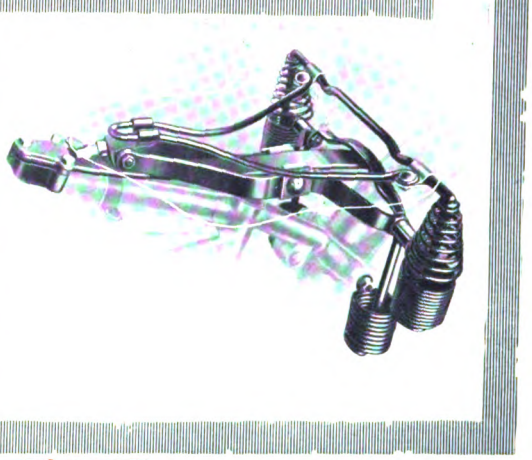
*REGULAR FRAME TWIN WITH POWERPLUS MOTOR AND CANTILEVER COMFORT SADDLE. AT THE PRICE A VALUE THAT IS FAR IN EXCESS OF ANY OTHER RIGID FRAME MACHINE. $250.00*



*CANTILEVER COMFORT SADDLE---EXCELS EVERY OTHER SPRINGING DEVICE OF ITS KIND*

Powerplus mechanical superiorities are readily recognizable.

Complete valve and ignition timing system exposed by removal of one cover.

Big side by side valves, tandem mounted, contribute sustained power and convenience.

Lubrication of the proved Indian system—*with total oil-tightness.*

Quickness of take down. Any valve can be removed in less than three minutes without disturbing its mate. Any timing gear or cam can be taken out in five minutes. No need to take the motor apart. The carburetor comes off in a jiffy. Three minutes' work will dismount the magneto. A cylinder can be slipped off in ten minutes, exposing the piston and rings. And this without disturbing the motor base.

Silence is a true characteristic of Powerplus. Enclosed valves, subdued reciprocating parts, fine accuracy of inner design make quietness a positive assured realization.

And Powerplus is furthermore a proven accomplishment. Read the last page of this announcement and its story of E. G. Baker's record-breaking "Three Flag Drive" on a Powerplus machine.

*INDIAN FEATHERWEIGHT. NOT A MOTOR BICYCLE BUT A TRUE MOTORCYCLE AT $150.00*

# THE INDIAN FEATHERWEIGHT

For 1916 the Indian puts at the disposal of those thousands who want motorcycling in Featherweight form the *first practical and fully matured junior type motorcycle to be placed on the American market.*

There have been motor bicycle types precedent to the Indian Featherweight, but none having the *true motorcycle features which make the Featherweight actually a motorcycle.*

Indian Featherweight has the Indian Light Pressure Starter, Three Speed Gear, Chain Drive and Cantilever Comfort Saddle—a springing device that makes lightweight riding extremely comfortable and satisfying.

Yet, with all its motorcycle appointments and conveniences, the Featherweight is amazingly simple. *It is the A. B. C. of motorcycling in running, in care required and in operating cost.*

The two-stroke, 2½ h.p. single cylinder motor has but three moving parts—piston, connecting rod and crankshaft. Valves, springs and cams are all dispensed with. Developing ample power and speed—40 miles an hour—the rider has at his command those two important factors in excess of his needs.

In design what is unquestionably the prettiest, trimmest, cleanest machine of its class has been created. It has Indian inspiration written all over it.

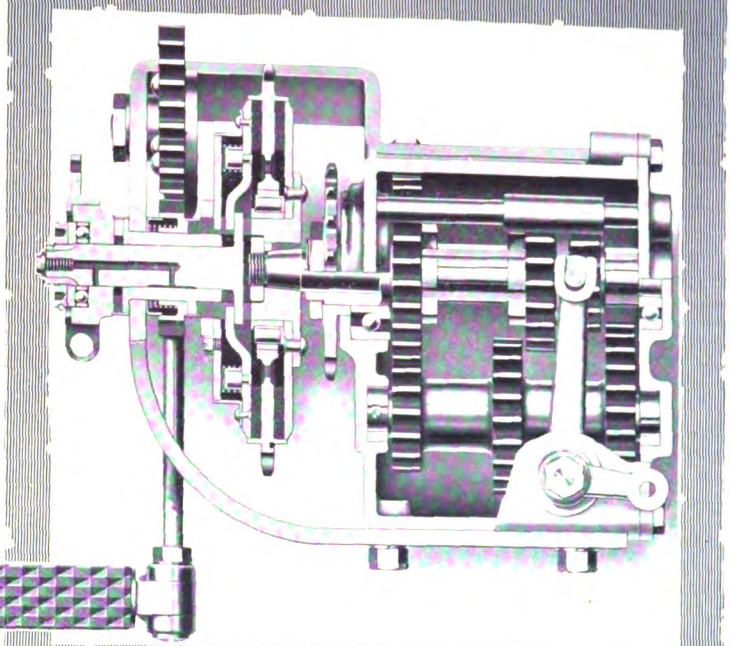
*FEATHERWEIGHT MOTOR IN SECTION*



*FEATHERWEIGHT THREE SPEED, CLUTCH AND STARTER*

A number of pages in the 1916 Indian catalog are given over to a complete presentation of Featherweight advantages. Many men will find these the most interesting part of the book.

*We believe that following a national introduction of the Indian Featherweight it will be oversold far beyond our proportionate production of this model.*

Who can place the limits upon the Featherweight market? The business and professional man, the office worker, the factory employe, the local salesman, the boy who is graduating from the bicycle—these are the Featherweight enthusiasts of tomorrow, of 1916.

INDIAN FEATHERWEIGHT RIDERS WILL RIDE WELL—WILL SPEND LITTLE—WILL BELIEVE IN THE MOTORCYCLE MORE!

## GRAND PRIZE FOR INDIAN!

The winning of the Grand Prize at the Panama-Pacific Exposition—the highest award for excellence—conclusively confirms the Indian claim of distinctive leadership.

# A POWERFUL TEST FOR POWERPLUS

Dashing overland at the terrific pace of 475 miles a day, E. G. Baker, driving his battle-scarred transcontinental Indian, with a 1916 Powerplus motor "up," nailed a phenomenal international road record from Vancouver, Canada, to Tia Juana, Mexico, August 27. Streaking over this Three Flag route, Baker burned up the 1,655½ mile gap from border to border in 3 days, 9 hours, 15 minutes. Five mountain ranges, a four-mile gauntlet of forest fire and the continuous wild and rocky trails of the Coast States failed to daunt the "Old Warhorse" in his flight through three nations. Baker's Three Flag ride takes rank with his coast to coast run as one of the spectacular achievements in the annals of the motorcycle.

## What E. G. Baker Says About the Powerplus Motor:

*E. G. BAKER WHO GAVE POWERPLUS THE THREE FLAG TEST*

"In my 10 years of motorcycling I have had some of the best machines ever built under me, but the 1916 Indian Motor is the prize baby of them all.

"Its crackerjack work on the Three Flag record run introduced me to the most wonderful machine of its kind I have ever ridden.

"I didn't believe it possible to build a motor that could buck the Three Flag route in the time that it did.

"Take it from me, you have made a motor that is a world beater on all kinds of roads. I'll stack it against all creation to bring home the bacon anywhere, any time.

"It's a bear, a big, husky lick-all-comers machine—that 1916 Indian. It hits me where I live."

### HAS CAUSE FOR OPTIMISM

Los Angeles, Cal.—Hugh A. Fargo is optimistic, as he always has been, regarding the Henderson business in Southern California. "Actual business justifies my optimism," said Mr. Fargo in a recent interview. "Maybe reports did not justify much shouting a few weeks ago, but the crops are now coming in and the boys have the 'kale.' Our second-hands are being cleaned up and good business is neither a dream nor a hope."

When the California State report for July was checked up, Mr. Fargo found that the Henderson sales were half as many as any of the three leading makes. This shows the activity of the Henderson, which is only slightly over four years old from the production standpoint, and is the highest-priced mount on the market.

### MORITZ WILL ENLARGE STORE

Cleveland, O., September 8.—J. L. Moritz, of the Moritz Motorcycle Garage, Dayton agent, announces that he has purchased the entire plant of J. H. Silsby, the local Merkel and Henderson dealer, who has retired from business. As a result of the purchase Mr. Moritz will entirely remodel his store in order to cope with the increased business he expects.

New display windows will be put in and the repair shop will be moved to the rear and equipped with the latest machinery. J. L. Moritz will act as manager of the new concern, assisted by his son William H., one of the best known riders in the city, and Herman Sill, an expert repairman. The bicycle business will be continued. Moritz has not yet announced what makes he will handle for 1916, a matter which he will determine when he visits the Chicago Show.

### LANDS A SALE AND $3

A fire in the town of Ticonderoga, N. Y., recently figured in a sale which was landed by Art Rochow, the genial "X" traveler. He was demonstrating his machine on a real hot day to a live prospect when suddenly the town fire whistle started to snort. The prospect happened to be a volunteer fire laddie. With three persons in the Excelsior sidecar outfit, Rochow "let out" his 1915 three-speed and made off for the fire.

Here's Rochow's graphic description of what happened: "Quick action (turn camera faster!)—en route on fair grade—encounter hook and ladder wagon, shown in the accompanying picture—no time wasted—hooked on outfit to wagon—away we went, up and down hill—dashed around corners like lightning—first to get to the fire—great honor for the fire company." Rochow says that the return trip was a cinch, and, after he got back to Ticonderoga, the local fire department paid him three dollars for his service in pulling the wagon with his "X." And then he sold an outfit to the prospect.

### MANDERY PASSES ON

Rochester, N. Y.—Joseph J. Mandery, one of the pioneer bicycle and motorcycle men in the East, died in this city on August 18, after an illness of six months. He was 49 years old. Mandery's connection with the motor trades dates from the late '90s, when he enlarged his bicycle shop in Rochester and took in the de Dion, later taking representation for the Rambler, Columbia and other models of Pope motorcycles, as well as the Mitchell. He gave up the cycle lines for the automobile about 1904, and had represented no less than eighteen different makes in the last twelve years. He was noted for his originality in sales-campaigns from the days of the cushion-tired bicycle till his last illness this Spring.

### TAKE OVER INDIAN STOCK

Dallas, Texas.—The Hendee Manufacturing Sales Company have closed their Dallas store, at 2208 Commerce street, and the entire stock of machines and parts has been turned over to Harry Schuett & Co. who have opened an establishment at 1905 Bryan street.

### RECENT SALES BY LAWSON

Stockton, Cal.—Manager T. H. Lawson, of the Stockton Motorcycle & Supply Company, Indian agent, reports the sale of two three-speed models to the Bell Telephone Company, for its trouble-shooters, as well as two others to the Stewart Book Company for their travelling men. James Heidrich, of the Stockton Normal School, has also purchased a three-speed machine with sidecar from Lawson and uses it to advertise the school in his travels all over the State.

### STEUBEN IS ACTIVE

Visalia, Cal.—W. E. Steuben is the local representative of the Indian and Excelsior machines, as well as for the Tourist, Columbia and Albatross bicycles. He recently sold an Indian to the Whitney Power & Electric Co. for the use of their trouble-shooter.

### SELLS TWO FOR COLLECTION USE

San Diego, Cal.—The Excelsior Motorcycle Company, "Big X" agents in this city, have delivered a regular twin to the Benbough Furniture Company and a three-speed twin to the Rood Peters Insurance Agency recently. Both machines are to be used by collectors. Proprietor R. E. Smith believes in having an exclusive motorcycle establishment and in giving the best of service both outside and within the store, and his prosperity has proved the wisdom of his belief.

### FARRIS IS DOING WELL

Turlock, Cal.—J. E. Farris, of the Turlock Cyclery, Indian agent, reports sales so far this season to be as good as those of 1914. His bicycle sales, on the other hand, have been 25 per cent. greater than last year. The Dayton line of wheels is handled, and the best demand is for a medium-priced bicycle.

### BERGES OPENS UP

Bakersfield, Cal.—J. A. Berges has opened a well-equipped repair shop at 1826 H street, this city, under the name of the Burgess Motor Supply Company. Burgess has taken the agency for the Thor for this district. The shop will specialize in repairs and will also handle gasoline, oil and accessories.

### LOCATED IN NEW QUARTERS

Pasadena, Cal.—F. S. Hopping, proprietor of the Pasadena Sporting Goods Company, Harley-Davidson distributor, writes that the company is now nicely located in its new garage and salesroom at 47-51 East Walnut street, and that they have delivered a five and a regular stock model to the Home Telephone Company, of Pasadena.

### HUNSUCKER ENLARGES HIS STORE

Pomona, Cal.—S. P. Hunsucker, Harley-Davidson distributor for Pomona, has just finished a new addition, 35 by 60 feet, where the repair department will be installed. The space occupied in the old building by that department will be utilized as a salesroom. He has just delivered an electric-lighted model to the police department, a twin three-speed to the Edison Company and three machines to the rural carriers of the Pomona *Progress*. Hunsucker has been in the motorcycle and bicycle game for the past thirteen years.

## Reduced Prices on Vacuum Cup Tires Effective Sept. 1

ANNOUNCEMENT of a substantial voluntary downward revision of prices on the smaller popular sizes of Pennsylvania oilproof vacuum cup tires, effective September 1, is made by the Pennsylvania Rubber Company.

This action, according to the announcement, is entirely independent of market conditions at large. It is more or less in the nature of a dividend, or profit-sharing plan, to the users of V. C. tires, and results from an expansion of the company's volume of business to double the proportions of that of last year.

The splendid facilities of the company's new three-quarter million dollar factory addition have resulted in a greatly increased production this year; and this heavy output, coupled with the heavy demand for Vacuum Cup tires, makes this price reduction feasible.

"The policy of this company," says the announcement, "is to at all times give its cutsomers the benefit of every saving in cost made possible by greatly increased volume. This is done irrespective of whatever prices may exist elsewhere. We believe our customers are entitled to their proportionate share of whatever savings their demand for our products makes possible and propose to share these profits with them whenever we can consistently do so without sacrificing quality. This policy we shall continue to adhere to, and no matter what price reductions may be made from time to time, the company will, under no circumstances, consider lowering the quality of its product."

## Panama-Pacific Gold Medal for V-Ray Spark Plug

THE V-Ray Co., of Marshalltown, Iowa, manufacturers of the V-Ray line of spark plugs is justly proud of recent honors conferred on its products on a strictly merit basis. A telegram from the authorities at the Panama-California Exposition conveys the information that the V-Ray spark plug has been awarded the gold medal in competition with all domestic and foreign makes of plugs, this competition being awarded on a strictly 100 per cent. quality competitive basis.

In the racing field the V-Ray has also shown its class by contributing to the winning of the speed records at Fresno, Sacramento and Tacoma recently.

At Sacramento Don Johns, riding a Cyclone, on which machine V-Ray plugs are standard equipment, won the one mile professional championship, turning the trick in the unsnail-like record time of 49⅗ seconds.

At Tacoma "Red" Armstrong, on an Indian, using V-Ray stock plugs, shattered all precedents for 300, 200 and 100 miles by finishing in 3 hours, 45 minues and 29 9/10.

### WINNER AT KOKOMO

**Clarence (Spick) Sargent, of Indianapolis, Ind., Who Rode to Victory in Fastest Field in Home State Recently**

## Firestone Sales Increase 31 Per Cent. In Year

AKRON, O.—At the annual meeting of the Firestone Tire and Rubber Co., held at the general offices in Akron, September 1, it was shown that the quick assets of the company total $11,251,620.79. Sales during the fiscal year amounted to $25,187,884.33, an increase of $5,937,774.41, or 31 per cent., over the preceding year.

President H. S. Firestone, in his annual report, stated that the company would continue to operate on the same conservative basis as heretofore.

He explained that the Firestone Company was now producing 7,500 pneumatic tires daily and that after the factory additions now under way were completed the company would turn out 12,000 tires per day, or an increase of 60 per cent. This increase of 4,500 tires per day is larger than the output of the original new Firestone plant, which was erected on its present site four years ago.

Mr. Firestone said that the company had not received any orders from any of the warring nations. This discredits many rumors to the effect that the company had received so-called war orders.

President Firestone will recommend to the directors that an extra 4 per cent. dividend be paid on common stock October 15, making the dividend rate during the past year 16 per cent. He will also recommend that the dividends on the common stock hereafter be paid on a basis of 5 per cent. per quarter.

All directors were re-elected.

### NEW GOODYEAR POSTERS

Akron, O.—Concurrent with the announcement that the Goodyear Tire and Rubber Company is making in magazines of the reduction in the prices of its Akron-Goodyear bicycle tires, the company is distributing posters to bicycle dealers which effectively flash to the minds of those who see them that an important reduction in prices has taken place. The posters are printed in blue and black and bear a telegram that presents in few words, the extent to which the prices have been lowered. The poster measures 24 x 24.

Digitized by Google

# Kramer Annexes Two Championships

NEWARK, N. J., September 5.—Once more demonstrating that he is the peer of all bicycle riders, Frank L. Kramer, the East Orange wonder, annexed the world's sprint cycling championship at the local Velodrome on Sunday afternoon. Although the weather was anything but favorable for cycling, about 8,500 bike fans turned out to witness the final of the championship. When Kramer crossed the tape a winner, the band played the "Star Spangled Banner" while the crowd stood up and, with hats doffed, cheered the champion to the echo. He was handed a handsome bouquet of flowers, draped with a silken scarf emblematic of the championship, and rode around the track amid continued cheers. The race which gave the East Orange rider the championship was ridden at one mile. Iver Lawson, of Salt Lake City, finished second and Alfred Grenda, the elongated cyclist from Australia was third.

The world's cycling tandem championship was also decided and once more Kramer showed to the fore. In this race he was paired with Iver Lawson, and these two displayed wonderful speed and easily won over Alfred Grenda and Freddy Hill as well as Reggie McNamara and Bob Spears.

Kramer took the lead away from Lawson in the one mile championship race, two laps from home and immediately set out at a hot pace. The fifth lap was ridden at a stiff clip and going into the last lap, Grenda drew up alongside Lawson, with Kramer in the lead. There was a battle for three quarters of the distance of the last lap and it looked as if Grenda would be the rider to battle Kramer for first place. Just as they rounded the next to the last turn, Grenda was shaken off and Lawson tacked on to Kramer's wheel. Coming down the home stretch Lawson let out with a hard sprint and come mighty near beating out the champion. Kramer rode the last eighth mile in 11⅗ seconds.

In the tandem race, Kramer and Lawson were in third position going into the last lap. They did not succeed in passing McNamara and Spears until the middle of the back stretch was reached and they then went around Hill and Grenda on the last turn. Grenda and Hill had heretofore been looked upon as an unbeatable combination in a tandem race and the great speed shown by Kramer and Lawson was received with a great demonstration. Kramer and Lawson rode the last eighth mile in 11 seconds flat.

While Kramer was basking in the limelight Alf Goullet, who has been sharing the majority of the honors with the champion, had to be content with a single victory in a match race against Jackie Clark. In this affair he required three heats before the final result was decided. Goullet won the first heat and Clark came back by annexing the second. Goullet then went out and won the last heat and race.

**Frank Kramer**

Harry Kaiser, of the Bronx, copped first place in the two mile open for the professionals. Reggie McNamara put up a hard fight in the home stretch and just missed nosing out Kaiser by a few inches. McNamara spilled at the start of the race, remounted his bike and by hard riding got second place.

Jerry Nunziatta, of the Empire City Wheelmen, came home first in the one mile open for the amateurs. Hans Ohrt, the San Francisco star, was second and Fred Taylor, of Newark, third. Jerry jumped at the crack of the gun and opened up a lead of a half lap. He held this advantage to the finish as none of the other "simonpures" would go out after him. The full summaries of the Sunday's card:

Half-Mile Novice (Amateur)—Won by George Neubauer, Newark; Phil Switzer, Newark, second. Time, 1m. 16s.

One-Third Mile Handicap (Professional)—Won by Jacob Magin, Newark (30 yards); Gordon Walker, Australia (22 yards), second; William Hanley, San Francisco (20 yards), third; Donald McDougall, Newark (30 yards), fourth; Harry Kaiser, Bronx (15 yards), fifth. Time, 36⅖s.

The Brassard at One Mile (Professional)—Robert E. Spears vs. Frank Cavanagh, Newark. Won by Cavanagh. First race—Dead heat. Time, 3m. 25⅕s. Last eighth mile, 12⅕s. Run off—Won by Cavanagh. Time, 3m. 15⅘s. Last eighth mile, 12s.

World's Championship (Professional)—Won by Frank L. Kramer, East Orange; Iver Lawson, Salt Lake City, second; Alfred Grenda, Australia, third. Time, 3m. 8s. Last eighth mile, 11⅗s.

One Mile Open (Amateur)—Won by Jerry Nunziatta, Empire City Wheelmen; Hans Ohrt, San Francisco, second; Fred Taylor, Newark, third; Frank J. Whitney, New York Athletic Club, fourth. Time, 2m. 7⅘s.

One Mile Tandem Consolation (Professional)—Won by George Cameron, New York, and William Hanley, San Francisco; Lloyd Thomas, Salt Lake City, and Ernest Jokus, Newark, second; Gordon Walker, Australia, and Thomas Smith, Newark, third; Al Halstead, England, and Fred Weber, Newark, fourth. Time, 1m. 57⅗s.

World's Tandem Championship (Professional)—Won by Frank L. Kramer, East Orange, and Iver Lawson, Salt Lake City; Alfred Grenda, Australia, and Fred Hill, Boston, second; Reginald McNamara, Australia, and Robert E. Spears, Australia, third. Time, 2m. 10⅕s. Last eighth mile, 11s.

One Mile Invitation Handicap (Amateur)—Won by J. P. Cobert, Newark (scratch); Charles Rimmele, Newark (30 yards), second; William Beck, Newark (55 yards), third; Chris Potterweich, Newark (45 yards), fourth. Time, 1m. 59s.

Miss-and-Out (Amateur)—Won by Edward Byron, Australia; Thomas Fitzsimmons, East Orange, second; William Weimer, Newark, third; Ernest Pofahl, Newark, fourth. Time, 4m. 43⅘s. Distance, 2 miles.

Two-Thirds Mile Match Race (Professional)—Alfred Goullet, Australia, vs. Jackie Clark, Newark. Won by Goullet. First heat won by Goullet. Time, 1m. 52s. Last eighth mile, 12⅖s. Second heat won by Clark. Time, 1m. 52⅖s. Last eighth mile, 12⅕s. Third heat won by Goullet. Time, 1m. 53⅘s. Last eighth mile, 12⅖s.

Two-Mile Open (Professional)—Won by Harry Kaiser, New York; Reginald McNamara, Australia, second; Eddie Root, Newark, third; Alfred Grenda, Australia, fourth; Lloyd Thomas, Salt Lake City, fifth. Time, 3m. 44⅖s.

## St. Louis Bicycle Dealers Form Association

ST. LOUIS, Mo., September 6.—The bicycle dealers of this city met and formed an association on Wednesday night, September 1. The object of the association will be to promote co-operation among the dealers and to boost bicycles in general. Under its auspices will be staged races, parades and tours.

Each member of the newly formed organization promised to see at least one of the absent dealers and induce them to be present at the next regular meeting which will be held on Thursday, September 16, at the Rock Springs Turner Hall. At this meeting officers will be chosen and a constitution and by-laws submitted to the dealers for their discussion.

# KNOPF WINS THE BALDWIN 25 MILE

## Blanket Finish In Long Island Bike Race—Scratch Men Make Good Showing.

BALDWIN, L. I., September 7.—The finish of the twenty-five-mile handicap bicycle road race, which was held in conjunction with the games of the Baldwin Country Club at Baldwin, Long Island, on Labor Day, proved to be a thriller, as a blanket could have covered the first nine riders to cross the line, and the judges could not decide the positions of the riders after the fourth place until almost an hour after the race.

George Knopf, of the Century Road Club of America, accounted for the first prize from the 2 minute 30 second mark, after catching the long-mark cyclists, and it was only in the last twenty-five feet that he sprinted on his wheel ahead of Nelson Johnson, of the C. R. C. A., and Louis Hiban, of the Big Mac Cycle Club. Harry Pettit, a local favorite, could only obtain fourth place with "Teddy" Heisig, of the Century Road Club of America, fifth.

At the finish of the scratch men, who accounted for the time prizes, only 1 minute and 13 seconds after the winner, was a long sprint that could be seen from the grandstand. It started fully a quarter-mile away and resulted in a win for Lester Bowker, of the Glencoe A. C., and a few feet only separated each of the scratch men as they crossed the line, the second of the scratch men over being "Chet" Smith, who had charge of the race for the Baldwin Country Club, and he was followed by George Bowker, of the Glencoe A. C.

This race was over a 6½-mile course that was very sandy on each of the sixteen turns made; the time made is considered excellent in view of this fact. That no serious spills took place on the turns was a marvel, for much skidding occurred in rounding the turn at the grand stand.

Ernest T. Taborelli, of the C. R. C. of America, led the way from the 7-minute mark around the first lap and was caught by H. Garbade from the 6-minute mark, and William Bohrenberg from 5 minutes 30 seconds on the start of the second lap. He led the field for a full 20 miles before being caught. The time for the first lap was 19 minutes for Taborelli and 16 minutes for the scratch men; the second lap being 37 minutes, with Bohnenberg leading the honor men; and the third lap was completed in 54 minutes 38 seconds, Bohnenberg still leading, and Bello led the scratch riders at the 50-minute. The finishing times were 1 hour 13 minutes 11 seconds, total time for Knopf, less his handicap, making a net time of 1:08:41, while L. Bowker's time was 1:07:13⅖.

The first prize was an Iver-Johnson bicycle, second prize a pair of the new "Advanced Palmer" tires, and the time prizes were a Pierce racer bicycle followed by a pair of Palmer tires.

The summaries are as follows:

| Name. | Club. | Hdcp. | Time. |
|---|---|---|---|
| George Knopf, | C. R. C. of America | 2:30 | 1:08:41 |
| Nelson Johnson, | C. R. C. Assn... | 3:00 | 1:09:11⅕ |

# GOULLET DEFEATS AMERICAN CHAMP

## Australian Is Now Within One Point of Frank Kramer in National Title Series.

NEWARK, N. J., September 6.—The struggle for the national cycling honors became red hot here on Labor Day when Alfred Goullet, the light haired rider from Australia succeeded in winning the five-mile national titular race from Frank L. Kramer, the present champion. Bob Spears finished third and Iver Lawson, who recently returned from Chicago, annexed fourth place. The victory of Goullet puts him within one point of Kramer in the championship standing. Kramer has a total of 43 credits while Goullet has 42.

Spears, Goullet, Kramer and Lawson rode in that order for four miles and four laps of the long race. On the back stretch of the fourth lap and two more to go, Kramer made an attempt to pass Spears and Goullet, but was unable to do so. He then rested up until the back stretch was reached once more on the last lap of the race when he rode high on the track in an effort to go around the two Australians. Spears was on the pole while "Goullie" rode in the centre of the track. There was a terrific sprint in the home stretch with Goullet and Kramer just beating out Spears at the tape, but Kramer was unable to get by Goullet.

Frank Cavanagh surprised the fans by defeating Alfred Grenda, the big Tasmanian, in a special match race which was ridden at two-thirds of a mile. It took three heats before the affair was decided. Cavanagh got the first and last while Grenda managed to come through with a win in the second. In the first two heats, Cavanagh rode from behind, but the last time he took the lead two laps from home and held it right down to the finish. Cavanagh has been riding all summer in Chicago and from the form displayed here on Sunday and Labor Day he seems to have improved wonderfully, since leaving Newark early in the summer.

Hans Ohrt, the San Francisco boy, finished first in the miss and out race for the amateurs. He only managed to get the winning position after a hard fight down the home stretch with Fred Taylor, the Newark boy.

# CHICAGO CYCLISTS BRAVE MUD ROUTE

## Grotjahm, Unattached, Wins 20 Mile Race on Labor Day—Kochler Time Winner

CHICAGO, Ill., September 6.—W. H. Grotjahm, unattached, riding a Nelson Special, plowed through twenty miles of slippery mire, and won the Chicago Cycling Club's twelfth annual road race, which was held today over the Chicago-Evanston course. The victor's time was forty-nine minutes and forty-seven seconds; he was handicapped eight minutes.

See Salem, of the Belgian-American Club, also from the eight minute mark, accounted for second place, being one-fifth of a second behind the winner. Bert Wickert, a member of the promoting club, landed third position in forty-nine minutes and forty-eight seconds. Wickert started from the seven and a half minute mark. Ernest Kochler, riding for the Riverview Cycling Club, who was recently awarded the amateur championship of Chicago, took the first time prize, despite the fact that he encountered a bad spill while nearing the tape.

The rain was pelting down hard when the starters were lined up at 9:15 in the morning. The going was the most difficult which even some of the more seasoned riders had ever encountered in a race. Nearly every one of the cyclists had a fall on the slippery ground, but fortunately there were no serious accidents. Forty-nine entrants started in the race, and forty-two finished. At the tape it was impossible to recognize some of the fellows, for their faces were almost completely covered with mud.

Kochler, the amateur champion, stated that he would not have entered the race had he known the grind would be so gruelling. Kochler rode a Pierce bicycle, and plowed through the mud at a pace which gave him the first time prize, his time being forty-four minutes and thirty seconds. Peter Himshoot, mounted on a Nelson for the Belgian-American Cycling Club, was one-fifth of a second behind Kochler, and captured the second time prize. The sprint between the two time men was one of the most thrilling which was ever witnessed on the boulevards of Chicago.

A large crowd braved the rain and stayed throughout the race. The course was patrolled by the Lincoln Park motorcycle police, and flag men were stationed at every corner passed by the route. The summary: W. J. Grotjahn, unattached, first; See Salem, Belgian-American C. C., second; Oscar Wickert, Chicago C. C., third; Joe Growbowski, unattached, fourth; T. E. Stasch, unattached, fifth; Art Van Pamael, unattached, sixth; Fred Pacthen, unattached, seventh; Paul Anderson, unattached; eighth; Phil White, C. C. C., ninth; Carl Stockholm, C. C. C., tenth; F. Vinch, Belgian-American C. C., eleventh; A. Schlevitt, C. C. C., twelfth; E. J. Mitchell, unattached, thirteenth; Christian Daniels, unattached, fourteenth.

# C. R. C. A. Holds Pleasure Run

THE twice postponed annual pleasure run and monster cycling carnival of the Century Road Club Association started from Columbus Circle, New York, in two sections, on September 5, the first division consisting of unattached riders numbering 80 cyclists, while the second section was composed of the several clubs competing for the "Neatest Appearance Cup," donated by Captain C. J. Dieges, and for the "Pope Cup," for the best decorated individual bicycle.

At the Grand Concourse and 169th street a stop was called and the decorated wheels were paraded back and forth in front of the judges, and A. R. Jacobson, of the promoting club, was picked as the first prize winner for the best decorated bicycle. Second prize was taken by Ernest Noster, of the Darcy Wheelmen of Newark, and third prize by Harry A. Whiteman, also of the promoting club. The silver loving cup for the best appearing club was won by the Century Road Club Association, whose members turned out in their track and road sweaters, and presented a fine appearance.

With this contest decided, the run proceeded to Fordham Road, and east to White Plains avenue, where the five races were held.

The first of these was the quarter-mile scratch race, in which the old record of 33⅕ seconds, held by Jerome Steinert when he made same on September 3, 1911, was broken by Anothony Desimone, of the C. R. C. A. by riding the quarter mile in 29⅘ seconds, bettering the record by 3⅕ seconds.

Ten heats of twelve riders each were necessary to run this quarter-mile race, and the winners of the three semi-finals battled very hard in the finals, which was won by John Marquart, of the C. R. C. A., followed by Herbert B. Yarold, of the Bay View Wheelmen, who in turn was followed by Rudolph Rom, of the Empire City Wheelmen. Marquart's time in the final was 30⅗ seconds.

Following the quarter-mile race came the novelty race, which consisted of placing the bicycle on the shoulder and running a quarter of a mile, and then riding back to the start in a sprint. Robert Henderson, of the Bay View Wheelmen, was the fastest novelty man, followed by H. Garbade, of the Glunz Wheelmen, and Harry Aron, of the Glunz Wheelmen.

With lunch over, the big three-mile handicap was held with over 100 competitors, with handicaps ranging up to 450 yards. After a hard fight against the long mark riders the winner was Fred Woisin from scratch, representing the Acme Wheelmen, followed by Nelson Johnson (75 yards), of the C. R. C. A., and Anthony Desimone (scratch), of the C. R. C. A.

The 75 yards slow race was next in order, and three heats eliminated the fastest riders, wherein the slow riders had their inning. Henry Terhune, who hales from Hackensack, C. R. C. A., showed he was actually the slowest rider, followed by Teddy Heisig, of the C. R. C. of America, and Fred Armster, unattached.

The final race of the day was the one-mile scratch race with 3 heats of 12 riders each, and the final resulted in a win for Nelson Johnson, of Great Kills, Staten Island, representing the C. R. C. A., followed closely by Fred Woisin, of the Acme Wheelmen, and Anthony Oesimone, of the C. R. C. A. The winner's time was 2 minutes 30⅗ seconds. The summaries of the races are:

Quarter-Mile Open Bicycle Race—John J. Marquart, Century Road Club Association, first; Herbert B. Yarnold, Bay View Wheelmen, second; Rudolph A. Rom, Empire City Wheelmen, third; Robert Henderson, Bay View Wheelmen, fourth; Joseph Naphthal, Century Road Club Association, fifth.

Novelty Race—Robert Henderson, Bay View Wheelmen, first; Henry Garbade, Glunz Wheelmen, second; Harry Aron, Glunz Wheelmen, third; Patsy Giordano, Century Road Club Association, fourth; Edward Mullin, Century Road Club Association, fifth.

Three-Mile Handicap Race.—Fred Woisin, Acme Wheelmen, first; Nelson Johnson, Century Road Club Association, second; Anthony Desimone, Century Road Club Association, third; John J. Marquart, Century Road Club Association, fourth; Paul Reinike, Acme Wheelmen, fifth.

Slow Race (75 yards)—Henry Terhune, Century Road Club Association, first; Teddy Heisig, Century Road Club of America, second; Fred Armster, unattached, third; Erwin Spillane, Acme Wheelmen, fourth; William Lock, Century Road Club of America, fifth.

One Mile Open Race.—Nelson Johnson, Century Road Club Association, first; Fred Woisin, Acme Wheelmen, second.

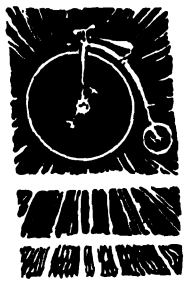
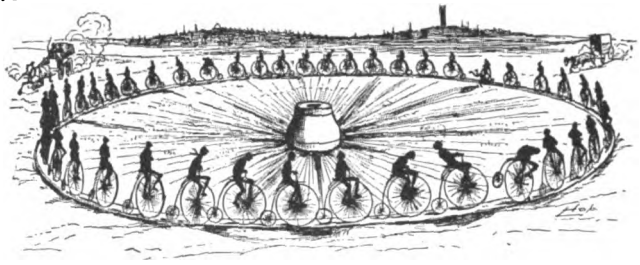
# The First Wheel Around the Hub





By Abbot Bassett

**The three illustrations that accompany this article were reproduced from the sketches which appeared in the original story.**

ON Thursday, September 11, 1879, a party of wheelmen started upon what they called "A Two Days' Out and Home Run." This was the birth of what is now known as "A Wheel About the Hub." There was quite a lot of secrecy about the affair for it was a journalistic enterprise and the management desired what, in newspaper parlance, is termed a "scoop."

It was not christened "A Wheel Around the Hub" until it was described and liberally illustrated in an article appearing in Scribner's Magazine (now Century) for February, 1880. Later it was realized that the route did not take the wheelmen around the hub, for the course is altogether south of Boston, and a change of "around" to "about" was made. This article, however, has to do with the initial trip, and we must, therefore, adhere to the earlier title.

### Crowd Gaped at Riders

At that time cycling was in its infancy; the bicycle was still the cause for wonder and admiration by the populace on foot and behind the beasts of burden. There was always a crowd in front of the club houses on Saturday afternoons to see the cyclists start upon a run and the riders were not adverse to showing their skill in riding up and down the roads, before starting on the projected runs.

The success of an article on bicycle clubs which Scribner's had published suggested to Mr. A. W. Drake, then the manager of the art department of that magazine, the possible success of an illustrated article on the bicycle among those who were eager for life on the open air. He wrote to Charles E. Pratt, the president of the Boston Bicycle Club, and requested him to prepare such an article, agreeing to furnish a number of first class artists who would make the pictures.

Mr. Pratt accepted the invitation and offered to arrange a bicycle tour around Boston, which would take the tourists over the good roads and among the attractive scenery of the Hub suburbs. Mr. Drake pursuaded the Essex Bicycle Club of Newark to send a delegation of three members to the tour.

### Got Right on the Job

The Boston men took up the work with the enthusiasm and energy which has always characterized the efforts of the Boston wheelmen. Mr. Pratt, Frank W. Weston, Capt. E. C. Hodges and Ed. W. Pope spent many hours upon the roads about Boston, choosing the best routes of travel along which lay the most attractive and interesting scenes. The utmost secrecy had to be observed in order to insure an absolute "scoop." The route was, after many investigating runs, selected with due regard for eating and sleeping accommodations. Fifty invitations were sent out, informing the cyclists that the "Two Days' Out and Home" would start from the corner of Walnut avenue and Warren street, at 8 a. m., on September 11, 1878, and that a good time might be expected.

### The Route They Followed

As many important changes have been made in the route since the earlier tour, an outline of the route which was then followed will be of interest:

First day, September 11.—Start from Warren avenue at 8 a. m.; Jamaica Pond; Brook Farm; Dedham; Pine Grove, Readville, for a picnic lunch; Blue Hill and climb to summit; Ponkapog; South Canton; Massapoag House and pond at Sharon, where supper was served at 7:30. Total distance 36¼ miles.

Second day, September 12.—Leave Massapoag House 6:30 a. m.; Canton Corner Cemetery; So. Braintree; East Weymouth; Hingham; Kimball's on Jerusalem Road for dinner. Return: Hingham; Quincey; Russell Farm at Milton; Milton Lower Mills; Boston. Distance 60½ miles. Distance for two days 96¾ miles.

The important changes in the old route that may be noted are: Pine Grove at Readville was later called "The Grove of Pleasant Memories." It has been built over and the lunch for the first day is now served in the orchard at Cobbo. The Massapoag House was burned down in 1906 and the first night is spent at the Mansfield Tavern. On the second day the noon luncheon is served on the lawn at the Tom Jones farm at Randolph. The dinner and concluding item on the program is now at the same resort in Nantasket.

### "Big" Men in Line

Those who participated in the first Wheel Around the Hub are not only numbered among the real pioneers of American bicycling, but many of them were, and a few are still, leading men in various professions. Doctors, lawyers, ministers, artists and writers of note were numbered among the genial company that pedalled their rubber-shod steeds in the first great bicycle tour.

A. W. Drake and Allen C. Redwood, both of Scribner's art department, followed the run in horse buggy. F. S. Church, Francis Lothrop, W. Taber, Rob. Lewis and L. Hopkins, although not with the party, contributed sketches to the Scribner's article. An ambulance accompanied the party.

The riders wore the uniforms of their respective clubs and the line had a more gala appearance than it has had in recent years, for knee breeches, golf stockings and outing shirts have taken the place of the old time uniform and sent it down the back entry of time. The route took the wheelmen, first of all through the pretty village of Jamaica Plain to Jamaica Pond where the first rest was taken. Here an officious policeman ordered the party off the grass, but they refused to budge despite a very emphatic expression of the officer's opinion regarding "fools who ride them things."

Now the ride took them along the edge of Franklin Park and the Arnold Arboretum with its wealth of foliage and trees from every country and every clime.

### Visit Brook Farm

Next a visit to Brook Farm, the scene of that remarkable communistic experiment of 1841-7—an experiment engaged in by Charles A. Dana, Nathaniel Hawthorne, Geo. Wm. Curtis, Julia Ward Howe and many more whose names are famous in history. The party strolled over the grounds, not failing to visit the rock where John Eliot preached to the Indians and the school building in which Margaret Fuller and Julia Ward Howe taught. Then mount and away to the square fronting which stands the church where Theodore Parker used to preach, and on to Caledonia Grove on the upper waters of the Charles river, where were to be seen the boat houses along the shore and a moving picture of canoes on the river.

Dedham village came next and the wheelmen were welcomed by crowds of villagers, many of whom looked for the first time at a bicycle.

### Famous House Still Standing

Next onward to the Fairbanks House,

**An Ambulance Followed the Wheelmen**

Digitized by Google

one of the oldest houses in Massachusetts. Built in 1636 it is still in a good state of preservation and is a never failing source of interest to the lover of the antique. Every mind now reached forward to the lunch at Pine Grove. A surprise awaited the wheelmen at this point, for instead of a picnic lunch which was promised a very substantial meal was set before them which had been provided through the generosity of Colonel Pope.

During the meal, a railroad train passed over the rails at the edge of the grove, and the engine driver seeing the tourists at dinner give them a whistle salute and waved a greeting. The boys cheered the train and threw up their caps in recognition of the salute. And at every lunch in the Grove of Pleasant Memories since that day the incident has been repeated. There has always been a train to pass and the wheelmen have shouted themselves hoarse in welcoming their old friend.

**Won't Be Same Train**

There is little likelihood of its being the same train or the same engine driver, but the shouting always has taken place, and we do not doubt the train men wonder what it is all about. But the Grove of Pleasant Memories is a thing of the past. In 1913 the wheelmen were forced out of the pleasant grove by the demands of the building interests and the lunch has been served in Cobb's orchard since that date. Another pleasant incident laid aside by the ravages of time. From the grove a good view of Blue Hill was had and this was the next place visited. Blue Hill is the highest elevation in eastern Massachusetts.

The ranks were broken at the foot of the hill and the riders were invited to mount to the summit. Nearly all availed themselves of the great privilege. The view from the top showed them the valley of the Charles and every part of greater Boston. Boston harbor with its many islands was spread out before them in the east, while all around and about was the beautiful foliage incident to the valley of the Charles. At the foot of the hill to the south could be seen two lovely lakes—Ponkapog and Houghton's Pond. Off in the west could be seen Mount Wachusett, a mere outline in the dim distance.

Now mount and away to Massapoag House for supper and bed. This famous hostelry stood in a beautiful pine grove on the boarder of a clear lake some mile and a half in circumference. The hotel was large and commodious and the wheelmen were easily accommodated. There were plenty of summer girls in the house and a dance was hastily arranged at which the wheelmen were much more popular than the masculine boarders at the place. One wheelman in particular won the sobriquet of "The Masher" which followed him through the tour, into Scribner and for years afterwards. We have been bribed not to disclose his name. He fears the title will come to him again.

**Coming on "Waterscape"**

And the second day was like unto the first, but changing from landscape to "waterscape." Mount and away at 6:30 a. m. Note the long days—6:30 a. m. to 7 p. m. The days of the wheelabout now run from 10 a. m. to 4 p. m., and yet modern machines make about the same distance per day as did those of 1879.

From Sharon to the sea lacked the great interest of the first day, but at Hingham the ride was over the Jerusalem Road. A well built roadway following the coast for ten miles. This was before the day of good roads, but this highway along the seashore was considered to be the best road in Massachusetts. Bordered on one side by the sea, it was lined on the other side by the beautiful summer residences of well-to-do Boston merchants.

It was Boston's show road and the wheelmen appreciated it. The road led to Kimball's where could be had the best fish dinner served on the coast. The men from inland towns were shown how to eat

**Tripping Up**

clams and to crack open lobsters. There was hilarity on tap at the dinner table for man lets go when the food is good. The homeward run from Kimball's included a call at the Russell Stock Farm at Milton and gave the tourists a chance to institute comparisons between the iron shod and the rubber shod steeds.

Home in Boston at 7:45 a. m., 60½ miles.

**Roads Rutty and Sandy**

The roads were not then as they are now, and we cannot fail to admire the pluck and perseverance of the men who in 1879 rode the rutty and sandy roads on machines which were new to them and of which they could not have had the perfect command which is gained by long use. As a matter of fact it was a tough experience for some of them. There was weary trudging up long hills, numerous headers and a liberal patronage of the ambulance. But is it not the common fate of pioneers to wear the martyr's crown?

Capt. E. C. Hodges, of the Boston Club, was in command of the line and Josiah T. Dyer, of the Massachusetts Club was bugler.

**Story Boomed Cycling**

The Scribner article had a surprising effect. It gave a boom to cycling that was potent and far-reaching. It was the most effective starter that was given in the early days to bicycling and the yearly repetition of the tour serves to keep the interest in cycling keenly alive at the present day for it is one of the things which make all of us who are fortunate enough to engage in it cling even more closely to the sport we love so well.

As "Si" Dyer sounded "Boots and Saddles" when the party were to leave Kimball's for the homeward run there was one thought uppermost in the mind of every rider:

"The sun lies crimson in the west,
The soft breeze fans my brow,
Woulds't know the steed I love the best?
The one I'm riding now!"

In 1892 the Boston Bicycle Club revived the Wheel About the Hub, and the delightful tour has been held every year since. Its regular date of starting is the Friday nearest to September 11, and the tour ends on Saturday night. Very many spent the night at the shore and ride home on Sunday.

The Boston Bi Club has had made a medal of appropriate design with a hanger which tells how many times the wearer has been on a tour. The holders of the medal are not slow to exhibit their records of which many of them have good reason to be proud.

On Friday, September 10, the twenty-sixth Wheel About the Hub will start from Walnut avenue, corner of Warren street, Roxbury, at 10 a. m., and go over the usual route. There will be riders of the wheel and riders in the auto in the line.

## BICYCLE DISPLAY STAND

Tulsa, Okla.—TheMcGee Sporting Goods Company, of Tulsa, is manufacturing a bicycle display device which is being put on the market by George Meyers, of the Johnson-Meyers Company, of Memphis, Tenn.

The device is a stand which bolts to the floor and holds the cycle at an elevation of about four feet, and is guaranteed not to scar the enamel. It is taking well with the dealers, as it fills a long felt want for windows and shops.

## TWO NEW BICYCLE STORES

Herman Dickman has just opened a new bicycle and accessory store at 211 East Third street, Long Beach, Cal. His floor space is 11 x 50 feet. Mr. Dickman has been out of the business for a year, but sees better times coming, and thinks now is the time to get in.

F. G. Slater, proprietor of the Orange Sporting Goods Company, Orange, Cal., has been watching the bicycle revival in his locality, and is perfecting plans for adding a line of bicycles and accessories to his general stock of sporting goods.

### ELLIS IS ON THE MOVE

George A. Ellis, recently appointed New York State F. A. M. Commissioner, is putting a punch in his job, and announces that nothing will be left undone to advance the interests of riders in his district. He has reappointed Joseph Hartig, of Brooklyn, as Vice-State Commissioner.

Commissioner Ellis has issued a plea for greater activity on the part of New York State clubs, and is desirous of forming a State racing association, with the idea of holding a race meet each Saturday afternoon during the racing season. He is also anxious to learn the sentiments of the clubs with regard to local commissioner appointments.

### COLLEGE POINTERS WILL BANQUET

College Point, N. Y., September 6.—In celebration of its membership reaching the fifty mark, the College Point Motorcycle Club will hold a banquet sometime in the latter part of September at the Joseph Witzel Son's Hotel in College Point. There will be bowling, dancing and a midnight supper.

The club rooms are located in the building occupied by the Horn & McCracken's Garage. There are a smoking and reading room, two card rooms and a large kitchen where the members can always find something to eat and drink. The club invites all motorcycle riders passing through College Point to stop in and share its hospitality.

### WILL STAGE SPECIAL RACE

The Independent Motorcycle Club, of Harlem, New York City, will hold a special thirty-five mile club race on the Motor Parkway, on Sunday, September 12, which is open to members only. In case of rain, the event will be staged on the first clear Sunday following the scheduled date.

The Independent Club is a new organization, rapidly growing in size and has club rooms at 306 West 133rd street, which the motorcyclists of New York are invited to visit. The officers are as follows: President, E. Churchill; treasurer, Fred Larsen; secretary, Ed. Eithel; road captain, Geo. Busing and press agent, E. Grossman.

### ROAD RACE CALLED OFF

Dallas, Tex.—The Fort Worth-Dallas motorcycle race planned for Labor Day was called off as a result of the refusal of the Commissioners' Court of Tarrant County to allow the use of the Dallas Pike, lying in that county, for this purpose.

The commissioners vetoed the plan on the grounds that such a race would be dangerous to traffic unless it were possible to exclude all traffic from the road during the hours of the race, which was impracticable. The race will now be run out of Dallas to some other point which has not yet been decided upon.

### RACES TO FEATURE LOCAL SHOW

Peoria Ill., Sept. 6.—Motorcycle races will be one of the features of the National Implement and Vehicle show to be held in Peoria, September 28 to October 8. A one hundred mile race and several other events are scheduled for several afternoons during the exposition. Several cash prizes are being offered.

### RACINE SPEEDSTERS TUNING UP

Racine, Wis., September 6.—The half-mile track at Klinkert's Park is a popular place these days due to the fact that the Racine Motorcycle club is arranging for a series of race meets to be held there and all of the local dare-devils are holding little speedfests of their own practicing to get in trim for the Sunday programmes.

### REMY BRANCH IN ATLANTA

The Remy Electric Company announces that it has established a thoroughly-equipped direct factory branch at 14 W. Harris street, Atlanta, Ga. The Remy company has in the past been represented there by Alexander Seewald.

## MILITARY BIKES INTEREST MANY

TORONTO, Ont.—The Canadian National Exhibition at Toronto this year was featured by the presence of a comparatively large number of exhibits of bicycles, bicycle accessories and tires. With the exception of the Cyclemotor, the motor attachment for bicycles, there was nothing on the grounds in the shape of a motorcycle and practically no motorcycle accessories were displayed.

A feature of the bike displays was the war bicycles. The Canada Cycle & Motor Company, Limited, the Planet Bicycle Company, Limited, and the Hyslop Bros., Limited, had several of the military models which attracted considerable notice. In addition, the Canada Cycle Company showed a number of reconstructed bicycles of former days. There were at least a dozen distinct bicycle accessory and tire exhibits by various companies, the names of which were given in **Motor Cycle Illustrated** two weeks ago.

There was always a big crowd around the Cyclemotor exhibit where models ready for the road were shown in addition to several cutaway models and also a complete attachment as it comes packed in a box.

During the Exhibition H.R.H. the Duke of Connaught, Governor-General of Canada, inspected the bicycle corps of the Boy Scouts.

### CANADIAN LICENSE REGULATIONS

Riders from the United States who desire to tour in the provinces of Ontario or Quebec will have little difficulty in doing so, for seven days at least, if they are able to prove membership in a recognized motorcycle club. At the Canadian border a permit will be issued, giving the right to ride for a period not to exceed seven days in either of the provinces, this permit being issued gratis at the port of entry into Canada. The only qualification with the permit is that the rider must leave Canada by the same port by which he entered. The necessary identification to obtain this permit free is a card of membership in a recognized club.

Should the rider not be able to display the card or other satisfactory proof, he will have to give a bond, costing from $3 to $5. This bond, which is good for six months, is to the effect that he will not dispose of his mount during his stay in the Dominion, without due notice to the authorities. There is a duty on machines imported into Canada, hence the bond. This same bonding applies to a recognized member of a club who leaves at a different port from that which he entered. The bonds can be had at any port of entry, with the possible exception of very small towns.

An American rider can obtain a license for the Province of Ontario, costing $3, and good for one year. This license will permit him to ride in any province of the Dominion for the period stated. Like the bond, it can be had at any principal port of entry.

Riders from States not requiring a state license are warned that a license plate is essential on all motorcycles in the Dominion, and should provide themselves with one before entering. They may, however, obtain a provincial license instead, if they so desire.

### GASOLINE PRICE GOING UP

Montreal, Que.—During the past week the price of gasoline in Canada has jumped three cents per gallon and a further increase is probable, so the dealers say, because of the action of producers in advancing the price of crude oil. For almost a year gasoline retailed in Canada for 15 to 18 cents per gallon, but now the cheapest is 18 cents. The reason for the apparently big difference between American and Canadian prices for gasoline is simply that Jack Canuck gets more of the liquid fuel in a gallon. The Imperial gallon, which is the standard measure in the Dominion, is approximately one-fifth greater in cubic capacity than the so-called wine gallon which is the standard in the States.

Some of the dealers predict a gasoline famine in Canada. The government prohibits the importation of gasoline with a lower specific gravity than .65, and this restriction is causing trouble because it is hampering the market.

The Spitler Puncture Plug Company, Inc., 1790 Broadway, New York, has opened a Canadian branch in the St. Nicholas building, Montreal. This company makes a brass plug for inner tube repairs.

### THE CYCLEMOTOR IN VANCOUVER

Fred Deeley, who handles the new Cyclemotor in the west, gave the machine a thorough tryout himself. Crossing by the gulf ferry to Nanaimo, he made a comprehensive tour of Vancouver Island, crossing the Malahat Drive and going right through to Victoria, the capital city, taking in all the important points en route in the interests of the Cyclemotor. Demonstrations were given freely en route to interested parties, and eight were placed with dealers.

## SNAPSHOTS AT TORONTO DOINGS

TORONTO, Ont.—Announcement has just been made by W. H. Cooke, of the Fairn Cooke Company, 32-34 Front street West, Toronto, that he has been appointed the Canadian distributor for the Persons Manufacturing Company and the Majestic Manufacturing Company, of Worcester, Mass. He declares that he has already secured several good contracts for Persons saddles.

The Toronto civic authorities are framing by-laws which will compel the placing of lights on all vehicles at night and the prohibition of the use of glaring searchlights on the city's street. Another proposed regulation will prohibit the use of the muffler cut-out.

At a meeting of the Toronto Bicycle Riders' Association, a further sum of $20 was collected for the Soldiers' Fund of the Canadian Wheelmen's Association.

Mayor Church and other public officials of Toronto will participate in the civic reception which will be tendered to Art. Spencer, the Canadian amateur champion cyclist, when he returns to Toronto after his successful campaign at the Newark Velodrome.

The Toronto board track has been closed for the season. Owing to many rainstorms, only two racemeets were held during the whole month of August.

### SIDECARRING IN NEW ENGLAND

Hamilton, Ont.—A large party of Hamilton motorcycle tourists are now making an extensive trip through the Berkshires, over the famous Mohawk Trail and the Catskill Mountains and into New England. Five Indian motorcycles and sidecars and one solo Indian mount are being used by the wayfarers who include four married couples. The tourists are: Mr. and Mrs. Nelson Chambers, Mr. and Mrs. E. Covell, Mr. and Mrs. S. Atherton and daughter, Mr. and Mrs. Bert McAllister, William Griffin and B. Halliday. The latter is using the only single machine in the party. Mr. Chambers is the local Indian dealer and the tour is being conducted under his auspices. The party started on Sunday, August 29, and the trip will occupy a period of three weeks.

### CYCLISTS STILL ENLISTING

Calgary, Alta.—Major Buchanan, of the Corps of Guides, has recruited thirty riders in Calgary for the Divisional Cyclist Corps which is being organized in Canada for active service. The local riders responded quickly to the call.

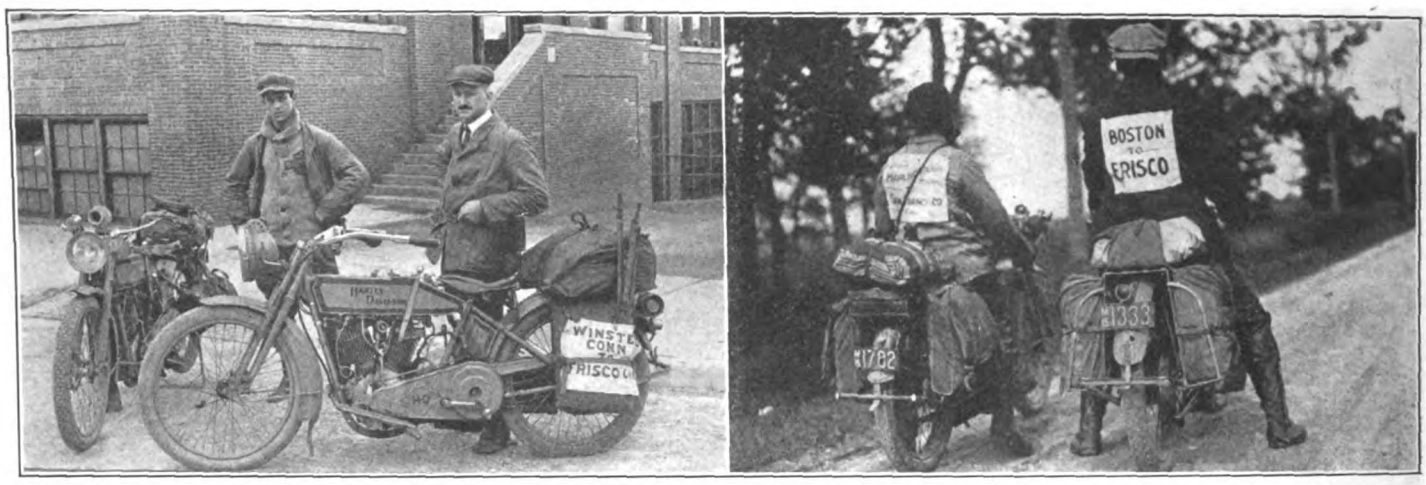
# Milwaukee the Tourists' Mecca

## 'Frisco Bound, They Visit the Silent Gray Fellows' Home

By HUGH SHARP



**At Left, Elton S. Jones, of Riverton, Conn., and Ray D. Allen, of Winstead, Conn., Now on Way to Pacific Coast; At Right, Edwin F. Longley, of Marlborough, Mass., and Irving F. Brown, of Boston, Who Are Also Headed Coastward**

DESPITE the fact that Milwaukee is about 100 miles or so out of the direct transcontinental route of Eastern tourists on their way to the Panama-Pacific Exposition at San Francisco, there has been an unusual number of long distance travelers who have stopped in Wisconsin's metropolis before continuing on the western half of their trip. The desire to see the home of the Harley-Davidson accounts for the visit of many out-of-town riders.

### Two Hearty Travelers

The most picturesque pair of travelers the Milwaukee Motorcycle Club has entertained in a long time are W. G. Havilin and George Schaefer, two Lewiston (Mont.) tourists, who set out last September for a year's trip through the country. Their plan, which has of course already been partly realized, was to start east, then southwest, take in the exposition at San Francisco and finally return to their homes in Montana, after a year of traveling.

With the exception of some real cold weather last winter, the two Lewiston travelers have slept out of doors while they were on the road. Their expenses seem to have been about as low as human ingenuity could possibly make them. Their home is a big rubber blanket, either strung over the two machines or over a ridge rope fastened from the handle bars of Schaefer's mount to a convenient tree. The headlight of the machine peers through the tent flap and well illuminates the interior of their rubber shelter.

That there has been practically no summer up to the middle of June in these parts did not deter either Havilin or Schaefer from sleeping out of doors. While in Milwaukee, Schaefer let the boys have a peep at a photograph of himself, jumping into his clothes, early one morning, before the tent. From the bleak, cold atmosphere of the picture it could easily be surmised that at the time the shutter clicked the mercury in the thermometer was flirting with the zero mark.

"It was about fifteen above that morning," he remarked, and the crowd shivered.

"Gosh, you fellows must be hard boiled," ventured one of the fellows.

"It's nothin' when you get used to it," was Havilin's rejoinder.

The Montana lads contend that a heavily loaded motorcycle is more easily navigated over rough roads than an unburdened machine. Schaefer's bus, with all the assembled paraphernalia piled on it, weighs just 575 pounds, and the ease with which he piloted the load through some of the sandy stretches in the vicinity of Milwaukee seemed to give conviction to the heavy load theory.

Schaefer and Havilin left Milwaukee for Rockford, Ill., from which point they intend to go south and hit the Lincoln Highway. In a letter to some of the local club members, Havilin states that he and his partner have picked up five more riders 'Frisco bound. Havilin and Schaefer are slated for one of the relays of the Transcontinental Relay to be run off in connection with the F. A. M. convention at Sacramento.

### All Togged Up

Ray D. Allen, of Fancher & Allen, Harley-Davidson dealers at Winsted, Conn., with Elton S. Jones, Riverton, Conn., visited the city on their way to 'Frisco. These two tourists also carry complete camping outfits on their machines. To look at them, in their immaculate riding suits—Jones even wore a white collar in Milwaukee—one would never think that they had traveled all the way from the Nutmeg state in those duds.

Jones and Allen have a unique lighting system for their tent which consists of an electric bulb with eight feet of cord. Allen rides one of the electric gray fellows and he simply plugs into the slot, provided for the sidecar light, and gets all the illumination needed. "Milking the electric system" is the way Jones expresses it.

The first night's stop of these two gasoline knights was really the most eventful of the whole trip to Milwaukee. During the night at Rome, N. Y., a storm came up with a high wind that threatened to blow their tent sky high. There wasn't very much sleep that first night. Since then, however, the gypsy mode of travel has been a delight.

### Good Fellowship Everywhere

"You must hand it to the motorcycle fraternity all over the country for its prevailing good fellowship," said Edwin F. Longley, of Marlborough, Mass., who is making the trip to the exposition with Irving F. Brown, of Boston. Longley rides an Indian, while Brown is astride a Harley-Davidson.

Mr. Brown is advertising manager for one of the large woolen mills in the bean town. He bought his machine only a few days before starting across the country by the longest route. Previous to their departure Brown loaded up his machine with 200 pounds of baggage—"just to see how she would ride"—and took a trip to Keene, N. H., covering 200 miles. This was practically his first ride. Right after that, he joined Longley for the big ramble. His speedometer showed 1,500 miles to this city.

Still another long distance traveler visiting this city was Ray Graff, of Dickinson, N. D., a former resident of this section. He dropped in to renew old acquaintances before returning to Dakota, after an extensive western trip, much of which was taken in Milwaukee.

---

### PLAN 350-MILE RUN

Buffalo, N. Y., September 6, 1915.—On October 10 the Buffalo M. C. will hold their annual endurance run. The run, the longest ever staged by the local club, will cover 350 miles, and will carry the riders through Tonawanda, Niagara Falls, Lewiston, Youngstown, Olcott Beach, Yates, Summerset, Arcade, Olean, Salamanca, Jamestown, Westfield and thence back to Buffalo. Any rider who is a member of the F. A. M. and wishing to make application of entry should communicate with George Haier, chairman of the contest committee.

"TOLEDO MADE FOR THE WHOLE WORLD'S TRADE"

## You Need The Best

Your motorcycle engine is only as good as the spark plugs you use.

No matter how expensive—how perfect in design or construction, it can't possibly run ahead of those life-giving sparks.

To get the best your engine can do, you need the **unfailing reliability and endurance** you find only in Champion Motorcycle Plugs.

These plugs were built specially for motorcycle use. We developed them by repeated tests in motorcycle engines. Over and over again we put them through the stiffest mills known to riders.

Today we know they are **right in every respect.** And we back them by the most sweeping guarantee it is possible to give.

### THE CHAMPION GUARANTEE

Complete satisfaction to the user—free repair, replacement or money back.

Look for the name Champion on your spark plug porcelains.

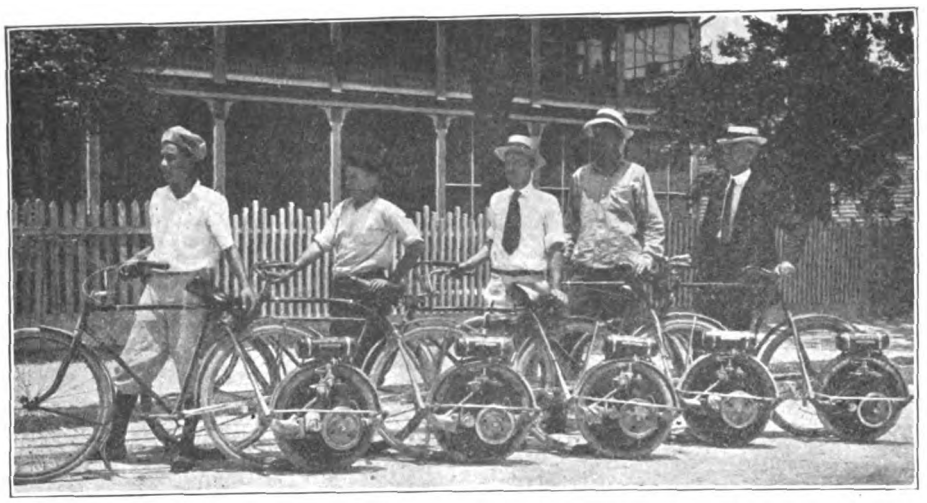
## NO AGE LIMIT TO MOTOR WHEELERS IN PASS CHRISTIAN



Quintette of Devotees Who Are Followers of F. M. Steadman, Smith Product Representative in Mississippi City—Agent Steadman Is at Right of Picture

### $400,000 SPEEDWAY FOR NEW ORLEANS

New Orleans, La., Sept. 6.—A deal for a two-mile motor speedway in this city, involving an investment of $400,000, was recently closed, when A. F. Brockman, S. W. Lindsay and H. C. Moore, all of Chicago, successfully completed negotiations for 360 acres of land fronting on Lake Pontchartrain and instructed J. A. Prince, originator of board track speedways, to take immediate charge of the construction work. The speedway will be completed by March 4, when a 500-mile automobile Derby will be run off.

The track will be the fastest in the world, according to Mr. Prince, who stated that the object in building a speedway in New Orleans was to establish a center for winter racing. The speedway is to be sixty feet wide, the surface of two by fours laid on edge, running lengthwise like the boards in a bowling alley. The straight-away incline will be pitched at five degrees, and the common half circle will be pitched at 30 degrees, the circle rounding on a triple radius leading the driver gradually into the stretch, the angle of pitch declining from thirty degrees in the radius to five degrees in the stretch, thus keeping the driver at all times on the center of the tire at right angles to the surface of the track, at a speed of 120 miles an hour.

### OBJECTS TO LICENSING LAW

EDITOR, **Motor Cycle Illustrated:**

Some time ago you sent me a letter in reference to renewing my subscription to **Motor Cycle Illustrated** and I have been trying to get time to answer same and let you know why I have not sent you a subscription for another year. I would say that I have found your paper very interesting and valuable, but do not agree with the policy it has pursued with regard to a numbering law. I can see no reason why I should not have the same right to use the highways, without special restrictions, as have my neighbors who freely use their horse-drawn vehicles, more especially as I have paid taxes on these roads with the understanding that they were for public use in *any* reasonable and proper manner.

The only way in which you can justify the licensing and numbering of motorcycles is on the ground that they are more dangerous than other vehicles that freely use the roads (in which case, I think, they should not be allowed to use the roads at all), or that the riders of them are as a class criminally inclined or mentally incompetent to a greater extent than other road users and therefore required special police surveilance. As I decline to agree with either of these views, and I know the accident statistics show the motorcyclists to be responsible for fewer accidents than any other road users, excepting, perhaps, the bicyclists, I feel that I cannot longer give support to a paper that consents to a regulation unjustly discriminating against the motorcycle user. A. E. OSBORN.

New York City.

[Mr. Osborn is taking exception to **Motor Cycle Illustrated's** advocacy of a standard motorcycle licensing law for New York State. Such a law was favored by this journal because it was clearly evident that legislators antagonistic to the motorcycle would ultimately force through a harmful and exorbitant regulation unless the motorcyclists themselves assisted in placing a sensible licensing law on the books. We have not changed our opinion as to the wisdom of this course.—Ed.]

### TOURING NORTHERN MICHIGAN

Marquette, Mich., September 6.—That northern Michigan highways excel by far those between Chicago and New York is the contention of John H. Whitney, formerly private secretary and photographer to Glenn Curtiss, the aviator, who is making an extended tour by motorcycle of the northern Michigan district working on panorama photographs.

"From Oshkosh, Wis., north to the state line were the usual Wisconsin roads, a few good, the rest bad and indifferent," said Mr. Whitney, "but after crossing the river at Marinette the change was a pleasant one—a smooth, hard, white highway, stretching ahead as far as the eye could reach. This follows the Northwestern railroad as far as Powers.

"For scenic beauties and excellent roads I certainly advise motorcyclists contemplating trips to explore Northern Michigan. It is simply wonderful. The Copper country should do more to boost its roads and scenic advantages. It should be the mecca of tourists."

### MAYOR LANDS IN SPEED NET

Kenosha, Wis., September 6.—One of the first catches of the two new motorcycle policemen put on the job by the Kenosha county board was R. Whyte, Fort Pierce, Fla. When brought into court Mr. Whyte stated and showed credentials that he was the mayor of Fort Pierce. He left a deposit of $25 to insure his appearance two days later to answer to the charge of violating the automobile speed ordinance of Kenosha.

### KNIGHT MOTOR CO. MOVES

St. Louis, Mo.—The Knight Motor Company, general motorcycle agents, has moved to 3325-3329 Locust street, this city. They were formerly at Olive and Twelfth streets.

# LINART CAPTURES WORLD TITLE RACE

## Belgian Beats a Crack Field in 100-Kilo. World Championship and Takes 30 Mile Feature

BOSTON, September 6.—Victor Linart, the Belgian, made two desperate wins at Revere Cycle Track the past week, carrying off the 100-kilometer world's championship, the motor-paced derby of the season, on Wednesday, and in the 30-mile event on Saturday, crowding out George Wiley and Georges Seres, incidentally hanging up a new track record of 40 minutes 38⅖ seconds.

Linart was never headed Saturday night, getting away in a whirlwind and sticking to his pace like sticky flypaper. Seres got to his pace ahead of Wiley, and, foxy as ever, was always up and doing whenever Wiley tried to take the bank to pass him. By a magnificent spurt on the last lap, Wiley sprung his machine ahead and finished nearly abreast of the little Frenchman.

Pat Logan, of South Boston, continued his lucky streak by tucking away the win in the five-mile professional. Hugh MacPartland, with 80 yards handicap, won the 1½-mile professional handicap event.

The Saturday summary:

Half-Mile Amateur Handicap Race—Won by Elmer Duncan, Everett (95 yards); Harry Moore, Everett (110 yards), second; Lewis Hill, Revere (100 yards), third; John Fardig, Orient Heights (65 yards), fourth. Time, 57⅘s.

Brothers Special Tandem Match Race (best two in three heats)—First heat, one mile, won by Willie Turville and Pinkie Turville, Revere; Harold and L. C. Rollins, Everett, second; Tom and Dennis Connolly, Everett, third. Time, 2m. 19⅘s. Second heat, one mile, won by Rollins brothers; Turville brothers, second. Time, 2m. 33⅖s. Third heat, one mile, won by Rollins brothers; Turville brothers, second. Time, 2m. 56⅗s.

One and One-Half Mile Professional Handicap Race—Won by Hugh MacPartland, Boston (80 yards); Saxon Williams, Buffalo (100 yards), second; Tim Sullivan, New Haven (40 yards), third; Warren Holbrook, South Boston (115 yards), fourth. Time, 3m. 7⅕s.

Three-Mile Open Amateur Race—Won by Ned Chandler, Boston; Elmer Duncan, Everett, second; John Fardig, Orient Heights, third; Bert Jones, Revere, fourth. Time, 6m. 44⅘s.

Mile Amateur Invitation Race—Won by Mike Barber, Brighton; Harry Moore, Everett, second; Lewis Hill, Revere, third. Time, 2m. 23s.

Five-Mile Open Professional Race—Won by Pat Logan, South Boston; Tim Sullivan, New Haven, second; Willie Turville, Revere, third; Dennis Connolly, Everett, fourth; L. C. Rollins, Everett, fifth. Time, 11m. 48⅖s.

30-Mile Motor-Paced Race—Won by Victor Linart, Antwerp; Georges Seres, Paris, second; George Wiley, Syracuse, third. Time, 40m. 38⅖s.

The winning of the 100-kilometer championship event by Linart Wednesday night was a hair-raiser. Never during the progress of the race were Wiley, the American, and Linart more than ¾ of a lap apart, and Wiley's efforts to pass Linart were desperate. The finish spurt brought Wiley to within 15 feet of the Belgian. Georges Seres, of Paris; Georges Colombatto, of Italy, and Clarence Carman, American, were trailing in that order.

Wiley, with the benefit of pole position, took the lead at the start of the race, but by one of his famous sprints Seres took the lead in a few laps. Linart and Wiley, however, were not to be denied, and pushed him into third position, the effort costing Wiley, however, his lead over Linart.

Time after time Wiley challenged for the lead, but every time found Linart alert. At the sixtieth mile Colombatto and Carman were called off the track, as they were hopelessly out of the running, and the crowd watched the most desperate racing for the championship that it has been their luck to see in many years. Wednesday night's summary:

Half-Mile Handicap, Amateur—Won by Fred McKenzie (15 yards); A. R. Cook (85 yards), second; Lewis Hill (110 yards), third; John Fardig (65 yards), fourth. Time, 59⅖s.

Five-Mile Professional Open—Won by Willie Turville, Revere; Pat Logan, South Boston, second; Dennis Connolly, Everett, third; Fred Herbert, Fall River, fourth. Time, 12m. 8⅘s. Winners of mile prizes—Warren Holbrook, Saxon Williams, Charlie Turville, Fred Herbert. Winner of most laps—Charlie Turville.

Mile Invitation, Amateur—Won by Mike Barber, Brighton. Time, 2m. 32⅕s.

100 Kilometers International Championship Motor-Paced Race—Won by Victor Linart, Antwerp, Belgium; George Wiley, Syracuse, N. Y., second; Georges Seres, Paris, third; Georges Colombatto, Turin, Italy, fourth; Clarence Carmen, Jamaica, N. Y., fifth. Time, 1h. 27m. 48⅘s.

### RUSHING WORK ON STANDARD WELDING ADDITIONS

Cleveland, O.—Business for the Standard Welding Company has grown to such an extent within the last few months that every effort is being made to hasten the construction of several large additions to the plant on West Seventy-third and Seventy-fourth streets. The first of these additions, on West Seventy-fourth street, has been practically completed. It is a brick structure 100 feet in depth and 200 feet long. It will be devoted entirely to the manufacture of bent tube parts. The Standard folks point with pride to the fact that with this new building open and in action, it will have the largest bent tube department in the world.

The second addition will be built in the form of an L, one leg being on West Seventy-third street, extending 200 feet north and south, while the other leg will extend 240 feet east and west, between West Seventy-third and West Seventy-fourth streets. This building will be of reinforced concrete, the reinforcements being of the mushroom type.

The Seventy-third street section will be five stories high. The top floor will be finished off for general offices, recreation and dining rooms. The location of this building is considered an ideal one for the purpose, overlooking as it does Edgewater Park, one of Cleveland's most picturesque lakeside resorts. At a later date, two more buildings will be erected parallel to the Seventy-third street section and connecting with the main structure. Double track railroad sidings will enter between each section, in order to obtain the maximum of shipping and receiving facilities.

### GOODYEAR WINDOW DISPLAYS

Speaking of the value of an attractive window display, the Goodyear Tire & Rubber Co. addresses the following paragraphs to dealers:

"In the Goodyear organizations the 'silent salesman,' a tasty window display, plays an important part. Oftentimes a story that could not be told in many words can be pressed home by a simple, striking arrangement of products in the dealer's window. Goodyear experts have conclusively shown that the dealer's window, if properly used is a valuable factor in promoting sales. Tire buyers are as susceptible to the influences of an attractive display of tires as are the shoppers by tasty displays of wearing apparel or other necessities of life. The value of a window display as a business-getter is in offering the remedy at the same time that it suggests a want. Most people like to look at pictures, and the window display of a dealer is a picture of what he has to offer the motoring public.

"Goodyear employs an expert to design the displays which are constantly appearing in its sixty-five branches throughout the country. These are renewed at proper intervals and special designs carried out for holidays and holiday seasons. The elements of novelty and good taste are invariably introduced."

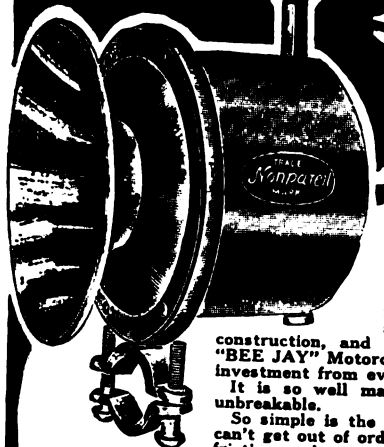
# Think of the Price Last



Examine THIS horn, compare its efficient warning note with any other motorcycle signal — consider its lightness, compactness, appearance and simple and durable construction, and you'll find that the "BEE JAY" Motorcycle horn is a sound investment from every view point.

It is so well made as to be almost unbreakable.

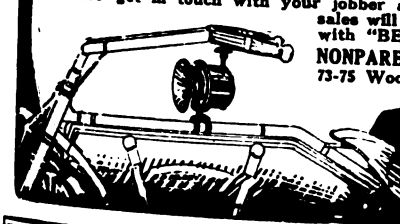
So simple is the "BEE JAY" that it can't get out of order. A spring release friction rack presses a ratchet against an adjustable diaphragm, and presto—a harsh, growling roar is heard

Now think of the price, $2.50, and you'll wonder how such a motorcycle horn can be procured for this low cost.

The "BEE JAY" is light, weighing only 21 ounces.

Dealers—get in touch with your jobber at once. Your horn sales will take a decided jump with "BEE JAY" in stock.

**NONPAREIL HORN MFG. CO.**
73-75 Wooster St., New York



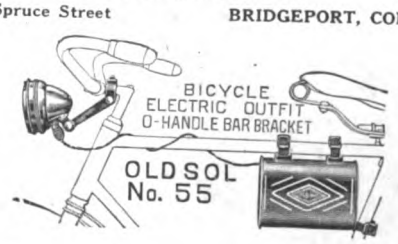
**$2.50**

The fastest sellers on the market. Thousands of dealers have found them so. Supplied complete with bracket. Lamp nickel plated, silver reflector. Battery Box latest "OLD SOL" pattern with opening in front and concealed lock. Lamp head 5" in diameter, 2.8 v. bulb, 2 candlepower. Throws a powerful, penetrating ray of white light. Price, $2.25, less batteries.

**Hawthorne Manufacturing Company, Inc.**

Manufacturers of Old Sol Lighting Systems for Automobile, Motorcycle, Motorboat, Carriage, Bicycle and Hand Use

24 Spruce Street BRIDGEPORT, CONN.



# Not Strength Alone But—

**Lightness Flexibility Smoothness**

The possession of mere brute strength does not always insure proper performance of a motorcycle chain. It must possess, in addition, lightness, flexibility, smoothness of operation.

In addition to being the strongest motorcycle chain in the world,

## "The Coventry" Chain

*"The Motor's True Mate"*

is the lightest for its breaking strength, lightning fast, uncannily silent and, when properly lubricated, the smoothest transmission in existence.

"The Coventry" Chain is the standby of thousands of dealers in the United States. It has so invariably made good their claims that they insure their customers' good will by PUSHING "The Coventry" at every opportunity.

JOBBERS,

## *Proved its Value, the*

CORBIN

## DUPLEX COASTER BRAKE

On roads in all parts of the country the Corbin Duplex has proved its value by actual service.

Bicyclists no longer experiment with other makes—they equip with the Corbin Duplex because experience has shown it can be relied upon.

They know its grip is powerful and sure; they know its action is smooth and flexible.

They know its construction is strong and durable, that large ball bearings minimize friction and add to the life and efficiency of the brake.

They know that the mechanism of the Corbin Duplex is enclosed in strong case where it is protected from dirt, dust, rust and injury. And above all they know that day after day, month after month the year around they can depend on the Corbin Duplex.

Increase the pleasure and comfort of bicycling by equipping with this brake of maximum service. Sold and equipped by dealers everywhere. Catalog on request.

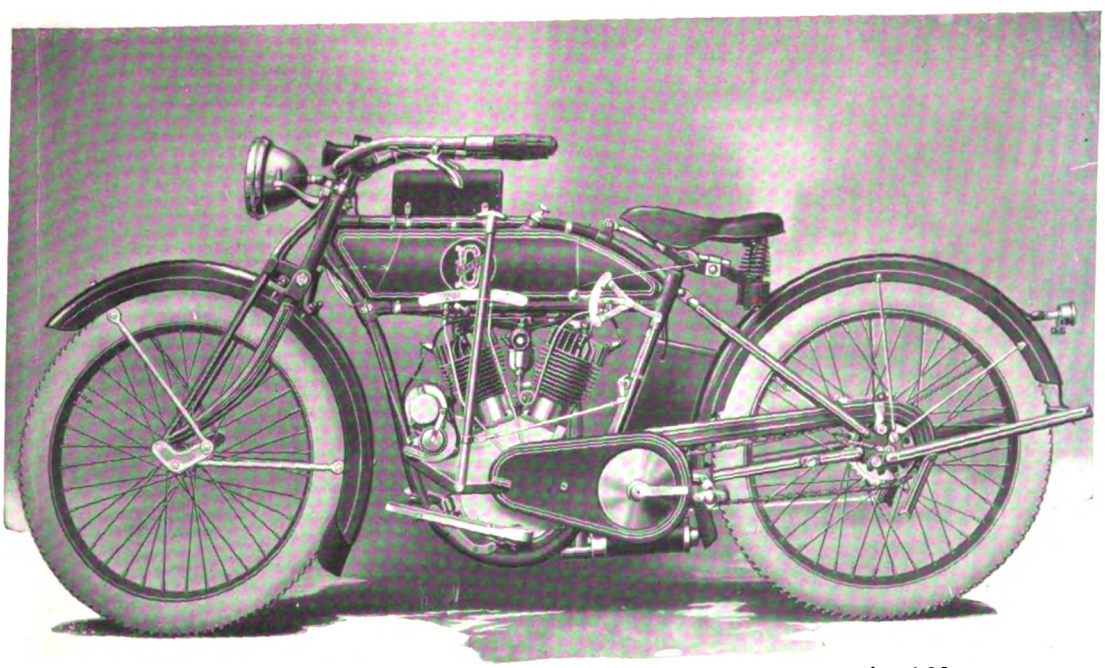
# THE 1916 DAYTON



MODEL D-4. 8 H.P. Dayton Motor, Two-Speed, Electric, $305.00

**This announcement gives briefly the more important refinements and improvements in the husky DAYTON for the season of 1916.**

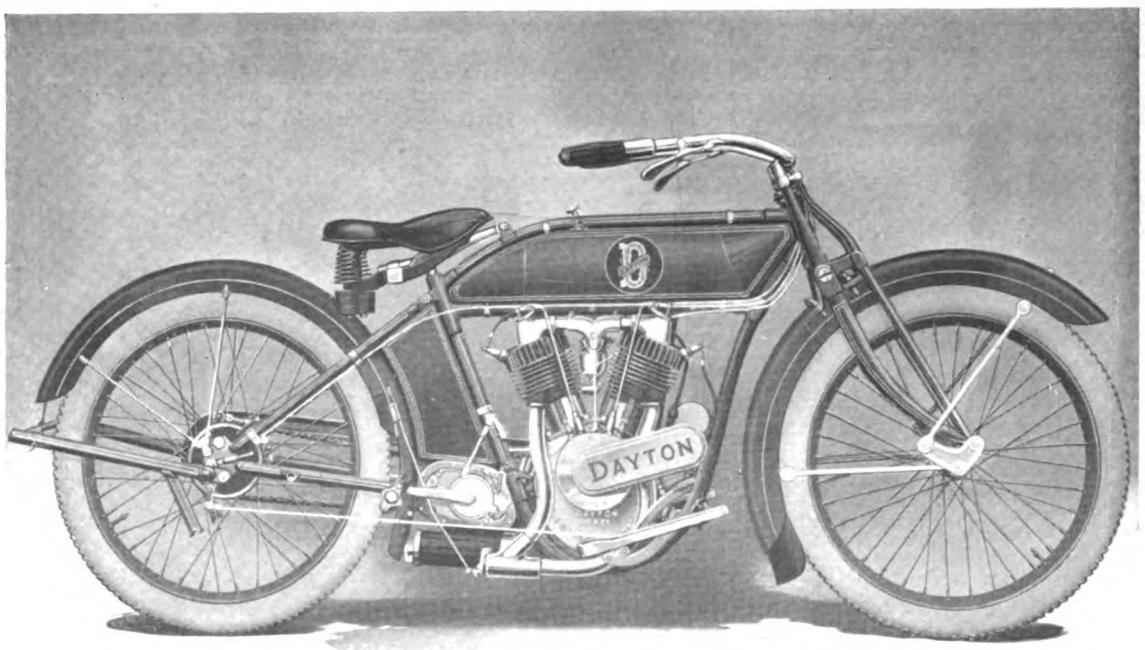
## The Davis Sewing Machine Company

CYCLE DEPARTMENT

DAYTON, OHIO

406-16 Linden Avenue

Digitized by Google



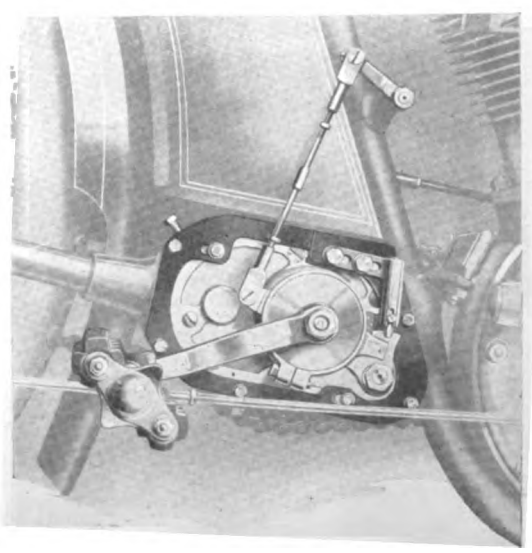
MODEL D-3. 8 H.P. Dayton Motor, Two-Speed, $265.00

# THE DEPENDABLE DAYTON FOR CONSERVATIVE DEALERS

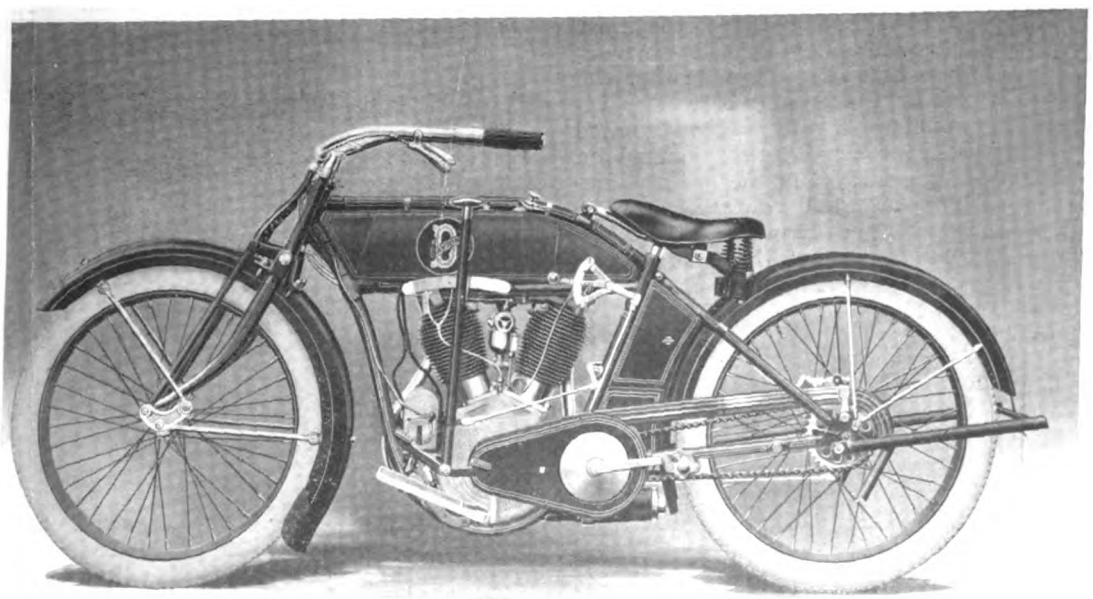
**To say that the 1916 DAYTON Motorcycle is by far the best we have ever built does not do it justice. It is more than that. There are seven big improvements—improvements that mean much to the experienced rider—and many refinements that all go to make the DAYTON a powerful, dependable, heavy-duty machine on which nothing has been sacrificed in order to reduce weight.**

GEAR LOCK—The two-speed gears of the DAYTON models for 1916 are fitted with a simple, strong and positive lock, operated by the free engine lever, automatically and absolutely preventing a change in the gear unless the clutch is released. The gears are shifted by a hand lever locking into an arch-segment conveniently located at the left of the tank.

STRONGER FRAME—The U tube on the frame of all 1916 models is re-inforced inside for a distance of 11⅛ inches, greatly strengthening that part of the frame directly subjected to the vibrations of the motor. In addition the frame is strengthened by Double D reinforcements at all points of greatest stress.

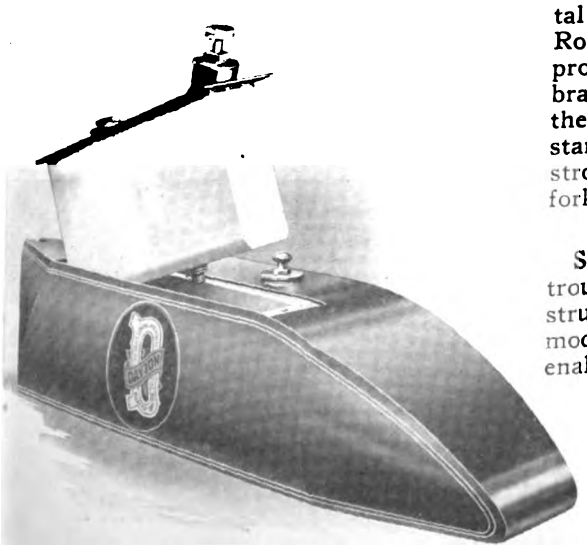


Digitized by Google



MODEL D-7. 9 H.P. De Luxe Motor, Two-Speed, $265.00

AXLES IMPROVED—In order to give a large factor of safety, both axles have been greatly increased in size and turned from special alloy Duplex steel. The front axle on 1916 models is 7/16 in. diameter instead of 3/8 in. as heretofore. The rear axle is 7/8 in. instead of 7/16 in. The rear axle is of the knock-out type and can be removed without affecting other adjustments. This greatly facilitates the removal of the rear wheel.



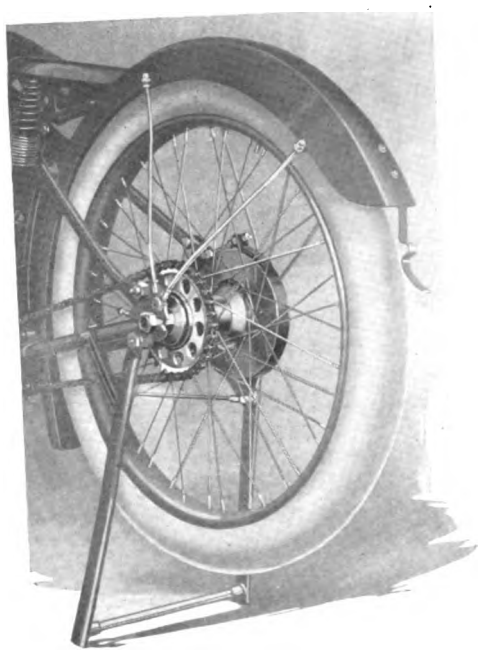
FOOT CLUTCH CONTROL—To add to the comfort and safety of the 1916 DAYTON rider, a foot clutch control has been designed which is neat and positive. By means of the foot control the clutch can be operated without removing the hands from the handle bars. This is a big advantage in heavy traffic and on bad roads.

IMPROVED FORK—The fundamental patented features of the DAYTON Rocker Spring Fork are retained, as it has proved to be incomparable, but heavier braces are used on the latest models and the rocker arms are forgings instead of stampings, giving unquestionably the strongest, safest and easiest riding front fork on the market.

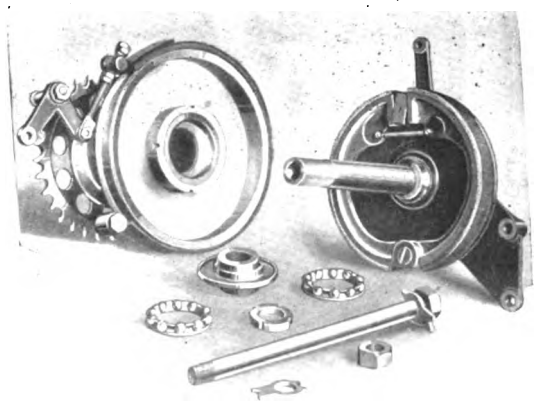
SEPARATE TANKS—The DAYTON trouble-proof gasoline and oil tanks, constructed separately, are retained without modification. They have given phenomenal satisfaction and are admittedly without an equal. In the interests of a neater appearance, the 1916 tanks bear the initial D of the Dayton monogram displayed on a black background instead of the word "DAYTON" as formerly.

Digitized by Google

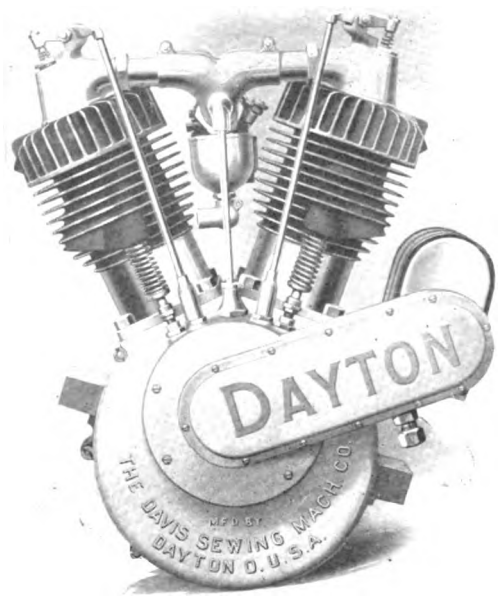
MORE POWERFUL BRAKE—The 1916 DAYTON band brake is the most powerful known to motorcycle construction. It can be operated from either the foot board or the handle bar. The internal expanding segments are actuated by a foot-lever conveniently located on the right side instead of the left as heretofore. The external contracting band fits closely in the channel around the outer circumference of the brake drum. It is operated by a hand lever attached to the handle bar.



MINOR CHANGES — Many refinements have been made on the new models, among which may be mentioned hook spokes, a cross-bar on the handle bar, and the placing of all controls outside the handle bar, making longer bends in the cables with less chance of the control wires breaking. The tool box on the two speed models opens on the left side; a more convenient position when a side car is attached.



CHOICE OF MOTORS—The 1916 line is in 6 models, three equipped with the DAYTON Motor introduced last year and three furnished with the old reliable DAYTON De Luxe Motor.



| | | |
|---|---|---|

# TWITCHELL AIR GAUGE

## Guessing May Cost You Your Life

## BE SURE

You can't tell how many pounds pressure there is in your tires by pinching them or looking at them, and a difference of a few pounds between what they have and what they should have means the price of a new tire or a broken collar bone, or both.

Inflate your tires to the pressure prescribed by your tire maker and test the pressure in them by means of a Twitchell gauge. There is no other SAFE way of doing it.

Write for table of air pressures recommended by the tire manufacturers.

**PRICE ONE DOLLAR**

*For Sale by Jobbers, Dealers, Garages or*

**THE TWITCHELL GAUGE CO., 1213 Michigan Avenue, Chicago**

## The Superlative WRIGHT SPARK PLUG Spark Plug

### Infallible, Inimitable Ignition

The "Wright," the superlative spark plug, produces such perfect ignition and so continuously as to be termed "infallible." No plug, given the same amount of care and service, will give such inimitable ignition.

The very large combustion chamber, probably the largest of any spark plug made, makes possible an accelerated and fuller ignition.

The "Wright" spark plug, by its scientific design and high quality of construction, has proven its merits to thousands of riders.

The "Wright" plug is essentially a winner—investigate its efficiency.

**Write for Catalog**

### Supplies Superior Service

One of the notable achievements accomplished with "Wright" plugs this year was the winning by Otto Walker—Harley-Davidson—of the

**Dodge City 300 Mile Race**

The "Wright" spark plug will be used as regular ignition equipment on the 1916 models of

**Harley-Davidson**

And not only first place, but second also was secured by a "Wright" equipped Harley-Davidson, Harry Crandall piloting the machine to second-place victory.

Digitized by Google

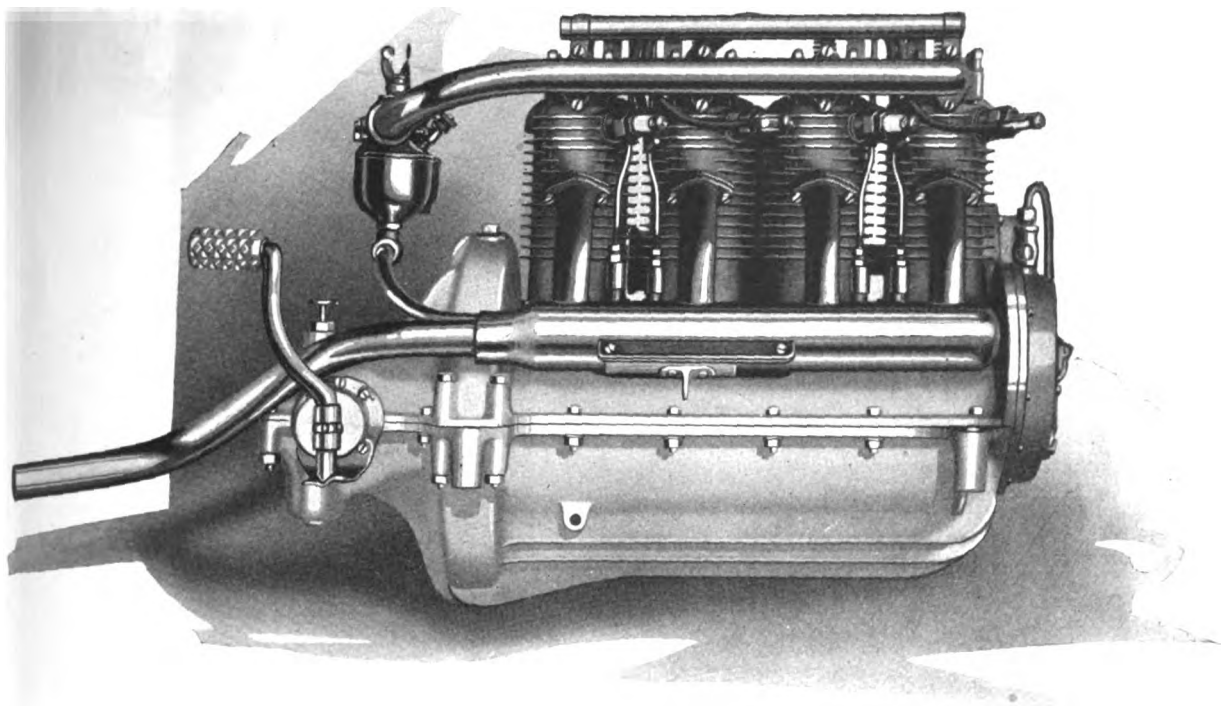
# Still Greater Value, but Lower in Price



THE utmost in motorcycles—with the ceaseless flow of power, the instant responsiveness, and the turbine-like steadiness that are possible only with a four-cylinder power plant. And the price of the 1916 models is only a little more than that of the merely ordinary machines, the old-style twins. Now that there is no great difference in cost, it is natural to choose the four-cylinder Henderson with its myriad advantages.

So the Henderson dealer for 1916 is sure of big sales, for he sells the motorcycle that buyers **want,** at a price they can all **afford.**

# Cleveland $150

## The Biggest Selling Feature In The Light Weight Field

The Power Plant of the Cleveland Light Motorcycle is positively this season's biggest advance in design. Its *Two Stroke Motor* is the keynote to light weight motorcycle efficiency, for there is an explosion at every single revolution which gives absolute smoothness and evenness of action.

There are no valves, valve springs or tappets to make mechanical noises.

Every moving part of the Cleveland power plant is enclosed in an oil bath. This insures absolute cleanliness, as no moving part is exposed.

Lightness is secured by our originality of design in combination with the two stroke motor, eliminating a great number of parts necessary to the operation of the conventional four stroke type. Highest grade aluminum castings, alloy steel parts and ball bearings guarantee light and durable construction.

Our original combination of *two stroke motor, worm driven* counter shaft, *two speed transmisson, multiple disc* clutch and *magneto* drive makes a wonderfully compact and accessible power plant which can be removed by taking out only two bolts. The cylinder can be removed for cleaning without disturbing any other part.

At the same time the Cleveland has an economy of operation not found in any other motor type.

Look over the view of the Cleveland Motor on this page. You can't help noticing the clean design — the extreme simplicity.

Combined with the other unusual advantages of the Cleveland Light Motorcycle, this motor, smooth, silent and economical in operation, is creating the one big sensation of the year in the motorcycle trade.

Dealers everywhere are clamoring for territory.

There is still a chance for you.

Write or wire today.

Deliveries begin in October.

## MOTORCYCLES

Digitized by Google

# The Schickel Lightweight are the result of 2 years

It is only reasonable to assume that the FIRST LIGHTWEIGHT motorcycle on the market should have CERTAIN DISTINCT POINTS OF SUPERIORITY, due to the experience gained by its actual road performances, over those of more recent manufacture.

This is the case with the SCHICKEL LIGHTWEIGHT — the FIRST LOW-COST, LOW UPKEEP LIGHTWEIGHT MOTORCYCLE ON THE AMERICAN MARKET. Two years of riding experiences over every conceivable road condition in the country have permitted changes, refinements, strengthenings in SCHICKEL construction that have placed it far to the front in the lightweight division.

BUT HERE IS SOMETHING EVEN MORE IMPRESSIVE! For more than six years, the name SCHICKEL has been linked with the highest development of the two-stroke motor. We were the consistent champions of this form of power, concentrating our entire manufacturing facilities on the two-stroke, with its smooth flow of constant power, its simplicity, its total absence of cams and gears, its low fuel consumption, its "sweet," silent action.

Hence, it is not hard to understand WHY the SCHICKEL lightweight is the most impressive example of modern lightweight construction.

Think of it! A graceful, staunchly constructed, perfectly balanced motorcycle, with ample power for the stiffest grades, with sufficient speed for anyone but the "road burner," complete, in every detail, for $100!

# veight contains refinements that
# 2 year of actual road work

A motorcycle you can take anywhere—that requires no special garaging facilities, that can be carried by a man of ordinary strength up a flight of stairs. A motorcycle so simple in its control arrangements that a novice can handle it the first time up. A machine that will take you from New York to Albany, a distance of about 150 miles, on a gallon and a half of gasoline!

The SCHICKEL will put ten motorcyclists on the road where the ordinary heavyweight will only put one. It will put motorcycling on a BASIS OF EVERY-DAY USE, as the logical means of transportation for everyone.

AND WHAT IS MOST IMPORTANT OF ALL—THE DEALER WHO HANDLES THE SCHICKEL AGENCY WILL HAVE THE PRESTIGE OF BEING THE LEADING MOTORCYCLE MERCHANT IN HIS TOWN.

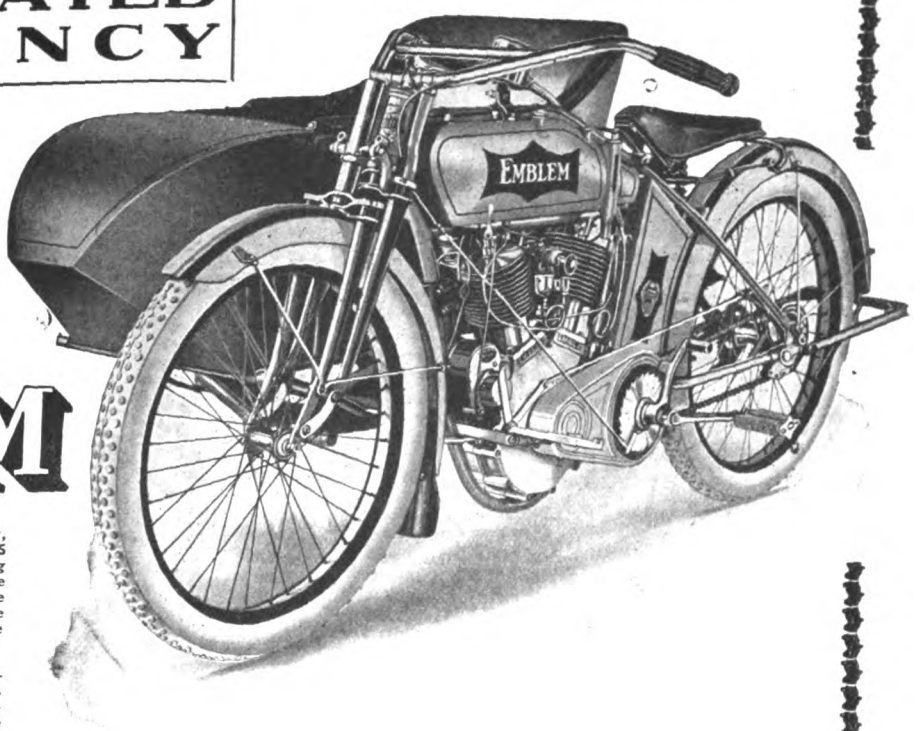
# EMBLEM



There is, of course, no such thing as finality, but as nearly as it may be approached the 1915 EMBLEM embodies this great ideal. Nothing has been spared that brains, skill or experience could suggest to eliminate every possible source of trouble and to make this wonderful machine one which will unfailingly fulfill every possible demand.

The experienced rider will appreciate by reading our catalog that we really understand his needs. The novice who hesitates as to the machine he should buy may accept our assurance that he too will find his confidence justified.

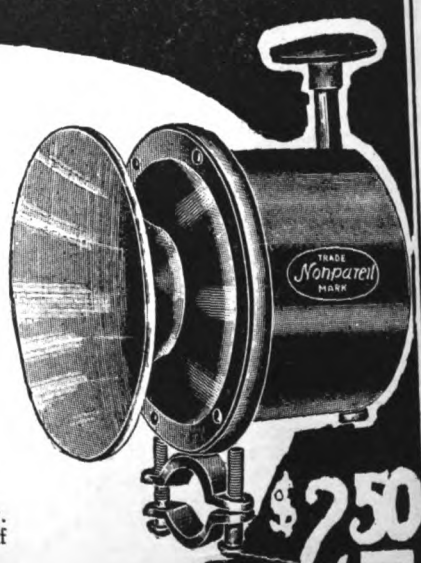
# BEE JAY HAS UPSET ALL HORN VALUES!

You will have to readjust your ideas on horn values when you see for yourself the marvelous lightness, simplicity, and strength of the BEE JAY, hear the deep, harsh warning note it utters, learn the unheard-of price.



Only specialized horn-making facilities like ours, second to none in the world, permits us to turn out a horn of such evident value for $2.50.

The BEE JAY is light, weighing only 21 ounces. Its deep diaphragm is backed by an equally deep sounding chamber which accounts for the power of its call. Vanadium and tool steel construction makes the BEE JAY sufficiently durable to outlast any motorcycle or bicycle.

The BEE JAY is making its low-price, high-quality appeal all over the country. It is THE horn of the day. It sells on its price, it is appreciated because of its quality.

# THE TALE THE TIRE TRACKS TELL

They tell a story of safe riding—on all roads—in all weathers. They tell of a marvelous endurance—of a riding confidence born of the knowledge that YOU GO WHERE YOU STEER—always.

Watch for the tracks of the CHAIN TREAD—they're on nearly every road. Note how clearly and firmly these tracks stand out above all others.

These tracks are made by men who KNOW—

That UNITED STATES CHAIN TREAD TIRES will give greater mileage, more real non-skid protection, look better and resist punctures more effectively than any other motorcycle tire on the market today.

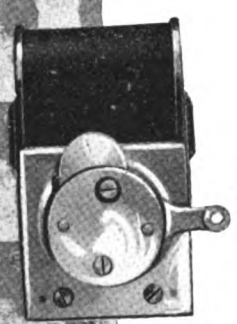
# DIXIE MAGNETO



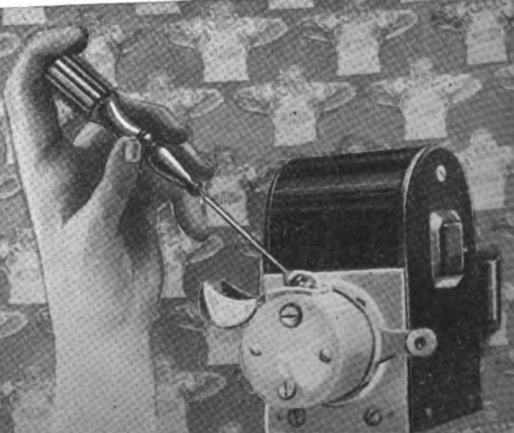
## OUR CLAIMS

A year ago the DIXIE Magneto made its first public appearance and our claims for it then were:

**Greater simplicity of construction**
**Better accessibility**
**Quicker pick-up**
**Livelier get-a-way**
**Longer endurance**

than was to be found in any other magneto in existence.

We repeat and emphasize our early claims for the DIXIE — after a year's gruelling test in the hands of thousands of users on road and track — on hike or race — after the hardest analysis of usage DIXIE Magnetos are without a rival in perfection of performance — in being the ideal ignition for every motorcyclist.



A distinctly new magneto feature—the platinum points external to the main breaker-box. With this it is possible to observe and adjust the breaker points, if necessary, while the DIXIE Magneto is running.

Digitized by Google

# 20th Century IGNITION

## OUR PROOF

The DIXIE Magneto received its baptism in actual contest in the Grand Prize Race at Savannah last Thanksgiving Day. Lee Taylor, who "landed the turkey" with a DIXIE-equipped *Indian*, wrote:

> "I wish to state that during the 303 miles of the Savannah Grand Prize, your DIXIE MAGNETO and SPLITDORF SPARK PLUGS never missed an explosion. We think the combination is the world's best motor ignition."

Ray Creviston cleaned up in the professional national championships at Sacramento —the one truly national racing meet of the year—showing his heels to the crack speed masters of the country with his DIXIE-equipped *Indian*.

Earl Armstrong, astride a DIXIE-equipped *Indian*, smashed all previous records for 300 miles, his 3:45:27 9/10, being 10 minutes and 18 seconds faster than the International Dodge City time.

And then the other day E. G. Baker, of Transcontinental SPLITDORF renown —took the 3-Flag victory and he telegraphed:

> "With my '16 DIXIE-equipped *Indian* motor I experienced no trouble and had best results on 3-Flag record run from Canada across United States to Mexico. Total mileage, 1655½; time, 3 days, 9 hrs., 15 min.; av. per day, 475 miles."

A Gold Medal—the highest award in their class at the Panama-Pacific International Exposition—was another of the highest of the year's achievements for DIXIE Magnetos.

## When You Place Your

# DEALERS!

## These Tires Help Sell Any Motorcycle Made

BLUE Streak Tire equipment settles many a sale where the buyer is in doubt which motorcycle to choose.

Remember this when you place your order for your new stock of motorcycles. Insist on *Blue Streak* Tire equipment. You'll find that about nine riders out of ten now want them.

Blue Streak is the tire *classic* in motorcycling. Its brilliant record on track and road is admired even by rival tire makers. It's the pride of riders everywhere, and thousands are won to Blue Streaks every year.

So don't overlook the value of Blue Streaks on the machines you order. *You can cash big on this tire's immense popularity,* like thousands of good live dealers are doing.

For the sake of satisfied trade and bigger business insist on these Blue Streaks.

**EXTRA! EXTRA!**

**Blue Streak Tires Capture the World's Speed Classic**

Twenty-five speed kings fought for the world's supremacy at Chicago's famous speedway last Sunday, and every man of them rode Blue Streaks.

Every inch of the way, for three hundred miles, this tire withstood the terrific speed, the blistering heat, the rough boards, the fearful grind. No motorcycle tire was ever called to perform like that before. It was the supreme test.

From the mile to the 100, 200 and 300 miles all world's records were beaten. Yet this was achieved with scarcely a mishap. And Blue Streak tires, remember, helped these men to do that.

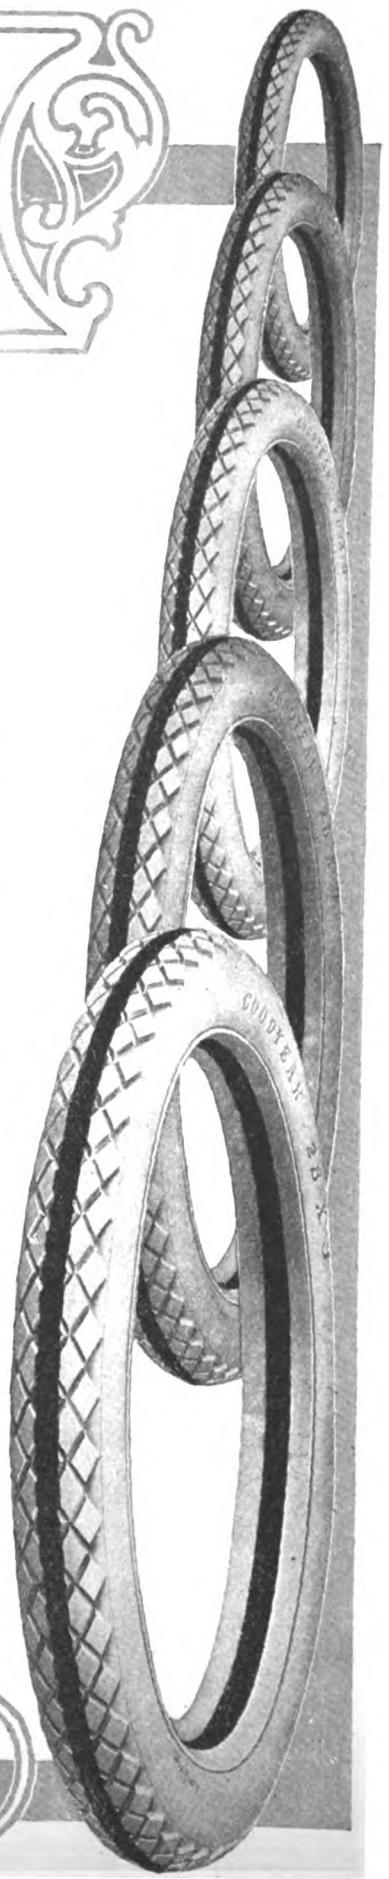
## Order for Motorcycles



## RIDERS!

### Tell Your Dealer—"I Want it Equipped With Blue Streaks"

REGARDLESS of which *motorcycle* you choose, request your dealer to have it come with these classic *Blue Streak* Tires. He will be glad to get you the best that men know how to make—and Blue Streaks have proved their excellence again this year by sweeping the field in all important tests of speed and endurance. In July alone they broke all previous records for one mile, 100, 200 and 300 miles. Since then they've made new world's records for 25, 50 and 75 miles.

More Goodyear automobile tires are used than any other make. And our Motorcycle Tires long have led the world about three to one. Yet we're spending *$50,000.00* for betterments this season. And our prices are 15 per cent below last year's—due mainly to quantity sales.

The Blue Streak is in fact a small-size automobile tire—28 x 3. Built of four plies of extra strong fabric, a special breaker strip and the handsome All-Weather tread of rows of rugged blocks, with blue circle 'round the middle.

This tread is extra-wide, so it grips the road securely when you turn sharp curves. It is tough and extra thick, so it multiplies mileage and resists punctures. The blocks are flat, so the Blue Streak rides with smoothness and luxury no rival tire can match.

Insist on *Blue Streaks* and you'll get them, like thousands of others who are riding now on this top-class tire.

# CARL GOUDY WINS CHICAGO TRIPLE-CENTURY AND HANGS UP NEW RECORDS

## *Comes Up on the Field with His Excelsior Through Consistent Work and Has Wide Margin at Finish; Carroll, Indian, Second, and Weishaar, Harley-Davidson, Third; Walker Lands 100-Mile Prize*

SPEEDWAY PARK, Ill., September 12.—Carl Goudy, of the Excelsior camp, once more demonstrated his reliability as a long-distance motorcycle speedster in the 300-mile race at Speedway Park this afternoon, leading the classy field home in 3:29:51⅘ for the 150 hard-fought laps.

**Carl Goudy, First**

Teddy Carroll, on an Indian, was in second place. Goudy led Carroll over the tape by nearly four laps, or about eight miles and broke all previous records for the 300-mile distance.

Ray Weishaar, Harley-Davidson, was third in 3:35:17, two minutes behind Carroll. Bill Brier, Harley-Davidson, fourth, in 3:37:08; B. Bruggerman, Excelsior, fifth in 3:39:10, and Earl Armstrong, Indian, sixth, in 3:39:14.

Each of the men who finished in the money, as well as Ray Seymour, "Red" Parkhurst, Georgie Lockner, Fred Whittler, Lee Taylor and W. R. Kemp, who were still pounding the boards when the sixth man was flagged, deserves a lot of credit for the endurance and generalship displayed. The machines themselves, together with the equipment they carried must also be remembered.

The day was the hottest Chicago has had this summer, and it was freely predicted that many stops would be made throughout the grind for tire changes.

**Teddy Carroll, Second**

But the Goodyear Blue Streaks held up wonderfully well, not more than four changes being made throughout the day.

### Donovan on the Job

The stands were sparsely filled and the full military band worked overtime to keep the crowd in a good humor until the race was called. After the boys were lined up in three long rows clear across the track, John L. Donovan, who was official master of ceremonies, shook hands with each of the riders and asked them if they knew the track rules and were in good condition physically. This is a little precaution the present competition chairman has adopted.

Once around the track and the race was officially on. With engines volleying like the roaring of thunder, the two score and six machines shot out in a bunch, so close together that if a mishap had occurred to one of the riders many would have gone down with him. It was the most exciting start ever witnessed in these parts and the hundreds of riders, dealers and others who had journeyed far to see it shouted with enthusiasm. The time of the start was 1:22:10.

### Thrilling Generalship

The crowd watched the turn into the homestretch eagerly, many favorites hav-

*Average, 85.71 miles per hour.

ing been picked in the stands. Bruggerman, on his Excelsior, was the first to head his machine toward the starting line again, but by the time he reached the stand he had fourteen others at his heels, seven of whom he could almost have touched by reaching out his hands. This gives an idea of how closely the boys were bunched. Had there been one "dub" rider in the crowd there is no telling what might have happened in many of these tight squeezes, but every rider was a general and a past master in the art of riding the boards.

As the crowd rounded into the straightaway in the finish of the second lap McNeil, on his Excelsior, was leading by twenty feet and in the third lap he had lengthened this lead by another ten feet. "Teddy Bear" Carroll, on his red warhorse, had a mishap in the third round with his driving chain but reached the pits without pushing or pedalling. In 19 seconds he was off again to work harder than ever to "cop" the thousand bucks, the first real big money the boys have had a chance at since Joe Wolter wore short jeans.

### Perry Is Popular with the Fans

In the fifth lap, after ten miles, Bob Perry came limping in with a fouled spark plug, and right there he established himself as the popular idol of the speed fans. Many were the expressions of regret at his hard luck, and the cheers which were given him on his return to the track 40 seconds later could be heard above the shrieking of the motor—which, incidentally, is some send-off. Every time he passed the stands thereafter the crowd gave him some encouragement.

McNeil guarded his lead jealously until the 11th lap when Ray Weishaar, on his Harley-Davidson, had a sudden burst of Kansas speed and literally ran away from the field. Gene Walker and "Curley" Fredericks, on an Indian and a Harley-Davidson, treated the crowd to a thrilling little race by themselves dur-

Bob Perry—Still Smiling

ing the 11th and 12th laps. "Curley" was so close to the rear wheel of Walker's machine that it looked as though he were trying to touch tires.

### Walker and Fredericks Show Speed

The pace was telling on both boys and after two laps they settled down to more sane riding. Fredericks took a header the next time around, but luckily the boys had separated. The tire on his back wheel blew while he was doing something over ninety per, caught in the small mudguard and crumpled it as though it were paper. Riding the rim was no novelty to "Curley," but no man lives who can pilot a machine for any great distance at that speed with one wheel sliding on steel.

With the wheel entirely locked he managed to slide along for two hundred feet before it commenced to wobble, and then—some header. He held his head to one side and landed on his shoulder, jumped up, lifted his machine, and pulled it out of the way of the other riders.

### Bruggerman's Consistent Work

Stokes was playing in hard luck and accompanied Bob Perry into the pits, each with minor trouble. Bruggerman, their team mate, who had been going strong all of this time, was given the flag to stop and obeyed instructions at the end of the first fifty. McNeil did the same in the next round. By the 34th lap Otto Walker, Harley-Davidson, had really come into his own and was riding a strong race. Bruggerman, on the Excelsior, was a close second with Roy Shaw, the California boy, on an Excelsior fighting for a position in front. In the 34th lap he succeeded in forcing his way through and sat tight in the coveted position until the 39th.

McNeil wrested the first position from Roy after a beautiful two-round battle, but only to find another opponent, Otto Walker, fresh for a skirmish. Otto slipped over some speed and from then on up to the 100th mile it was a battle royal between Bruggerman and Walker.

The race between Walker and Bruggerman for the 100-mile record was so close that there was a difference of opinion as to which rider had landed it. The first report stated that Bruggerman had been given the record, under a protest from the Harley-Davidson company, but a careful study of the times led Referee Yates to declare in Walker's favor.

### Acrobatics at the Pits

The big show of the race about this time was "Slim" Cholly, of the Excelsior camp, catching his riders as they would pull into the pit. All he has to do is to stand in front of the machine, let the wheel hit him and then catch hold of the handlebars on the rebound. The two Goudy boys on the "Red" Armstrong stopped for fuel and then catch hold of the had been reeled off, and the hundred miles stops for the same purpose from then on until the whole field had been supplied. Glen Stokes was ticking off the laps

that nothing short of death itself could have kept him from entering.

**Pit Stop Crimps Bill Brier**

Fred Whittler worked his way forward in the 108th mile, his time for the distance being 1:14:21. Bill Brier had been edging toward the front up to this time, alongside of the Indian rider, and stood a good chance to "cop" the lead when in the 55th lap he pulled up at the pits. This put a bad crimp in Bill's chances, and from the time he re-entered the race until the very last minute he rode like a demon but could get no further ahead than third position. This, however, he closed with, feeling that $350 was pretty good for a strenuous afternoon's work.

The position on the leading riders in the 110th mile was as follows: Bruggerman, first, time, 1:15:43; Otto Walker, second; Ray Weishaar, third, and Bill Brier, fourth. Bob Perry's jinx overcame him as these boys were rounding into their 56th lap and the little student, who was then in this 45th lap, slid into the pits again. Still hopeful, he fought savagely with the attendants until he was back on the track.

**Averaged 90 Miles an Hour**

From the 100th to the 120th mile only 15:56 were consumed by Otto Walker and Bruggerman, who jockeyed back and forth for first place. The average speed for the first hundred was an even 90 miles per hour, at least four miles faster than anyone in the trade had dared hope for. The second hundred was reeled off at the rate of 86:76, and the last century at the rate of 85:71.

McNeil's motor, in the 63rd lap, developed a miss from a fouled plug, but he rode ten miles in the hope that both lungs would begin coughing again of their own accord. He was forced to stop, however, and utilized the time spent with the plug to take on additional supplies.

Otto Walker retained his lead until the 160th mile, through clever handling of his mount, but here the nervy Carl whirled past with Bruggerman hot on Goudy began pushing him and taking his pace. At the 150th mile post Otto had his trail, the time being 1:44:40. Kemp, on his purring Henderson, realized that he was outdistanced, but showed his gameness by sticking to the grind. If he did nothing else he demonstrated that the popular four-cylinder engine will stand the gaff no matter how strenuous. He made but two stops, one for fuel and the other for fuel and a new plug.

**Goudy Begins to Show Class**

At 170 miles, when Goudy was recognied as a serious contender for first place, everybody remembered his many previous long-distance performances and the spectators pulled for him. His time for 170 miles was 1:58:27, and right at his heels were his brother Bill, "Red" Armstrong and Roy Shaw.

From then on until the finish of the long grind Goudy did not relinquish the position once, and when he stopped for fuel he saw to it that his lead was sufficient to take care of the lapse of time spent at the pits. At 200 miles his time was 2:18:19, and his lead was a fraction over one lap. After sewing up the second century he saw Shaw on his Excelsior in the distance and determined to pass him. He did; but Roy accepted the pace of the speedy Carl and hung on for dear life.

**All Over But the Shouting**

The Fairbury boy made his 125th "revolution" just 2:54:46 after the starting time, pocketing the bacon for keeps, as from then on until the finish he was never sighted by the other contenders. Gene Walker "busted" up to the pits in the 133rd lap carrying his driving chain, but as it was quickly replaced Gene lost but little time on that account.

In the 140th lap, with only twenty miles farther to roll, the lucky thirteen were still in the game and fighting hard. These were Carl and Bill Goudy, Ray Weishaar, Seymour, Parkhurst, Carroll, Lockner, Armstrong, Bruggerman, Brier, Whittler, Taylor and Kemp.

**Goudy's Time 3:30:20**

The 145th lap, 290 miles, saw Carl still far in the lead with the time consumed 3:22:57, and the following trying their gol-dingest to catch him: Brier, Carroll, Bruggerman and Armstrong.

Carl rolled across the tape after making the 300 miles in 3:30:20, so far in the lead that he did not bother making the extra precautionary lap which he is accustomed to ride. He was carried on the shoulders of his many friends over to the movie man and introduced as the man who rode the fastest two hundred and three hundred miles in competition on record.

## ACTIVITY AT THE PITS

OLD Sol sure did his best to discourage the boys at the pits. The concrete reflected his rays, making it doubly hard to bear up, and the attendants admit that were it not for the lack of tire changes the afternoon would have been some Turkish bath. The only man who had a real cinch was the attendant for Kemp, the Henderson pilot. He had the real dyed-in-the-wool vacation, doing nothing but fill the tanks twice and change a plug for his day's pay.

Carroll was the first Indian to roll up to the pits; he carried his chain and pleaded for quick assistance. He stopped again in the 50th and the 110th for fuel.

Fouled plugs brought Lee Taylor in for help in the 19th and the same jinx followed him in the 26th and 30th. In the 81st and 131st he took on fuel.

Digitized by Google

Alva Stratton dropped out in the 17th lap with a stripped gear shift. He stayed out.

The fouled plug hoodoo caught Gentleman Ray in the 31st. In the 51st he broke a chain but took on oil and gasoline while it was being fixed. In the 93rd and 111th he repeated, with both plugs and supplies.

Paste and tape failed to fix a leaky oil tank for the famous Don Johns, and in the 82nd lap he dropped out, so oil begrimed that he was not recognizable.

Red Armstrong was signalled to come home in the 50th lap for fresh supplies. Three laps later he pulled up with a rear wheel that had lost alignment and was quickly fixed. More gas was taken on in the 102nd and in the 119th his front wheel was tightened.

Morty Graves made the regular signalled stops for fuel, and in addition changed plugs. A broken crankcase finally eliminated him in the 71st.

Besides the supply stops of Harry Glenn he changed plugs in the 99th. A broken piston put him out in the 104th.

Freddy Whittler took fuel in the 50th and in the 76th stopped again with a broken chain. New plugs and a new rear cylinder were given him in the 96th. In the 110th he stopped again for a plug but the life of the new device was short as the crankcase had filled with oil and the plug quickly fouled.

Joe Wolters, the veteran Riverview idol, blew a tire in the 17th, broke a chain and sprung his frame. That was enough to put Joseph out, but he sure did hate to quit.

"Curley" Fredericks, whose spectacular spill has already been described, ended his trip with the accident.

Ray Weishaar stopped in the 27th, 79th and 124th laps for fuel.

"Red" Parkhurst rode in tough luck. In the 48th lap his brake stuck and the inlet valve also went wrong. While these were being repaired he took fresh supplies, and replenished again in the 96th. The first stop cost him the race as he spent nearly a half hour at the pits.

Otto Walker stopped in the 50th lap for gas and oil, and 35 laps later pulled up for a new plug. In the 95th lap he broke a valve and was out.

Bill Brier took gas and oil in the 54th and again in the 100th, changing a spark plug in the 131st.

Bob Perry wanted a new plug in the 8th circut, a new terminal in the 14th, oil and gas in the 26th and 50th and a piston in the 51st. This put the plucky little rider out of the running.

Glen Stokes stopped in the 15th with a broken exhaust valve, the same trouble in the 38th, gas and oil in the 52nd and was out in the 59th with broken valves.

Bruggerman pulled up in the 24th for fuel, again in the 51st and again in the 101st and the 126th. No mechanical trouble bothered Bruggerman.

McNeil took gas and oil in the 26th, more supplies and a fresh plug in the 44th, a new intake valve in the 45th, a plug in the 46th, another plug in the 49th, a valve in the 67th and a broken piston put him out in the 86th.

Geo. Lockner took supplies on his 40th lap and a new tire and manifold in the 50th. He was given an entire new front wheel in the 82nd, and in the 106th stopped for gas and oil.

Roy Shaw stopped in the 44th for oil and gas; again in the 89th. He developed motor trouble in the 92nd.

Carl Goudy did not stop until the 51st, when he was flagged for gas and oil. His next stop was the 102nd for the same reason, and in the 111th he pulled up to the pits with an imaginary case of trouble.

His brother Bill stopped with him for supplies but in the 105th had a broken valve and dropped out.

## JOTTINGS ON THE SIDE

MONTGOMERY took a nasty spill during practice, adding considerably to his collection of slivers, but otherwise was not seriously hurt.

The prize money was $1,000 for first; $600 for second; $300 for third; $250 for fourth; $150 for fifth and $100 sixth.

The Indian introduced a novel scheme at the pits, using an adding machine to check the red boys as they shot by.

The Goodyear crew was superintended by the popular Jack Cameron, H. S. Quine, Ernest P. Brunswick and F. H. Ferguson.

The Harley-Davidson delegation from Milwaukee included Bill Harley, A. E. Becker, Hugh Sharp, F. B. Rodger, E. J. Muehler, T. A. Miller, J. J. Balsom and Harry Osborne.

Big E. G. Baker, of Indianapolis, was busy shaking hands all around, everyone wishing to congratulate him on his recent three-flag victory. Paul Derkum, who came on from California with him, was ever at the side of the "war horse."

The Harley-Davidson team was ably handled by Bill Ottaway. Bill had the assistance in this work of some hundred or more enthusiastic riders who journeyed to the Windy City from Milwaukee.

The Hendee camp included such notables as F. J. Weschler, the popular Charlie Gustafsons, father and son; Jesse Edwards, Paul Derkum, Doc "Yak" Magill, Lon Claflin, E. G. Baker, Carl Modig, Ollie Ross, Arch Strong, Harvey Bernard and any number of dealers from out of town.

The full list of starters in the race was as follows: B. Bruggerman, Excelsior; W. R. Kemp, Henderson; Don Johns, Indian; Joe Wolter, Harley-Davidson; J. A. McNeil, Indian; Earl Armstrong, Indian; Otto Walker, Harley-Davidson; Bob Perry, Excelsior; Morty Graves, Indian; Leslie Parkhurst, Harley-Davidson; Glen Stokes, Excelsior; Ray Seymour, Indian; Carl F. Goudy, Excelsior; Harry Glann, Indian; Bill Brier, Harley-Davidson; Fred Whittler, Indian; Morris Fredericks, Harley-Davidson; Geo. Lockner, Excelsior; Lee Taylor, Indian; R. L. Shaw, Excelsior; Gene Walker, Indian; Bill Goudy, Excelsior; Ted. Carroll, Indian; Ray Weishaar, Harley-Davidson; Al Stratton, Indian.

Goodyear Blue Streak tires were equipped on all of the 25 starters. During the entire race only four tire changes were made, two on Harley-Davidsons and two on Excelsiors. The Indians and Henderson had no tire changes at all. The track was rough and the heat terrific, so it was generally agreed that this was some tire performance. Ernie Brunswick and Ferguson, of the Goodyear factory, might as well have gone fishing for the afternoon; they were not called on once during the entire contest.

Ray Weishaar had a piece of hard luck towards the finish that, in his opinion, cost him second place if not the race. Weishaar's helmet came unfastened while he was leading, and for four laps he held it in his teeth, finally throwing it into the pits. The referee made him stop for another helmet, and Ray lost just enough time to affect him seriously at that critical stage of the contest.

Otto Walker used a new Harley-Davidson mount in the race, preferring to enter it instead of his old standby, the fastest stock Harley-Davidson at Chicago. He expressed himself as entirely satisfied with the work of the new machine, and the fact that he had a lead of two laps in the 188th mile (in which he broke a valve) indicates that he must have been getting something out of his mount.

The United States Tire crew were under the guidance of T. A. Jordan, factory superintendent, of Indianapolis; F. C. Baldridge, of Indianapolis, and J. J. Alexander, of the Chicago branch.

In addition to copping the big purse Carl Goudy picked up a few extra shekels for winning the big race. He received $100 from Fred Mathis, sales manager for the Excelsior; $50 from Frank Schwinn, and $50 for using Monogram oil.

Firestone uniforms were worn by all pit workers at the track, the garments being given out with the compliments of the Firestone company. O. E. Speaks came over from Akron, and H. W. Darrow, William Fitzgerald and A. W. Moore were on hand from Chicago.

# MOTORCYCLE VOLUNTEERS TO PLAY BIG PART IN MANEUVERS

## Major General O'Ryan Approves Plan to Use Hundreds of Riders in Various Capacities in New York National Guard Program at Van Cortlandt Park Sept. 25; Call Is Issued to Motorcyclists

AN encouraging display of enthusiasm marked the meeting held at the Coast Defense Armory, Park avenue and Ninety-fourth street, New York, on Wednesday evening, September 8, for the purpose of planning the part to be played by motorcycle volunteers in the maneuvers of State troops in Van Cortlandt Park, September 25. One hundred and fifty riders were in attendance. Colonel Regan, of the staff of Major General O'Ryan, commanding officer of the New York National Guard, was sent from Albany to address the meeting. He discussed the possibilities of the power two-wheeler as an adjunct to the military, and was firm in the opinion that the value of the motorcycle as an aid to the army will be fully appreciated as soon as motorcyclists are given an opportunity to demonstrate their prowess.

Colonel Regan explained that the regulations under which the National Guard operates are based upon the provisions obtaining in the U. S. Regular Army, and that certain legislative changes will have to be made before the State can avail itself of the motorcycle in military service. The chief purpose of the demonstration to be given at Van Cortlandt Park, September 25, is to bring home to the "powers that be" the unreasonableness of barring the motorcycle longer from the national defense plans.

### Ten Riders as Orderlies

By way of calling special attention to the effectiveness of the motorcycle Major General O'Ryan has issued an order detailing ten motorcyclists to serve as orderlies for the headquarters staff during the Van Cortlandt Park maneuvers. The business of these riders will be to convey orders from the headquarters to the various brigades. In addition, one company of fifty motorcyclists will be attached to the main advance guard of the cavalry to act as scouts for that body.

L. H. Guterman, president of the Harlem Motorcycle Club, who has just returned from the Business Man's Camp at Plattsburgh, N. Y., where he was attached to one of the regiments as scout and orderly, gave his views at the armory meeting on the work performed by motorcycles and bicycles at Plattsburgh. He stated that the officers at the camp were very favorably impressed by the showing made.

### The Executive Committee

Another meeting of motorcycle volunteers was called for Wednesday evening, September 15, when squad, section, platoon and company leaders will be selected for the Van Cortlandt Park maneuvers. An executive committee was also formed, consisting of Colonel Regan, ex-officio; Lieut. Alexander Perry, chairman; B. F. Edgar, H. H. Powell, L. H. Guterman, August Rotholz and G. E. Wood.

Lieutenant Perry, L. H. Guterman and Gus Rotholz were appointed a sub-committee to get in touch with all the motorcyclists in Greater New York in order to enlist their co-operation.

### Official Formation

The official formation of the motorcyclists in connection with the maneuvers on September 25, will be as follows:

Three squads of three privates each, and one corporal, in each section under command of a sergeant. This accounts for 13 men, nine privates and four officers. There will be four sections, as above, in each company, under command of a lieutenant; 54 men in all, 36 privates and 18 officers. In addition there will be one first sergeant to each company.

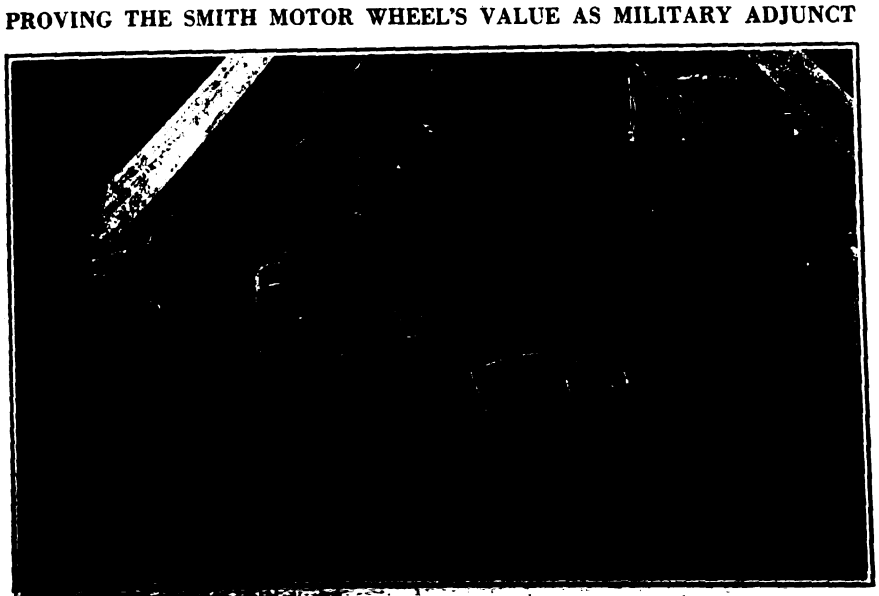
The riders will be detailed as follows: One company of sidecar combinations to the Sanitary Department and Hospital Corps; one company of solo riders for orderly duty; one section for duty with the headquarters staff, of which one squad will be sidecar riders; one section of solo riders for scouting, one section of tandem machines for scouting. The remaining riders will be apportioned among the various commands.

### Point of Assembly

The motorcycle volunteers will assemble on Kingsbridge Road and Jerome avenue, in front of the Coast Defense Armory, at noon on Saturday, September 25, and will move promptly at 1 p. m. The riders will select their own squad leaders or corporals, and the latter will report for special instructions at the armory on Sunday, September 19, at 11 a. m.

The Hendee Mfg. Co. will send two sidecar outfits to New York for the maneuvers, one equipped for hospital duty and the other carrying a machine gun.

## PROVING THE SMITH MOTOR WHEEL'S VALUE AS MILITARY ADJUNCT



L. H. Guterman at the Business Men's Military Instruction Camp, Plattsburgh, N. Y., Where He Used the Motor Wheel for Scout Work

## MEET TO ORGANIZE CORPS

A meeting of motorcyclists interested in the organization of a motorcycle corps in New York State was held at the Eighth Regiment Armory, 94th street and Park avenue, New York City, on Tuesday, Sept. 14. Capt. Lorillard Spencer presided. After a few introductory remarks, outlining the purpose of the corps, Capt. Spencer spoke of the interest which Gen. O'Ryan felt in the movement and called upon State F. A. M. Commissioner G. A. Ellis, and a number of regular army officers to address the two hundred riders present.

Riders were divided into three classes, solo, tandem and sidecar. A call for drill and formation was issued for 8:30 a. m., Sunday morning, Sept. 19, at the armory building. Corporals, sergeants and lieutenants will be selected at that time for the maneuvres on the 25th, at Van Cortlandt Park. One company will escort Gov. Whitman to the scene of the maneuvres.

## OPENS REPAIR SHOP

Brooklyn, N. Y., September 14.—E. M. Van Name, formerly connected with the Brooklyn Thor agency, has opened up a repair shop in connection with the Cyclone agency at 1213 Bedford avenue.

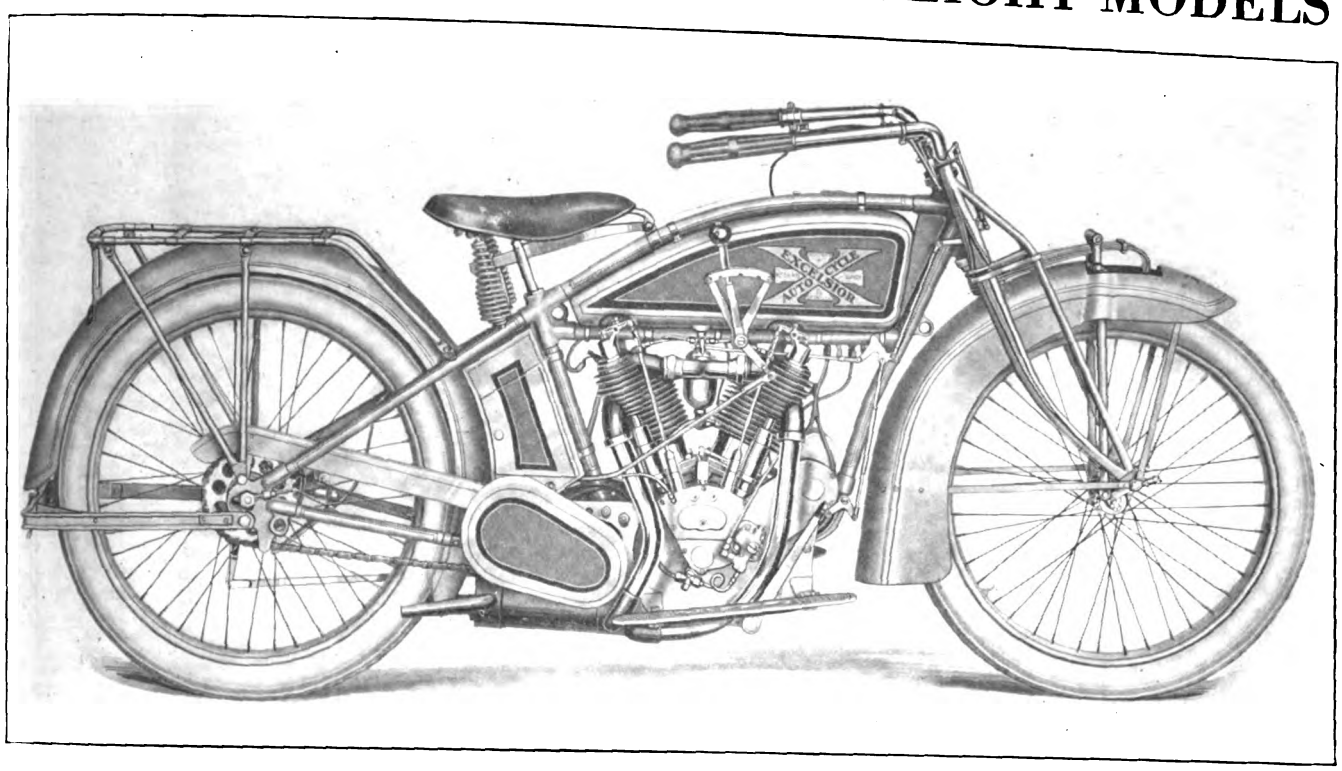
# EXCELSIOR POLICE AND LIGHTWEIGHT MODELS



**Right Side View of 1916 Excelsior, Model 16-1, a Single-Geared Twin**

FOUR models of the "16" series and a brand new lightweight are the offerings of the Excelsior Motor Manufacturing & Supply Company, of 3703 Cortland street, Chicago, Ill., for 1916. Of the "16" series, Model 16-3 is a three-speed twin, Model 16-1, is a single-geared twin; the Police Model is a new machine of great speed capabilities, and Model 16-S.C. is of the short-coupled speed type. The lightweight is of the two-stroke type with a two-speed gear, with combination drive.

The Model 16-3, is practically identical with the Model 15-3, the three-speed twin of the 1915 season, designed for heavy duty and sidecar service. The motor is practically the same as in 1915, with a bore of 3 21/64 and a stroke of 3½ inches, with a piston displacement of slightly less than 61 cubic inches. The cylinders are in one piece, with valves in a side pocket, the exhaust valves being operated by direct thrust and the inlets, in a cage overhead, being operated by a push rod and rocker. The exhaust mechanism is fully enclosed and there is a telescopic sleeve fitted to each inlet pushrod. The exhaust valves are easily adjusted by telescoping the sleeves surrounding the valve stems and springs, while the inlet valves are regulated by means of an adjusting sleeve at the top of the push rod. There are ball and socket joints between the top of the long push rods and the ends of the rocker arms.

### New Priming Device

The 16-3 motor is fitted with a new priming device, being a quick-acting needle valve in the bottom of the fuel tank directly above the motor. There are two leads for delivering the fuel directly into the passage over each inlet valve. It is only necessary to turn the needle valve handle a quarter turn and hold it there for a short time, as the L-handle of this valve points downward when closed it will not jar open at any time. This device replaces the priming cups fitted on previous models.

The motor is lubricated by the Excelsior direct-acting gear-pump, delivering oil through a distributing valve to the right main bearing, and front cylinder. The oil going to the main bearing also takes care of crankcase and cam gear lubrication. A hand pump entirely enclosed in the oil compartment of the tank is fitted for emergency service. The carbureter is the new Schebler model H with auxiliary air valve. The muffler is of a new design, giving great silence without back pressure.

### Transmission Details

The power of the motor is transmitted through the three-speed gearset mounted in countershaft position by means of a roller chain, with final drive to the rear sprocket on the right side. The object of this drive is to distribute the strain on the rear frame, and obviate any distortion that may arise from a chain-pull all on one side. The clutch is of the Eclipse multiple disc type, mounted on the main shaft of the gear set and is controlled by a foot lever at the left side of the machine and by the left grip. The clutch is lubricated by oil passing through the hollow main shaft of the change gear to the center of the clutch, where it is distributed to the plates and other clutch members by centrifugal force. The gearset is of the sliding-dog and gear type, all gears and pinions being of nickel steel. The dog-clutches are cut so as to facilitate instant engagement with the minimum of shock and the maximum of positivity, thus preventing slipping and damage to the gear teeth or the clutches themselves. High and low speeds are by means of the dog-clutches, while the intermediate speed is had through sliding a pinion on the main shaft into mesh with a gear on the side shaft. The gear teeth are chamfered to permit of this being done readily.

Extra large ball bearings are used to support the main shaft. These bearings are of the annular type and are open to the interior of the casing to ensure ample lubrication. Escaping oil is prevented by felt washers in combination with very accurate fitting. Gear changes are effected by a lever on the right side of the frame, and an automatic gear lock is provided, preventing shifting without first disengaging the clutch. The gearset is lubricated by heavy oil introduced through a filler cap in the top of the casing. A drain plug in the base is used to run off stale oil and to clean out the set with kerosene. In the 16-3 there is a neat little device for adjusting the shift, consisting of a screw stud in the base of the hand lever where it is readily accessible without the rider coming into contact with any other part of the machine.

### Brake and Hub Construction

The rear hub and brakes are practically identical with those fitted to the corresponding model in 1915, except that the end-plate taking the braking strain is a nickel-steel drop forging made heavier than in the 15-3 machines. There is also a wider range of adjustment for both the internal and external members. The service brake is operated by a foot lever, being a Raybestos lined steel band.

The frame is of characteristic Excelsior construction with open base. This makes for simplicity of construction, while great strength is attained by the use of nickel steel drop forged units instead of a number of small connections and short tubes.

Digitized by Google

The head fitting is a single piece drop forging with integral connections for the top, brace and diagonal tubes. The seat post cluster, rear fork ends and rear motor supports, fork crown and front fork ends are all forgings of nickel steel. The frame tubing is of 12 gauge seamless cold-drawn steel.

### Cradle Spring Fork

The front fork is the familiar Excelsior cradle spring type with drop-forged crown plate, forged fork ends and tubular steel trusses. The fork sides are of seamless extension type, passing through the crown plate to the top of the fork, where they furnish a seat in connection with the fork stem for the three-point-connection handlebar. The ends of the handles are raised about 1½ inches as compared with those of 1915, giving a slightly higher position for the hands and more clearance of the top tube in making short turns. The rocker arms are improved over 1915 construction, which prevents striking through contact of any of the parts and gives a wider range of action. Compression grease cups in the forward side of the rocker arms take care of the lubrication.

The cradle springs are packed with heavy lubricant when the springs are assembled, ensuring long life to the parts. The head cups in the frame are now fully depressed in the fitting and entirely enclosed, preventing dirt and grit from entering as well as keeping the lubricant in its place. Such details as folding footrests, mudguards, luggage carrier and similar equipment are practically unchanged for the new season. The feature of grip control is retained and improved wherever possible. The throttle is operated by means of the right grip and there is a friction lock on the throttle which prevents its disarrangement without requiring attention from the rider. The pressed steel tank which characterized the 1915 models is retained unchanged, save for 1½ inch collars around the gasoline and oil compartments to prevent splashing out the vents or around the pump rod.

### Foot Starter Unchanged

The foot starter remains exactly as in the 15 models. It is of the gear and segment type, operated by a foot lever of the left side of the frame, where it is conveniently accessible with or without the sidecar being fitted.

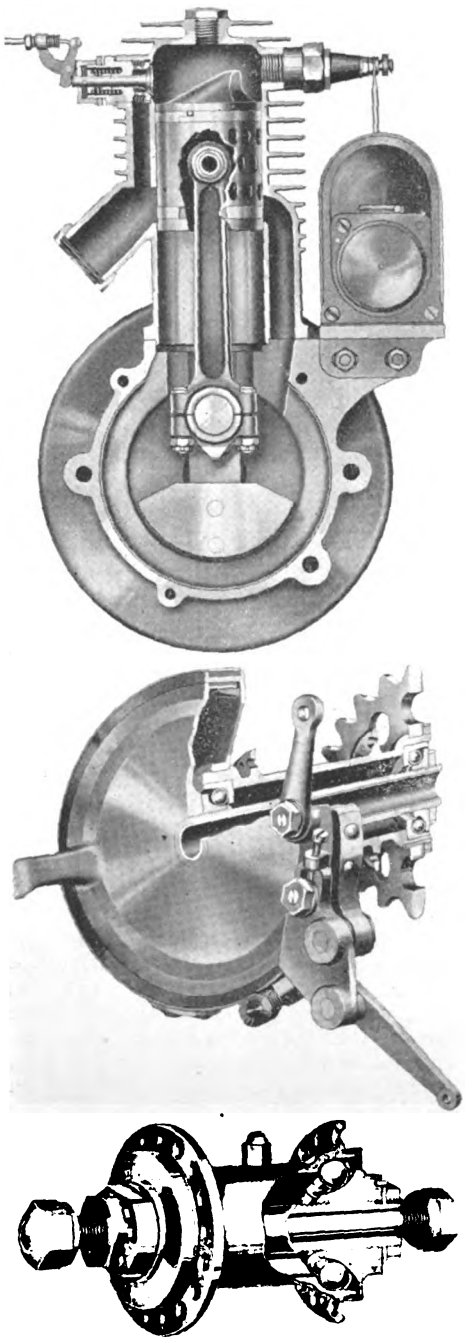
### Model 16-1 Details

The Model 16-1 is in every way identical with Model 16-3, except in not having the three speed gear. A neutral countershaft carrying the clutch is fitted, this countershaft having a single dog-clutch for disengaging the final drive to use the foot starter.

### New Police Type

The Police Model is a new one, specially designed to give a great range of speed from as slow as possible to keep steerage way to a guaranteed speed of 75 to 85 miles per hour. This machine is practically the same as Model 15-3, but is fitted with the Model 16 short-coupled motor. The variations in motor design from the regular speed type are in the matter of equipment only, and are in the carbureter and its appurtenances, to obtain a wider range of action and more economical gasoline consumption.

This machine was originally designed for the Chicago police, the officials of that body having learned through several years' experience with motorcycles that a man may be at any moment required to move very slowly through a crowded thoroughfare, or as an escort to a body of men on foot, and the next be called upon to chase a runaway team or fleeing joy riders in a high powered racing automobile. It is a well-known and acknowledged fact that under ordinary conditions a motor specially designed, timed and balanced for extreme speed will not render efficient service at low speed. It has, therefore, been the problem of the Excelsior designers to make a machine that would meet the requirements of both ends of the line. This they claim to have done in the new police model, backing it with a broad guarantee, and offer as proof the accomplishments of these machines in actual police service.



**Top—The Light Weight Motor. Middle—Brake on '16 Models. Lower—Front Hub Used on All Models**

### Short-Coupled Machine

The Model 16-S.C. is the short-coupled speed machine, specially designed for racing purposes. The motor is in a general way identical with the regular type, but it has specially-balanced flywheels, lightened reciprocating parts and huge valves. The entire cylinder, including inlet and exhaust passages is machined perfectly smooth, to give the greatest possible freedom for the passage of gases. The exhaust pipes are of the racing type and very large. Carbureter and inlet manifold are specially designed for high-speed service and are much larger than on the regular models.

The motor is lubricated by a regular gear-pump, and there is a special racing type of hand pump fitted outside of the tank. The fore part of the frame and tank is the same as in the regular 15-1, but the rear portion is shortened to obtain the desired short wheelbase. The front fork is of the rigid racing type, with trusses and drop handlebars. Power is transmitted through a multiple disc clutch and countershaft, chain drive of course being used. Pedals are fitted, the shaft passing through the hollow countershaft. Folding footboards are regular equipment.

### Double Brake Provision

Double brake application is provided, operating through pedals and foot lever at the left footboard. The front wheel is without mudguards, but there is a short guard in front of the real wheel to protect the motor from flying particles.

### Two-Stroke Lightweight

The Excelsior Lightweight is an entirely new product, one which has been designed throughout for lightweight service and not a product reduced in weight or size. It is distinctly foreign in appearance, but is thoroughly Americanized in simplicity of control and interchangeability of parts. The frame marks the first departure of Excelsior designers from the open bottom type, as the light motor is not adapted to this form of construction. Neither is it of sufficient weight and size to necessitate setting low enough to require an open frame to attain a low center of gravity. The two-speed housing on this model, which lies between the crankcase and the seat mast has to be supported, hence the frame construction adopted.

The motor is of the two-stroke type, with three ports. The cylinder is in one piece, while the crankcase is arranged in vertical halves. The flywheel is outside the crankcase, and has a heavy rim, giving great flexibility. There are but three working parts, the piston, connecting rod and crank. At the top of the cylinder is fitted the compression release valve or decompressor. Gases passing out of this device in starting the motor are led through a passage cast integral with the cylinder wall and thence to the exhaust pipe, passing out through the muffler.

### Shafts and Bearings

The main shaft bearings consist of a large annular ball-bearing on the left side and a long bronze bushing at the opposite side. Both main shaft bearings are fitted with packing boxes to prevent the escape of gas when it is being compressed in the crankcase. The packing used is a special

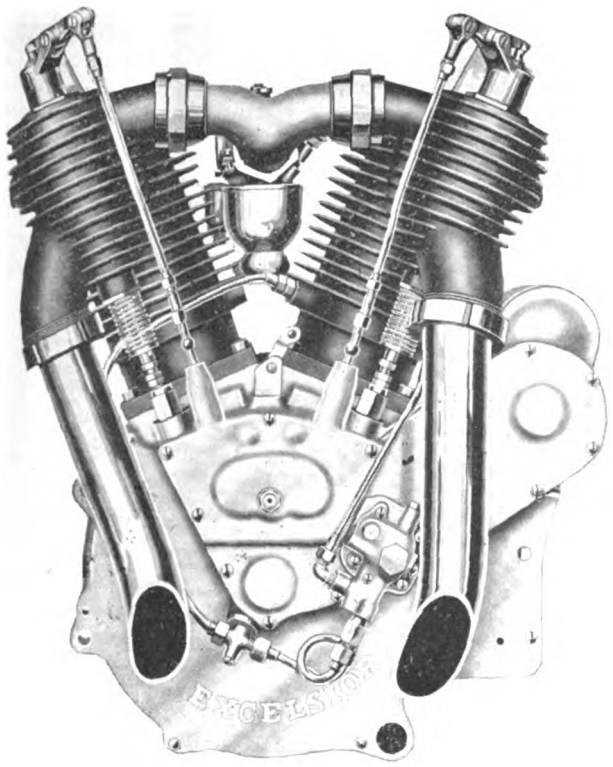
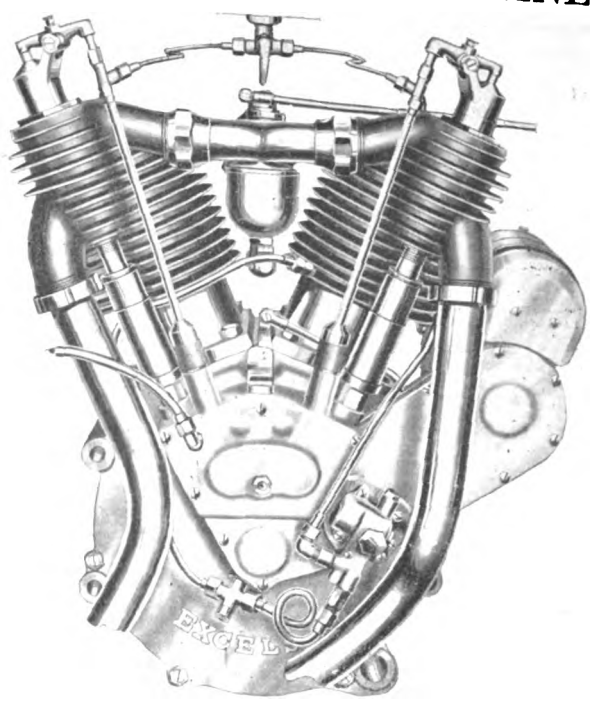
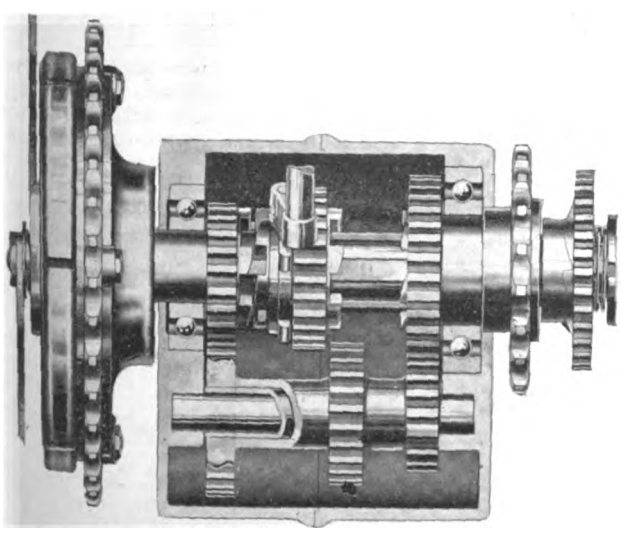
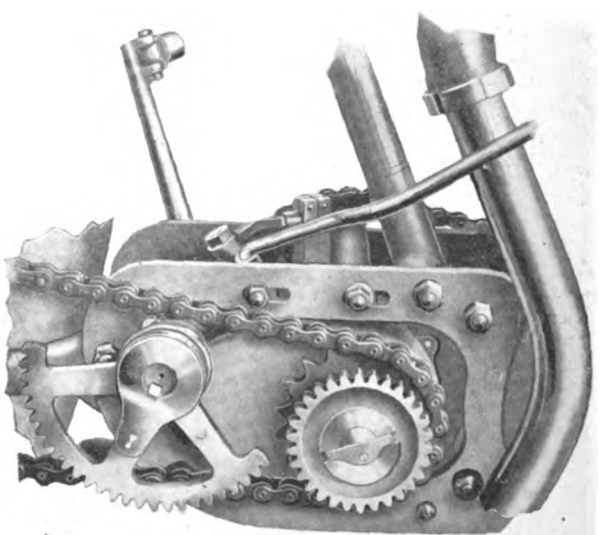
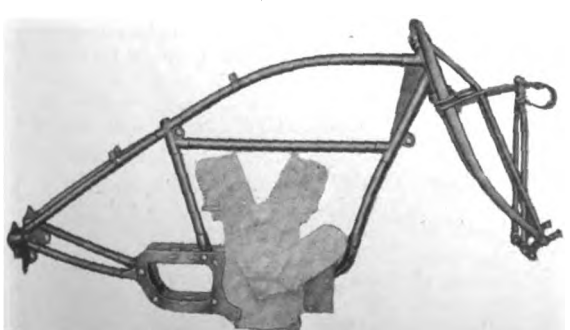
# SIX OUTSTANDING FEATURES OF THE 1916 EXCELSIOR LINE

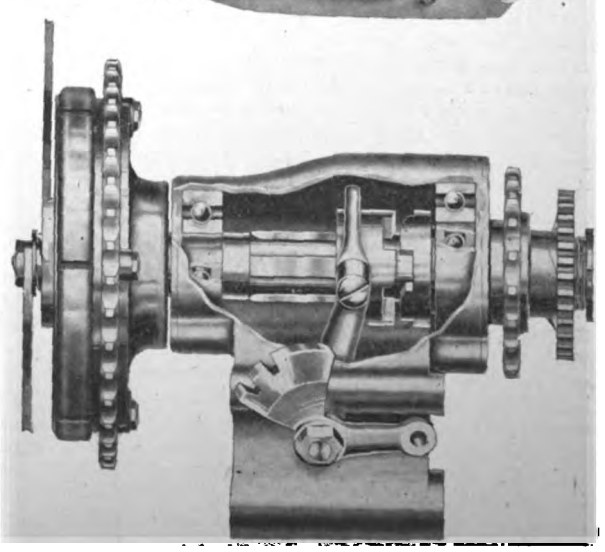












Upper Left, the Racing Motor; At Right, Model 16 Motor; Below At Left, the 3-Speed Transmission; At Right, the Foot-Starter; Bottom at Left, Model 16 Frame; Right, Neutral Shaft and Clutch on Model 16-1

Digitized by Google

compound that eliminates friction between the bearings and shafts. The crankshaft is a one-piece drop forging, machined throughout and fitted with counterweights. The connecting rod is of the marine type, with Non-Gran bushings. The flywheel is fitted on the end of the crankshaft. Much attention has been paid to balancing the motor, and there is no vibration at high speeds, even with the motor in a stripped frame.

The two-speed gear fitted is of the conventional sliding type with the main shaft running on ball bearings and the side or lay shaft on a steel pin with Non-Gran bushings. The gearset is small and compact. All gears are nickel steel drop forgings, accurately cut and oil-tempered. The primary drive, on the left side, is by chain from the motor shaft to a sprocket on the main shaft of the gearset, with final drive, on the right side, by V belt and pulleys to the rear wheel. The rear hub is merely a cylindrical ball-bearing hub minus brake and sprockets, the brake being a shoe working on the inside of the rear pulley.

**Novel Pulley Fitting**

The rear pulley is fitted to the rim by a series of short spokes with nipples practically the same as in the regular wheel construction. This enables the pulley to be readily centered and maintained in perfect contour. The motor is ignited by a high-tension magneto, and the carbureter is a special Schebler, designed for this motor. The front fork is of the tried and popular rocker type, pivoted at the crown and bearing by links against a spiral ring fitted to a forwardly-extending piece from the head. The front wheel is carried in the fork ends.

The gasoline tank is cylindrical and is suspended from the top tube of the frame. It is in two compartments, one for fuel and the other for oil. The latter compartment is provided with a draw-off cock and measure, the latter being used to determine the proper quantity of oil to put in a tank full of gasoline. From this it will be seen that the motor is lubricated on the injection system, where the oil passes through the carbureter along with the gasoline.

**Lightweight Equipment**

The Excelsior lightweight machine is fitted with spring seat post and foot rests, no pedals being fitted to this model. The finish is the same as on all Excelsiors: Excelsior gray with red trimmings. Its weight is about 112 pounds.

M. H. Parsons, formerly district sales manager of the Goodyear Tire & Rubber Co., has resigned to accept a similar post with the McGraw Tire & Rubber Co., of East Liverpool, O. Under the new arrangement Parsons will have charge of eastern territory under General Sales Manager C. E. Miley, while R. J. Delevan will supervise western sales.

Joseph L. Patenaude, who for the past five years has been connected with the service department of the United States Tire Co., first with headquarters in San Francisco, and later in New York City, died of heart failure early Thursday morning, September 2, while on a sleeping car between Springfield and Boston, Mass. He had been associated with the Hartford Rubber Works Co. and the United States Tire Co. since 1899.

Frank Chase, sales manager for the Frank Mossberg Company, of Attleboro, Mass., has recently returned from a short vacation at Nantucket. Mr. Chase set right to work on his return to the office in compiling the new Mossberg catalog, and the product of his labors will be ready for distribution very soon.

"Big Bill" Farrell, of the J. W. Grady Company, of 66 High street, Worcester, Mass., says that 1916 will be a banner bicycle year. "If bicycle sales keep up the pace that they have been going lately, 1916 will be a boomer," asid Mr. Farrell recently. "Everything indicates a prosperous buying esason and bicycle dealers will have a splendid opportunity."

C. K. Patterson, Dayton dealer at Newark, Ohio, visited the plant of the Davis Sewing Machine Company at Dayton, Tuesday, August 31. Mr. Patterson has represented the Dayton motorcycles and bicycles in Newark for a good many years and thinks that 1916 is going to be a banner year in the bicycle business with an increase in the motorcycle trade.

His opinion is shared by the Dayton agent at Cincinnati, Mr. Schuster, who visited the factory Saturday, August 28.

Joseph M. Gilbert, former general manager of the United States Tire Co., and later president of the Lozier Motor Co., of Detroit, has acquired a substantial interest in the Gibney Tire & Rubber Co., of Conshohocken, Pa., becoming its vice-president and director of sales. He will make his headquarters in New York City.

Victor Brunzel, formerly connected with the Splitdorf Electrical Company, and lately with the Harley-Davidson Sales Company, of New York, is now a member of the sales staff of the Auto & Machine Spring Company, New York City, manufacturers of motorcycle parts. Mr. Brunzel will travel through the States of Ohio, Indiana, Illinois and Wisconsin.

Charles S. Whitney, formerly manager of the Chicago automobile department of the Westinghouse Electric Co., has resigned and joined the staff of the Willard Storage Battery Company. He will be sales manager and assistant to the manager of the Chicago branch of the company.

R. S. Bryant has been appointed manager of the Standard Welding Co., of Cleveland, O., in charge of all the manufacturing. He was formerly the consulting engineer of the company.

Los Angeles, Cal., September 14.—C. W. Risden, the Indian distributor for southern California, whose big store is located in this city, is looking for a capable shop foreman and has a good proposition to offer him, by which the right man could work up a substantial business for himself. The idea is to have the foreman take personal charge of Risden's splendid repair shop, the foreman to receive all charges for labor and the house to get the parts business. Under this arrangement he would be practically working for himself, and his income would depend upon the efforts he puts forth.

San Francisco, September 7.—Friends of D. A. Carlson, cashier for the Hendee Manufacturing Sales Company of this city, and familiarly known to the motorcycle trade as "Doc," will be grieved to learn that he met with a painful accident at San Jose on Labor Day, which resulted in his suffering a broken leg. He was piloting a sidecar when run into by an automobile.

W. O. Turner has resigned as secretary and director of the Lovell-McConnell Mfg. Co., of Newark, N. J., maker of Klaxon horns. He will take a rest of several weeks before re-entering the accessory field.

**TRADE WITH "CLOSED" NATIONS**

Dayton, O.—Foreign trade with Belgium, Germany, and the other European countries now closed on account of the war, will open up rapidly after the cessation of hostilities. This was the information received by H. M. Huffman, manager of the Cycle Department of The Davis Sewing Machine Company, from their former agent in Belgium, Mr. Henry DeRudder.

**RODE TO CHICAGO**

Indianapolis, Ind.—Fifteen riders left this city Saturday morning, September 4, for Chicago, with the Indiana Road Club to witness the 300-mile race. John Merz, the club's road captain, led the Indianapolis squad to LaFayette, where they expected to meet other riders from the state touring to Chicago.

**MOTORCYCLISTS ENJOY SKATING**

Indianapolis, September 3.—The Consolidated Motorcycle Club of this city held its first skating party of the season at the Riverside Skating Rink on September 3. Fifty members of the club took part. A fine program of races had been arranged. Several good prizes were donated for the winners by the G. H. Westing Co., of this city. Skating parties every two weeks have been arranged for by the club.

# EIGHT MODELS FOR HARLEY-DAVIDSON

WHILE changes have been made in the Harley-Davidson product for 1916 as compared with that of 1915 and preceding seasons, they are in the nature of improvements which go to make for increases in power, silence, reliability, and last but not least, comfort for the rider. There are eight models listed, five being for touring and general hard service and the remaining three for racing. Three of the touring models are fitted with three-speed countershaft gearsets of the progressive sliding type, and each of these is fitted with a new type of step starter. It is this new starter which first attracts the eye on the 1916 models.

The eight models which are being produced from the Harley-Davidson Motor Company's factory in Milwaukee are: Model 16-F, twin three-speed with step starter, $265; Model 16-J, twin three-speed with electrical equipment, $295; Model 16-E, twin single-geared with step starter, $240; Model 16-C, single cylinder three-speed with step starter, $230; Model 16-B, single cylinder single-geared with step starter, $200; Model 16-R, twin cylinder speed roadster, $250; Model 16-S, 4 horsepower single cylinder stripped stock, $210; Model 16-T, twin cylinder stripped stock, $250. In all cases the twins are of eleven horsepower rating, while with the exception of Model 16-S, the singles are rated at 6 horsepower. For the new season Harley-Davidson motors have shown even greater power than their rating.

### Minor Improvements in Motor

The Harley-Davidson motors used on the 1916 twins, with the exception of the racing models (16-T and 16-R), are practically the same as those used in 1915, with, however, a few refinements. The inlet valve springs, for example, are now made of genuine vanadium steel, as are also the exhaust valve springs. The flywheel keys are of nickel steel, while the roller retainers in the connecting rod bearings are now of steel. A new type of oiler is fitted to the inlet rocker arm bearing and an oil in the pushrod bearing on this arm makes it easy to lubricate at this point, thus eliminating the annoying squeaks developed heretofore.

The inlet and exhaust valves are made with 45 degree seats, the former being of nickel steel and the exhaust valves of tungsten steel. The timing gears are of special alloy steel, heat-treated by a new method now in use at the Harley-Davidson plant. This treatment is also given to the magneto generator and driving gears. The 11 horsepower motor is of the long stroke, high-speed type, operating upon the four-stroke cycle. The single cylinder motor is rated at 6 horsepower and like the twin is guaranteed to give its power rating, and in most cases, somewhat more. What has been said about the twin construction and refinements applies also to the single cylinder motor.

### New Step Starter

While the 1916 motor shows no visible signs of being refined the three-speed gearset does so. The most noticeable change in connection with the set is in the new type of step starter. It is of the rear stroke type, located at the right side of the gear housing in line with the main shaft of the gearset. It consists of a long arm fitted with a folding pedal, the latter folding out of the way of the gear housing in order that it may not damage the housing should the machine be knocked over. The starter has all the gears and other working parts completely enclosed, thus doing away with any chance for dirt, water or mud entering and rendering starting difficult. The starter arm or crank is heavier than the crank on the 1915 step starter and the leverage is greater. A longer starter key is fitted, the material employed being a special steel. The sprocket key is of nickel steel. Step-starter gears are of chrome nickel steel, heat treated by the new Harley-Davidson method. A ratchet clutch replaces the starter disc on the three-speed models and the 1916 starter construction in all is much simpler than that of 1915.

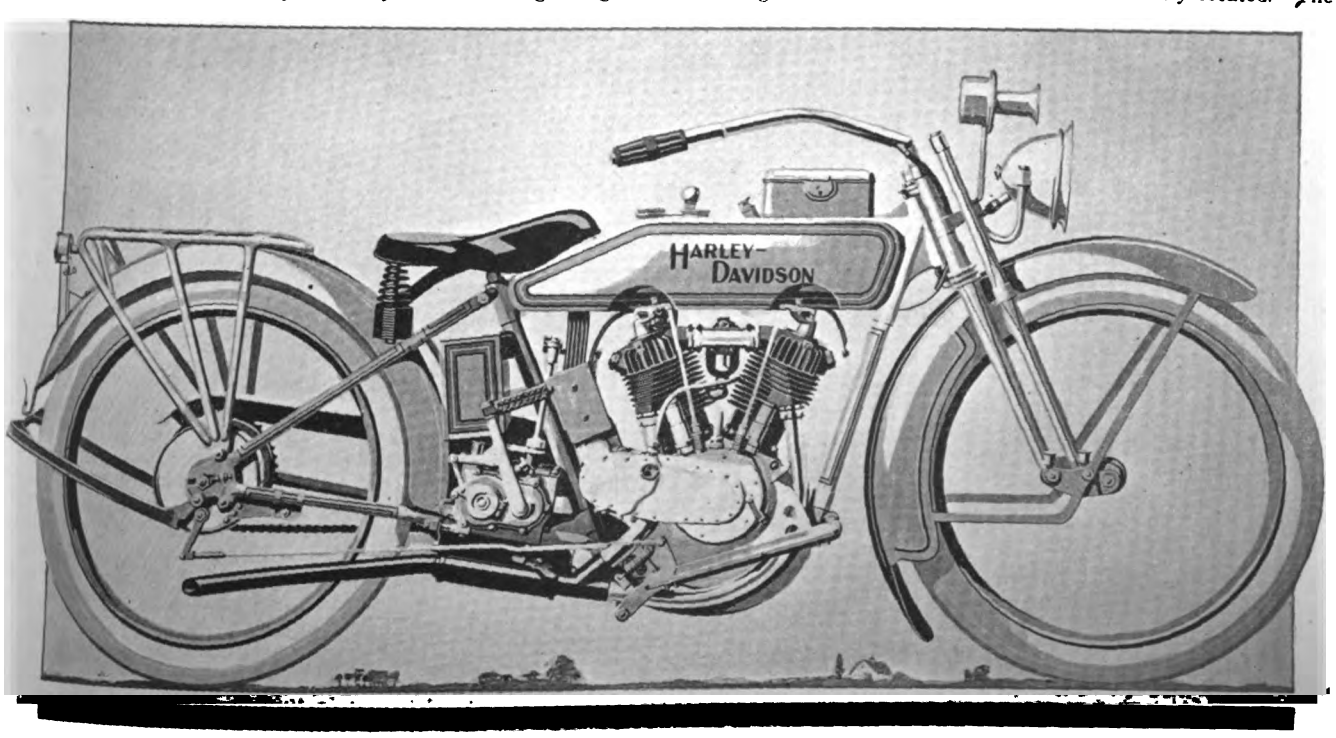
On the single-geared models, both twin and single cylinder motored, the well-known Harley-Davidson forward stroke starter is retained, this type having been standard on such models for the past two seasons.

### Gearset Improvements

In the gearset itself there are several important refinements. The main shaft runs now on annular ball-bearings of special type as in the past, but the layshaft is mounted on two high-duty Harley-Davidson roller bearings in place of the bronze bushing used in 1915. Steel roller retainers are used in these bearings. End thrust on the layshaft is taken care of by hardened and ground steel washers. The layshaft is made heavier, of genuine chrome nickel steel. A very ingenious self-aligning thrust ball-bearing keeps the pullrod and other clutch-actuating parts in perfect alignment at all times.

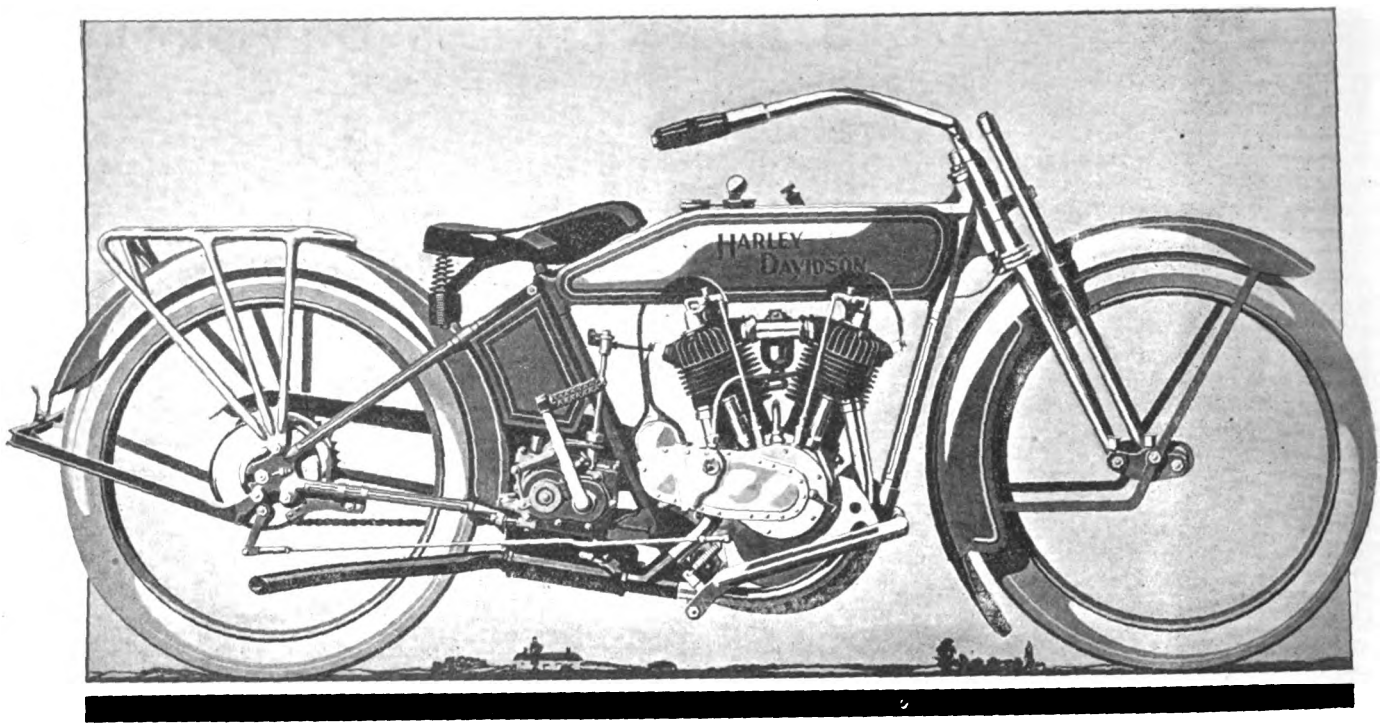
Nickel steel gears and pinions are used throughout the gearset. All gears are, of course, treated by the new method. For 1916 the gear housing is fitted a gasket on the right hand side to eliminate oil-leakage, while there is an oil-deflector at the left side of the housing. Oil-retainers are of improved design. The gear-shift gate is made without a notch, so the lever may be shifted right through from first to second speed without a halt. The gear shift lever bearing is 100 per cent. longer than in 1915.

The clutch lever on the three-speed models is more conveniently located. The



**Three-Speed Twin Cylinder, Model 16-J, with Electrical Equipment, Including Lighting, Ignition and Signal System.**

Digitized by Google



**Model 16-F Viewed from Right Side, Showing New Step Starter and Graceful Lines of Round-Cornered Tank.**

sprocket spacing collar on the countershaft is made wider and the sprocket lock-nut is now hardened. The faces of the sprocket hub are both hardened and ground. A heavier lock-nut is used on the clutch bearing and the clutch driving head is made heavier also. The clutch key is of chrome nickel steel for the new season and the clutch thrust bearing of special cone steel.

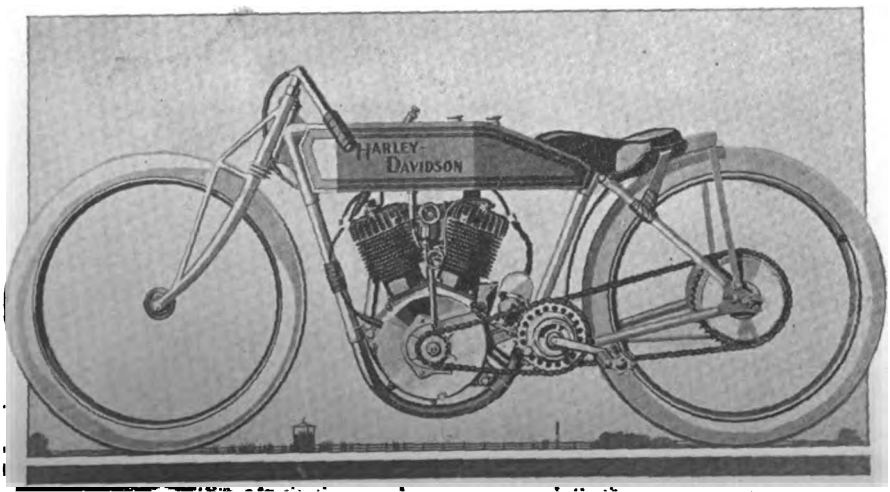
### Increased Tire Clearance

Another point that will appeal to the rider, present or prospective, is the increased tire clearance on the new models. The front fork is wider and the space between the mudguards and the wheels at both front and rear is greater, a feature which will be appreciated by riders doing any amount of touring in muddy sections. Tire chains can now be used on both wheels without trouble. The grip control has a new cover sleeve permanently fitted to the actuating worm member, doing away with the loose sleeve construction formerly used. The control rollers are now larger and turn on hardened studs instead of screws.

In tank construction, the new streamline tanks have nicely rounded edges in place of the square corners formerly used. There are no seams exposed. Each tank side is made of a single piece of metal drawn to shape under heavy pressure. Both tanks are much larger than in 1915, the oil tank holding 8 pints while the main fuel tanks contains 16½ pints and the emergency tank 5½ pints. The total gasoline capacity is thus 22 pints. Attention is called to the fact that the 1916 tanks will not fit any previous models.

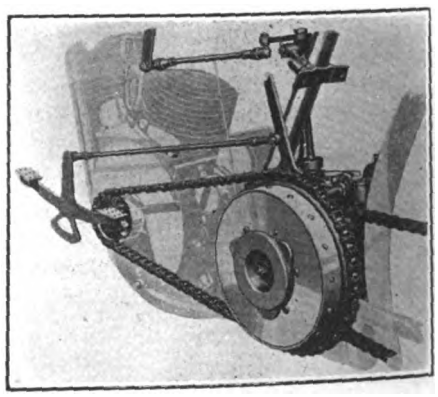
### Large Filler Caps

All tank filler caps have 1½ inches opening on the new machines. This increase in the size of the filling aperture enables the ordinary garage funnel to be used. The filler caps are faced off, rendering it very easy to screw them in place. The gasoline shutoff valves are improved for the new season and are now beneath the tank, making for a smooth and sightly job. Owing to the large size of the tanks, heavier clips are fitted. A large strainer is fitted inside both fuel tanks to prevent dirt or sediment in the gasoline from reaching the carbureter.



**Twin Stripped Stock, Model 16-T with Dropped Bars and Characteristic Saddle Position**

One big point that appeals to dealer as well as rider is in the standardization of all 1916 frames. This means that the frames are the same on both the single and twin cylinder three-speed models, and that



**Primary Drive and Control Details**

the single-geared models have the same frame for both single and twin motors. The left tank is the same on all single-geared models and the left tank is also the same on all three-speed models. The right tank has two pockets for the twin models to allow of removing the valves and one pocket on the single cylinder models for the same purpose.

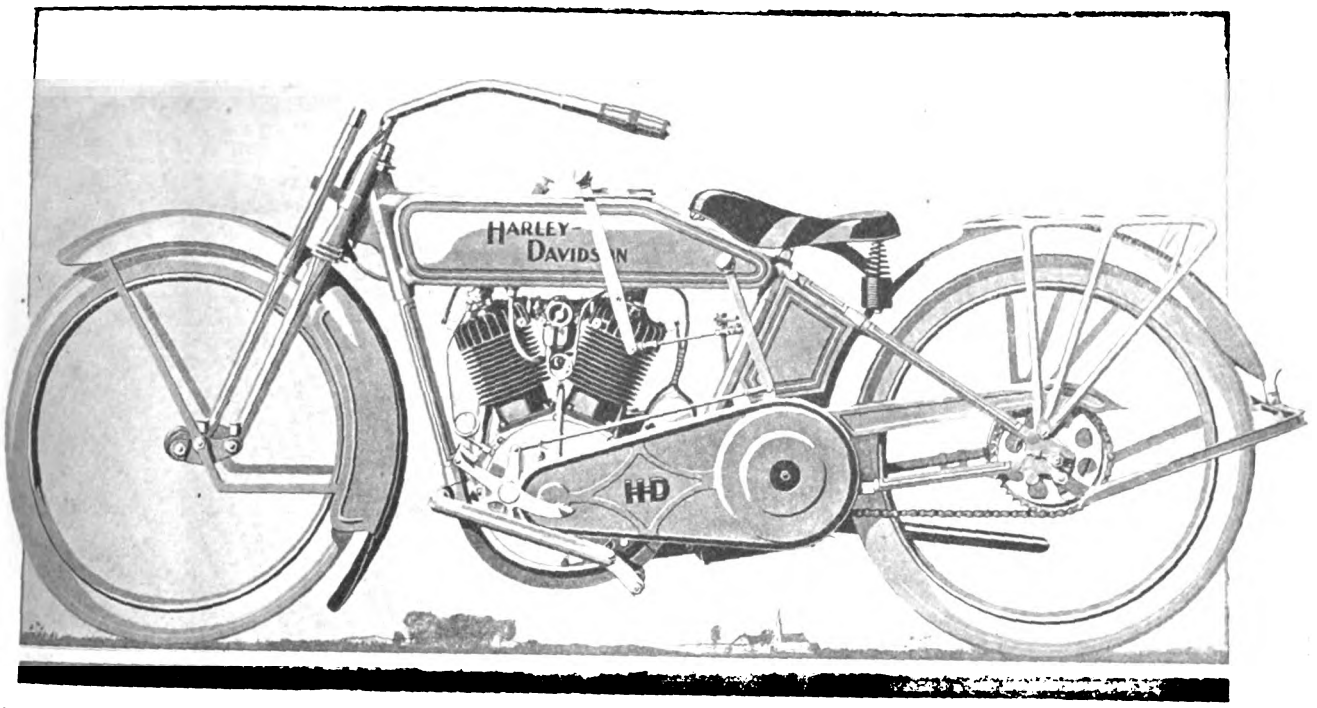
### Standardization Advantageous

In utilizing the same frame on both single and twin models, it is possible to use the same footboards, brake rods and other parts. This greatly simplifies the handling of repair orders and makes it possible for the agent to carry a complete line of parts with a smaller investment. All three-speed parts are interchangeable on the single and twin models, the only difference being in the motor itself.

### Reinforcements Increased

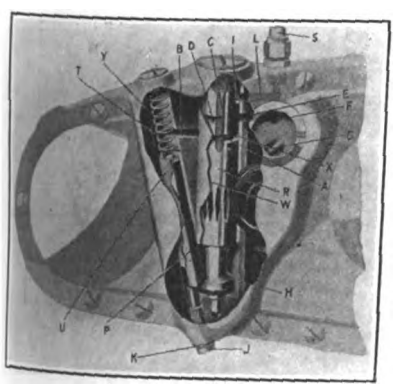
In 1916 frame is of special carbon steel tubing throughout, with nickel steelf orged fittings. The frame is more heavily rein-

Digitized by Google



**Left Side View of Three-Speed Twin Model with Double Clutch Control, Efficient Chain and Mudguarding and Sturdy Luggage Carrier.**

forced than in 1915 below the head to withstand extended sidecar service. The rear stays are more heavily reinforced for sidecar work and the seat post clamp bolt is larger to take a bigger sidecar "I" bolt.



**Mechanical Oil Pump in Section**

The front fork is made wider to get increased clearance on the tires and permit the use of chains. Forksides are of special steel of new composition and are much heavier to stand sidecar service. The spring fork rocker plates are placed at a more efficient angle. The recoil springs are of vanadium steel.

In the front hub longer lock nuts are used for the axle cones and the axle and its nuts are longer. The upper head cone is made heavier and the surface is now curved to conform to the profile of the ball, doing away with point contact and substituting surface contact. The lower cone is heavier and is curved like the upper cone. The new installation can be fitted to older models of Harley-Davidson frame.

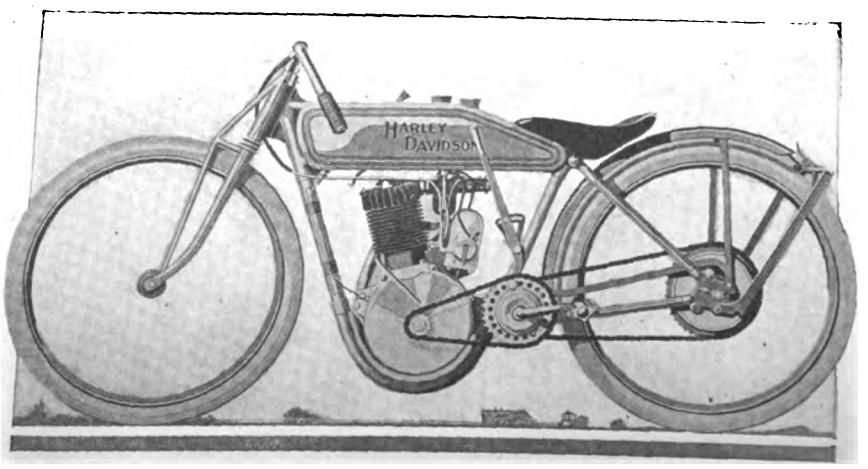
### Rims and Mudguards

Both front and rear rims, although of CC type, are made from special high-carbon steel, and are 50 per cent. stronger by actual test than rims used heretofore. The mudguards are made wider, being 5¼ inches from edge to edge. The front guard is longer, extending well forward and braced by four stays instead of two. Two fender-bolts on the spring fork, 4 inches apart, make a rigid fastening at this point. The splash flap is larger to give increased protection. The rear section of the rear fender is detachable to facilitate removal of the rear wheel or for making tire repairs with the wheel in place. Fender stays are of special flat stock, heat-treated. Both fenders are drawn at the offsets instead of being cut away.

The Model 16-F Harley-Davidson is powered by the 11 horsepower twin motor, three-speed gearset and step starter. It is fitted with Bosch high-tension magneto ignition, Schebler carbureter and the Harley-Davidson mechanical oiler which proved so successful during 1915. This model has the combined pedal and hand lever clutch control, foot-controlled band brake, countershaft chain drive and other details as given above as well as those which have been continued from 1915. The wheelbase is 59½ inches and 28 x 3 inch tires of Goodyear Blue Streak, U. S. Chain Tread or Firestone Non-Skid type are offered. The gear ratios are: High, 3.84:1; intermediate, 5.76:1; low, 8.64:1. The list price is $265, a reduction of $10 from the figure of 1915.

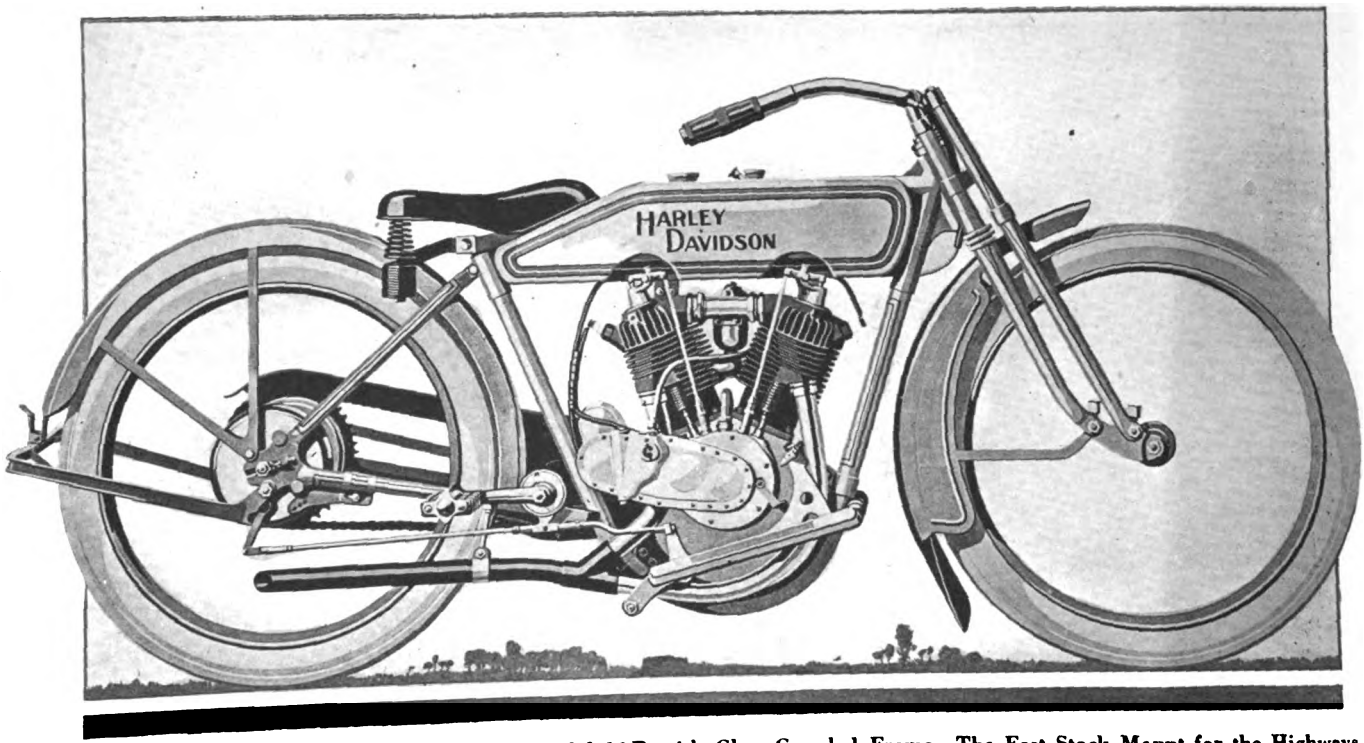
### Single-Geared and Electric Fitted

The Model 16-E is the same machine without the three-speed gearset and has the forward stroke starter in place of the one used on the three-speed models. The gear ratio is 4.07:1, and the clutch is located in the rear hub. Price is $240. The Model 16-J is a three-speed twin corresponding to 16-F, but fitted with Remy-Harley-Davidson electric lighting equipment and signal system. The source of ignition and lighting current is a special generator. The headlight is a twin bulb one, the main bulb being a 7 volt, 12 c. p., located in the focus of the lens, while the pilot bulb is 7 volts, 2 c. p. The tail lamp carries a 7 volt, 2 c. p. bulb above a license bracket on the rear mudguard. The horn is electric and a vacuum lighting control, the



**Four Horsepower Stripped Stock Model 16-S Fitted with Clutch.**

Digitized by Google



**Harley-Davidson Twin Cylinder Speed Roadster, Model 16-R with Close-Coupled Frame—The Fast Stock Mount for the Highways**

same as in 1915 is used. This machine costs $295, a reduction of $15 from the corresponding model of last season.

The 16-C model is a single cylinder, 6 horsepower, three-speed machine, similar in all respects to the 16-F except in the motor. It is priced at $230, the same figure as that for the single cylinder hub-two-speed model of 1915. The 16-B is fitted with the same motor as the 16-C, but is single-geared and has the forward stroke starter. It lists at $200.

### The Speed Models

The speed models, 16-R, 16-S and 16-T are, respectively, fitted with the 11 horsepower twin motor, and the 4 horsepower single cylinder motors, the first and last models having the twin. But while the twin motor is rated at 11 horsepower it is made with mechanical construction to suit any requirements, provided that the piston displacement does not exceed 61 cubic inches. In fact, the specifications for each machine are quite elastic, permitting a mechanical construction to fill almost any demand. Lubrication is by hand pump or mechanical oiler. The wheels are 28 inches and the tires of 3-inch profile or smaller. The saddle is a Troxel or special racing type and transmission is by roller chain. Magneto ignition is fitted and the wheelbase on the 16-T and 16-R is 51½ inches or optional. On the 16-S, 4 horsepower single cylinder stripped stock

mount, the wheelbase is 50½ inches or optional and the motor is built to meet the requirements of the purchaser, but must not exceed 30½ cubic inches in displacement. Details, such as forks, handlebars, clutch, brake, etc., are optional. The prices are 16-R, twin cylinder speed roadster, $250; 16-S, single cylinder stripped stock, $210; 16-T, twin cylinder stripped stock, $250.

### Sidecar and Van Changes

For 1916 the sidecar body is two inches wider than in the former model. A ratchet brake lock is provided with each sidecar, this being ready to attach to the right footboard of the motorcycle in a short time. The lock makes it possible for the sidecarist to hold the sidecar in either direction when the machine is standing. This lock can be supplied to present owners of Harley-Davidson sidecars at an extra cost. The sidecar springs are of a new steel, giving better service under hard driving, as well as longer life. The "I" bolt, where the sidecar fitting is attached to the seat post, is made larger, being 9/16 of an inch in diameter and is of nickel steel.

The side van has a body measuring 36¼ x 21¾ x 18 inches deep at the center and 15½ inches deep at the sides. The body is made of substantial air and kiln-dried wood, carefully selected. The top is hinged so as to open from the driver's seat. The body may be lettered at the factory at a

cost of ten cents per letter. The ratchet lock supplied with the sidecar comes with the sidevan also. Prices are: Sidecar, Model 16-L, including 28 x 3-inch tire on sidewheel, $75; sidevan with 28 x 3-inch tire on sidewheel, $65.

### Heat Treating Process

Harley-Davidson engineers have perfected a remarkable new process for heat treating gears and other steel parts with exposed working surfaces. This new method has eliminated all loss of metal in heat treating by so-called "scaling" or "flaking," which is the result of oxidizing of the metal, for with this new process no oxidation of the metal whatever takes place. Beside doing away with oxidation, the new method makes it unnecessary to use any sand-blasting, so the accompanying loss of metal from sand-blasting is also eliminated. In sand-blasting the surface of the article blasted is left rough, of course. It takes time for this surface to wear smooth and when it does wear smooth the parts are smaller than originally. It is true that the difference may be but a decimal part of an inch but often it is enough to make noisy gears, if the articles sand-blasted happen to be gears.

Still another advantage of the new process of heat treating is that there is no noticeable distortion due to internal strains in heating or cooling the gears, or articles heat-treated. Distortion invariably occurs to a greater or lesser degree in all heat treating by the old methods. The distortion may be microscopical but it exists, nevertheless. It sometimes grows worse with service. By the very nature of it, the uniform heating and cooling of the steel by the new Harley-Davidson process eliminates practically all chance for distortion.

## LATEST ADDITIONS TO THE CHICAGO SHOW LIST

In addition to those already listed the following companies have contracted for space at the Chicago Show, according to the latest bulletin from Manager Coffman:

Forsythe Metal Goods Co., Buffalo, N. Y.
Hagerstown Shoe & Legging Co., Hagerstown, Md.
Kelly Handle Bar Co., Cleveland, Ohio.
Wheeler & Schebler, Indianapolis, Ind.
Schickel Motor Co., Stamford, Conn.
Handy Bicycle Co., Chicago, Ill.
Indiana Rubber & Insulated Wire Co., Jonesboro, Ind.
Premier Cycle Works, Chicago, Ill.
Remy Electric Co., Detroit, Mich.
Chicago Eye Shield Co., Chicago, Ill.
Pioneer Mfg. Co., Milwaukee, Wis.
Caillet Bros., Wellington, Col.
New York Lubricating Oil Co., Chicago, Ill.

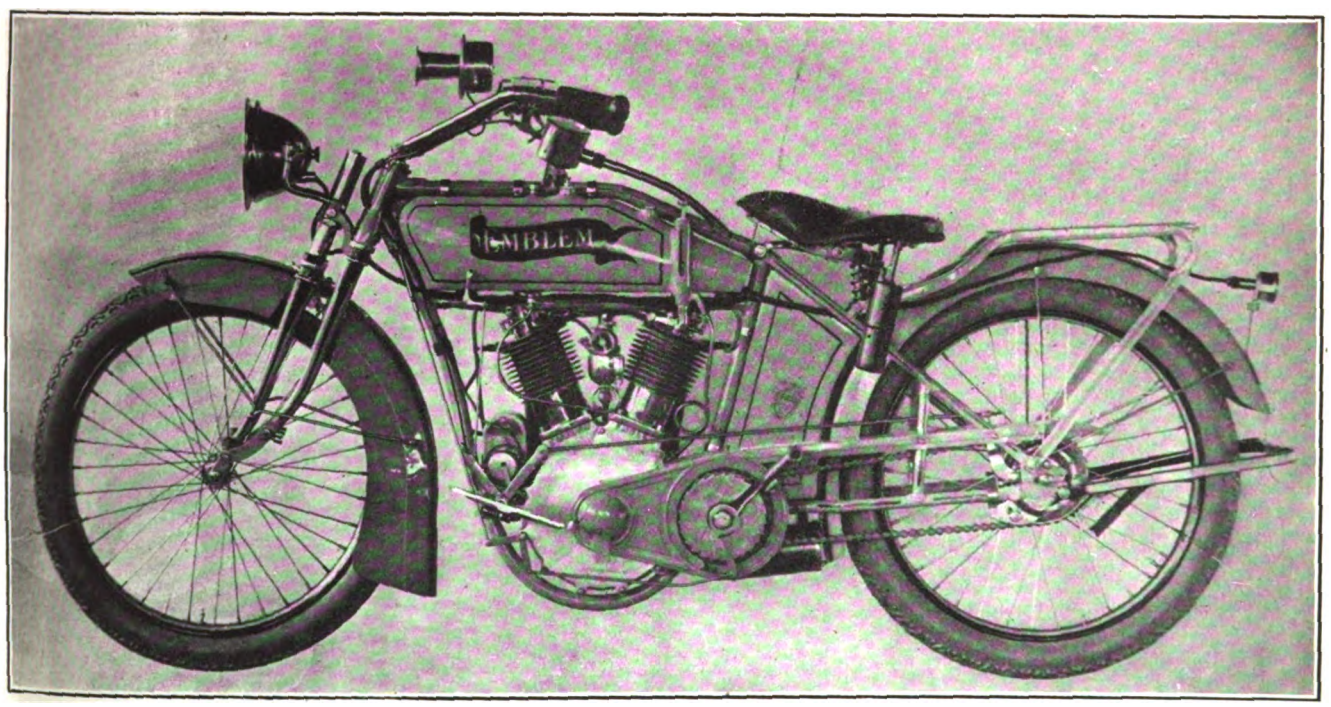
# NO PEDALS ON EMBLEM MODELS

FOUR distinct models of Emblem motorcycle are announced by the Emblem Manufacturing Company, of Angola, N. Y., for the 1916 season. The first of these, Model 110, has a 76 cubic inch displacement twin motor, a kick starter, and improved fork, and lists at $250. The second is Model 108, a 67 cubic inch twin similarly fitted and listing at $225. The third is Model 105, a single cylinder mount. The fourth, about which details are not yet to hand, is Model 106, a medium-weight twin in less power than either of its mates, with improved spring fork. The latter twin is designed to fill a want in the motorcycle field for a machine with two cylinders, capable of a speed of 40-50 miles per hour on the road and yet light enough to be easily handled. The Model 106 will make its debut at Chicago on September 21.



**Emblem Twin, Showing Kick Starter, New Device on Tank and Electric Lighting Equipment—No Pedals Are Fitted**

The big Emblem, Model 110, which develops 14 horsepower, proved itself very popular in 1915 and preceding seasons and has shown greater speed for the present year. It will give a road-speed of 70 miles per hour, and the maker claims that this is the fastest stock machine on the 1916 market. The Model 108, while not so fast as the bigger twin, will still travel at least 65 miles per hour on the road, and is suitable for sidecar work like the Model 110 The single cylinder Model 105 develops 7 horsepower.

### Emblem Motors

The engine of the Models 108 and 110 is fitted with the intake overhead valve and regular exhaust valve. The overhead valve, which is so popular among the automobile manufacturers on account of its increased power and cooling, is retained on the 1916 model. The exhaust valve action has a new device which has improved its action very much and produced greater speed and power and also eliminating the noise of the action. The intake walking beams are also bushed at all points with wood fiber so as also to eliminate the metal sound of the valves.

### Magneto Gear Casing

The magneto gear case is a housing by itself, holding all of the gears which drive the magneto and is placed through an opening through the cam gear housing and fastens with two bolts. This housing can easily be removed by simply unscrewing two bolts and pulling the entire train of gears from the motor. This housing is also fastened to the magneto and practically makes a unit of itself and cannot get out of alignment. The new oiling device will be fastened to the cover of this magneto gear case and be a part of same and be driven from the large magneto gear which drives the magneto.

On the interior of the Emblem motor the pistons are fitted with three rings, two above the wrist pin and one which slightly covers the piston pin and keeps same from working cams. The motor is a new oiling device giving a constant flow of oil at all times, increasing with the speed of the motor. Outside of minor improvements there will be no radical changes on the twin motor.

The valve operation of the Emblem motor is by means of four cams in one piece, each cam performing the action for the four valves of the cylinder. By this four-cam action the proper opening and closing of the valves can be arranged, which is so essential to get the best power and speed from a motorcycle motor. It gives a full charge of ingoing gas and also discharges the entire burned gas. The exhaust pipe is of a large diameter so as to give a free flow of the exhaust gas without any resistance whatever. The exhaust valve tappets are all bushed with wood fiber so as to prevent the metal sound of the valve and scarring the side of the cylinder. The pistons are of a very light design and drilled with a number of small holes around the entire lower base of the cylinder. The lower piston ring also acts as an oil ring; just below this piston ring there is a groove cut into the piston a trifle below the depth of the ring, which on its downward action scrapes all the surplus oil and forces same into this groove and through holes into the crank case. This prevents the oil from getting above the piston and thereby fouling the spark plugs. The piston pins are of ¾ inch diameter and hollow. The connecting rods are of a vanadium steel forging with a four piece roller bearing at its lower end. This bearing runs over a 1-inch crank pin made from Hyten steel. This bearing is similar to the one which was used in the past season, and which has been in use for many thousand miles without showing but a slight wear. The main shaft bearings, which are of a large diameter, are run in bronze with oil grooves on each side. These bearings have also proved very satisfactory in the 1915 models, and will be retained in the 1916.

### Closer Clearances

In regard to the fitting of the cylinders and pistons, the clearance between these two is far more closely than previously, making them practically a tight fit when the motor is built up and are only worked down when running in a bath of oil until they run freely. The cylinders and pistons also are put through a heat treat operation before the final grinding is done.

The countershaft has been fitted with a new oiling device. This device is made by passing a steel tube through the inside of the countershaft, this tube acting as a grease cup. This tube is threaded on the inside to a depth of over half way. Into this tube

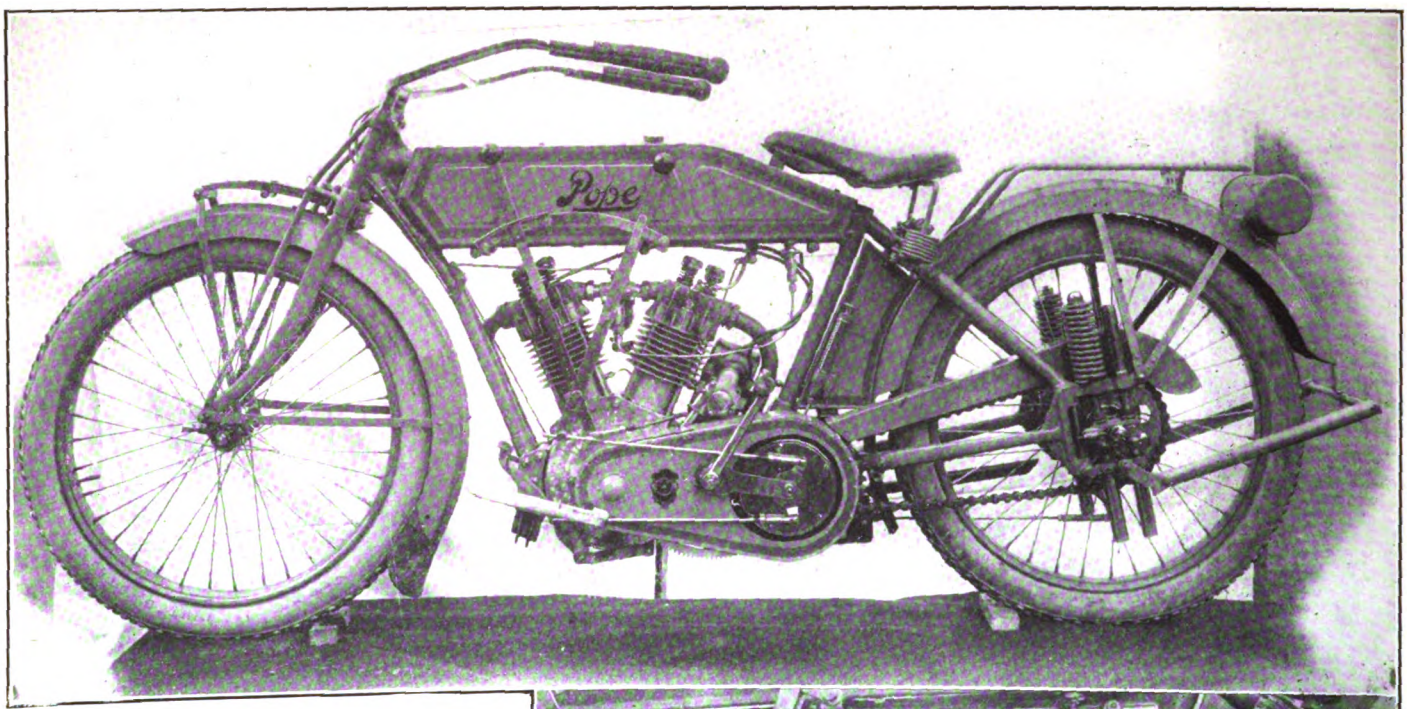
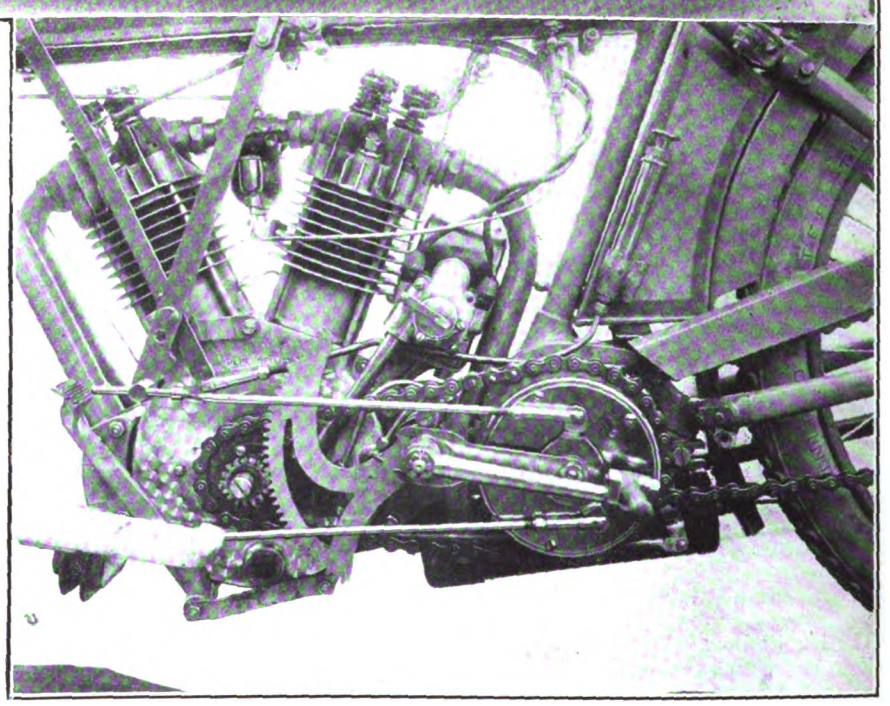
# NOVEL THREE-SPEED GEARSET IS CHIEF





**Left Side of Three-Speed Model, Showing New Kick Starter, Clutch and Brake Control and Magneto Drive; Above, Model R-16 Three-Speed Twin**

OF the varied offerings of the Westfield Mfg. Co., Westfield, Mass., which succeeds the Pope Mfg. Co., the one most likely to interest big twin and sidecar devotees for the 1916 season is the ingenious three speed gearset on the R-16 twin model. This gearset has a number of striking features, one of which is that the three pairs of gears giving the three speeds are always in mesh. Another feature, which is a radical departure from existing motorcycle practice, is the operation of the sliding dog clutches for the different gears by a pair of barrel cams.

But the new three-speed gear is not the only added feature for this model in 1916. A direct foot-starter of the pinion and sector type is fitted, the pinion being mounted on the motor shaft and the sector and its arm with folding pedal on an intermediate lug on the rear motor bearer. With the new gearset comes a new control of the gear shift and a novel and handy means of carrying the box itself. The clutch lever for this model, when pushed forward, first disengages the clutch and then sets the brake, a most handy feature for both solo and sidecar rider.

### Gears Always in Mesh

The new three speed gearset contains but six gears, all being in mesh at all times. The main shaft left hand gear is fitted with a dog clutch and the low gear on the main shaft, which comes next to this first gear is likewise fitted with the same device. On the fluted main shaft is a slider with opposite dog clutches. The intermediate main shaft gear, at the right, has a dog clutch and there is a single dog clutch slider on the fluted shaft to correspond.

On each slider works a fork whose upper end projects through the gear casing cover and carries roller. These rollers fit into special grooves in a barrel or cylinder, these grooves forming cams. The barrel cam rotates in a special chamber above the gear casing proper at the right side and carries a pinion at its right end. In this pinion is meshed a rack operated by a lever attached to the gear shift lever at the left side of the frame. The operation is as follows, the gear being in high speed position:

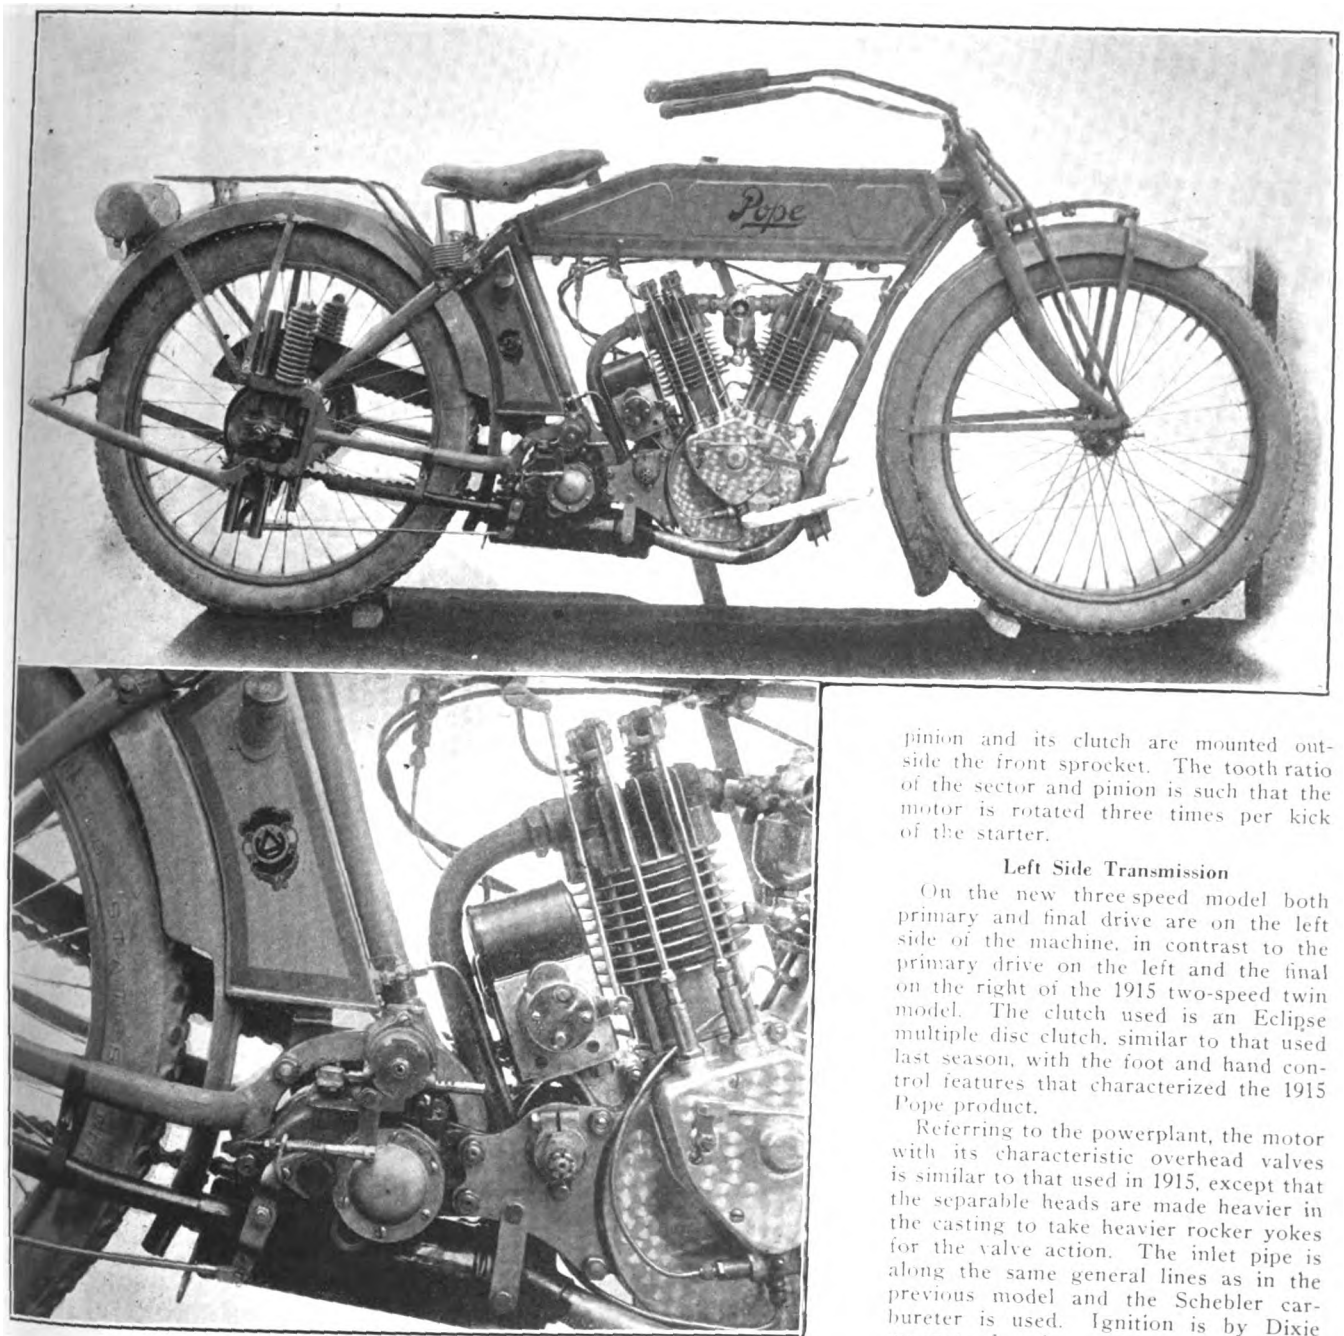
### Shifting Operations

On moving the shift lever toward the intermediate position, the rack rotates the barrel cam from front to rear. The roller and fork following the cam groove, takes the high speed dog clutches out of mesh and meshes the intermediate dog clutches as the intermediate position is reached. From intermediate to low gear, the intermediate clutches are unmeshed and the low clutches are gradually meshed, both slider forks being acted upon by the cam grooves at all times. The grooves are so formed as to prevent meshing more than one set of clutches at a time.

There is an interlock between the gear shift and the clutch pedal or lever. On the end of the shaft carrying the barrel cam is a notched plate, the notches corresponding to the three gear positions and a neutral point. On operating the clutch a short rocker on the right side is first withdrawn from the notch in the plate before the gears can be shifted. This rocker acts as a gear lock as well

Digitized by Google

# ADVANCE IN POPE LINE FOR NEW SEASON



**Right Side of Twin Powerplant with Clutch and Gear Interlock and Dixie Magneto; Above, Pope Three-Speed Model, Illustrating Characteristic Features**

as a clutch interlock. A short shaft on its lower arm is operated upon by a lever mounted on a through shaft working in a boss at the lower rear part of the gear box, there being another shaft attached to the clutch control on the opposite side. The lever on the right hand side further is connected to the brake arm on the big double acting band brake at the right side of the rear axle. This position for the brake is new for 1916, and so is the brake itself.

### Gearset Mounting

The three-speed gearset is mounted in the bottom bracket in a similar manner to the two speed set in 1915. There are two forks on each side forward and one at the rear on each side. The supporting bolts have their heads to the left and the nuts are provided with a novel device which keeps them from revolving when the bolts are unscrewed or screwed up. This feature makes it possible to adjust the gearset from either side so as to compensate for chain wear, without having to go to the opposite side as well.

The foot-starter kicks downward toward the rear. It is mounted in the same position axially as the short shaft carrying the rear sprocket of the Pope 1915 Model R-15 starter. The arm is long and carries a toothed sector, the latter being mounted on the main motor shaft and having dog clutch teeth to correspond with others attached to the shaft. The pinion and its clutch are mounted outside the front sprocket. The tooth ratio of the sector and pinion is such that the motor is rotated three times per kick of the starter.

### Left Side Transmission

On the new three-speed model both primary and final drive are on the left side of the machine, in contrast to the primary drive on the left and the final on the right of the 1915 two-speed twin model. The clutch used is an Eclipse multiple disc clutch, similar to that used last season, with the foot and hand control features that characterized the 1915 Pope product.

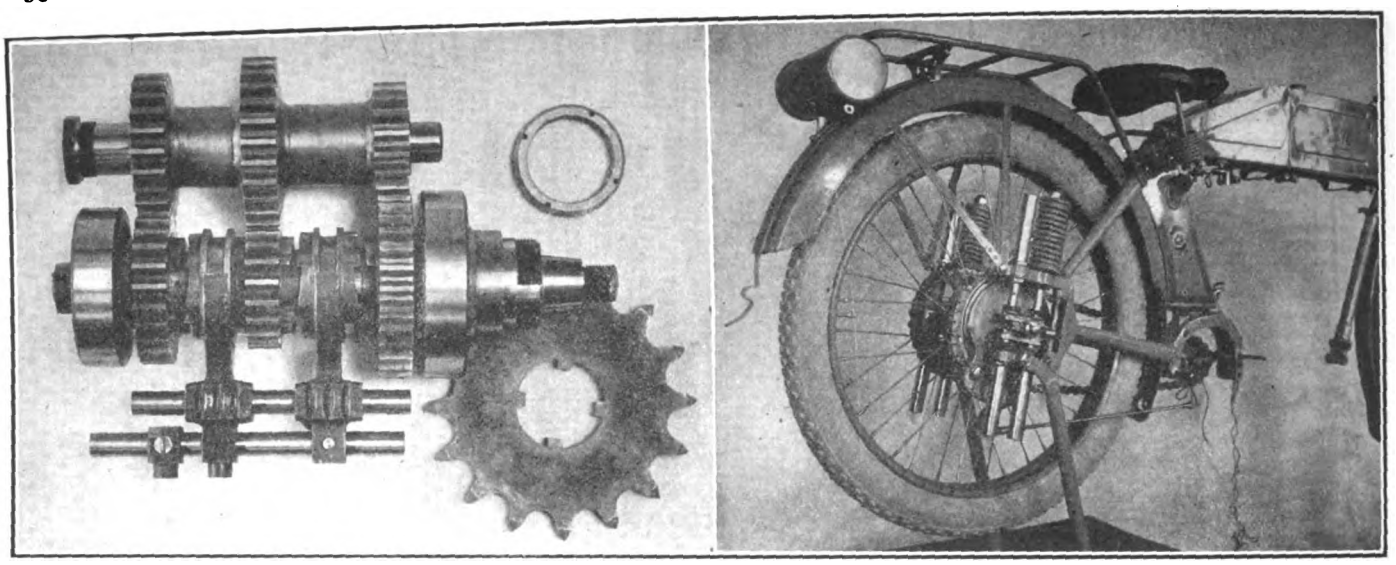
Referring to the powerplant, the motor with its characteristic overhead valves is similar to that used in 1915, except that the separable heads are made heavier in the casting to take heavier rocker yokes for the valve action. The inlet pipe is along the same general lines as in the previous model and the Schebler carbureter is used. Ignition is by Dixie magneto for the new season, the Pope inclined shaft drive with worm gears being retained.

### New Band Brake

The brake, mounted on the right side this season, is new and very large. It is of the contracting band type, operable by either the clutch lever or the brake pedal as desired. The gear shift lever, mounted at the left ahead of the clutch lever works in a slotted quadrant, with the positions of each gear and of a neutral point marked. The quadrant is slotted to ensure the rider's not unintentionally passing through a speed position.

Little details which make for greater safety are noticeable in this new model. There is, for example, a lug cast integral with the pedal arm, this lug being bored to take the bent end of the lower clutch-operating arm. In the 1915 construction.

Digitized by Google



**Left, Gears and Shafts in Pope Three-Speed Set, Which Has Dog Clutches for All Speeds; Right, Spring Suspension and Rear Frame**

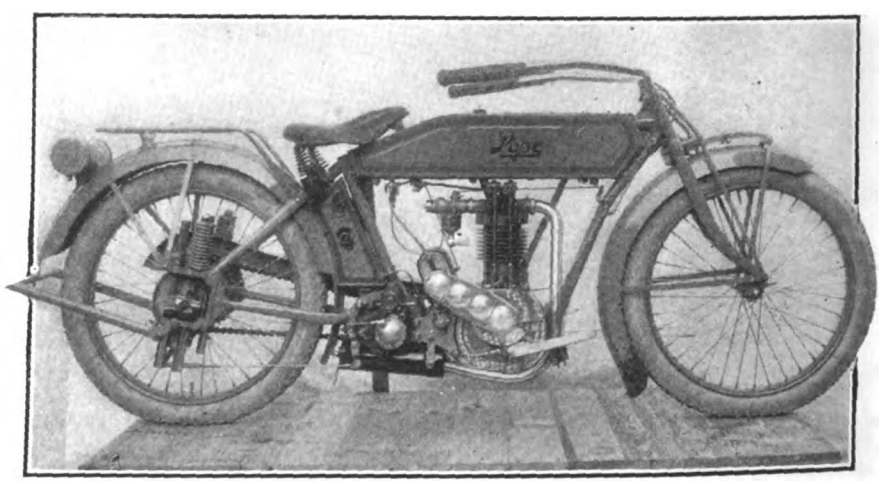
the rod is attached through a hole in the pedal arm, but this arrangement, while satisfactory, was not as good as the present one. The rear chain guard has a novel method of front attachment to the frame. There is a slotted short flat piece projecting downwardly from the front end and fitting over a through bolt with side slots in it. This bolt passes through the lugs on the rear forks, and the slotting arrangement enables the rider to lift up the chain guard by slacking the nut on the right hand side.

The gearset itself partakes of this ease in adjusting or dismounting. The only tools needed to disassemble the entire gearset are a screw-driver and a bicycle wrench. In fact, Pope accessibility, is an even stronger feature for 1916 than for the preceding season.

### Head Reinforcements

There has been no change in the front fork for the new year, and the same can be said of the frame from front to rear, with the exception of a fishtail reinforcement at the lower reach of the head tube and an external reinforcement at the brace tube. The footboards are new and give greater foot surface. The muffler has been improved also. There is a lower saddle position, the height being now 28¼ inches.

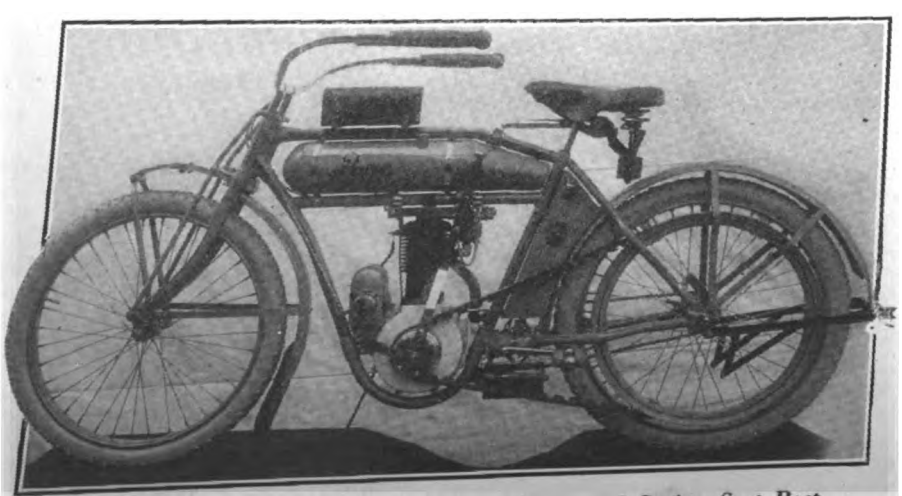
In regard to other members of the Pope motorcycle family, there is a 38 cubic inch single cylinder type, the Model TM-16, fitted with the same three-speed gearset as the model just described. This is the successor of the RM 15 two-speed single of the 1915 season, and outside of the three-speed set remains similar to its predecessor. The Model M-16, succeeding the M-15, has a few refinements for the new season, while the Model L-16 twin with direct starter of the pedal and chain type, remains practically the same as the corresponding model of last season. The same is true of the V-belt driven Model H-16, with Eclipse clutch and pedalling gear. Attention is called to the fact that for the 1916 season, the Sturmey-Archer three-speed hub gear has been discontinued on the H Model.



**Three-Speed Single Cylinder Model TM-16 with Same Transmission As R-16 Twin**

### Pope Gray Finish

All models coming from the Pope factory will be finished in Pope gray with contrasting striping. The Model H in particular, in this finish, is exceedingly attractive, especially in connection with the aluminum-finished crankcase and black cylinder. Prices on the various models are not yet quoted.



***Model H-16, Single Cylinder with V-Belt Drive and Spring Seat Post***

## VARIETY IN POPE BICYCLE OFFERINGS

OF the ninety distinct models of bicycles that the manufacturing company stands sponsor for, one of the most noticeable for 1916 will be a man's bicycle with a number of novel fitments. The first of these is a spring seat post, similar to that used on the Pope Model H motorcycle, others including a motorcycle type saddle, tandem spokes and Pope heavy guards. This mount is designed for merchants or others who have to deliver heavy packages, for riding on sandy roads or poor surfaces and for the

Digitized by Google

fitting of motor attachments. As will be gathered from the above, the machine is stronger than a regular bicycle.

This bicycle is made with a 20, 22 or 24-inch frame, the main frame members being constructed of stronger and larger tubing than the ordinary types. The rear stays are heavy. The frame is designed to take 1¾-inch tires. The head is large and the cups and cones are made larger than in the other Pope models. The Columbia frame head, which has stood road punishment in all kinds of hands for years and has not needed changing since its introduction, is used on this model.

### Clipper Roadster

The Clipper light roadster, designed for either road or track, is a short-coupled mount. It has a curved tube in rear of the head for 1916 and the seat mast is curved to give the desirable short wheelbase. The main frame tubes are ⅞-inch in diameter, and are of Shelby stock. The crank stock on this and other Pope models is the same as was used on Columbia bicycles over 20 years ago and has not needed changing since.

The big boy, in the "awkward age" who is too large for a juvenile and yet too small for a man's wheel, is taken care of by the Pope designers. For him there is a mount with an 18-inch frame and 28-inch wheels, giving him room to grow, as it were. The 1916 output includes many other styles, both chain and chainless models, with and without the Pope spring fork and cushion frame. There are mounts offered with three-speed hubs and a considerable list of competition bicycles included. In fact, in the chainless models, the devotee of the multiple gear can have two speeds, while in the chain models he or she can get two or three speeds.

### Catalog Brands

The Pope officials have found that a reduction in price on the chainless models in 1913, far from unfavorably affecting the output, had trebled the sales of these models in New York and in foreign fields. In all the Westfield firm produces the following catalog brands: Pope, Columbia, Cleveland, Hartford, Pope Special, Seminole, Rambler, Westfield, Pope Daily Service, Defiance, Clipper Light Roadster, Tribune, Monarch, Crescent, Imperial, Stormer, Ideal, Sterling, Fay Juveniles and Motorbike.

# NOVEL TWO-STROKE MOTOR IN TIGER

FOR 1916, the Autobike Company, of 2233 Prairie avenue, Chicago, Ill., is bringing out the Tiger Autobike, a two-stroke machine with a novel arrangement of valves. This machine, which has a camel-back frame, deep and thin tank, V-belt transmission and pedal gear, weighs 112½ pounds and lists at $112.50.

Referring to the motor, there is an auxiliary passage whose lower end communicates with the space formed by a slot in the piston and also above the piston head when the piston is at the foot of its stroke. The carbureter is connected to this passage by a short pipe carrying a spring-loaded poppet valve. At the upper end of this passage is a second poppet valve giving communication directly into the cylinder close to the head.

### Advantages Obtained

The result of this construction is stated to be a direct flow of cool gases into the cylinder at its top, a freedom from reversing and "back firing," and a cleansing action on the part of the cool inlet gases as they pass into the cylinder. The motor, which is air-cooled, has a bore of 2½ inches and a stroke of 3 inches being rated at 4½ horsepower at a speed of 1,100 revolutions per minute. It is known as the Frederickson motor, from its designer, Clayton Frederickson.

The carbureter, fitted forward and quite high up on the passage referred to, is of the float type with auxiliary air valve. Ignition is by gear-driven high-tension magneto, located on a foot just ahead of the crankcase. The injection system of lubrication is used. The muffler is of pressed steel, with direct cut-out, and fits between the rear bearer plates. The exhaust aperture and pipe is large, thus permitting of the rapid escape of gases.

### Drive and Running Gear

Transmission is by V-belt from a pulley on the motor shaft to a large rim on the rear wheel. A pedal gear is fitted and a coatser brake, operated by back-pedaling is provided. Wheels are 28 inches in diameter with 2 inch tires. The wheelbase is 48 inches.

The frame is of the same gauge and quality as is used on heavy weight machines. The front fork has been specially designed to give easy riding and is guaranteed to stand all strains. The top tube is "camel-backed" to give a low saddle position. The tank is about 2½ inches in width, but its depth and form allow of a large capacity, and this with a number of tests in which 140 miles to the gallon have been attained, give a wide radius of action on one tank of fuel. The handlebars are of nickel steel seamless tubing, bent close to the grips to give a comfortable position to the hands.

### Saddle and Stand

The saddle is a heavy and comfortable one, with seat post having a wide range of height-adjustment. The stand is of the heavy folding type, locking to the rear mudguard when not in use. The finish of the machine is Tiger yellow with black striping and all exposed metal parts are nickeled. The weight is 112½ pounds, and the price is $1 per pound, or $112.50.

The action of the Frederickson two-stroke motor is unique. The gas is drawn into the passage or manifold and then forced into the top of the cylinder. As the piston opens the exhaust port, the fresh gas rushes into the top of the cylinder without waiting for the piston to uncover the inlet port. The larger poppet valve acts to prevent "popping back" into the carbureter, while the upper and smaller valve acts as an automatic inlet valve. The piston is fitted with a deflector plate of novel design, which prevents premature firing of the charge should the burned gases "linger" in the cylinder from any cause. The cool gas entering the cylinder plays on the spark plug and keeps it from carbonization and overheating. It is claimed to have a like effect on the cylinder. The control of the machine is simplicity itself.

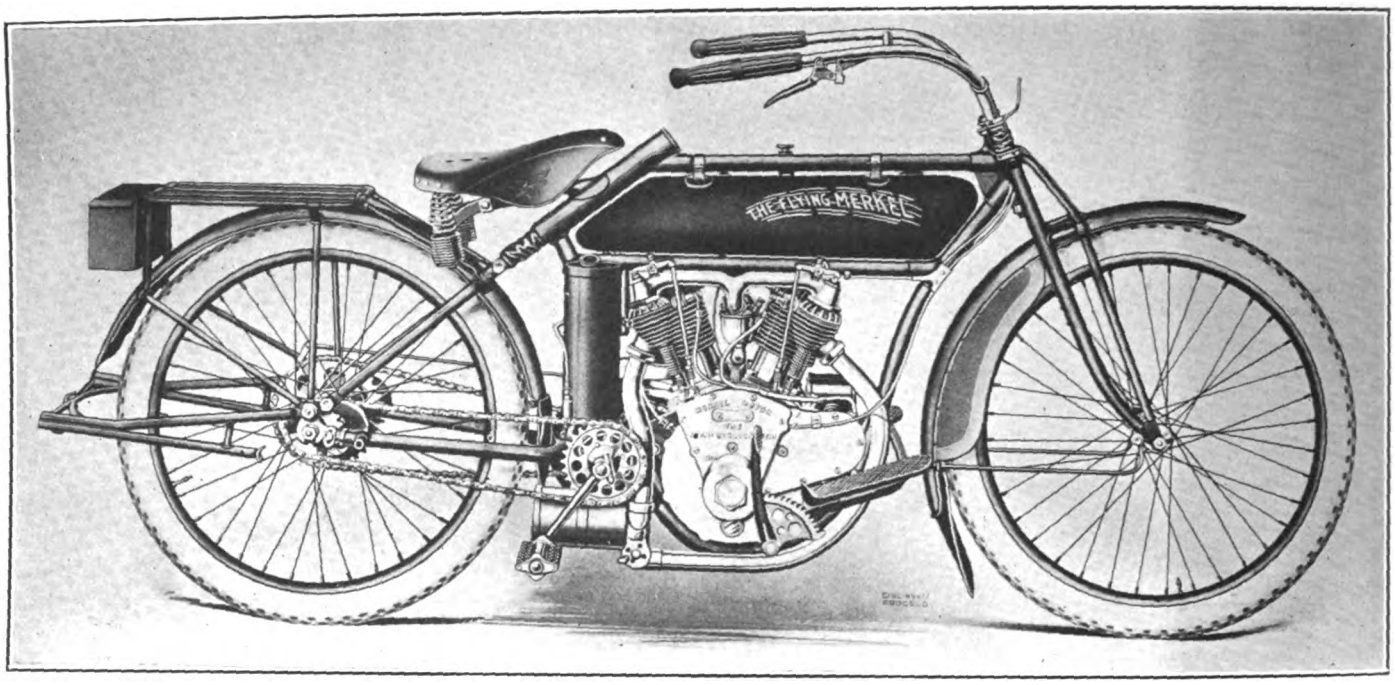
# MIAMI OFFERS THREE POWER BICYCLES

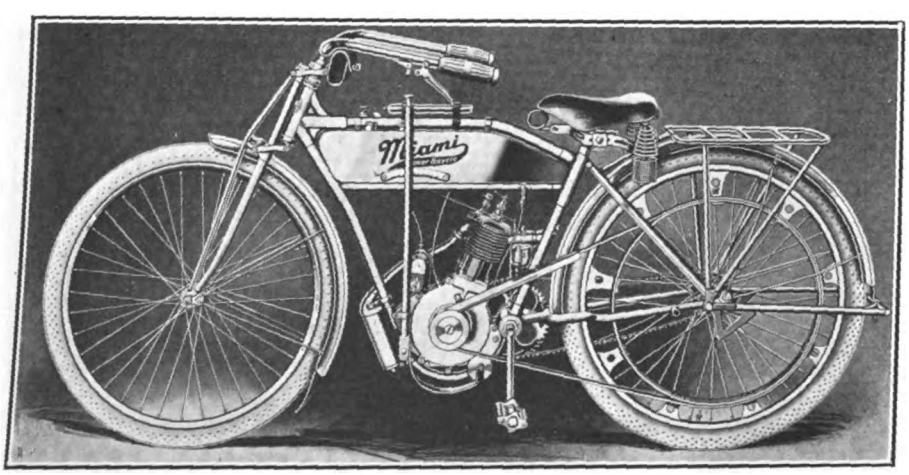


**Flying Merkel Two-Speed Planetary Gear Twin Model 675 with Direct Foot Starter and Pedal Gear**

THREE models of the Miami Power Bicycle, and five models of Flying Merkel motorcycle are offered by the Miami Cycle & Manufacturing Company, of Middletown, O., for the 1916 season. The Power Bicycles include a chain-driven two-speed machine, known as Model 16; a belt-driven, magneto-ignited, single-geared mount, known as Model 15, and the same machine, fitted with battery ignition, Model 14, which was first introduced last season. All these models are fitted with a single-cylinder, side-by-side valve, four-stroke motor of 2½ horsepower. The Flying Merkel models differ in minor details only from their immediate predecessors.

The Model 16 Miami machine is of the countershaft chain-drive type, a 3/16 x ⅝-inch roller chain being used on both primary and final drives. The ball-bearing two-speed gear is of the sliding type, fitted on a special bottom bracket. It is controlled by a short-ball-grip lever working in a quadrant on the right side of the frame close to the seat cluster. The gear ratios are 6.3:1 on high, and 11½:1 on low. High gear is direct, while the reduction on low is 1.78.

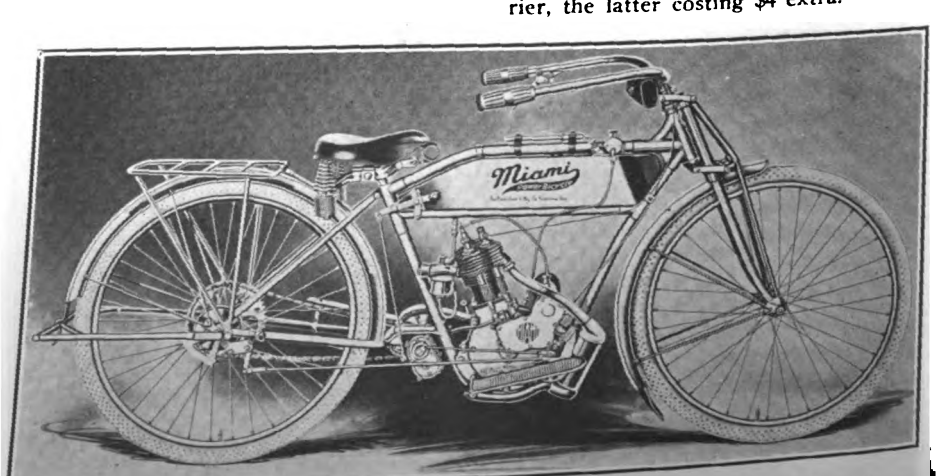
The gearset incorporates a disc clutch of the dry type, having four Raybestos discs interleaved with steel discs. This clutch is controlled by a rocker pedal on the left footboard through linkage on the right side of the machine. The motor shaft on Model 16 carries a spur-pinion, in addition to the front sprocket, and with this pinion gears a toothed sector pivoted to the crankcase on the left side. This sector is fitted with an arm and pad and enables the motor to be turned over about three times at one kick. This starter, as it really may be termed, is fitted with a ratchet clutch in the pinion on the motor main shaft.



**New Belt-Drive Miami Power Bicycle, Model 15, Having Magneto Ignition**

### Contracting Band Brake

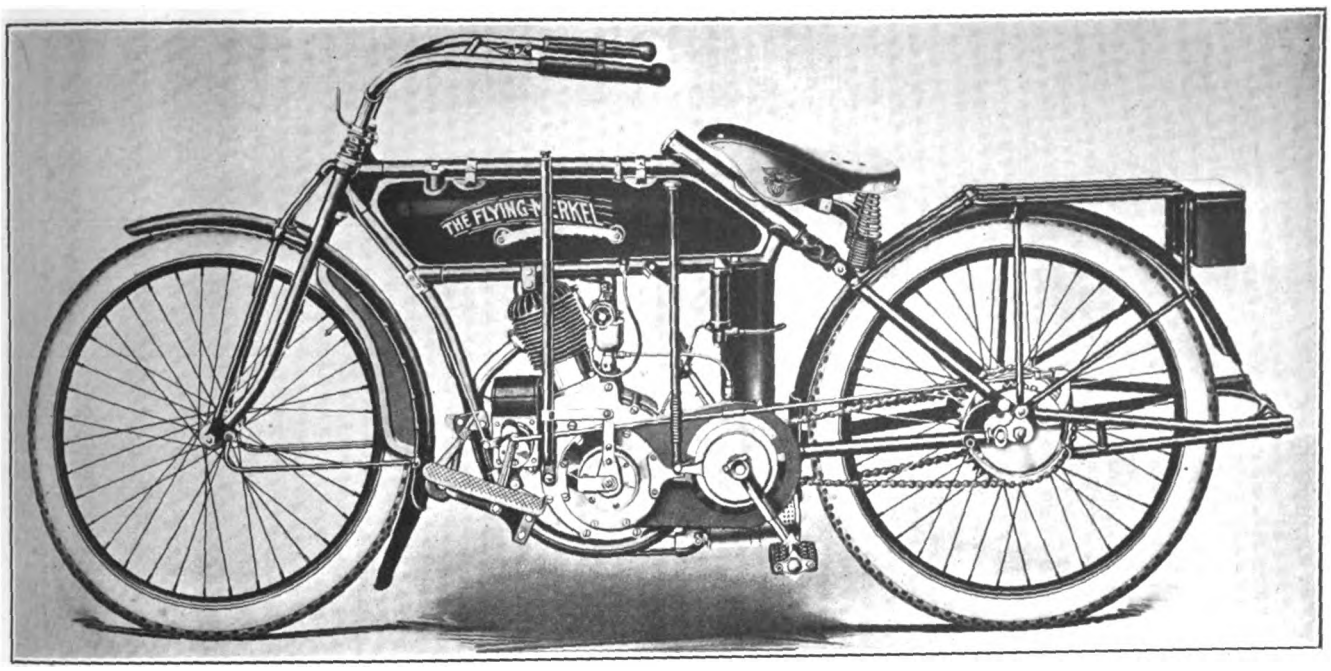
Going toward the rear of the machine, the brake is seen to be of the band type, acting to hold the mount either backward or forward. It has a powerful leverage and is operated by a pedal on the right footboard. Footboards are of aluminum. The machine is fitted with 28-inch wheels and two-inch Goodyear Blue Streak tires are standard, with an option on Federal studded treads. The wheelbase is 51¼ inches. Model 16 is listed at $140, but the equipment does not include a luggage carrier, the latter costing $4 extra.



**Right Side of Two-Speed Miami Model, Showing Clutch and Gear Control**

Digitized by Google

# AND FIVE MERKEL MOTORCYCLE MODELS



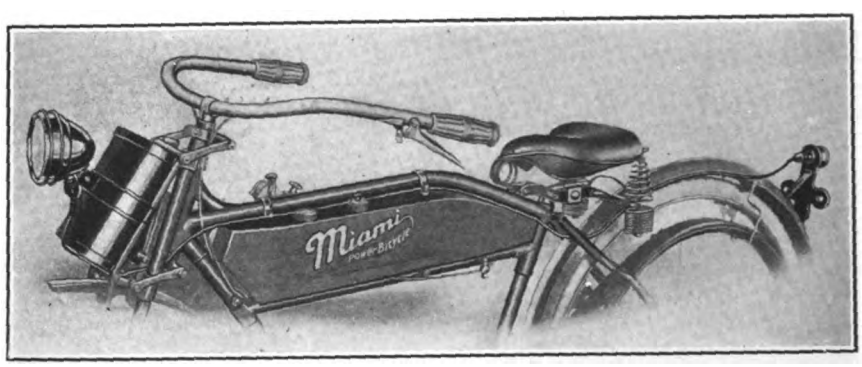
**Single Cylinder Two-Speed, Model 643, Showing Two-Lever Control, Footboards and Luggage Carrier**

The power plant used in the Model 16 is the same as that used in Models 15 and 14, except that a sprocket and starter pinion are fitted in place of the flat-belt pulley on the motor main shaft. The motor is of the side-by-side valve type, with exhaust valve in the forward chamber. The bore is 2½ inches and the stroke is 2 15/16 inches, giving the motor a rating of 2½ horsepower. The piston displacement is 14.21 cubic inches. The carbureter is of a special type, named the Miami, and fitted with a choking device for easy starting. It is a float-feed instrument with adjustable air and needle-valve to the jet. The throttle is controlled by the right grip on all models.

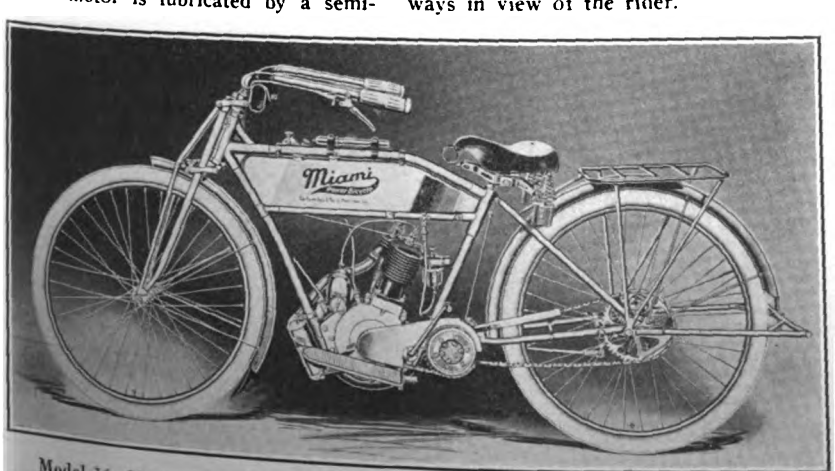
**National Magneto Used**

The ignition is by a fixed-spark, high-tension magneto, the National. It is fitted at the front of the crankcase and is driven by a train of three spur gears running in an oil-tight casing. The muffler is arranged at the front below the crankcase and is very compact. Its great size in proportion to the cylinder volume makes it noiseless. The tail-pipe extends to the rear under the motor. The motor is lubricated by a semi-automatic device incorporated in the oil compartment of the tank, the oil going to the bearing surfaces by splash. This device has a spring plunger which forces oil through a cylinder and sight-feed to the crankcase. The sight-feed is in a horizontal glass barrel on top of the tank, always in view of the rider.

The difference between Models 15 and 14 lies in the ignition only. Model 15 uses the National magneto, while Model 14 employs a battery and coil system. Both models, as well as the Model 16, have the characteristic loop frame of the Miami Power Bicycle of last season, also the cantilever type spring fork, fitted only by the makers. The tank has a gasoline capacity of slightly more than 1½ gallons, while the oil capacity is 2 pints. There are double partition walls between the oil and fuel compartments. The mudguards and stand are the same on all three models of the Power Bicycle, while the means of controlling the valve lifter, by hand-latch on the left grip, is also common to the three models. The wheelbase of both models is shorter than that of the chain machine.



**Electric Lighting Set for Miami Power Bicycles, Listing at $5 Extra**



Model 16, Chain Drive, Two-Speed Miami Power Bicycle, Showing Footboards

**Spartan Belt Drive**

Both Models 15 and 14 are driven by 1½-inch Giant Spartan flat belts, with idler or "jockey pulley" acting to regulate the tension and free the motor from the transmission. The brake used on both is the Musselman positive drive coaster type, operated by back-pedaling. A Troxel Motor Bike saddle is fitted, like that on the chain-

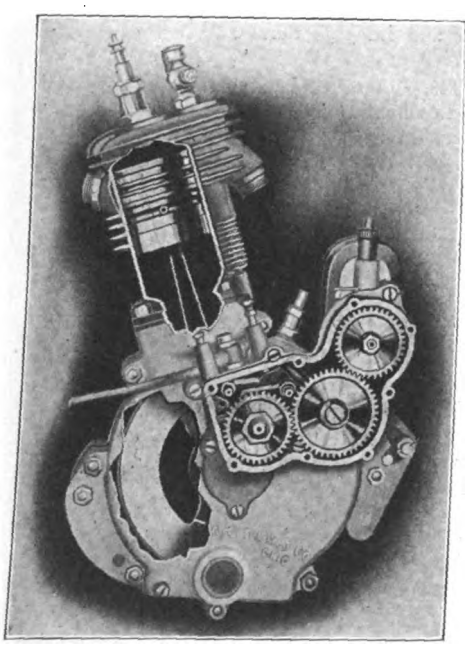
drive two-speed model, and the tire equipment is the same as on the latter. Pedals



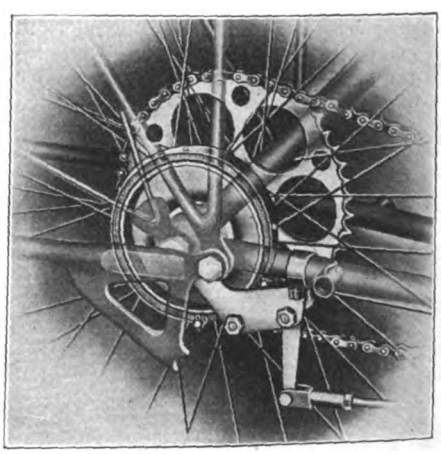
**Section of Miami Motor**

are fitted, being of motorcycle type. A tubular luggage carried is listed at $4 extra. The Model 15 (magneto ignited) lists at $125, while the Model 14 (battery ignited) is priced at $100.

An electric lighting equipment is offered by the Miami firm as an extra for the different models of the Power Bicycle. This consists of a set of dry cells, a headlight and a tail lamp. The battery is to be mounted on the front fork, with the headlight on its casing, while the combined tail lamp and license plate bracket is to be attached to the rear mudguard. The outfit is supplied with the necessary wiring. It lists at $5. Application for details on this set should be made to the manufacturer at Middletown.

### Flying Merkel Series

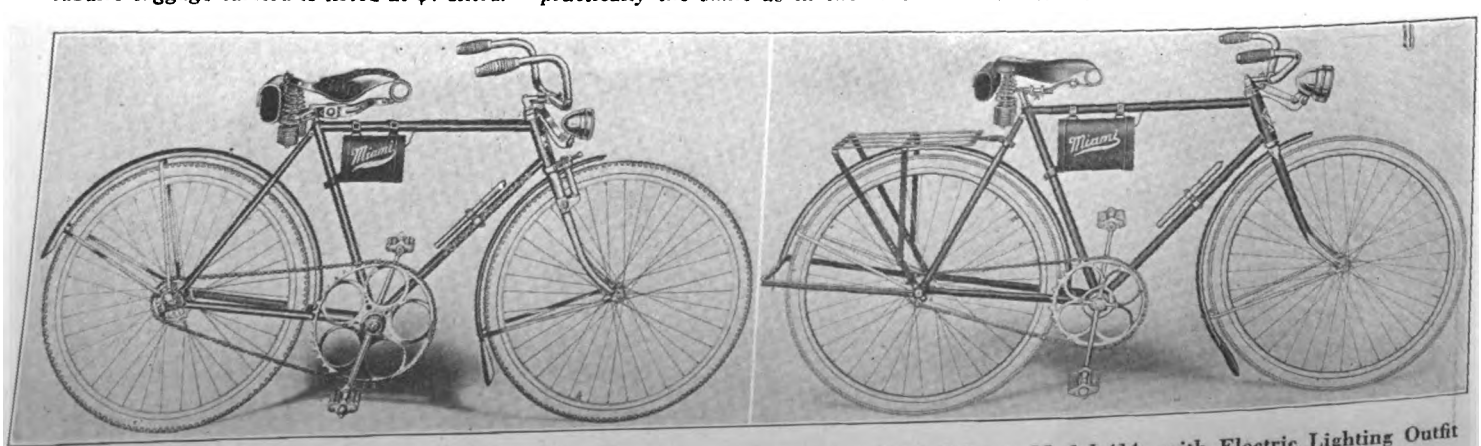
In the Flying Merkel line, the twin models, 673, 671 and 675, are now fitted with a one-piece inlet manifold, in place of the built-up one of previous seasons. The clutch used is an Eclipse, of 1916 type, giving greater surface than that previously used. The Miami combination dual brake is fitted on all models, and ignition is by the Dixie high-tension magneto. The five machines which constitute the Flying Merkel line, are all fitted with the successful Merkel spring frame, the truss spring fork, and a crossbar between the handlebars. The power plants in each case are practically the same as in the 1915 models, and the same details apply to the frame, tanks, and saddle equipment. The two-speed gear used in 1915 has been continued for the new season. Tires for 1916 are Goodyear Blue Streaks, with an option of



**Band Brake on Model 16**

Firestone non-skids, 28 x 3 inches in size. Footboards are fitted as in 1915.

The Flying Merkel models are the Model 675, planetary two-speed twin, $260, incorporating the foot starter at the right similar to that of 1915; Model 673 twin,



***Left, Racycle Pacemaker, Model 210, Showing Full Equipment; Right, Flying Merkel Scout, Model 414, with Electric Lighting Outfit***

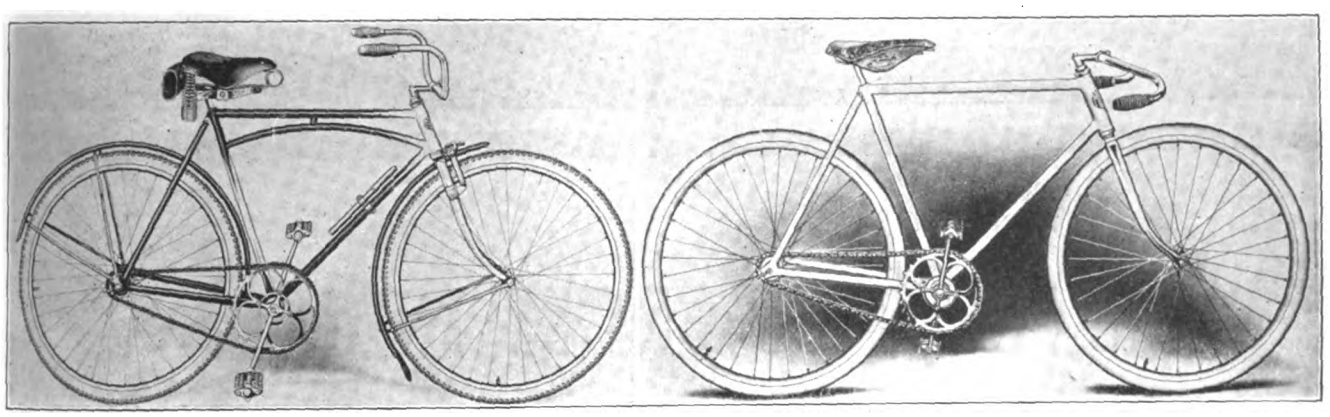
Digitized by Google

with pedals and footboards and no starter, $250; Model 671, single-geared twin, $225; Model 643, single-cylinder, two-speed, $225; and Model 641, single-cylinder, single-geared, $200. Luggage carrier on all models is listed at $5 extra. Color is Merkel orange, with an option of No. 17 blue.

In the bicycle line, the Miami company announces the Racycle Pacemaker as one of its 1916 leaders. This machine, otherwise Model 210, comes with electric lighting equipment, Miami spring fork and high pedaling gear, for $60. It is fitted with Musselman coaster brake as standard equipment, as well as studded tires. The Hudson racer, Model 510, listing at $50, is another machine which has been further developed for 1916. The top tube has been enlarged without detracting from the appearance of the machine. This model is equally adaptable to road, as well as to track racing. A similar model is made in the Miami, and Racycle lines, adaptable to a similar service.

The Flying Merkel Scout is another 1916 model that will prove its popularity during the coming season. This is equipped with electric lighting equipment and flat luggage carrier, listing at $35. The frame pump is attached by clips to the diagonal tube. This model comes with the Musselman coaster brake as standard equipment. The Miami Pathfinder, Model 310, is fitted with the characteristic Miami spring fork, trussed top tube and Musselman coaster brake, for $50, complete with frame pump.

The different bicycle lines of the Miami Cycle & Manufacturing Company, manufactured in 1915 and previous seasons, are being continued for the new year. There are nine in the Racycle line, six in the Miami line, three in the Flying Merkel line and five in the Hudson series, in addition to those mentioned above. Prices range from $25 to $35.



**Left, Miami Pathfinder, Model 130, with Truss Frame and Spring Fork; Right, Hudson Racer, Model 510, with Enlarged Top Tube**

# SMITH MOTOR WHEEL RECOGNIZES NO SEASONS

MILWAUKEE, Wis., September 14.—When asked for a description of the Smith Motor Wheel for 1916, W. V. C. Jackson, general manager of the Motor Wheel division of the A. O. Smith Company, stated that the company recognizes no seasons, that its engineers make an improvement in the product whenever an opportunity presents itself and that the policy of yearly announcements does not jibe with the "do-it-now" spirit of the organization.

"There was no 1915 model of the Smith Motor Wheel and there will be no 1916 model," said Mr. Jackson. "If there is one thing more than another that we are trying to accomplish in the marketing of Smith Motor Wheels it is the elimination of the seasonal idea.

"If we see a chance to improve our product we do it at the earliest possible moment. This may be early in the summer, or late in the fall, or in the middle of winter. Why should we wait until a definite date to say to our dealers: 'The machines we will ship you on and after such a date will differ in such and such respects from the machines we have been supplying you in the past?'

### Always Seeking Improvements

"It goes without saying that we are continually seeking improvement. We want to make the Smith Motor Wheel the best thing on the market, not in 1915 or 1916 or 1917, but all the time. Our dealers have the constant assurance that every machine that is shipped to them is the very best our factory has turned out up to that time, with the added assurance that the moment we are satisfied that any improvement under experiment is practical, it will be embodied in the machine. Smith Motor Wheel dealers are not compelled to wait until the opening of the 1916 season, so-called, to get the benefit of our latest efforts to make the machine better.

"The Smith Motor Wheel that we are turning out today is an improvement over the Smith Motor Wheel that we turned out six months ago. I doubt if there will be a great deal of difference between the machines we exhibit at the Chicago Show and those that have been going out to our dealers for several months past. On the other hand, we expect to keep right on making improvements, changes here and there, wherever experience indicates the need.

**A Messenger Who Is Saving Time with the Aid of a Smith Motor Wheel**

### The "Waiting" Idea Eliminated

"The big thing that we are accomplishing by this policy of steady improvements instead of a sort of annual upheaval which results from the seasonal idea, is that instead of coming out each year with a machine radically different from every machine turned out the year before, we keep up to date all the time. There are no radical differences between our machines. The latest turned out are better than those that preceded them, but they are all good, and the man who buys a Smith Motor Wheel today has the assurance that he is getting the best our factory knows how to produce up to that minute. He need not feel that he should wait a few weeks so as to get the 1916 model, for there is no such thing. Our dealers also know that should we evolve an improvement two months or six months from now, it will be immediately incorporated in the machine and there will be no holding up the good things for another season.

"The seasonal idea has been a terrible disadvantage to the cycle industry, in our opinion. Manufacturers, dealers and riders all suffer from it. Because of the custom of coming out once a year with changes and improvements on the machines, riders have got the idea that after the first six months of a year is gone they might as well wait a few weeks longer and get next year's model. Dealers are also hampered by slacking up on sales in mid-summer to wait for the prospective new models.

# A LETTER FROM INDIAN

Sept. 11, 1915.

Dear Sir:—

Here's a chance to obtain an INDIAN MOTOCYCLE agency in a big, live town.

We are revising our agency appointments for the 1916 season and have a number of live towns in different parts of the U. S., ranging from 5,000 to 100,000 inhabitants, where we consider it desirable to change our representation.

We are looking for "live wires" to take the agency for the INDIAN MOTOCYCLE in these towns.

Only a small investment will be necessary and good money can be made in the motorcycle business in the towns we have to offer.

If you already have an agency and feel you have outgrown your present location and could handle a bigger proposition, or if you have not had any experience and would like to try your hand; this is an opportunity to get in the motorcycle business right in a territory that is capable of big development.

First, study the 1916 Indian announcement—the new Indian Power-plus Motor—the new Indian Featherweight.

# 1916

**Then, address a personal letter to the undersigned, giving full particulars as to your experience, qualifications and the investment you would be able to make.**

**On receipt of your letter we will forward you at once a list of these towns, giving you full information as to what has been done in these towns in the past and what we think can be done in the future.**

**An early reply will insure the choice of territory—will let you in on what many big men in the trade predict will be the most successful year in Indian history.**

**Our sales staff will be glad to meet you at the Chicago show.**

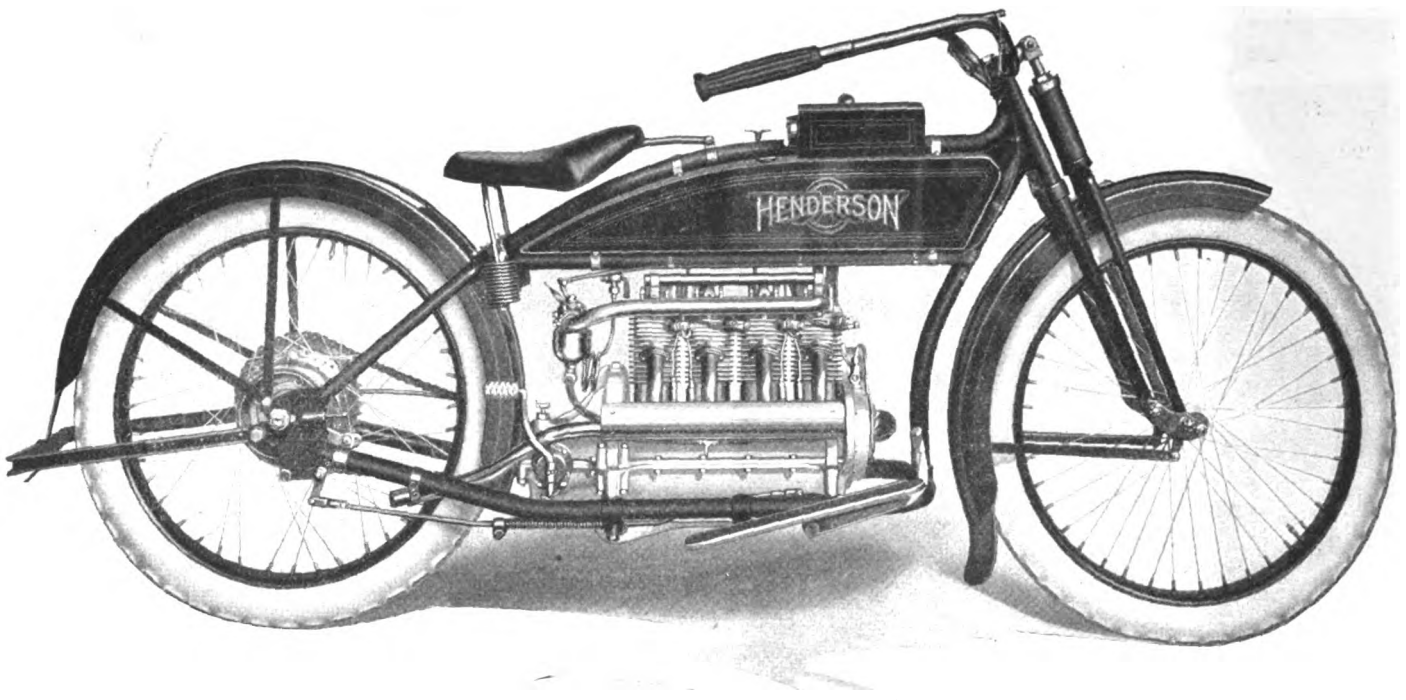
# HENDERSON IMPROVEMENTS ADD TO SPEED,



**Right Hand View Showing New Kick Starter in Unit with Four Cylinder Power Plant and Comfortable Footboard**

DETROIT, Mich. — Following its established policy of constructive advancement, the Henderson Motorcycle Company has embodied in its 1916 models a number of new features which go to make the service of the machine still more uniformly efficient and satisfying than in the past. That is to say, more snappy in action, livelier in acceleration, more full of "pep" and ginger, and smoother and quieter than ever. At the same time, changes of a radical nature have been avoided, the principles that past experience has proven right being all retained in their full strength.

Two models are in the Henderson line for 1916. Model F is the standard single-speed model, four-cylinder, 8 h. p., with 58-inch wheelbase. Model F2 is the two-speed machine. Either model may be obtained with electrical equipment if desired.

### Frame Lower and More Racy

The frame lines of the new models are much the same as the 1915 Model E, but a still lower saddle position gives a more racy appearance.

The alterations in which most keen interest is taken are naturally in the motor, as the power plant is, of course, the vital factor. There are several improvements which tend to make it still smoother and snappier in its action and even more responsive in quick acceleration.

The cylinders have been redesigned and the total piston displacement slightly reduced, so as to bring the machine within the 61-cubic-inch limit. This makes the four-cylinder Henderson eligible for track races, hill-climbs and all other contests held under F. A. M. rules, and at the same time the motor has been made still faster and more powerful by refinement of design.

Both the intake and exhaust valves in the new motor are much larger in size—now being 1¼ inches in diameter. This provides for quickly and thoroughly scavenging the cylinders of dead gases, and injecting a full fresh charge. The gas passages from the valves to the exhaust pipes are also made larger, thus facilitating quick movement of gas and reducing friction to the minimum.

The intake manifold is shortened so as to give more direct passage of the incoming gases, and is carefully designed to eliminate resistance.

The spark plugs in the new motor are located in the side of the valve pocket. This location places the spark points in the center of the very freshest gas so as to produce quick and thorough combustion. The flow of cold, fresh gas from the intake valve, passing across the points, effectually prevents plugs burning and eliminates any chance of their being fouled by oil.

The pistons of the new motor are of hard, gray iron, very light and strong, and provided with a number of carefully drilled holes in the side walls to insure perfect lubrication and to reduce the weight of moving parts.

### New Mechanical Oiler

Lubrication is taken care of by a new mechanical oil pump of the positive plunger type, driven by a worm gear. This is adjustable so as to provide just the right oil feed for any grade of lubricant, or to meet the requirements of changing conditions. It delivers just the proper amount of oil to the motor in proportion to speed—as the motor runs faster it feeds more oil, and as it slows down there is less, etc.

A feature of this lubricating system which the experienced riders appreciate is the sight glass on the oil line where it enters the gear case. This glass allows the rider to observe the flow of oil so as to make sure that the engine is getting just what it ought to have.

### Hand Pump Fitted Too

A hand oil pump is provided for high speed use, the pump being located in the tank with the handle in a convenient position in front of the rider. The mechanical oil pump delivers the oil to the gear case at the front of the motor. From this point it flows to the motor base, where it reaches a level by means of passages through the partitions, and from the motor base oil is thrown to the cylinder walls by projections on the lower connecting-rod ends which dip into it.

This system of lubrication is positive and unvarying, as the lubricant is thus thrown direct onto the bearing surfaces and the moving parts cannot possibly run dry unless there is a total absence of oil.

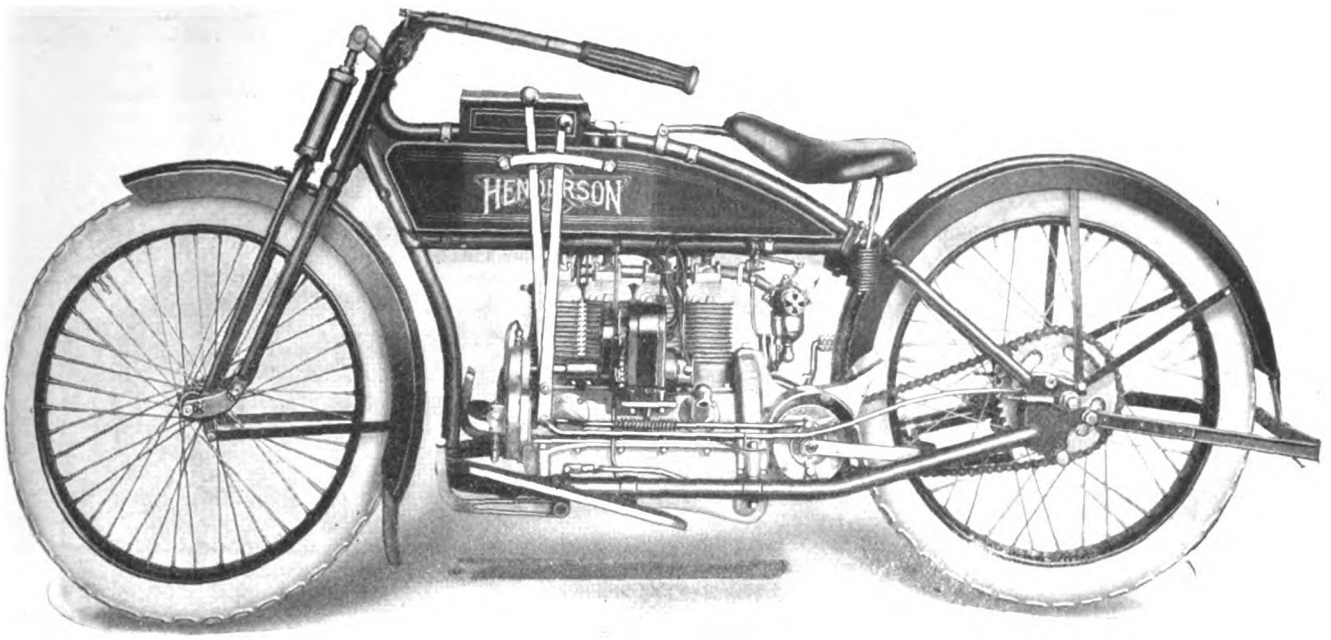
The wrist-pin bushing is oiled through the hollow wrist-pin which is provided with outlet holes, carrying lubricant direct to the working surfaces. The lower connecting-rod bearing also has holes provided to care for the inner surfaces and a system of grooves and channels in the bushings insures proper distribution of oil over every part of the surfaces.

### Neat Piston-Pin Fastening

The fastening of the wrist-pin is a detail which meets with approval from the mechanically-inclined riders who give attention to the little inside features. In place of the troublesome cotter-pin or similar devices which have formerly been used for this purpose, the pin is screwed in a hole which passes through both the boss and the wrist-pin and is held against any possibility of working out by a lock-nut. Only the lower part of the boss is threaded and this fasten-

Digitized by Google

# STURDINESS AND SIMPLICITY OF CONTROL



**Left Side of Henderson with Clutch Control by Foot and Hand, Me chanical Oiler—Gearset Is in Hub**

ing makes a very secure and dependable one which allows no chance for working loose, in addition to being easy to install and equally easy to remove again, in case it is desired to do so at any time later.

### Big Bearings Are Used

The bearings in the new motor are unusually large and the big surfaces form ample provision against wear or undue friction. The four crankshaft bearings are, from front to rear, 1⅜, 1⅝, 1½ and 1¼ inches wide, giving generous surface that is more than ample for the hardest work that they will ever be called on to do.

The shaft itself is a steel drop-forging, carbonized and carefully oil tempered. An improvement in the crankcase breather points this downward so that there is no possibility of oil vapor being blown on the machine or rider.

### New Kick-Starter

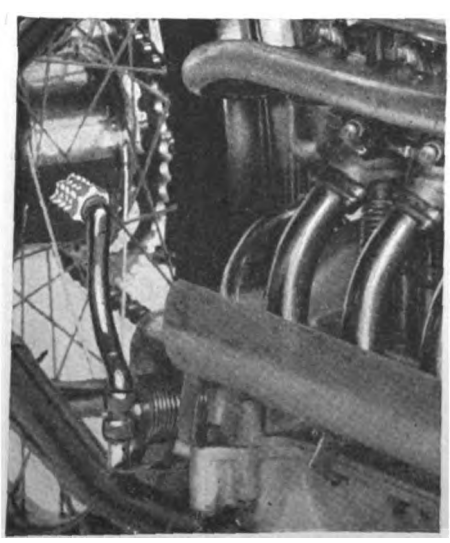
A feature which is meeting with an enthusiastic reception is the new Henderson kick-starter. It is distinctly different from any other device made for this purpose, and is remarkably simple and effective. There is a neat foot-lever which folds back out of the way and out of engagement when not in use. When swung around to the position for starting, a cam movement engages the eight dogs on the starter and a down kick spins the motor over, starting it readily. The leverage is so powerful that it is easy to kick the motor over against compression, and as the motion passes through the transmission bevel gears the revolutions are so fast that the engine starts quickly and easily practically every time—just an easy pressure of the foot on the starting lever and the motor immediately begins to purr like a contented cat.

When the foot is removed from the starter it is swung back up and folded in its proper position by a spring. The rider simply kicks it down to start the motor, removes his foot and after that it takes care of itself.

### New Carbureter Kink

Two new features on the special Schebler carbureter which is made for the Henderson, attract attention. One is the new auxiliary air-lever. The extra air shutter is provided with a short, convenient lever for regulating its opening, instead of the Bowden wire which was used last year.

Another carbureter feature which looks good to the efficiency-seekers is the warm-air intake. A pipe from the main air port at the lower end of the carbureter leads to a jacket around the exhaust, where it draws hot air for the mixture. This results in an appreciable increase in efficiency, especially in cold weather, as it gives perfect vaporization and does much to get proper results from the poorer grades of gasoline which are generally the best that can be obtained.



**Position of Kick Starter**

### Dual Clutch Control

Another new point of a very practical and useful nature is the dual clutch control which permits the clutch to be manipulated either by hand or foot. A foot lever located conveniently by the left footboard releases the clutch when it is pressed down and returns it to the same point of engagement that it occupied originally, when pressure is removed. The hand lever can, of course, be used independently.

If the hand lever has been set at just the right point to give proper traction for the conditions at the time, the rider can release the clutch for a sharp turn, or a slow-down, simply by pressing on the foot lever, and then can go on again without removing his hands from the bars or disturbing the hand lever adjustment, simply by lifting his foot. With the clutch foot lever on the left and the brake lever on the right, the rider has the most perfect kind of control over the machine at all times, being able to stop with the most abrupt suddenness if he wishes, or to creep forward at a snail's pace in crowded traffic or under similar circumstances, or to stop and start, or slow down or speed up, just as conditions call for.

The clutch used in the 1916 models is an Eclipse multiple-disc of ample size to provide plenty of bearing surface for transmitting the greater power of the new motor.

A neat guard over the clutch and front sprocket prevents any possibility of oil

Digitized by Google

being thrown, or of dirt or road grit from the wheel being thrown on the sprocket or chain.

The two-speed gear is the Henderson rear-hub design which has proven so efficient and satisfactory during the past year. It is remarkably simple and strong, using big gears with wide faces, which give plenty of working surface to handle the load and do away with wear.

### Improved Fork Design

A change in the design of the front fork rocker arm makes this easy-riding machine still more easy. The new angle at which the front axle is supported, in relation to the spring-supported member of the fork, causes the wheel to move up and back when the shock is met, so as to give a still more flexible action and softer, easier motion. The front forks are made especially strong sidewise as well as vertically and longitudinally, so as to take care of the added side strains imposed by sidecar use.

The design of the forks on the new Henderson has been worked out very carefully and the angle of the rake of the steering head, the position of the rocker arms and the relation of the position of the axle to this, have been designed so as to make the machine very steady to handle. It steers easily on slippery surfaces or at extremely high speeds—holds the road and keeps to a straight line true as a die.

The frame is of the same suspension cradle type as in 1915, of course, with a more decided drop to the saddle, giving a still lower riding position.

The saddle is of a new floating design and is built right onto the motorcycle. There is no saddle frame at all, as such frames are ordinarily considered—just a yoke across the rear fork to support the seat springs. The long radius of action and flexible spring system make this unusually easy riding and comfortable.

### Frame Stronger Than Ever

Additional refinements in the side members of the frame make this even stronger than before. The forgings at the head and at the rear fork tips are unusually husky and powerful and eliminate any possibility of yielding to greatest strain. The frame is made of extremely heavy 13-gauge seamless steel tubing and the additional reinforcements, at points where strains are heaviest, make it immune to the most severe kind of service.

The Henderson is distinctive in that there are no parts at all projecting beyond the frame, so that in case of a spill there is no chance of breakage or derangement. The footboards, of course, fold up, and when this is done the side members of the frame and the rear forks form the extreme outer limits so as to protect all vital parts from accident. This includes protection of the two-speed control. The lever which shifts the gears on the rear hub two-speed operates inside the fork tips where it runs no chance of damage.

### Handlebars Changed

On account of the lower saddle position on the new models the shape of the handlebars has also been altered somewhat, placing the grips lower, so as to give a very comfortable riding position and a racy, attractive appearance to the machine.

The center of gravity of the new Henderson is remarkably low and the weight is distributed between the two wheels so as to give unusually good balance and make the machine very easy to handle under all conditions. The rider is protected from road dirt by wire extension mudguards which give plenty of clearance so as to permit the use of tire chains when desired. The rear guard may be swung down and forward so as to give easy access to the rear wheel.

The wheel base of the 1916 models is 58 inches.

A metal tool box is provided above the gasoline tank, and is enameled to match the machine. The standard finish is dark royal blue.

### Two-Unit Electrical Equipment

Either model can be obtained fitted with electrical equipment at an extra charge. This electrical fitting is of the two-unit system, retaining the magneto for ignition purposes and providing a separate generator and storage battery for lights and horn. The Henderson system includes a Rex generator and storage battery, head and tail lights and electric horn. The generator is shaft driven from the motor, being built in as an integral part.

### Price Reduction for 1916

A greatly increased output and the installation of a quantity of new high-speed machinery of extreme efficiency has enabled the Henderson people to reduce the price of the new models, in spite of the fact that its new features and improvements increase its actual value.

The new model F single-speed sells for $265, while the two-speed model is listed at $295. Either model may be obtained with the two-unit electric system, built in, for $45 additional.

The factory is preparing for an extremely busy season, with these new models, as all indications are very encouraging.

The Henderson people have already established heavy export trade, as over 50 per cent. of the 1915 output was shipped abroad. Extensive arrangements have been made to increase the factory's output, so as to take care of this, as the demand from dealers in America—United States and Canada, that is—is becoming so strong that many more machines will have to be manufactured in order to spare any of the foreign trade.

## STRIKING THE ALL-YEAR-ROUND PACE

THE Chicago Exhibit, which opens at the Coliseum, in Chicago, on Monday, the 20th, is the earliest national motorcycle and bicycle show ever held in this country. It ought to, and we believe it will, well serve the purpose of lengthening the season, in fact, making the selling of motorcycles and bicycles a practically all-the-year-round business. With the new models creating interest in the early Fall, with better deliveries than ever before practically assured, it remains for the dealer to make the most of his opportunities to sell machines during such months as October, November, December, January and February, which used to make up what was once known as an absolutely dead season.

Through the early shows, the Motorcycle Manufacturers' Association has afforded its members and their dealers an excellent opportunity to make an early start. With a mild Autumn in prospect, sales in advance of the Winter months ought to be fairly, if not very, good. We have just finished a rather poor season; now let us all get busy at once in preparation for what promises to be one of the most satisfactory years the trade has ever experienced.

## PRACTICAL HELP FOR THE CYCLE EXPORTER

ALTHOUGH we thoroughly appreciate that no one is capable of coming anywhere near mastering the export situation in so short a period of time as a year, still, we are convinced as a result of twelve months' study that wonders can be accomplished toward upbuilding foreign business in American cycles. We propose to do our share. To this end, we are in position to announce that we have completed arrangements for the establishment, by this journal, of a CYCLE TRADES EXPORT BUREAU, through which we hope and expect to disseminate among interested American manufacturers a lot of valuable and practical information regarding the situation in foreign countries, and at the same time bring foreign buyers of cycles and accesories into closer touch with the American market.

We have already begun the issuance of bulletins on foreign cycle trades opportunities, to interested manufacturers. In some cases, these bulletins will be sent by mail and, in others, published in a separate department, which will be started with next week's issue of this journal. We believe that every manufacturer will find both interesting and of practical benefit the date which we will publish from time to time in our export pages.

Incidentally, we have gradualy built up a list, accurate and up-to-date, of the names and addresses of more than five thousand motorcycle and bicycle dealers in something like fifteen hundred foreign cities and towns. Where a manufacturer desires to make a connection in any particular foreign town of importance, we shall be only too pleased to send him the names and addresses of the concerns in that town with which he ought to get in touch.

In sum and substance, we wish to be considered at the service of the trade in any way having to do with cycle exports business. We are almost daily adding to our data on the subject, and wish it clearly understood that manufacturers in this field are entirely welcome to all we have.

## STRAIGHT TALK FROM A CONSERVATIVE

FROM Los Angeles W. G. Schack, of the Emblem Manufacturing Company, writes under date of September 3:

"Business quite satisfactory; looks much better for 1916."

Those who know Mr. Schack are thoroughly well acquainted with his conservatism, and an expression like the above from the builder of Emblem motorcycles and bicycles means a great deal. However, Mr. Schack's optimism in regard to 1916 is shared by most of the people in the cycle trades. Nineteen hundred fifteen was undeniably a bad year, due to a combination of unfavorable circumstances such as we are not likely to be confronted with again for some time.

First, there was a condition of general unemployment which did not begin to show any great improvement until last spring. Men who would ordinarily buy motorcycles either were out of work when the season opened, or working on part time, or had been out of work long enough to make it impossible for them to make any investments in anything except absolute necessities.

But even if the market had been a normal one, business could not have been good under the weather conditions which have made this summer so abnormal. From the middle of May until nearly the middle of August, at least in so far as New York was concerned, there were not two successive days on which there was no rain.

At the present time, conditions of employment are better than fair, and rapidly approaching normal, if they have not already reached that stage. As for the weather, it is safe to predict that the summer of 1915 will not be duplicated for a long time.

Finally, the advent of the light weight will undoubtedly serve to extend the normal market, so that all indications point to a very satisfactory 1916 season. With deliveries following immediately after the shows, the season ought to open, and will open, within a few weeks, thus giving manufacturers a good start in advance of the inauguration of the active riding season next spring.

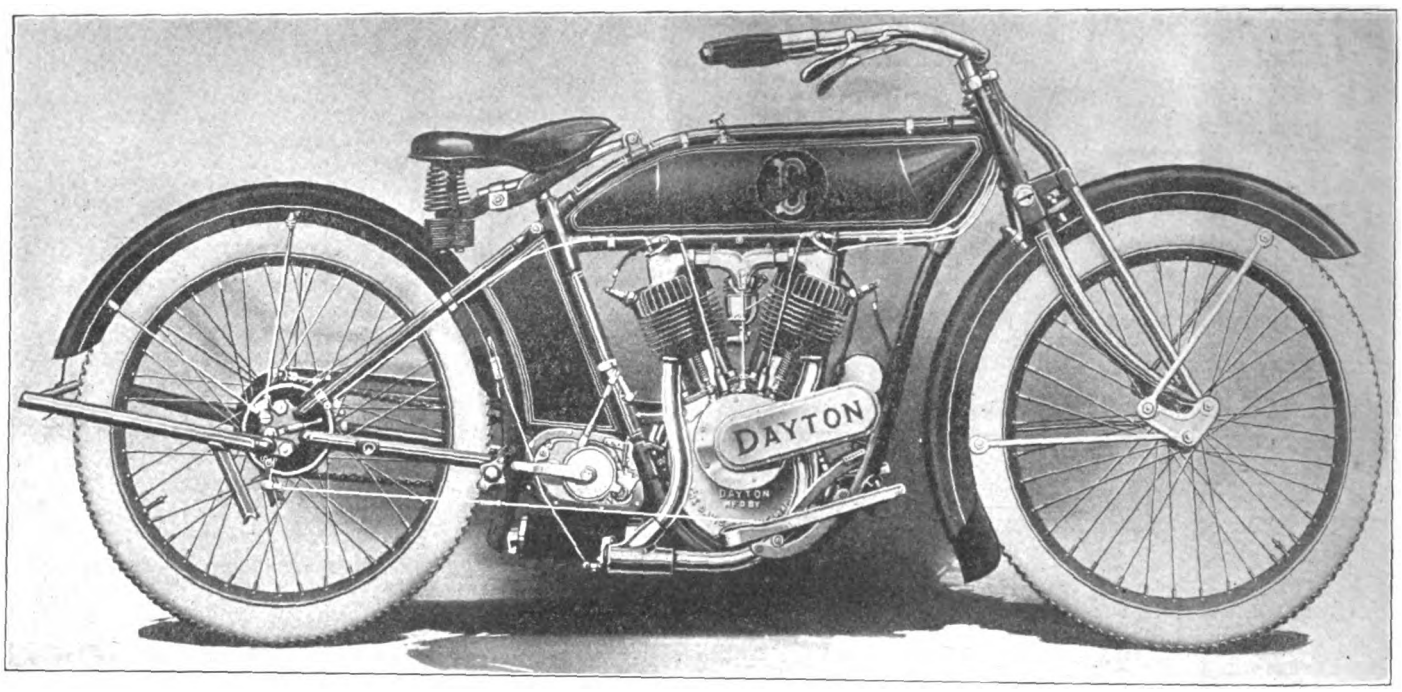
# INGENIOUS GEAR SHIFT AND CLUTCH



**Dayton Motored Model D-3 with Countershaft Two-Speed Gear, New Brake, and Front Fork Rockers—Note 1916 Tank and Emblem**

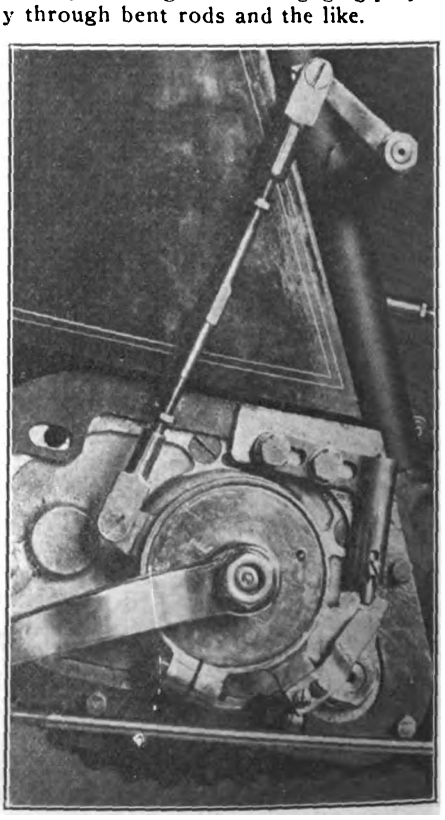
FOR the 1916 season, the Davis Sewing Machine Company, of Dayton, O., announces six models of Dayton twin motorcycles. Three of these will be fitted with the Dayton motor of 8 horsepower, while the remainder will have the Spacke De Luxe 9 horsepower twin for their power plants. The line includes four models incorporating two-speed gearsets, and it is on these models that the chief improvements over the corresponding 1915 Dayton machines have been made. There are two electrically-fitted models and two single-geared models. Only twins are produced.

What first attracts the attention of the motorcyclist to the two-speed Dayton for the new season is the gearshift lever and its slotted quadrant, mounted on the left side of the frame and so arranged as to be within easy reach of the rider without interfering with his knee-grip at any time. The next improvement noted will be the combined lever and rocker pedal control for the clutch convenient to the left footboard. There is also a crossbar between the handlebars, giving added rigidity to the handlebar assembly, and this fitment is on all other Dayton models in addition to those fitted with two-speed gearsets. In connection with the gearset itself, there is a very ingenious locking device for the different positions and a novel device in connection with this lock which prevents any attempt to change gears unless the clutch is first disengaged.

Hub and Double Brake Construction

### Clutch and Brake Controls

While on the 1915 two-speed models, control of both clutch and change gear was accomplished by the movement of a T-grip hand lever on the left side of the frame, on the new models there is a separate control for each. The T-grip hand lever is now attached to a rocker-pedal close to the left footboard, the connection to the clutch collar on the right side being made by rods through a rocker mounted on the seat post tube. The clutch collar has an arm on the side opposite to that on which the rod and clevis joint is attached and this arm carries a tongue which acts as a clutch interlock. The gearshift lever is a ball-grip handle of generous proportions and short throw, working in a slotted double-quadrant, the slots being cut to correspond with the high, neutral and low positions. The arm of the handle is disengaged by pushing inward on the grip, a spring causing the grip to move outward on release by the rider. The connection from this shifter to the arm on gearset is direct, thus ensuring changes being made without loss of time or possibility of the gears not engaging properly through bent rods and the like.



**Gearset with Clutch Interlock**

The clutch control which is dual, being arranged for either hand or foot, at the desire of the rider, is most conveniently placed, permitting of long distance riding without cramping the feet to operate the rocker pedal. The T-grip on the lever ensures a positive hold for the hand no

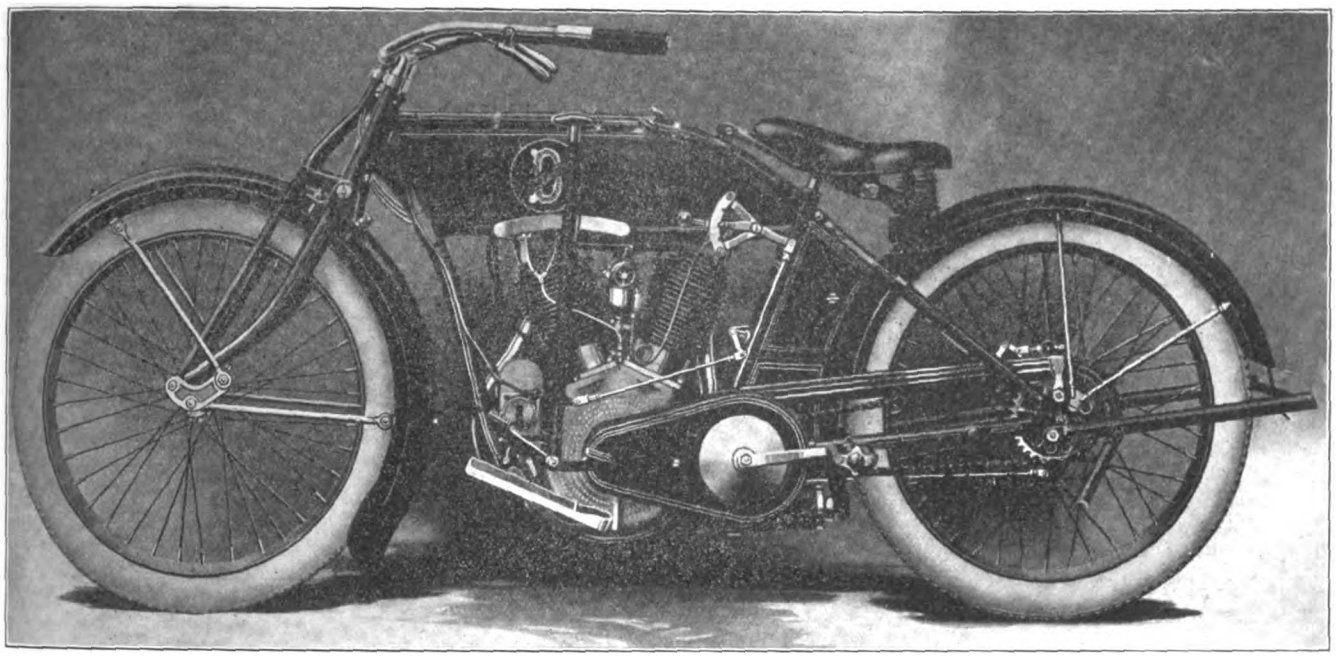
# CONTROL FEATURE 1916 DAYTON TWINS

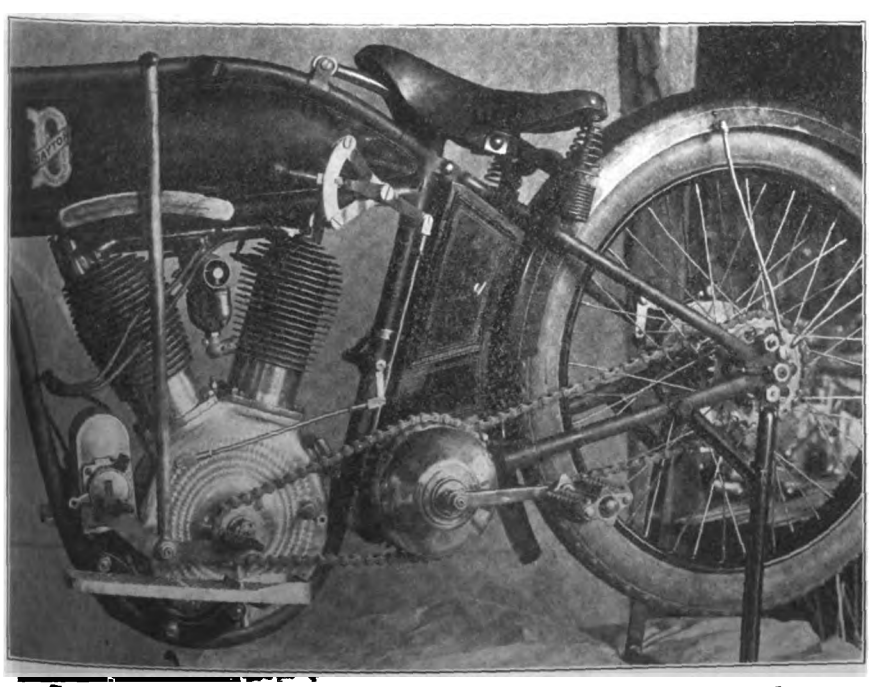


**De Luxe Motored Model D-7, Showing New Gear-Shift, Double Clutch Control and Hand Brake Latch on Left Bar**

matter whether the grip is wet or dry and is so positioned that it can be operated by either hand without hampering the steering of the mount. While the Dayton two-speed models have always been easy to control, the 1916 models are even easier than their predecessors and go a long way toward attaining the ideal in control and comfort for the solo or sidecar motorcyclist.

### Novel Locking Device

On the right side of the gearset, attached to the shaft which operates the sliding dogs within is a short and stout quadrant with three deep notches in it. Attached to the outside of the gearbox is a cylinder carrying a knife-latch or plunger, the latter engaging in the slot corresponding to the high, neutral and low gear positions according as the shift lever is moved. This latch answers the purpose of a gear-lock, giving two locks to the shift, the other one being that on the shifter handle. The tongue on the arm of the clutch collar is normally out of engagement with the knife-latch, that is when the clutch is engaged, but as soon as the clutch is disengaged, the tongue rises out and forces the knife-latch upwards, releasing the quadrant and allowing the dog clutches to be moved and the speed changes to be effected. In regard to the gearset itself, the same substantial one used in the 1915 models has been retained, no changes having been found necessary in its entire construction.



**Transmission and Control Details on Two-Speed Dayton Models—D-3 and D-7**

But while the gearshift has been improved in the direction of giving a double lock to the dog clutches and the clutch control by either hand or foot, greater safety has been seen to in the fitting of a double brake on the rear hub. This brake, which supersedes the Davis internal type used in 1915, has both internal expanding and external contracting bands, the former being operated by a foot-lever on the right hand side close to the footboard and the latter by a finger-lifter or latch on the left handlebar. Either brake is powerful enough to pull up a fully-loaded Dayton sidecar combination, and the fitting of the two independent sets is invaluable for both solo and passenger work, even of the heaviest class. The double brake is fitted to the right side of the hub, the internal carrier being attached to the axle tube, while the drum is fitted to the hub-shell itself. Brake anchorages are on the frame.

The brake drum is screwed on the rear hub, being held in place by a positive locking device. The axle proper is 5/8 of an inch in diameter and is of the knockout type.

### New Rocker Construction

Returning to the front of the new Dayton models, the rockers are now fitted with the "elbow" below. They are L-shaped drop forgings, the curved brace of 1915 construction being done away with. The front fork brace is heavier and leads directly to the yoke from the rear of each rocker. The forward end of the rocker is attached to the fork-end on each side, while the axle attaches to the lowest point. The front axle is of the knockout type and is 3/8 of an inch

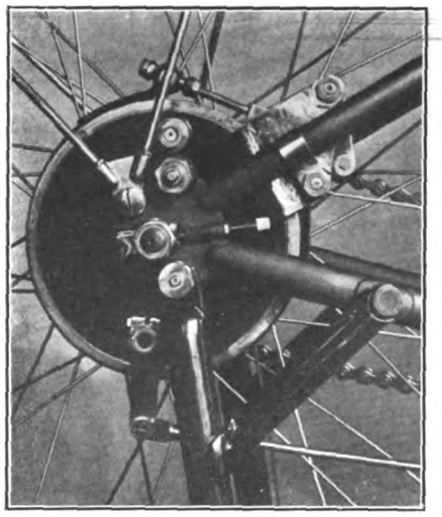
Digitized by Google

in diameter. In other respects, the characteristic Dayton fork used since the machine was first put on the market has been unchanged.

Regarding the handlebars, the only change is in the addition of a crossbar of substantial construction. The control cables are carried outside of the bars near the head in the 1916 models and lead to their respective points of application by the most direct route. The tank with its removable unit oil compartment is continued for the new season. The frame is not changed except in the base of the seat post tube, where a reinforcement has been formed on the gearbox hanger. This reinforcement extends four inches above and four inches below the hanger, making a total of 11½ inches on the tube. The characteristic shock-absorbing Dayton seat post has been continued on the new models.

**Convenient Toolbox Arrangement**

The toolbox is changed to give more convenience to the sidecarist, as well as the solo rider. The door is now at the left, permitting ready access to the contents when the sidecar is fitted, a feature impossible with right hand opening doors. Foot boards are of the folding type, as are the pads on the clutch rocker and brake pedals. The wheels are 28 inches in diameter, fitted with 3-inch tires, of U. S., Goodyear or Continental make. Wheelbase is 58 inches. The power plants on all the Dayton models are unchanged from those of the 1915 season.



**Internal and External Brake as Fitted to All Dayton Models**

A new decalcomanie is used on the 1916 Daytons. This consists of a large D corresponding to the initial letter of the word "Dayton" on the preceding models, arranged within a circle at the center of the tank on each side. The typical Dayton red color is used for 1916. The following models are offered.

D-1, single-geared, Dayton-motored model, $240; D-3, two-speed, Dayton-motored model, $265; D-4, two speed, Dayton-motored model with Splitdorf Mag-Dynamo and electric lighting set, $305, D-5, single-geared, Spacke De Luxe motored model, $240; D-7, two-speed, De Luxe motored model, $265; D-8, two-speed, De Luxe motored model with same electric equipment as on the two-speed D-4, $290.

# IVER JOHNSONS HAVE HUB TWO-SPEED

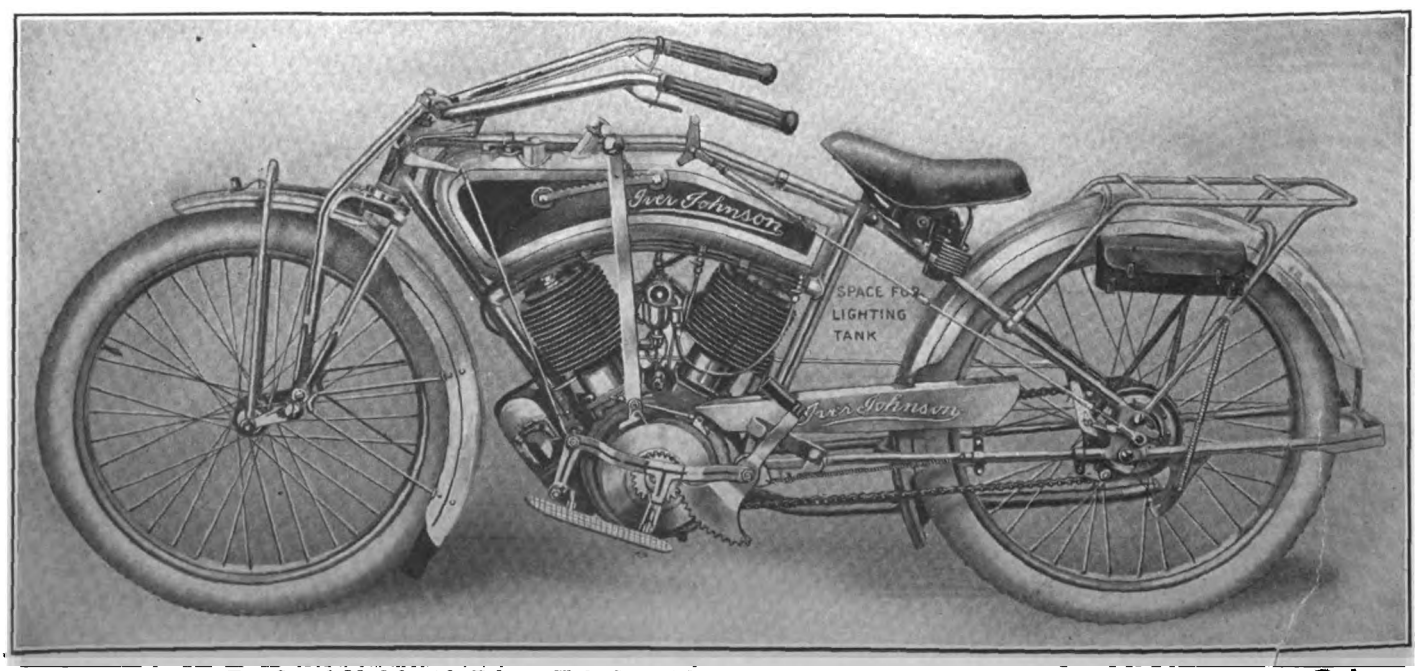
FIVE models of Iver Johnson motorcycles are being manufactured for 1916 at Fitchburg, Mass., by the old-established firm of Iver Johnson's Arms and Cycle Works. The leader of the quintette of models is the 16-7TS, a two-speed twin with kick-starter and spring seat post, and listing at $250. The others are the 16-7, a single-geared twin with starter and spring seat post, at $225; a two-speed 4-horsepower single equipped like the 16-7, selling for $200; a single-geared 4-horsepower single with like equipment, priced at $175, and a V-belt single, pedal equipped and with spring seat post, for $150.

The 16-7TS is fitted with the Eclipse two-speed gear in the rear hub. It is provided with a sector and pinion type of starter, located conveniently to the left foot of the rider on the crankcase side. The sector meshes with a pinion on the left extension of the motor shaft and one thrust down of the sector arm will turn the motor over three times.

**Planetary Clutch Used**

The clutch used on this model is the Iver Johnson planetary one, used during the past three seasons with success. It is operated by a side lever working over a quadrant on the left of the tank. The two-speed gear is operated by a short lever on the top tube close to the rider's hand. The seat post consists of a spring-supported bar carrying the saddle and being itself borne by a rigid piece in the seat post tube top. The motor is the characteristic Iver Johnson 60-degree, side-by-side valve twin, with push-down valve lifter interconnected with the throttle rigging, double crankpins, and internally-geared rotary cam. The typical "cows horn" inlet manifold of this make is retained for the 1916 season, the advantages of this construction having demonstrated themselves since it was first put on the market.

The 16-7 has the same power plant and planetary clutch as the 16-7TS, but is single-geared. The frame, which is the same as that used on most Iver Johnson models, has the curved top tube with two-compartment tank, the short steering head, cradle spring fork and long handlebars with tongue and fork grip control which distinguishes this make. There is ample space between the seat post and the rear mudguard for a lighting apparatus or a gas tank, this feature having been continued from 1915 by the designers. The 16-7 model has the spring seat post and foot starter, as well as the mechanical oiler which has been used for the past season on all motors of this make. Like Model 16-7TS, ample



**Model 16-7TS, Two-Speed Model with Eclipse Hub Gear, Planetary Clutch and Kick Starter--Note Space for Lighting Tank**

Digitized by Google

footboards are fitted, that at the left having its carrier prolonged to support the starter.

### Single Cylinder Models

The 4-horsepower single models, one with a two-speed and the other single-geared, are practically the same as the corresponding models issued in 1915. They are known as the "Big 4" models. During 1915 these machines had the spring seat post as an extra and pedals were used for starting, but for the new season both will have the new foot-starter and seat post as standard fitments. The V-belt single is the successor of the first Iver Johnson motorcycle. It has the double cone clutch, pedal gear and characteristic control, frame, tank and other Iver Johnson features. There is the same space for lighting tank or apparatus back of the seat post as on the larger machines. Its price, $150, is some $50 less than the figure quoted during 1915.

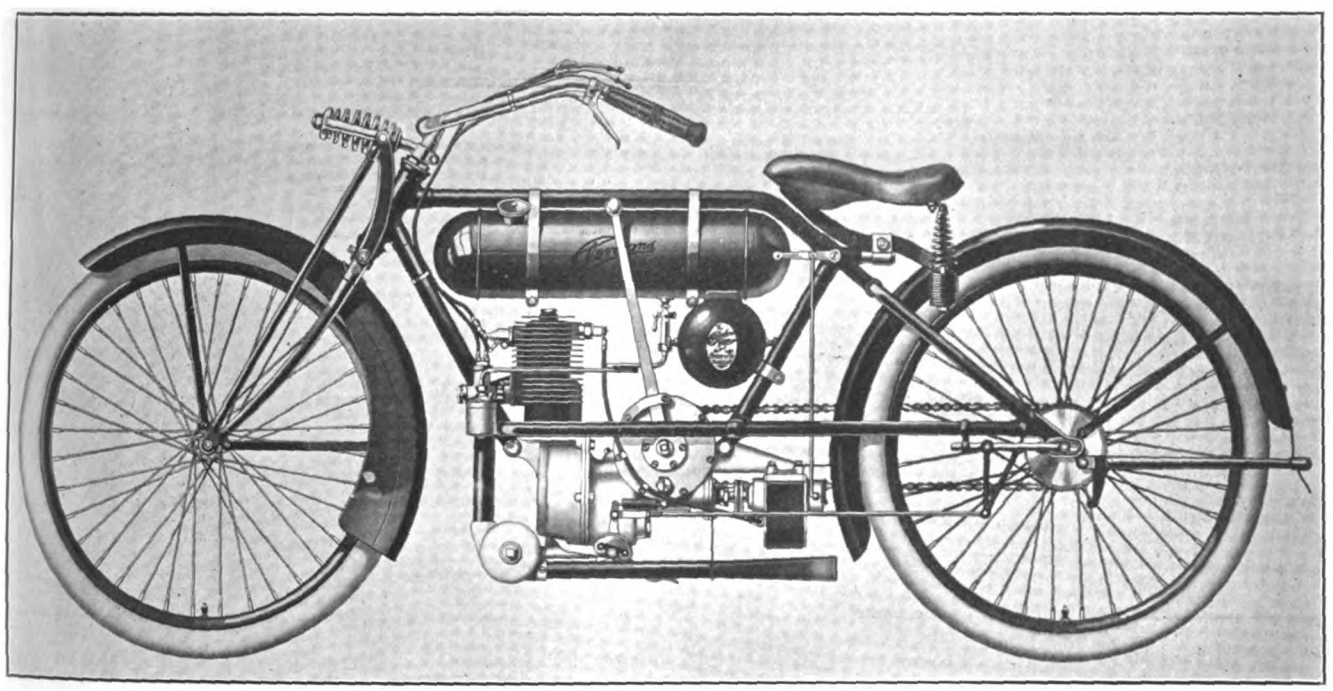
Recapitulating, the 16-7TS lists at $250; the 16-7 lists at $225; the Big 4 two-speed is priced at $200; the Big 4 single-geared at $175, and the V-belt single at $150.

### Iver Johnson Bicycles

In the bicycle line, Iver Johnson will produce all truss models except in the juvenile lines. The machines listing for $30 are fitted with the wedge truss, while those selling for $40 have the brazed truss. One of the new models is a service machine, listing at $40 and fitted with a 30-tooth front sprocket and stand as regular equipment.

The Iver Johnson roadsters have 22-inch bars, mudguards and motorcycle pedals. They can be equipped with Sturmey-Archer three-speed hubs or with Corbin two-speed hubs. The firm is offering a racing model in a new copper-bronze finish, all Chater-Lea fittings and designed for either track or road.

# DEMOUNTABLE POWER UNIT ON CLEVELAND



**Left Side of Machine, Showing Unit Power Plant with Clutch Lever, Spark Control, Cleveland Spring Fork and Handlebar Control**

FOR the 1916 season, the Cleveland Light Motorcycle with its readily-demountable unit power plant, trapezoidal frame and rocker-type spring fork shows but few changes since its debut on the market last Summer. The chief differences in the new machine and in the original model are in the fitting of a clutch, the rocker-pedal control of the two-speed gear, the use of a fibre and metal Hooke's joint in the magneto drive and the lever control of the spark. The drive is by Coventry roller chain. The weight of the Cleveland, as it comes from the hands of its makers, the Cleveland Motorcycle Manufacturing Company, 7209 Platt avenue, Cleveland, O., is 145 pounds.

The power plant of the Cleveland motorcycle consists of a single-cylinder two-stroke motor, a sliding-jaw clutch two-speed set, a worm-driven countershaft and a high-tension magneto, all in one unit. This unit, of aluminum, is carried below the lower members of the trapezoidal frame by means of through bolts forward at the end of the diagonal tube and at the rear at the end of the seat-post tube. Although the different members of the power plant are in a unit together, they can be removed separately, while the entire construction can be removed or replaced in the frame by withdrawing the bearer bolts, or inserting them after the unit is lined up with the bolt-holes.

### Three-Port, Two-Stroke Motor

The motor is air-cooled, and of the three-port type. The bore is 2⅛ inches and the stroke 2¾ inches, the rating being 2½-3 horsepower. The flywheel, into which is pressed the crankpin, is within the crankcase and runs at right angles to the frame of the machine. There are but three moving parts to the motor: the piston, the connecting rod and the flywheel. The Cleveland two-stroke motor is valveless, ports uncovered by the piston during its up and down strokes admitting the fresh charges and releasing the burned gases at the proper intervals. There is one power stroke at each revolution.

The cylinder is in one piece, with the transfer passage cast integral. The compression release, of the poppet valve type, is fitted in the head at the front, and is operated by a lift lever on the left bar. The spark plug fits into an aperture to correspond at the rear. The carbureter, a two-lever single-jet Brown & Barlow type, fits on the inlet port by means of a short connection. This carbureter is hand-controlled by Bowden cables from the right handlebar and is fitted with a device which ensures easy starting. The exhaust port has coupled to it a long vertical pipe leading to the cylindrical muffler arranged across the lower forward part of the power plant. The tail pipe on this muffler extends horizontally to the rear, leading the exhaust gases well away from the machine.

### Injection Lubrication

The motor is lubricated by the injection system, in which the oil and gasoline are mixed in the 1½ gallon cylindrical tank in a certain proportion and pass through the carbureter into the crankcase. At that place, the oil separates out from the fuel, the latter going into the cylinder through the transfer passage at the proper time, while the oil goes to the bearings.

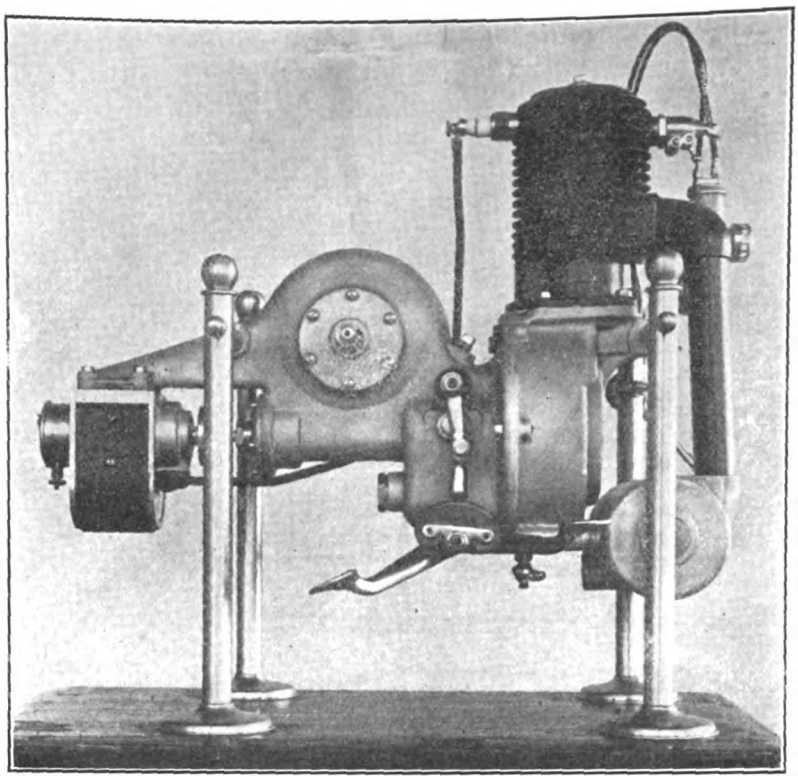
The flywheel in its turn is mounted on the forward end of a long shaft. This shaft forms the main shaft of the gearset and carries a worm at about its center. At the rear it has attached a fibre and metal Hooke's joint to drive the magneto, the latter being bolted upside down to a hollow arm forming part of the aluminum unit. The worm on the long shaft drives a vertical worm-wheel whose lateral axis carries

Digitized by Google

the clutch and the drive sprocket. In the entire unit, the sprocket is the only exposed moving member.

The two-speed gear, arranged in the unit immediately in rear of the motor, is of the sliding dog-clutch type and is operated by a rocker pedal on the right footrest. The teeth of the clutches are so formed that a change of gear can be made without recourse to the friction clutch on the cross side. The shaft is arranged below the main shaft. The worm and the worm-wheel housing follow the gear set in the unit, the cross shaft carrying the clutch and drive sprocket being above the main shaft. The clutch is controlled by a hand lever working in a plain quadrant on the left side of the power plant. All shafts in the unit are carried on ball-bearings. The gears in the two-speed device, the worm and worm-wheel and the main shaft run in an oil bath.

The magneto is of the armored, high-tension type, with direct connection from the contact maker casing arm to a short lever pivoted at the seat post cluster, within easy reach of the rider. The frame has a camel-back top tube, with the fuel tank suspended below it by broad bands. A cylindrical toolbox is attached to the rear of the tank across the frame and serves as an additional brace for the latter. The toolbox has a door on the left side, this door being held by a special locking device, which renders the contents secure and at the same time enabling easy access. This is a very handy arrangement.



**Unit Powerplant of Cleveland Lightweight; The Aluminum Countershaft Casing and Magneto Seat Are Clearly Seen**

**Brake and Fork Construction**

The Cleveland motorcycle is fitted with a band brake of the external contracting type, operated by a substantial foot-lever on the left footrest. This brake is double-acting and has a power more than ample to bring the machine up all standing. The front fork, of the rocker type, is pivoted at the crown, the wheel being attached at the fork ends. The fork members have the general form of the letter D, with the spiral spring attached to a post from the steering head at its inner end, links connecting the outer end with the fork members. This fork has been tried out in Europe over all kinds of roads for many seasons and has proved its worth not only in pleasure but in war service.

The saddle supplied with this motorcycle is of the Troxel Truform type. The footrests are conveniently located and have deep and wide rubber treads. They are firmly attached to the motor housing. The mudguards are wide and cover a large arc on each wheel, the front guard being fitted with side wings. Wheels are fitted with steel clincher rims, heavy spokes and dustproof hubs. The tires are 26 x 2¼ inches, with nonskid tread. The stand is of tubular steel, attaching to the rear fork. The wheelbase is 53 inches, and the clearance is 10 inches.

**Materials Used**

Regarding the construction of the Cleveland Light Motorcycle, the best steel stampings and drop forgings are used at the most desirable points. High-grade bronze is used in the worm-wheel and heat-treated nickel steel for the worm and shaft. Alloy steels are used in all vital parts. The use of a two-stroke motor is in line with the general policy of keeping the number of parts at a minimum and accessibility is well provided for. In addition to being able to remove the entire unit by taking out the bearer bolts, the cylinder can be taken off by removing four nuts. The magneto can be removed by disconnecting the Hooke's joint, taking out four screws and uncoupling the contact-maker arm.

# THREE SPEEDS ON READING-STANDARD TWINS

BUT one model, a three-speed 12 horsepower twin, is announced by the Reading Standard Company, Inc., of 348 Water street, Reading, Pa., for 1916. This model is the successor of the 10 horsepower twin which was the R.-S. leader during 1915, but in accordance with Reading-Standard practice ever since the first little single cylinder mount was brought out by this firm the new twin shows a number of improvements. The three-speed gearset, the clutch of increased size, the mechanical oiler, the step-starter, the redesigned handlebar and front fork, and the distinctive camel-back frame are among the improvements for the new season.

The three-speed gear, appearing for the first time on R.-S. machines, is countershaft-mounted and is very accessible for lubrication and adjustments. The gearset can be removed from the frame without disturbing the motor and similarly the motor can be taken out without interfering with the gearset. The three-speed set has the high and low speeds by dog-clutches and the intermediate speed by sliding a pinion on the main shaft into mesh with a gear on the lay shaft. All gears in the set are of vanadium alloy steel, giving great strength and long wearing qualities.

**Gearset Details**

The main shaft runs on self-aligning double ball-bearings of the annular type, of a size more than ample to carry the greatest load that can be imposed on them. Clutch thrust is taken care of by a flanged bushing running against a hardened steel collar of ample size. The lay shaft is a one-piece drop-forging, with all gears integral. A bronze bushing runs the entire length of this shaft, and the whole revolves on a steel center shaft hardened and ground to ensure a perfect bearing at all points. One of the noticeable features of the gearset, which follows Reading-Standard construction in this respect, is in the ample factor of safety, the gear-faces being of sufficient width to transmit 20 horsepower, much wider than many automobile gears adapted to motors of this power and of greater cost of material.

The teeth of the intermediate gear and sliding pinion are chamfered to facilitate meshing in changing both up and down. A positive drive is ensured on both high and low speeds by deep-cut dogs, and the gears are held in engagement by a plunger rack type of lock, governed by a simple locking-rig. This makes it impossible to shift the gears without first disengaging the clutch. Gear shifting is performed by a long lever at the left side of the frame, this lever working in a notched quadrant on the side of the tank. Connection to the shifting mechanism on the gearset is made through a single rod only. Disengaging the clutch automatically releases the gear shift lock, there being an inter-connection between the clutch rigging and the lock arm. The entire mechanism is enclosed in a neat aluminum housing, fitted with a removable top and is absolutely dirt and oil proof. As the gearset is fitted to the bottom bracket from above, access through the housing top is very easy.

**Clutch and Double Control**

The clutch is of the Eclipse type, countershaft-mounted. It is very large and

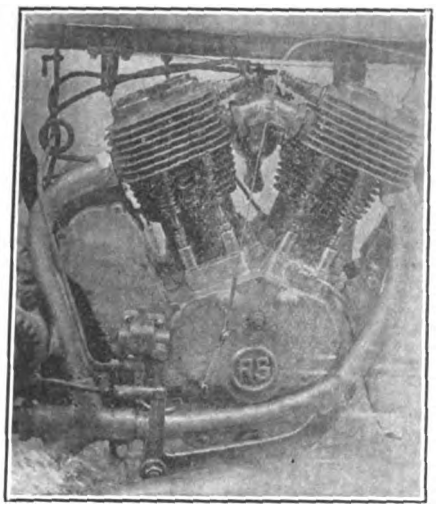
Digitized by Google

more than ample to care for the utmost power obtained from the motor. Control is by lever on the left side of the frame or by pedal located close to the long folding footboard on the left side. The pedal is to be normally employed in changing gears or for temporarily releasing the clutch in traffic. The normal position of the pedal is with the clutch engaged, provision being made within the clutch for this purpose. The operation of the clutch by pedal does not interfere with the operation by hand lever and vice versa.

The foot starter is new, being of the sector and pinion type, the latter acting on the gearset. This starter replaces the direct pedal-gear of 1915, in which the motor was cranked direct through a pinion on the right side of the main shaft by a chain and sprocket gear. The ratchet pinion is on the right side as is the toothed sector, but a shaft carries the latter and this shaft has the starter arm and pad on the left side. The arrangement thus gives free access to the starter when a sidecar is fitted and also enables the rider to kick her over from the saddle. As the majority of riders use the left foot in starting, the arrangement is a most happy one. One kick on the starter will turn the motor over more than three times.

### Increased Motor Power

The power plant is of the Reading-Standard side-by-side valve type, first adopted on the single cylinder models in 1907. To all outward appearances the motor is the same as the 10 horsepower twin of 1915, but an increase in valve area and in size of inlet manifold and carbureter have effected an increase to 12 horsepower on the same piston displacement. Valve tappets have been increased in diameter and the guides lengthened materially, preventing any oil from working out. The company, in fact, guarantee an oil-tight motor for 1916. The pockets are removed from the valve caps and the magneto is now bolted on instead of being held in place by



**Reading-Standard Powerplant Viewed from Valve Side**

a strap. The magneto seat is cast integral with the crankcase halves.

But the big addition to the motor lies in the mechanical oiler of the plunger type. Some seasons ago the Reading-Standard had a mechanical oiler, but it did not fit the exacting R.-S. requirements and it was abandoned in favor of the drip-feed system. The new oiler is satisfactory in every respect and is driven by a worm-shaft pressed into the timing gear. The ratio of the pump is such that at every twenty-second revolution of the motor a charge of oil is sent into the crankcase. The amount of this charge is readily controlled by a very simple adjustment. Sufficient pressure is developed by the pump to overcome any ordinary resistance due to sediment in the pipe. The oiler itself is very small and four screws hold it to the gearcase.

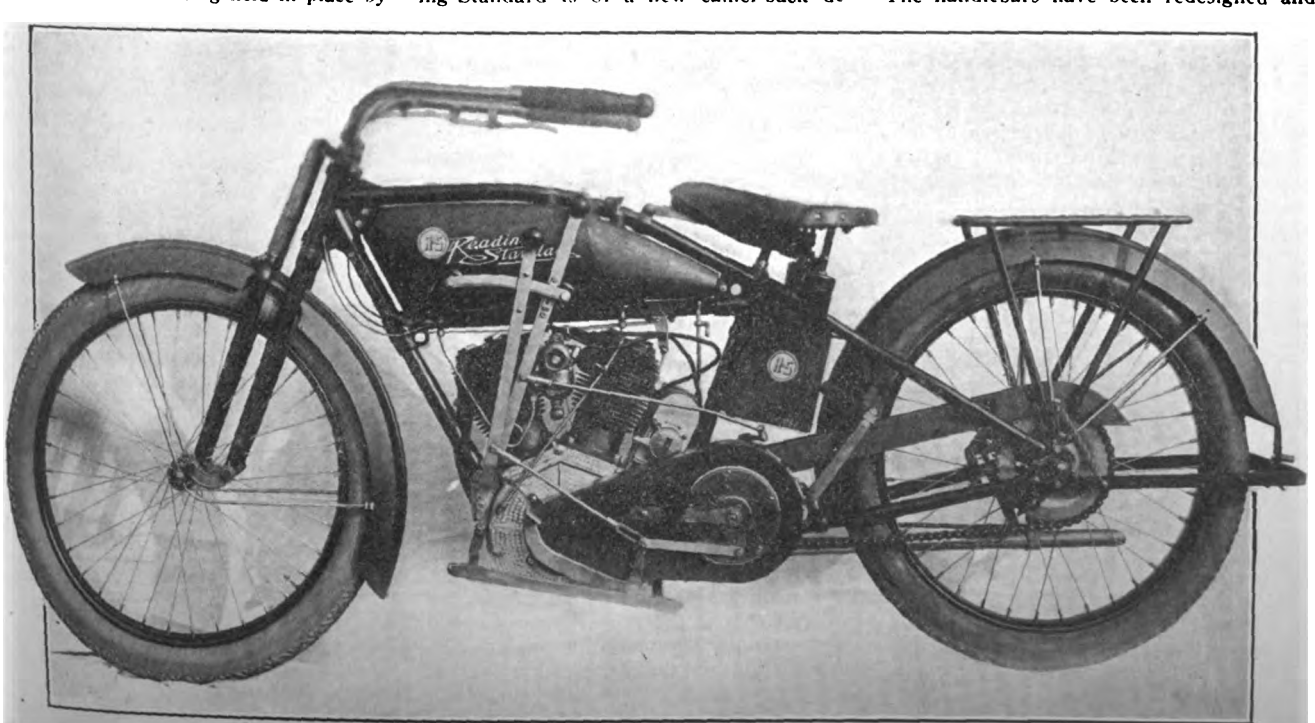
### New Camel-Back Frame

The frame on the 12 horsepower Reading-Standard is of a new camel-back design, giving very low saddle position. The tank is made very deep and is of graceful shape, with large capacity for fuel and oil. In spite of the low position of the brace tube, the motor or each cylinder can be taken out from either side without difficulty. The rear fork sides are made much heavier as are also the rear stays. All connections are socket-joints and drop forgings are used where any part is subjected to severe strain. The sidecar fastenings are integral with the frame, and the fastening on the rear end acts as a stop in connection with the Reading-Standard automatic stand.

The stand is in one piece and the luggage carrier is much improved. The carrier is supported entirely from the frame, removing all weight from the mudguard. The entire carrier is brazed together, thus forming practically a unit free from bolts or nuts. The mudguards are of pressed steel of greater width and depth than on preceding models. The front guard travels up and down with the wheel, thus retaining the same clearance under all conditions. The toolbox is located directly underneath the saddle instead of being on the top tube as in preceding seasons. The front hub is larger and heavier balls are used in it. The rear hub has a knock-out axle.

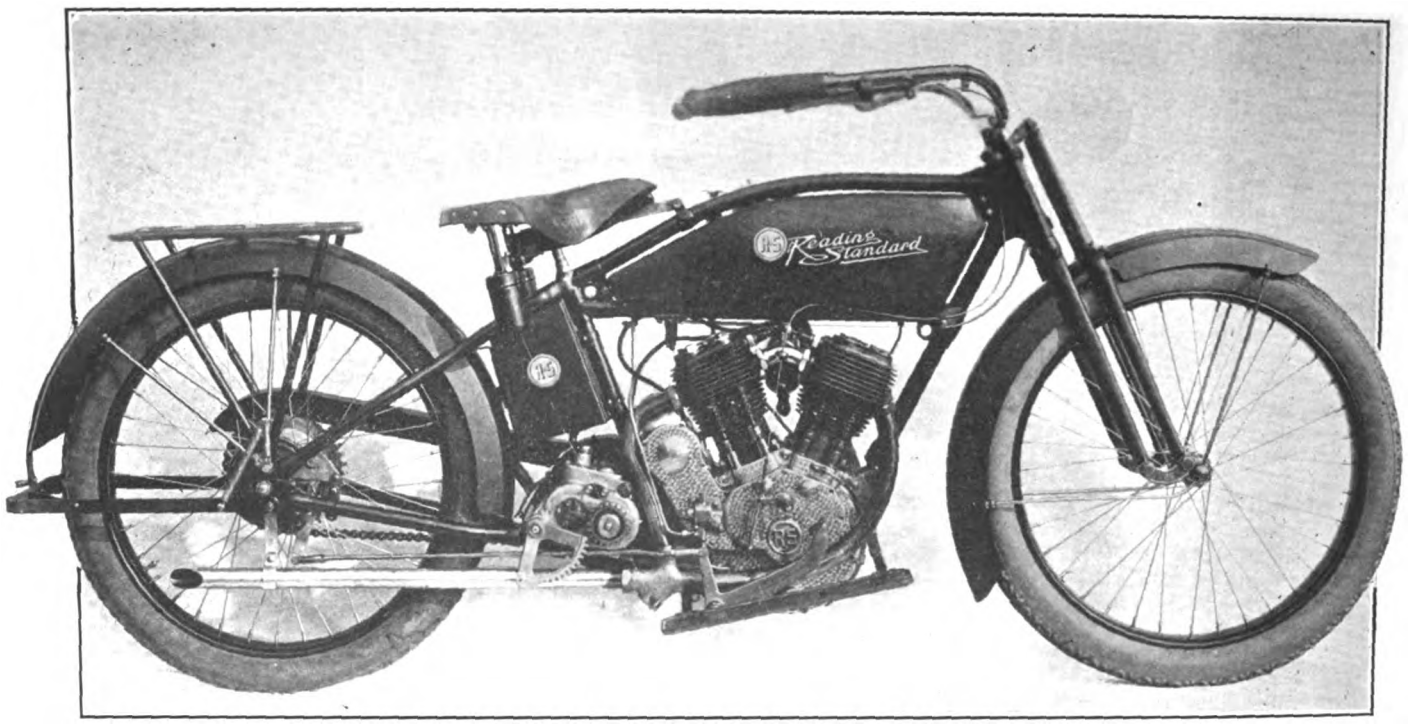
### Fork and Seat Post

The front fork, while retaining the Reading-Standard design which worked so successfully for the past ten years, has double fork sides for 1916. The springs have been so proportioned and fitted as to increase the total resiliency one hundred per cent. The large coil spring now takes the shock and the smaller one the recoil. The seat post for the new model is different from that used in preceding machines. It is known as the "Perfection," being of the spring plunger type, enclosed in the seat post. Adjustment is provided to meet the requirements of riders of various weights. The handlebars have been redesigned and



**Left Side of Reading-Standard 12 Horsepower Twin, with Lever and Pedal Clutch Control, Shift Lever and Starter Arm**

Digitized by Google



**Right Side of Reading-Standard Three-Speed Twin. Starter Sector and Pinion, Tail Pipe and Brake Are Clearly Shown**

are made from seamless steel tubing. There is a three-point connection and a horizontal brace. The bars are dropped and more graceful in form.

The footboards on the new model are 16 inches in length and are supported very securely at the bottom of the crankcase. They are most comfortable, not only in location but in form. They are within easy reach of the clutch and brake pedals.

The brake is of the expanding type, operated by a stout foot lever close to the right footboard. The muffler is entirely new, although the external part shows no difference over that of last year, but in the front part of the long tail pipe is a perforated sleeve. This muffler is easily removed by unscrewing the union nut holding the pipe in place. It is very simple and positively effective. The controls remain the same as in previous Reading-Standard models: Right grip operates throttle; lifter on right bar operates valve lifter; left grip operates spark position; right pedal operates brake and left lever or pedal operates clutch.

The Reading-Standard Company, Inc., will probably announce other models at a later date. The firm states, however, that at least 75 per cent. of orders for the new season will be for this model, the 12 horsepower, three-speed twin, with its 68 cubic inch motor and many improvements.

## NO PEDALS ON EMBLEM MODELS

*(Continued from page 47)*

a plunger is screwed, which forces the grease through a small opening directly into the discs of the clutch. With such a device all of the clutch trouble has practically been eliminated, as most of the clutch trouble has been due to the lack of lubrication of the clutches. All that is necessary with this device is to fill up this tube with grease, screwing the plunger down three or four turns after each long ride, which will take care of the lubricating of the clutch. This tube can easily be refilled by simply unscrewing the plunger and filling the tube and then replacing the plunger again.

### Kick Starter Improvements

The improved kick starter has worked so satisfactorily that the pedals will be entirely eliminated on all 1916 models. However, if the rider should at any time desire pedals these can be easily put into his countershaft without any necessary change. The gearing from the clutch to the countershaft has been changed, the sprocket on the engine being made considerably smaller. When using the kick starter, this allows the starter to throw the motor over much faster and also over more than one compression stroke. This has improved the starting of the motor satisfactorily.

The spring forks of the Emblem motor have also been improved. The spring in the cushion has been made much heavier to take care of the constant jars which have been created through the high speed of the motor. The fork sides have also been reinforced through their entire length and the rocker arms are fitted with small grease cups at all points. The front forks are also fitted with two sockets in which the lamp brackets are placed making a very neat appearing lamp bracket and which is located just above the front guard. This is far superior to the most common used bracket fastening on the handle bar which obstructs the view of the rider. The front mudguard has been fitted with large deep side flanges, which greatly improve the appearance. A new rear chain guard has also been added covering the rear drive chain, and is also arranged in such a manner so that the rear wheel can be removed without the removal of the guard.

### Two-Speed Gear

All Emblem models can be fitted with the improved two-speed, which has proved very satisfactory. This two-speed is located in the rear hub, and through many tests we find that this is the proper place for the speed ratio on account of not putting the severe strain on the drive chain leading from the countershaft to the rear wheel. With the speed change in the rear hub there is less strain in the drive chains when in low speed than during the high speed. It has been found unnecessary to have a three-speed attachment on the Emblem motorcycle. The motor with its high power will take the rider over the highest grades without the use of the speed change, therefore it was necessary to put in only one-speed change for the Emblem motor which has from 5 to 15 inches more piston displacement than most of the twin models on the market.

The finish of the different models is the same as in 1915, with a few exceptions. The panel on the tank is of a ribbon effect with the word "EMBLEM" on same. The new finish can hardly be appreciated only by seeing one of the models.

The Emblem models can also be fitted with sidecars and vans, the sidecar which has proved so satisfactory for the lover of a two-passenger motorcycle. The van is also highly recommended for delivery purposes as well as Rural Free Delivery motorcycles.

The sidecar "Beautiful" for 1916 sells for $70 and the "Serviceable" at $60. The Model 110 sells at $250, Model 108 at $225; extra for two-speeds $25.

### VIM SALES FULL OF VIM

The Vim Cycle & Hardware Co., of Buffalo, reports the largest August business they have ever had. "Sales have been remarkably strong," stated President Henry, "for this season of the year, and I believe that this condition is neither localized nor particular to our concern."

## Verrill Harpoons 25-Mile Toledo Grind

TOLEDO, O., Sept. 12.—The races of the Interstate Racing Association at the fairground half-mile track this afternoon drew a large crowd and aroused much attention. Verrill, Indian, was the star of the day, but the track being in bad condition the time made was not exceptional.

It was an unlucky day for Jones and Pineau. Twice Pineau shot to the front and opened a healthy lead that appeared to cinch first money for him, only to have mechanical trouble retire him from the race. The only time he evaded the jinx was in the consolation heat which he led from the very start, finishing in the same time made by Verrill in winning the first heat, 5:55.

Jones won the second heat after a nerve-racking battle with Marks, Thor and Coffee, Indian. Hardly a dozen feet separated the three all through the race, until Jones nosed to the front in the final sprint for the tape.

Verrill won the final heat, Jones being retired by mechanical misfortune again. Meyers took second and Amos piloted his Merkel to third. In the 25-mile sweepstakes Verrill marched to victory with the lead in his possession all the way. Amos rode consistently to second place and Coffee finally got third after a heart-breaking struggle with Sudduth, Thor.

Summaries:

First heat, five miles—Verrill, Indian; Meyers, Indian; Amos, Merkel. Time, 5:55.
Second heat, five miles—Jones, Merkel; Marks, Thor; Coffee, Indian. Time, 6:11.
Consolation heat, five miles—Pineau, Merkel; Amos, Merkel; Sudduth, Thor. Time, 5:55.
Final heat, five miles—Verrill, Indian; Meyers, Indian; Amos, Merkel. Time, 5:50.
Two miles, novelty—Meyers, Indian; Pineau, Merkel; Carver, Thor. Time, 5:10.
Twenty-five miles, sweepstakes, open—Verrill, Indian; Amos, Merkel; Coffee, Indian. Time, 29:41.

### EIGHT EVENTS AT TRENTON

Trenton, N. J., September 11.—With a splendid list of entries, good time marked the series of motorcycle races which were conducted here on Labor Day under the auspices of the Trenton M. C. The following are the summaries:

Three-Mile Novice (single cylinders)—First, Leo Van Noy, Harley-Davidson; second, R. S. Woods, Harley-Davidson. Time, 7:14⅗.
Five-Mile Novice (twin cylinders)—First, Elmer Christy, Indian; second, R. S. Woods, Harley-Davidson; third, Earle Ely, Excelsior. Time, 6:05⅘.
Five-Mile Bucket-Seat Race—First, Eugene Seidle, Indian; second, A. Massarini, Excelsior. Time, 5:57⅕.
Five-Mile Amateur (single cylinder)—First, Leo Van Noy, Harley-Davidson; second, Ray Forst, Harley-Davidson. Time, 7:58⅕.
Five-Mile Amateur (twin)—First, Christian Carson, Indian; second, Roland Carly, Indian. Time, 6:07⅗.
Five-Mile Sidecar Race—Won by Robert V. Studholme, Indian. Time, 8:39⅗.
Ten-Mile Free-for-all—First, Christian Carson, Indian; second, Elmer Christy, Indian. Time, 11:59¾.
Christian Carson, five miles against time. Time, 5:51⅕.

### HARD FOUGHT CINCINNATI RACES

Cincinnati, Ohio, Sept. 13.—Three exciting and hard-fought motorcycle races were an attractive part of the Labor Day program at Latonia race track. Dave Kenney, who has won quite a reputation as a rider at the Lagoon motordrome, capturing the two events for professionals, thereby getting away with the bulk of the prize money. Francis Knight, a messenger at the Cincinnati postoffice, won the amateur event at five miles, with a purse of $15, much to the delight of his friends. The summary:

Five miles, professionals—Dave Kenney, first; Harry Phillips, second; William Kamp, third. Time, 4:36. Prizes, $25, $15 and $10.

Five miles, amateurs—Francis Knight, first; Henry Von Altmann, second; Harry Stephens, third. Time, 5:15. Prices, $15, $10 and $5.

Ten miles, professionals—Dave Kenney, first; Harry Phillips, second; William Kamp, third. Time, 9:02. Prizes, $25, $15 and $10.

## 18 CLEAN SCORES ON INDIANA F. A. M. RUN

INDIANAPOLIS, Ind.—The judges on the two-day F. A. M. endurance run on August 7-8, have made their final decisions as to the winners. Of the 33 starters all but seven finished the 456-mile ride. The schedule of almost 24 miles an hour over the roads in northern Indiana failed to cut down all the perfect scorers as 18 contestants came through with scores intact. Eight other riders covered the course but did not check perfectly at all controls.

The Indian team, comoposed of Hodgin, Sargent and Von Staden, riding under the colors of the Consolidated Motorcycle Club of Indianapolis, was awarded the silver loving cup donated by the United States Tire Co. for the club team finishing with the highest aggregate score. The three riders had perfect medal scores, but lost a total of 134 points on consistency. This was the only team on the run to finish with a perfect score. The Indianapolis Motorcycle Club team, composed of Merz, Gilchrist and Somers, lost their perfect score when they failed to check in perfectly at the first night control. Just outside the control at Marion the Excelsior team began to have tire trouble and were forced to check in several minutes late.

Ivan Jacobs finished with a perfect score and had the highest consistency score. Jacobs ran close to schedule at all times and lost but 26 points on the entire course.

The merchandise donated by the manufacturers for the winners of this run will be awarded, together with the medals to the finishers. Perfect scorers will receive bronze medals.

### MANY ATTENDED DANCE

San Francisco, September 8.—Seventy-five couples attended the last monthly social and dance given by the San Francisco Motorcycle Club, at its club rooms, in Shakespeare Hall, on Fifteenth street, near Mission. Refreshments were served.

These affairs are always largely attended and enjoyable, and tend to keep up the interest of members in the club's affairs.

### FINAL STANDING OF INDIANA RUN CONTESTANTS

| Rider. | Make. | Team. | Medal Score. | Consistency. |
|---|---|---|---|---|
| Nelson Hodgin | Indian | C. M. C. | 1,000 | 958 |
| Geo. Von Staden | Indian | C. M. C. | 1,000 | 958 |
| Clarence Sargent | Indian | C. M. C. | 1,000 | 954 |
| John Merz | Excelsior | I. M. C. | 994 | 955 |
| Don Gilchrist | xcelsior | I. M. C. | 995 | 957 |
| Otto Sommers | Excelsior | I. M. C. | 996 | 959 |
| Ivan Jacobs | ndian | C. Team | 1,000 | 974 |
| H. F. Drake | Indian | C. Team | 988 | 935 |
| J. C. Carr | Indian | C. Team | 989 | 956 |
| Roy Martin | Indian | C. M. C. | 1,000 | 884 |
| Wm. Lowry | Indian | C. M. C. | Out | Out |
| A. C. Apple | Indian | C. M. C. | 990 | 926 |
| Walter Wischmeyer | Indian | C. M. C. | Out | Out |
| Ray Denges | Indian | C. M. C. | Out | Out |
| Paul Catterson | Harley-Davidson | C. M. C. | 1,000 | 937 |
| G. W. Waughop | Dayton | | 1,000 | 947 |
| C. C. Capshaw | Dayton | | 1,000 | 948 |
| A. C. Ferguson | Excelsior | | 984 | 916 |
| Roland Dilts | Harley-Davidson | | 995 | 945 |
| Paul Hegner | Indian | | Out | Out |
| V. R. McMillan | Indian | | 1,000 | 942 |
| Wm. Reinhardt | Indian | | 1,000 | 932 |
| Dan Reinhardt | Excelsior | | Out | Out |
| Geo. Evans, Thomas Miller | Excelsior, Sidecar | | 1,000 | 944 |
| Ernest Hughes, Harvey Davis | Harley-Davidson, Sidecar | | Out | Out |
| Heine Speckman, Harry Phillips | Harley-Davidson, Sidecar | | 1,000 | 934 |
| E. A. Swearinlon, Dennis A. Bierly | Indian, Sidecar | | 1,000 | 940 |
| Everett Chandler | Indian | | 1,000 | 959 |
| C. A. Butterfield and wife | Harley-Davidson, Sidecar | | 1,000 | 928 |

# SAVANNAH GRAND PRIZE RACE IS CALLED OFF

SAVANNAH, Ga., September 11.—Owing to a lack of enthusiasm among those who have heretofore helped to finance the Savannah Grand Prize motorcycle race, the Savannah M. C. has decided not to attempt to stage the big event this year. It has been customary to hold the 300-mile race over the Grand Prize course on Thanksgiving Day.

The announcement will be received with regret by factory men as well as racers, for the race had taken on the interest of a motorcycle classic and was certain to attract the best speedsters in the country. The club members point to the fact that Savannah is the home of the 300-mile motorcycle race in this country, and express deep disappointment over the declaration that it cannot be staged this Fall.

Plans are already being laid, however, to hold the 300-mile event on a flat track in 1916, steps having been taken to raise the funds necessary to construct a first-class course. It is the intention to make the 1916 race a relay affair.

The Savannah M. C. is now promoting races on the local half-mile track and the proceeds will go towards the construction of the new mile track. A meet was held on Labor Day, and others are being programmed for Thanksgiving, Christmas, New Year's and all succeeding holidays throughout the Spring and Summer of the coming season.

## ANNUAL PROVIDENCE TRIANGLE RUN

Providence, R. I., September 13.—The Providence Motorcycle Club will stage its twelfth annual triangle run on October 3. Entry blanks are now being printed and can soon be obtained on application to B. A. Swenson, 522 Broad street. The fee will be $2 and entries will close on September 30. Post entries will cost $3.

The roads of the route that has been selected are the best and the pace will be slow so that every rider can keep up with the field. Four pacemakers will head the line and no contestant will be permitted to pass them. A large sidecar entry has already been assured. The sidecar entry will be double the regular fee, if both the driver and the passenger intend to compete for the awards, which will be given to all perfect score winners and survivors. F. A. M. members only will be allowed to enter the run.

## CANADIAN VISITORS TRY NEW TRAILS

Led by Chieftain N. Chambers, a party of nine Indian enthusiasts of Hamilton, Ont., including a 14 months old lusty-lunged warrier, went far afield during the past two weeks in quest of new scenes and pleasures during the fine fall weather. There were three sidecar outfits and a solo machine on which were mounted Mr. and Mrs. Chambers, Mr. and Mrs. Bert McAllister, Mr. and Mrs. S. Atherton and daughter, Bert Hamilton, and William Griffin.

Their trail led from Hamilton to Niagara Falls, through the lake country of western New York, then East to Pittsfield, Mass., and Springfield. After being entertained at the Indian factory the party left for Providence and the shore. They expected to spend two weeks on their outing.

## ATE THIRD OF A TON OF MELONS

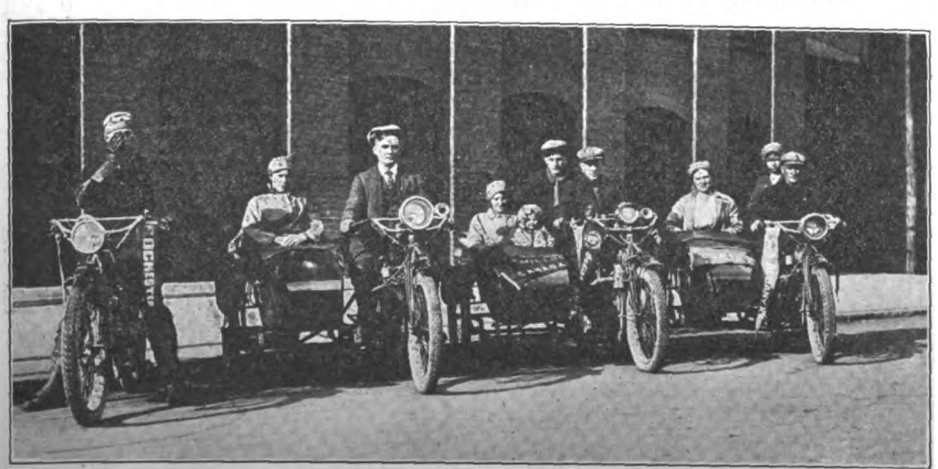
Los Angeles, Cal.—All speed limits were disregarded by the watermelon runners of the Los Angeles Motorcycle Club who made a 27-mile trip from the swimming pool on the San Gabriel to the official watermelon ranch. They brought back 625 pounds of melons, and by sticking to the job and eating nothing else the 53 riders, who went on 23 machines and one sidecar, consumed all but enough to take back to the club to make the stay-at-homes jealous. Bathing suits were at a premium, and in the final adjustment went mostly to the girls, but everybody managed to get a tobacco leaf or something, and the fish sure got a scare in the old pool. Since the run the boys on Motorcycle Row have been going into one prominent store and asking, "Les, how do you make a bathing suit out of a safety pin?"

## TWO MOTORCYCLE SCOUT SQUADS

Baltimore, Md.—A motorcycle scout squad will soon be added to the Fourth and Fifth Regiments, Maryland National Guard, according to an announcement by Adjutant General Charles F. Macklin. This means that the offer of the Maryland M. C. has been accepted. The members some time ago, through City Councilman D. C. Joseph, who is counsel for the club, offered to raise a batallion of motorcycle riders to serve in any capacity the military authorities designated. The men agreed to furnish their own machines and keep them in condition, only stipulating that the state furnish them uniforms and other necessary military equipment.

When first approached by Mr. Joseph, General Macklin did not think the proposition feasible but, nevertheless, he communicated with the War Department and a few days ago received word that a cycle squad would be acceptable. The men will be used for scouting purposes and as message bearers. With 20 men to each regiment the Maryland M. C. will be able to supply the forty men needed.

JOHN CANUCKS AND THEIR WIVES ON A TRIP IN THE STATES



This Party of Canadian Motorcyclists Made a Pleasant Journey to the Home of the Indian in Springfield, Mass., from Hamilton, Ont.

## GIVING EFFICIENT SERVICE

**Henderson Outfit Used Daily by a Poultry Store in New York**

## POLICE GET MOTOR BICYCLES

The twenty Miami Motor Bicycles which were ordered by the New York Police Department through H. A. Gleisman, the Eastern representative, were recently delivered and placed in service in various sections of New York City. Eight machines were assigned to the Flushing precinct, six to East New York and six to Staten Island. At the same time the Motor Bicycles were sold, an order for forty Hudson bicycles, made by the Miami Cycle & Mfg. Co., Middletown, Ohio, was also placed by the Police Department through Gleisman.

## AT THE INDIAN FACTORY

Baltimore, Md.—Ernest Wimmer, of Howard A. French & Co., this city, and J. McC. Seabrooke, of the Washington branch of the firm, are visiting the Indian factory at Springfield. They made the trip on an Indian with side car.

## NEW FIRM IN ALHAMBRA

Alhambra, Cal.—Parker Bros. have opened a repair shop at 103 N. Garfield avenue, and are on the lookout for a desirable motorcycle agency to boost during the 1916 season.

Digitized by Google

### NEW LAWS FOR NEW JERSEY

Newark, N. J., September 14.—With rumors of legislative action beginning to be whispered about, New Jersey motorcyclists are warned to organize more fully and to be on the watch for drastic laws which may be enacted during the winter session of the Legislature at Trenton.

As a result of a conversation which your correspondent had with an inspector of the State Motor Vehicle Department, it appears that a very large license tag is favored. Two white lights showing to the front will probably be demanded of sidecar owners. Sidecars will undoubtedly come in for attention when license fees are discussed in Trenton, for highways are breaking up badly and new sources for highway revenue will be sought.

### NEW YORKERS TAKE HEED

Passaic, N. J., September 11.—A law recently enacted in this State regarding the dimming of headlights should be heeded by motorcyclists from foreign States. Commissioner William L. Dill is confronted with a difficult problem through New York's failure to enact similar legislation and New Jersey is being overrun by New Yorkers who are not familiar with the provisions of the headlight law of this State.

Numerous summons have been issued in every district of the State and local offenders are being prosecuted before magistrates within the district where the violations occurred.

### CYCLISTS TOLD OF SCOUT MOVE

Dayton, Ohio, Sept. 13.—H. Lawrence Eddy, national scout commissioner of the Boy Scouts of America, was the guest of honor and the principal speaker at a meeting of the Dayton Bicycle Club recently. He delivered an address to the members on the scout movement in Dayton.

### CAFE NOIR A LA BAKER

San Diego, Cal.—The menu which was prepared for the banquet tendered "Cannon Ball" Baker here, when he completed his record three-flag dash, was cleverly worded in motorcycle lingo. Among other good "eats" there was consomme a la ball bearing; sand dabs with brown gasoline; combination salad with cup grease; roast chicken a la Indian; spark plug omlette a la exhaust; cafe noir a la "Cannon Ball" Baker.

### TURNPIKE BEING IMPROVED

Paterson, N. J.—Work has begun on the Paterson-Pompton Turnpike, which has been for the past year in bad condition. Early this year the Passaic County Freeholders voted that the turnpike be fixed. William Foley, of Paterson, received the first contract to lay tarvia from Paterson to the Jackson Hotel. At Upper Preakness, a distance of seven miles, and the other half of the contract, has been held over until next spring. In order to get to Pompton all riders will have to take the detour at the Cross Road Hotel in Haledon to Lower Preakness.

### INTERIOR OF THE BROOKLYN (N. Y.) EMBLEM AGENCY

**This Establishment, Managed by Otto Sohofer, Has Tripled the Sale of Emblems in Brooklyn During the Closing Season**

### GOOD ROADS FOR OHIO

Columbus, Ohio.—The Cass Highway law, which was passed by the last session of the Ohio General Assembly, went into effect September 6. It places the Buckeye State in the front rank of the states of the country in the matter of building, repairing and maintaining roads. The law, which practically repeals all other road laws in the state, is scarcely understood by officials and much study is necessary to completely understand it.

### WILL TRY 975 MILES IN THREE DAYS

Newark, N. J., Sept. 10.—Edward Everett, a local rider, left town recently on his Harley-Davidson with the intention of covering 975 miles in three days. His destination is Jacksonville, Ill., and his schedule calls for night stops at Pittsburgh and Indianapolis. Post cards from Everett show that he reeled off 356 miles on the first day.

When he arrives at Jacksonville, he will rest up for a week, then hook up his sidecar awaiting there and proceed leisurely homeward with his wife as sidecar passenger. Everett expects that his speedometer will ring up 2,600 miles before he spins into Newark.

### HALEDONITES AT ATLANTIC CITY

Haledon, N. J.—Seventeen members of the Haledon Motorcycle Club spent the week-end at Atlantic City. They rode to the sea in seven hours and ten minutes, a distance of one hundred and sixty miles. There was very little time lost, tire trouble and fouled spark plugs causing the delay.

### SAN PEDRO HAS A FAIR RIDER

San Pedro, Cal.—Mrs. Maud Nelson is an enthusiastic local motorcyclist. She rides a Henderson and has covered several thousand miles on her mount alone. She is now on a motorcycle tour to the San Francisco Exposition.

# The Engineers' Forum

## BALL BEARINGS FOR THE CRANKSHAFT

By H. H. GILDNER
Chief Engineer, S. K. F. Bearing Co.

IT is pretty well recognized by every user and manufacturer of motorcycles that the bearings which are most difficult to keep in condition are those on the crankshaft. This is due to the fact that they are subjected to very severe stresses, both from the shocks of explosion pressure in the cylinder and from the greater or less misalignment and distortion liable to occur under service conditions.

For this service, bearings must conform to the following conditions: High carrying capacity; superiority in material and workmanship; facilities for lubrication; self-alignment; proper mounting both as to design and manufacture.

S. K. F. Self-Aligning Ball Bearing

### High Carrying Capacity

The explosion pressure may be termed instantaneous, and, roughly speaking, may be considered equivalent to a blow of about one ton per cylinder delivered from 1,000 to 2,000 times per minute, depending upon the speed of the motor. In a plain bearing, this series of blows tends to squeeze the lubricant from between the bearing-surfaces, and rapid wear naturally results. In the case of a ball-bearing, the balls not only have an extraordinarily high crushing strength in so far as their capacity is concerned, but also the space in which the balls run always permits of thorough lubrication, providing that the ball retainer is properly constructed.

The double row construction of the bearing illustrated permits the use of a greater number of balls for a given size of bearing and naturally increases its carrying capacity and life to a corresponding amount. It will also be noted that the balls are staggered in two rows, so that the balls are very close together and allow of the load to be distributed in a most favorable manner over the raceways.

### Superior Material and Workmanship

The question of material and workmanship is naturally associated intimately with high carrying capacity. While some effort has been made in this country to produce a grade of steel suitable for ball-bearing purposes, the comparative smallness of ball-bearing manufacture in this country has apparently not been sufficiently attractive to domestic steel manufacturers to expend the energy and care necessary in the production of material equal to imported steel for this service. The bearing illustrated is manufactured in Sweden and the steel produced in that country is well recognized as the very highest degree of perfection, both chemically and physically.

Also, the reputation of Swedish workmen for the highest degree of skill in manufacturing is well recognized throughout the world. This is attested not only by the quality of ball-bearings produced, but also by the remarkable accuracy and perfection of gauges, tools and other high grade steel products produced in that country.

### Lubrication Facilities

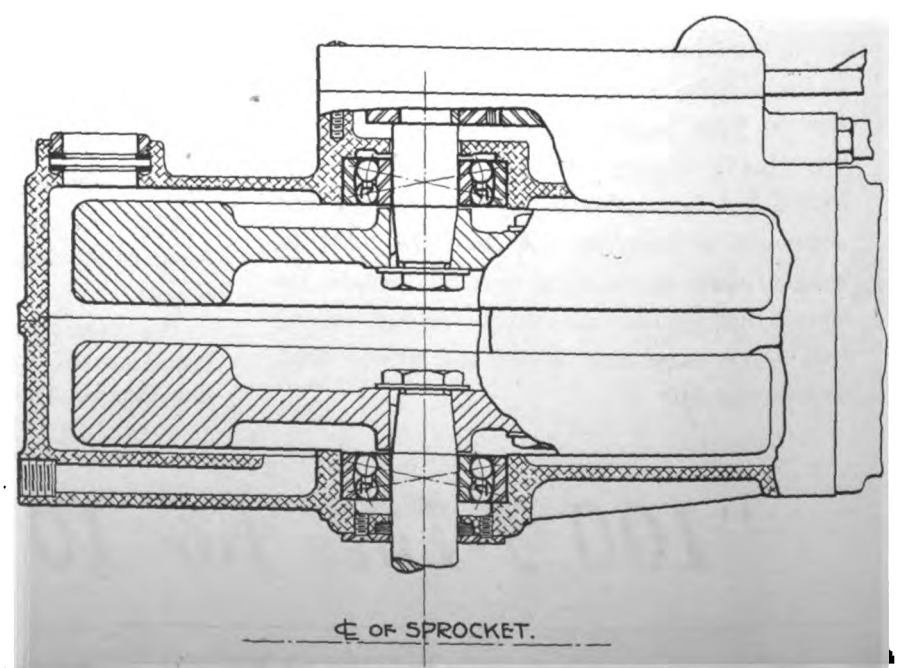
Lubrication is effected by splash from the crank case. It is desirable, therefore, that the ball retainer be open at the sides in order to allow free access of lubricant. This is all the more necessary with a double-row bearing, as the row of balls on the outside naturally receives by this means its proper share of the lubricant.

Changes in temperature or vibration when machines are working on the very high roads give rises to distortions which may not be very great in amount, but in a rigid bearing must result in rapid wear. This is eliminated by the use of a bearing which readily conforms to the misalignment without cramping. Such a bearing is "self-aligning."

### Proper Mounting

The selection of the proper size of ball-bearing must necessarily be referred in each particular case to the ball-bearing manufacturer, as a number of variable conditions are involved. It is ordinarily recommended by the manufacturers that the inner race be made quite a tight fit on the shaft and that a threaded nut be further used as a precaution to prevent slipping of the races on the shaft under severe service conditions. This threaded nut is not necessary if the shaft be finished with sufficient accuracy and smoothness. The shaft should be ground smooth to size and the inner race such a fit that it may be slipped into place with little effort by hand.

The outer race is ordinarily fitted directly in the aluminum crankcase. This brings conditions which require the most rigid attention in manufacture. It has been found ordinarily impracticable to allow the outer race to creep inasmuch as this race is carried directly in the aluminum crankcase, and if there is any looseness whatever between the race and the case, the constant shocks will finally peen down the race so loose as to ultimately destroy the bearing.



Application of S. K. F. Ball Bearings to Crankshaft, as in Harley-Davidson Motorcycle

## America's Premier Lightweight

HENRY FORD made fortunes for his agents because he offered to the American automobile public a low priced car that gave the same essential service as a high priced car.

When we announced the Miami Power Bicycle at the New York Show last January, we made as startling a sensation in the cycling world as Henry Ford did in the automobile world.

That the Miami Power Bicycle is a logical development in the cycling industry is attested by the fact that other manufacturers are following in the trail we have blazed.

For 1916, we offer to the cycling world the Miami Power Bicycle in two new models, in addition to this years model with refinements in the details which go to make the machine more flexible, more universal in its adaptability to the requirements of the tremendous market demanding such a machine.

Miami Power Bicycle

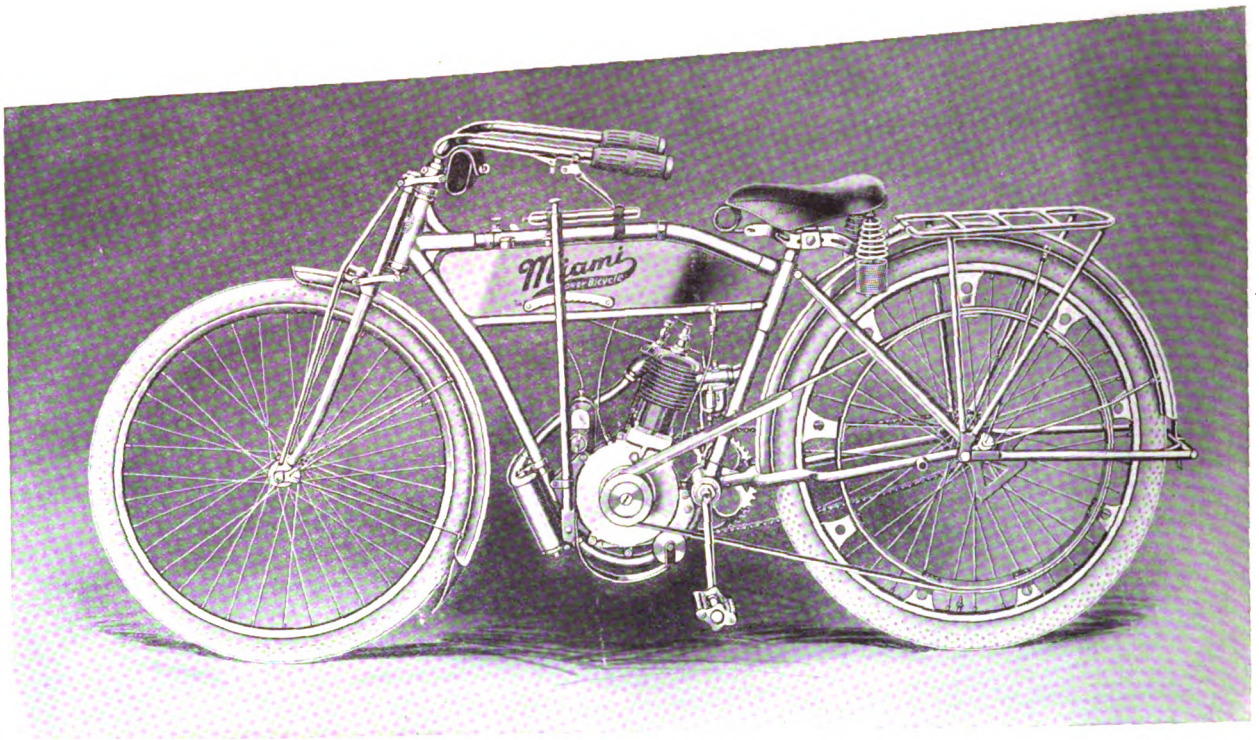
We introduced a moter driven two-wheeler at the popular price of $125.00—A MACHINE GIVING THE SAME ESSENTIAL SERVICE AS THE HEAVY WEIGHT, HIGH-POWERED MOTORCYCLE, but far easier to handle and far less expensive to keep up. A machine light in weight, silent in running, safe to operate. So simple that anyone can run it—so convenient that everyone wanted it—so low priced that anyone can buy it.

In short, the Miami Power Bicycle for 1916 is a machine that recasts every standard by which motor driven two-wheelers are judged—a machine that revises all previous ideas of efficiency and economy in the cycling world.

We take pleasure in submitting to the trade on the following pages detailed specifications of America's Premier Light Weight.

## "100 Miles for 10 Cents"

Digitized by Google



**Model 14** — **Price $100**
**Model 15** — **Price $125**

*F. O. B. Factory*

## SPECIFICATIONS

**Motor**—Single cylinder, 2½ H. P. Bore 2½ in. Stroke, 2 15-16 in. Piston Displacement, 14 21-100 cu. in. Main bearing annular type. Connecting rod bearing roller type. Priming cup on motor.

**Carburetor**—Miami, designed and manufactured by us especially for this motor. Choking device for easy starting and an adjustible gasoline needle giving proper mixture at all speeds.

**Control**—Miami Patent Leverless Double Handle Bar Control. Throttle controlled by right hand grip.

**Muffler**—Very compact and noiseless. Specially designed, so that there is absolutely no back pressure.

**Frame**—Loop design frame, made of AA1 Standard Welding tubing. Color No. 17 National Blue.

**Wheels**—Single clinch automobile type steel rims for 2 inch tires. 28 inches in diameter. 36 extra heavy tandem spokes used both front and rear.

**Front Fork**—New design Cushion Spring Fork, eliminating all vibration.

**Mud Guards**—Steel, extra strong, drop center, 2½ inches wide. Leather flap on front guard.

**Wheel Base**—50 inches.

**Brake**—The Musselman Positive Drive Coaster Brake operated by pack pedaling.

**Transmission**—1½ inch Spartan Giant Tanned flat leather belt, with specially designed idler pulley or belt tightener. Tension is controlled by conveniently located lever and positive notched segment control on left side of tank.

**Saddle**—Troxel Motor Bike, padded.

**Tires**—Goodyear Blue Streak, Studded Tread or Federal Studded Tread, 28x2 in. Optional.

**Ignition—Model 14**—Dry Battery and Coil. Jump Spark.

**Ignition—Model 15**—Fixed spark. High tension gear driven armored magneto. National.

**Lubrication**—Gravity force feed type, actuated by spring plunger located on top of oil tank. Sight feed, so that rider can see flow of oil at all times.

**Tank**—Stamped of special analysis sheet metal, heavily tinned inside and out.

**Gasoline Capacity**—1½ gallon plus. Gas reservoir in rear part of tank.

**Oil Capacity**—2 pints. Oil reservoir front part of tank. Double partition walls between oil and gasoline reservoirs.

**Tool Bag**—Troxel Leather. Attached to handle bars. Contains complete set of tools.

**Luggage Carrier**—Made of seamless steel tubing with cold rolled stamped connections and tubular braces. $4.00 extra.

**Pedals**—Motor Type Rubber.

# Introductory Announcement

—OF—

# America's Greatest Cycle Factory

WE take pleasure in presenting on the following pages a synopsis of our various lines for the season of 1916.

Space forbids the illustration of anything but the leading models of each line. However, we have complete catalogs with detailed description ready to mail out to the trade.

We feel that for the coming season, we have reached a period in our career as America's largest manufacturers of high grade bicycles and motorcycles, from which we can look back with pride upon our achievements in the cycling world and at the same time look forward with equal confidence that the merit of our goods will be attested to by the continuance of an increased production, such as has been the case during the past decade.

There are two ways to manufacture bicycles and motorcycles—one says "get it done"—the other says "get it done right."

Quantity production has its virtues, but in quality production, quantity is necessarily a secondary consideration.

Quality production means greater care—more attention to the vital points—maintaining a higher standard—doing it right. The cost is necessarily greater, but the results are invariably worth the cost. Otherwise, why should anyone strive to produce a better article?

When you dealers offer the goods you sell to your trade, be sure that the maker you buy from is just as particular in making his goods as you are in buying and selecting them. You cannot exercise greater care in buying the bicycles and motorcycles you sell than we do in making the lines we offer to you for your consideration.

The greatest of economies is satisfaction. The buyer who goes by price instead of by value is invariably disappointed. Ascertain what you may reasonably expect it will cost your consumer in the matter of upkeep expense in the bicycles and motorcycles you sell. This is where quality manifests itself. A good bicycle or motorcycle means the minimum cost of upkeep plus satisfaction.

We feel that if you will bear these facts in mind and then carefully investigate the offerings we have for 1916, that you will establish your business on the firmest basis possible.

The Miami Cycle & Manufacturing Company for years has been quality producers of high grade bicycles and motorcycles, and we are pleased to present to you briefly on the following pages what we have to offer for the ensuing season of 1916 in the Racycle, Miami, Flying Merkel and Hudson lines of bicycles and Flying Merkel Motorcycles.

## The Miami Cycle and M'f'g Co.

## Middletown, Ohio, U. S. A.

**Model 673** *F. O. B. Factory* **Price $250**

## SPECIFICATIONS

**Motor**—Twin cylinder, 9 H. P. Bore, 3¼ in. Stroke, 4 43-64 in. Displacement, 60.89 cu. in. Annular ball bearings are used throughout.

**Carburetor**—Merkel-Schebler improved type with auxiliary air valve for high speed and special air shutter for easy starting.

**Control**—Miami Patent Leverless double handle bar control.

**Muffler**—Very compact and noiseless, fitted with positive self-adjusting cut-out easily operated by foot.

**Frame**—Loop design spring frame, made of AA1 Standard Welding tubing with Double D reinforcement. Low saddle position. All working joints covered with oil and dust proof leather jackets. Color, No. 16 Orange; option No. 17 Blue.

**Wheels**—28 inches. 36 extra heavy motor spokes front and rear. Single clinch automobile type steel rims for 2¾ and 3 inch tires.

**Forks**—Merkel Patent Truss Spring Fork. A unit with the front wheel.

**Mud Guards**—Extra strong. 4½ inches wide with leather flap front and rear. Front mud guard drop side.

**Free Engine Clutch**—Eclipse 1916. Operated by side lever with positive notch segment control.

**Two Speed**—Planetary type, gears always mesh.

**Transmission**—¼ in. x ⅝ in. pitch, Renold roller chain.

**Brake**—Miami Combination Dual Brake.

**Saddle**—Troxel Stretched Leather.

**Tires**—Choice of Goodyear Blue Streak or Firestone Non-Skid, 28x3.

**Ignition**—High tension, ball bearing, gear driven armored magneto. Dixie.

**Lubrication**—Automatic drip feed, splash system and auxiliary left side force pump.

**Tank**—Stamped of special analysis sheet steel, heavily tinned inside and out with baffle plates.

**Gasoline Capacity**—2¼ gallons.

**Oil Capacity**—½ gallon plus. Oil tank integral with frame.

**Tool Bag**—Large size, attached to luggage carrier when specified; otherwise on top bar, with complete set of tools and tool roll.

**Luggage Carrier**—Made of ½ inch seamless steel tubing, with cold rolled connections and tubular braces. $5.00 extra.

**Foot Boards**—Folding foot boards of neat design.

**Pedals**—Knock-out axle.

# Consistent Bicycle Riding Boosts

## Let all those in the trade get astride a two-wheeler

By FRANK EFFINGER
Advertising Manager, Motor Wheel Division, A. O. Smith Co.

THE plan, outlined in the article which recently appeared in Motorcycle Illustrated from the pen of Mr. Starr, of the Westfield Mfg. Co., wherein he advocated the establishment of a central publicity bureau, having for its object the general boosting of the bicycle by means of appropriate publicity work, is deserving of the support of all manufacturers, jobbers and retailers.

### Time Needed for Plan

The bicycle undoubtedly needs to be pushed, and in my opinion a well organized and efficient staff of publicity experts could accomplish for the "silent two-wheeler" industry what has been done over and over again in other industries. To win the complete and whole-hearted support of the men engaged in the manufacture and distribution of bicycles to Mr. Starr's excellent plan may require some time; and meanwhile I have a suggestion to make that can immediately be put into operation.

It is a very simple suggestion and can be summed up in three words: *Ride bicycle more.* If the manufacturer, the jobber, the dealer and their employees were consistent bicycle riders, the splendid habit of cycling would be more general. Example is better than precept.

The bicycle is a wonderful self advertiser—it has no limit and should be used for all it is worth. The man who advertises bicycles, in magazines, newspapers, periodicals, circulars and signs, shows illustrations of boys, girls, men and women enjoying themselves astride a single-tracker. Is it not reasonable to suppose that these pictures, reproduced in *life*, would have a still greater effect on the public mind?

Every bicycle that is actually in use is a splendid bicycle advertisement. And the particular use to which a two-wheeler is put suggests its value to those that see it, for the manifold purposes that a bicycle can serve.

### A Case in Point

A little incident in the writer's boyhood days comes to mind right here, which bears out my suggestion strongly. Near the end of halcyon days of the two-wheeler, he secured one for nine dollars, a second hand bike, much the worse for wear. The boys of the neighborhood ball lot had discarded their "wheels." Arriving in their midst with my steed, excitement prevailed, all else was forgotten, each kid "tried her out." The boys who had stored their bikes away had them out next day. Two of the chaps prevailed upon their dads to buy bikes for them. The neighborhood was loud with the ringing of bicycle bells. The first Saturday, we were in the country. The bike came back there, brought repair business to the corner dealer and sold two second hand "wheels" for him.

Frank Effinger

Dealers' experiences with the Smith motor wheel indicate the same effect. Motor wheel dealers get their results from having motor wheels attached to bicycles scurrying about the streets. Every new buyer of a motor wheel makes more buyers—merely by riding about, spreading the germ, so to speak. The dealers demonstrate—nay, they do more—they leave behind, as they go by, the feeling "Gee! I wish I had one. Gosh! I must get one."

### Attracts Attention

Every one of our dealers has experienced the same thing. Upon arrival of his demonstrator he attaches it to a bicycle and gets to work on the street. At once, attention is attracted. Heads turn, people stop, look, wonder, and prospective purchasers are thus created for the dealer.

The bicycle can, to almost the same extent, create its own poularity, create that desire to possess, make its own market.

The color of the bicycle is important. Most bicycles are now enameled black. Would it not be better to use such colors as yellow, light blue and green, pink, cream, rich gray and red? Bright colors attract the eye.

Dealers can stimulate interest in the bicycle by promoting runs, races and picnics, inviting the cyclists of the neighborhood to participate. That will bring the riders out in a bunch, and besides directly drawing the attention of the public would indirectly boost bicycles by the publicity which newspapers are generally willing to give the bigger cycling events. Let the dealer go a little further and loan or rent bicycles for runs and picnics to those who do not own machines. Manufacturers and jobbers can effectively assist dealers in promoting events by informing them of methods which other dealers have used successfully.

Bicycle riding among employes should be encouraged. A large number of the employes of the A. O. Smith Company, both men and women use motor wheels in riding to and from the factory, in runs and tours. They have got Milwaukee sitting up and taking notice.

# Hold 1915 Wheel About the Hub

## *Good Cheer and Hearty Fellowship Prevailed Among the Cyclists at the Twenty-Sixth Annual Run*

By ABBOT BASSETT

BOSTON, Mass., September 14.—The bugle call sounded at 10:30 last Friday morning, when at the corner of Warren street and Walnut avenues in Roxbury a merry company of cyclists in long procession, some on bicycles and the veterans in automobiles, started on the twenty-sixth tour about the hub. From that very same corner in 1879 set forth the initial run which gave birth to the classic tour that since 1892 has been repeated each year.

The Center Picture Shows the Wheelmen Lunching in the Grove at Cobb's. To the Left, Abbot Bassett Is "Preaching" from Pulpit Rock, from Which John Eliot Spoke to the Indians. At the Right, the Wheelmen Are Getting Ready for the Clam Bake

### First Halt at Jamaica Pond

On sped the happy cyclists until they came to the border of Jamaica Pond which was hailed as the first halt. The younger men in the procession were informed that the pond was the largest stretch of fresh water within the limits of Boston and that it was the first source of water supply for the big city. It is certainly a beautiful body of water, framed as it is by overhanging foliage in stunning profusion.

Now on to Brook Farm, where in 1841 was tried that remarkable communistic experiment and which has been rightly described as a "place of great natural beauty, combining a convenient nearness to the city with a degree of retirement and freedom from unfavorable influences unusual even in the country." Our party took a look at the farm and then went through the woods and the Grove of Revelry to Pulpit Rock where once John Eliot preached to the Indians and later the Rev. W. H. Channing and the Rev. Theodore Parker discoursed to the Brook Farmers.

### Bassett Mounts the Pulpit

And now, on the 1915 tour, Abbot Bassett was placed in the pulpit and bidden to follow in the footsteps of Channing and Parker, and, after their manner, preach to the wheelmen. Mr. Bassett told the story of the communistic experiment, its rise and fall, and the good work that was accomplished for uplift in education, in simplicity of life and in altruistic endeavor. The various points of interest in the farm, its buildings and the scenes of former cycling revels, where shown by the newly ordained "preacher."

Then the tour continued on to Dedham; the wheelmen paused in the square and then made a pleasant call at the home of Mr. A. P. Benson, president of the Newton Bi Club, where they "watered up" to the clink of ice. Canton was next visited and a stop made at Cobb's for lunch, where Carter Hendrie was ready with one of his best efforts in the cuisine line. Roast beef, corned beef, ham, baked beans, lobster and chicken salad, deep apple pie, beer and lots more were waiting to appease ravishing appetites and great thirsts. Miss Gertrude received the party as usual and made us welcome to the splendid resources of the old time tavern, the surrounding grounds and orchard. Two hours were spent in the "do nothing business," for it has been found impossible to ride a wheel after one of Hendrie's lunches.

### On to Another Tavern

When finally the party took to the road again, they sped off to Mansfield and its tavern. Since the last visit the tavern, built and conducted several years by Walter M. Lowney, of cream chocolate fame, has been sold to a new proprietor. Mrs. Emily M. Beal is now the owner and, so far as the wheelmen could see, the hostelry has lost nothing by the change.

At seven o'clock in the evening came the banquet. It was indeed a good meal and there were goodly men to engage in it. President Hall presided at the post cena exercises and introduced the feast of reason with verses relating to what is done when the wheel goes around the Hub. Frank P. Sibley, the inimitable story teller, singer and reciter, kept the company grinning broadly when he was on the floor. Quincy Kilby recited some verses of his own creation which were very much appreciated. Abbot Bassett dropped into verse not so serious as the common form of preaching, in spite of his recent "ordination." William H. Hale told in verse of the way in which war munitions came to be, while George B. Woodnow, first president of the club, gave many interesting reminiscences. Not a man at the table escaped the eagle eye of the president, and everyone had to contribute something orally.

### Hendrie's Pleasant Soother

After the revelry of the banquet the tired cyclists went to bed. There was an early call by Hendrie the next morning, who had ready, as usual, his morning soother of rum and milk. But some there were who preferred sleep to Hendrie's "eye-opener" and were content to slumber on.

The bugle call soon summoned the party to up and away to Ponkapog. There were two routes to Sharon, equally beautiful, but the majority preferred the route circling the pretty Massapoag Lake and the delightful willow road that leads to it.

### The Impressive Toast

Another call was sounded at Cobb's to say goodby to Miss Gertrude. When the merry wheelmen arrived on the lawn at Tom Jones's they found a simple lunch of crackers, cheese and light ale. Here was given the very impressive toast to the wheelmen who have passed from our midst. A few words were spoken by the president, a bugle sounded taps, an echoing bugle in the distance took up the call and the toast was drunk. Not much of a ceremony one may think, but to appreciate what it really means to the old wheelmen one must have known the good fellows who have been on

Digitized by Google

the run and have now gone forward. Those fellows were and are still near to the hearts of the remaining veterans and a tender chord is struck when the heart strings are set to vibrating by the touch of memory.

### A Merry Clambake

The toast over the tour continued on toward the sea, over the Jerusalem road to Nantasket, where at Cohasset we find the Breaden Cheese Tree Motor Club. Then for a clam bake in the old style. The club house is provided with a big outside chimney, at the base of which is a very large fire place. On the hearth are placed large stones and on top of these are put logs of wood. When the stones are heated clams are placed on them, together with corn in the husk and potatoes. Then throw on the sea weed, cover with gunny bags, waitabit, and there's your clam bake!

And it was a jolly good clam bake. Everyone was given a lobster fresh from the pot and also a lesson in how to eat lobsters, being expertly shown by the more experienced just how to avoid swallowing the shells. Melted butter is about as good for lobsters as for baked clams—and there was lots of melted butter. If the price paid by the cyclists for this feast was a stomach ache it was certainly worth it.

### The Homeward Ride

Then at last came the ride home in the dark—for those in automobiles; the fellows on bicycles pedalled back to the Hub on Sunday. The tour afforded a splendid time from beginning to end: good cheer rules day and night; hearts expand in the open and ill feeling disappears, while the "hail fellow well met" spirit prevails and all hearts are happy. And thus another notch is cut in your memory and the 1915 Wheel About the Hub is entered in the pages of cycling history.

**Abbot Bassett, Chas. W. Reed and Geo. B. Woodward, Three of the Veterans Who Participated in the 1915 Wheel About the Hub**

The following participated in the tour of 1915:

Capt. W. G. Kendall, of the Promoting Club, the Boston Bicycle Club; President Thomas H. Hall. Others from Boston were: Abbot Bassett, A. P. Benson, J. Rush Green, J. A. Hendrie, Fred D. Irish, C. H. Kendall, Quincey Kilby, R. D. Paris, C. W. Reed, Chas. C. Ryder, Theodore Rothe, Frank P. Sibley, Fred J. Stark, Allen W. Swan, Joseph W. Swan, C. W. Bowen, E. E. De Graff. From Provincetown, George Young.

From New York: M. M. Belding, Jr., Wm. M. Frisbie, W. H. Hale, F. G. Lee, Dr. L. C. LeRoy, James M. McGinley, Chas. J. Obermayer, Sylvain Segal, George Steppello, George B. Woodward, W. H. Stafford, S. W. Madden. From Poughkeepsie, H. W. Bullard. George L. Cooke, Providence, R. I.; A. G. Fisher, New Haven; Dr. A. F. Wyman, New Bedford; Delwin M. Shepley, Sheldon Springs, N. Y.

# L. A. W. in Annual Convention

BOSTON, Mass., September 14.—The annual meeting of the national assembly of the League of American Wheelmen was held at the Dreyfus Hotel, in this city, on Thursday evening, September 9. The transaction of business was preceded by a banquet which was enjoyed not only by the members of the assembly but also by many lay members of the L. A. W.

President William H. Hale, New York, opened the meeting with a short address of welcome and then called for the report of the secretary-treasurer, Abbot Bassett. The secretary called attention to the fact that last May the organization had rounded out thirty-five years of very useful existence, during which time it initiated the movement for good roads, secured permission for cyclists to use the highways and made of cycle racing a clean and orderly sport.

The membership of the league is now 1,002, a decrease of 21 from the preceeding year. A summary of the membership reveals the fact that New York has the largest number of members with 249, Massachusetts is second with 183, and Pennsylvania is third with one hundred and seventy-seven. New Jersey has 79 cyclists in the league, while both Rhode Island and Illinois are even at 40 and Connecticut has just two score and two. The rest of the membership is well scattered over the entire country, and even some foreign lands are represented.

But the membership of the league has gradually decreased and some hard missionary work will have to be done by the active members to prevent the ranks from falling below the thousand mark next year. Secretary Bassett announced that a number of the prominent members of the organization had passed away during the year, among whom were two of the league's founders, Will R. Pitman and Winfield Scott Slocum. Of the older members present who still hold numbers under one hundred were H. W. Warren, 5, William M. Frisbie, 6, Chas. A. Collins, 28, Abbot Bassett, 41, Elmer G. Whitney, 55, Wm. H. Hale, 87.

The treasurer's report shows that during the year the league's revenue was $913.45 and the expenses $841.91, leaving a balance in the treasury of $71.54. The annual election of officers, in which votes were cast by mail or at the meeting, resulted in a poll of seventy-seven votes, all of which were cast for the following officers: President, William H. Hale, New York; first vice-president, George D. Gideon, Philadelphia; second vice-president, Theo. F. Merseles, Jersey City, N. J.; auditor, Augustus Nickerson, Boston.

Letters and telegrams from absent members were read by the secretary. Mrs. Helen E. Pitman, Vice-President George D. Gideon, Isaac Potter, Riverside, Cal.; G. R. Bidwell, New York; W. M. Perrett, Detroit, Mich.; E. O. Chase, Newark, N. J.; Fred Atwater, Bridgeport, Conn.

Two hardy riders from New York City visited the meeting. They left the Metropolis on Wednesday afternoon, September 8, reached Hartford, 115 miles, at midnight and made Boston the next day, arriving there in ample time for the L. A. W. banquet. These riders were Sylvain Segal, secretary of the Century Road Club Association, and Capt. George Steppello of the same club.

### BIKE RACES AT TAUNTON

Taunton, Mass., September 11.—There were two bicycle races staged here on Labor Day on the Taunton Driving Club's half-mile dirt track. A. E. Barber, who is working hard to arouse new interest in cycle racing, had charge of the meet. The summaries: One-mile open, won by Fred Handy; A. Lousa, second; W. Gilman, third. Time, 2:23. One-mile handicap, won by F. Handy, scratch; F. Lousa, second, 100 yards; W. Gilman, third, 175 yards. Time, 2:19. Bicycle races are now being held quite regularly at Taunton and much enthusiasm is being created for the sport, a fact that is very pleasing to local dealers.

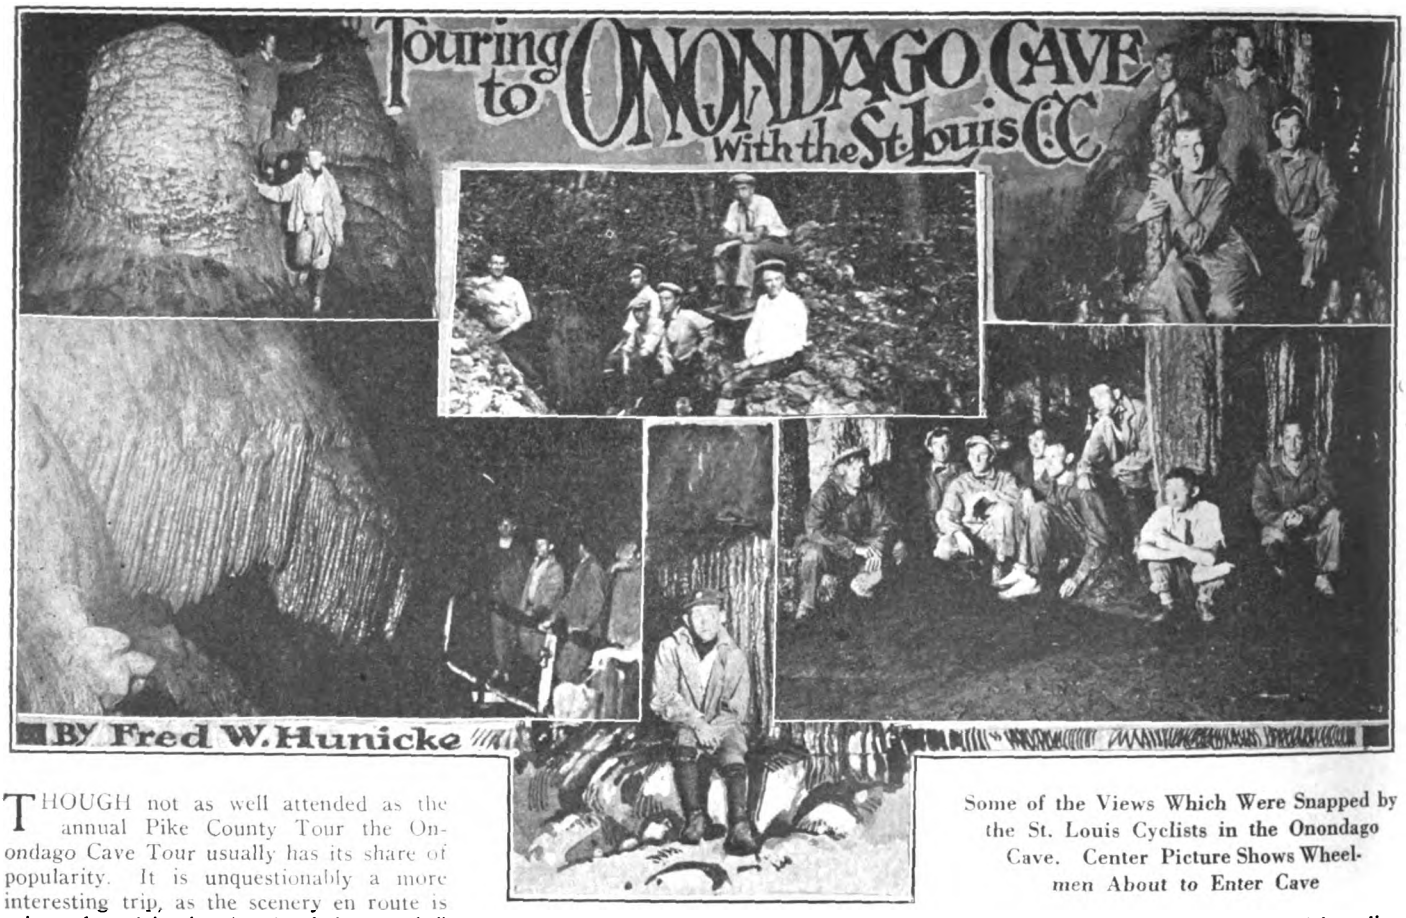
# Touring to Onondago Cave with the St. Louis C.C.



BY Fred W. Hunicke

Some of the Views Which Were Snapped by the St. Louis Cyclists in the Onondago Cave. Center Picture Shows Wheelmen About to Enter Cave

THOUGH not as well attended as the annual Pike County Tour the Onondago Cave Tour usually has its share of popularity. It is unquestionably a more interesting trip, as the scenery en route is primeval, and in that "neck of the woods," known as Crawford County, where is situated this famous Onondago Cave, ninety-five miles southwest of St. Louis, on the Frisco Railroad, a bicycle is indeed a curiosity, which fact never fails to cause many amusing and interesting experiences.

With Labor Day following Saturday and Sunday, thus making two and a half days of continuous holiday, the St. Louis Cycling Club always avails itself of such opportunities to take the longest tours of the year.

### No Stop Run to Union

Twelve riders made the start Saturday afternoon, September 4, at two o'clock, and sped over the macadamized Manchester road, via Manchester, Ballwin, Ellisville, Pond, Grover, County Line and Gray's Summit, to Union, fifty miles west of St. Louis, where the first night's stop was made. All had arrived by seven o'clock, and it is needless to say that supper was a well-earned meal. The entire distance was a "no-stop" run, with the exception of light refreshments en route, which are indispensable on the Manchester road that abounds in veritable mountains.

After a good night's rest all were up bright and early, ready for what proved to be a harder ride than the one of the day before. Leaving Union at eight o'clock the Bourbeuse River was crossed just out of town and the gradual ascent of the ten miles to St. Clair was made. Then the journey was continued in a southwesterly direction through Anaconda, Stanton and Sullivan, seventy-five miles from St. Louis, which proved an enviable dinner stop. Sullivan has no attraction other than as a good dinner stop, and our halt was only long enough to recuperate from an ailment common to all cyclists—over-eating.

### Over Rugged Clay Road

The rough and rugged clay road from Sullivan made its impression indelibly, and all were eager not to linger any more than necessary on this road. There were twenty-five miles more of it, and save for the few halts for refreshments and the picking of apples and peaches along the way, the desire to put the mileage at our rear wheel, instead of our front wheel, was most apparent.

The highway follows the Frisco railroad from St. Clair to Leasburg. Leasburg, ninety miles from St. Louis, the last town en route on the highway and the railroad, was reached at four o'clock. Here begin the six miles that were found to be a greater barrier than any other six miles in the State of Missouri. This sextet of miles leads to the "Eighth Wonder" of the world, which can be reached only by foot and bicycle, and compares favorable with the "Rocky Road to Dublin." The road runs continuously up-and-down, with plenty of sand and loose rocks to try one's patience. Here also is found a half-mile of "good walking" through three creeks and over boulders as large as a foot in diameter. But the last coast to the Cave, the entrance to which is situated at the head of a valley, makes one forget the ordeal just passed through.

### "Massacre" a Chicken Dinner

All had arrived in ample time before the call for supper and after a good wash, proceeded to "massacre" a royal chicken dinner served on a screened porch. The inner man now more than satisfied the climax of the tour was about to begin—the trip through the Onondago Cave, an experience never to be forgotten.

A few words regarding this cave will not be amiss. The beauty and interesting features of Onondago have been proclaimed for many years, but its inaccessibility to most people, being six miles from the railroad at Leasburg, has prevented it from receiving its deserved glorification.

The cyclist is usually dressed for all occasions, but not for cave exploring. It is customary before entering the cave to don overalls and jumpers, and it was not long before the twelve cyclists were transformed, as if by magic, into twelve miners.

A coal oil lamp, too, was formerly provided for each, but previous experience had taught the boys to use their acetylene lamps which often proved their superiority over the oil lamp.

### Entering the Cave

At seven-thirty the "chain-gang," headed by an able guide, the caretaker, proceeded up the narrow lane alongside Emerald Pool, which graces the entrance to the cave, to see the wonder of wonders. The entrance, small, dingy and unpretentious, unfolds a series of natural wonders that neither pen nor brush can adequately describe. Immediately upon entering a skiff is boarded and with the aid of a pike-pole a thousand-yard subterranean river is traversed.

Digitized by Google

The cave is "active"—stalagmites and stalactites are constantly forming and this process is, to some extent, discernible. The wooden bridges, platforms and steps must be replaced every few years, as rotting is very rapid because of the moisture. Vegetation is absent, but the moisture produces a growth resembling cotton, and spreads itself on the woodwork and rocks like veins.

**Weird Formations Seen**

The bridges and steps which rise to towering heights disclose further sights which must be seen to be appreciated. Dazzling colors do not exist in this cave. The formations are a sandy brown, and

Above—Beautiful Falls Near the Cave. Middle—The Wheelmen Walking to the Cave. Lower Right—"Washing Up" at Onondago Before Starting on the Homeward Journey

assume the most weird and fantastic shapes. Here is a dog's head, there a turkey's, there a camel's back, there a likeness of Washington, a turtle, a biscuit, an organ, a hat, and so on.

The water is as clear as crystal and the Crystal Rooms show bottom through this water to a depth of fourteen feet. The Lily Room abounds in figures resembling the water lily, which strangely grow downward instead of upward. The Chamber of Cathedral Spires is indeed weird with its thousands of pointed minute and colossal stalactites and stalagmites, which are occasionally found to have been severed by an unknown cause to a space of six inches and later have grown together. Other formations when tapped with a stick sound like chimes or reeds of an organ. Another one I recall is a perfect fan, twenty-four inches across and a half inch thick, which, with a lamp behind it, discloses numerous red veins. In three places are to be seen the petrified bones of a human skeleton, which tradition tells us are the remains of the Onondago Indians, a tribe that migrated to what is now the State of New York.

**"Safety First" in Cave**

The trip through the cave is not devoid of danger, for the slippery floor, the sharp rocks, dizzy heights, narrow passageways, boardwalks over deep pools and rifts are attended with hazard and the greatest care must be exercised throughout the entire trip.

And so, if you expect to see a cave with foundations of all colors of the rainbow, with terrific winds, or subterranean vegetation, and animals, and a smooth walking surface you will be disappointed. But if you expect to see a typical cave that abounds in stalactites and stalagmites of only two colors, of chambers of dizzy heights of rough and rocky footing, and dangerous narrow passageways just wide enough to crawl through, then you will find Onondago Cave a surprise—indeed a revelation.

**Emerge at Midnight**

We emerged from the cave at midnight, having walked seven miles in four and a half hours in a temperature of sixty degrees, which is constant throughout the year. We were so tired from the "big day" that no time was lost in adjourning to our "bunks" in the pavilion on the side of the hill.

Monday was a day of well-earned rest and the only strenuous items on the day's programme were "loafing," taking pictures and eating, beside the return trip to Leasburg, where we took the train at three o'clock for St. Louis.

It was the unanimous opinion of all present that even though a Labor Day tour, it was worth all the "labor" one had to expend to enjoy the three days' cycling holiday, with such a fitting climax as a trip through the famous Onondago Cave.

## EARL GREY A BICYCLIST

Ottawa, Ont.—According to an announcement just made, His Excellency, Earl Grey, former Governor-General of Canada, with residence here, has been ordered by his physician to ride a bicycle daily as a cure for nervous trouble. This announcement will probably become a big boost for the push-pedal machine as a health-giving means.

Jimmie Rankin, a well-known hockey and basketball player throughout this Province, has also adopted the bicycle as a means to remedy an injured knee as the result of medical advice.

## SOLD 49 MOTOR WHEELS

San Diego, Cal.—A. E. Anakin, of the Anakin Bicycle Supply Co., reports selling 49 Smith Motor Wheels to date. The firm also handles Excelsior bicycles and states that the demand seems to be for the higher-priced mounts.

# Kockler Captures 25-Mile Race at Riverview

CHICAGO, September 7.—By taking first place in every one of the five sprints in the last five-mile six-day finish to the 25-mile amateur team race yesterday afternoon, Ernest Kockler, the Riverview Cycling Club star, won the race for him and his team mate, Roy McWhirter, a member of the North West Skating Club. Eight teams started and only one pair, the Andresen brothers, Andrew and Willie, suffered the loss of a lap and they withdrew before the first sprint.

The rules of the race called for a sprint at the end of each of the last five miles. Kockler won the first sprint and then Charles Minnetti and Willie Wohlrab jumped away for a big lead, but before the second sprint was on Kockler and McWhirter had closed the gap and Kockler again won. The other sprints were enlivened somewhat by Hoffman and Monson getting a break only to be brought back by the great riding of Kockler. By taking all five sprints Kockler scored 35 points. Hoffman and Monson were second with 26 points, while Minnetti and Wohlrab finished third with a total of 24 points.

The professional handicap at one-third mile was accounted for by Bob Diefenbacher, the San Jose rider, who started from the 45-yard mark. Eddie Madden, Newark, 15 yards, finished second and Floyd Krebs, Newark, 25 yards, finished third. Charles Piercey, the Australian, finished ahead of the field in the three-mile open for the professionals, beating out Gus Wohlrab, Martin Ryan and Eddie Madden in the order named. The summary is fully given below:

One-third-mile handicap, professional—Won by Bob Diefenbacher, San Jose, 45 yards; second, Eddie Madden, Newark, 15 yards; third, Floyd Krebs, Newark, 25 yards; fourth, Ned Young, Salt Lake City, 45 yards. Time, 35⅘ seconds.

Three-mile open, professional—Won by Charles Piercey, Australia; second, Gus Wohlrab, Jersey City; third, Martin Ryan, Newark; fourth, Eddie Madden, Newark. Time, 6:21.

Five-mile motor-paced race, Joe Kopsky, Bohemia, vs. Norman Anderson, Denmark. Anderson won first heat, Kopsky second and third. Times, 7:22, 7:06 and 7:29.

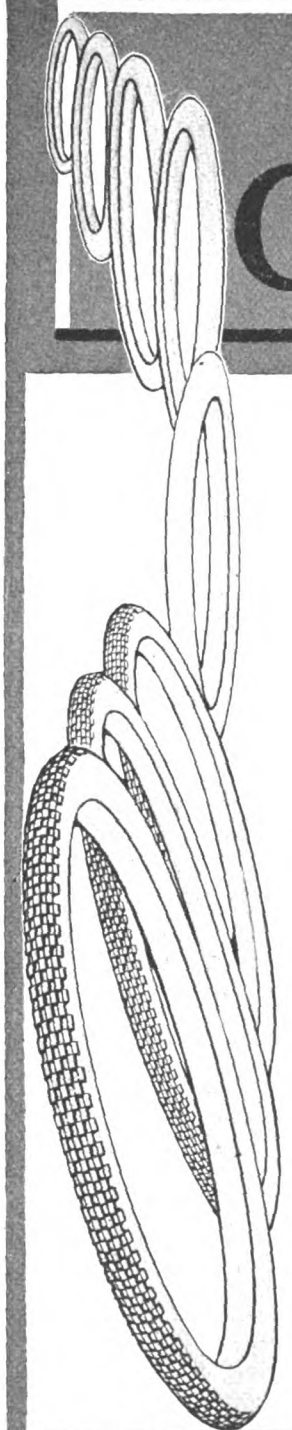
# The Road of Ex-
# Goodyear-Akron



## From Factory to Dealer —The Plan That Won!

Rivals predicted that Goodyear could not sell direct to dealers and offer the public this quality tire at the very low price we announced about two years ago. But we based our profits on *quantity* sales. And we soon showed dealers how they could win more trade in this same way.

### Dealers Trebled in Just 8 Months

When we began to advertise these tires to millions, only a very few dealers carried them in stock. But due to the big demand we soon created, scores of dealers lined up quickly on this winning tire.

In the past 8 months their number has trebled. Now over 6,000 dealers are cashing in on this tire's popularity.

They've learned the art of turning tire stocks quickly. And how to multiply profits by multiplying sales.

### Dealers! Get Our Guaranteed Sales Plan

No matter what other tires you're selling—no matter what prices you get, you can't judge by those what Goodyear-Akrons will do for you. Our dealer service is helping hundreds to win more business.

Right now we have a plan for you that's *guaranteed* to bring you sales direct.

The coupon brings you full particulars. Mail it *today* and see this new-day method of making more money.

**The Goodyear Tire & Rubber Co.**
**Dept. 227 Akron, O.**
**Makers of Goodyear Fortified Automobile Tires and Blue Streak Motorcycle Tires**

**Dealers! This Brings Guaranteed Sales Plan**

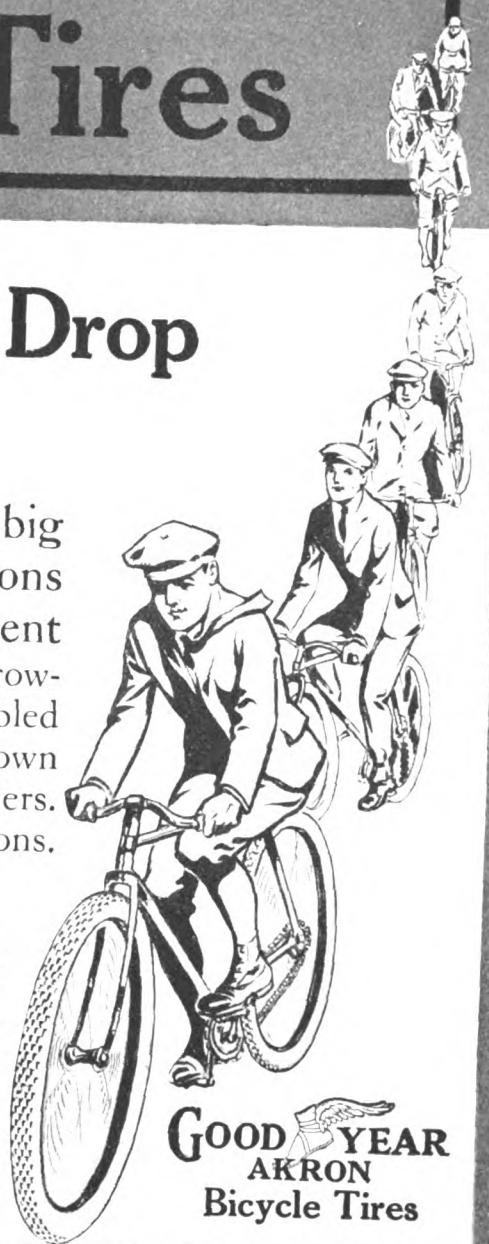
# perience Leads to Bicycle Tires

## Riders! A 33⅓% Drop In Prices

In the past 18 months we've made *three* big reductions in the price of Goodyear-Akrons—a total saving to riders of 33⅓ per cent—*two dollars and a half a pair.* This is due to growing demand—for our sales have more than doubled within the past year. Multiplied output brings down factory cost and we pass on this saving to bicycle riders.

Yet no better tires are made than Goodyear-Akrons.



GOODYEAR AKRON Bicycle Tires

### World Leaders

Goodyear Automobile Tires outsell any other. In Motorcycle Tires we lead the world about 3 to 1. These Goodyear-Akron Bicycle Tires are made by the same expert methods in a plant where up to 15,000 pneumatic tires are produced per day.

Some tires cost more, due to small output. Some cost less—but why run the gauntlet of tire trouble? Goodyear-Akron Tires give you the best that men know how to make and they save you about one-half the cost of other standard tires.

### New Low Prices

Goodyear-Akron Bicycle Tires now sell for $2.25 each in the Smooth Tread; $2.50 in the Non-skid. Yet they are just as fully guaranteed as the tires that cost you from $4.00 to $6.00 *apiece.* You can *pay* more but you can't *get* more.

Remember this when you go to buy tires. If your dealer can't supply you, send us his name on the coupon printed here. We'll arrange to have you supplied. Do this, and don't pay more than Goodyear prices.

# Cavanagh Upsets "Dope" at Newark

NEWARK, N. J., September 12.—Frank Cavanagh, a local rider, upset the dope here on Sunday afternoon when he defeated Alfred Goullet, of Australia, in two out of three heats of a two-thirds mile match race. Goullet was looked upon as an easy winner, and the victory of Cavanagh came as a great surprise. Previous to Cavanagh's victory over Goullet, he was vanquished in the Brassard race at one mile, by Cesar Moretti. In this affair Cavanagh was looked upon to romp off with an easy victory, but by not being up on his toes he let Moretti beat him over the finish line.

Frank Kramer and Iver Lawson, mounted on a tandem, easily disposed of Alfred Grenda and Fred Hill in a one mile match race, in which three heats were ridden. Kramer and Lawson won the first, in the second they were disqualified for switching, while they captured the match by easily taking the third and last. In the heat that Kramer and Lawson were disqualified they claimed that Grenda and Hill had given them a close ride and had locked handle bars with their machine. When Grenda and Hill swung up the bank this made Kramer and Lawson go up as well, which gave the appearance of switching. The referee would not listen to Kramer's reasoning and the race stood as the referee decided.

The ten mile tandem paced race went to Oscar Egg, of Switzerland. Reggie McNamara, of Australia, punctured after he had gone nine miles and one lap, while Alfred Goullet was all in after riding nine miles and quit. Egg did not have any opposition in the final sprint to the finish and of course was an easy winner.

Arthur Spencer, the Toronto amateur, equalled the world's amateur record for a half mile in the third heat of the half mile race for amateurs. Spencer rode the distance in 55 seconds, which is the same time made by Donald McDougall on July 15 of last year. Spencer did not get a place in the final, the race going to Albert Baker, of Nutley, who had a fifty-five yard handicap.

Tommy Grimm, the Irvington boy, won the Australian pursuit race after riding five miles and one-half a lap. He had to pass Fred Taylor to win, and he did this after some hard riding. William Weimar was third, Arthur Spencer fourth, and Hans Ohrt, fifth. Weimer eliminated Ohrt after riding one mile and two laps. The summaries:

Half-Mile Handicap (Professional)—Won by Peter Drobach, Boston (45 yards); Harry Kaiser, Bronx (20 yards); Frank Corry, Australia (40 yards), third; Martin Ryan, Newark (50 yards), fourth; Worthington W. Mitten, Davenport, Ia. (60 yards), fifth. Time, 52⅗s.

Two-thirds-Mile Match Race (Professional)—Frank Cavanagh, Newark vs. Alfred Goullet, Australia. Won by Cavanagh. First heat won by Cavanagh. Time 2m. 7⅗s. Last eighth mile, 12⅕s. Second heat won by Goullet. Time, 1m. 57⅗s. Last eighth mile, 12⅕s. Third heat won by Cavanagh, 1m. 57 s. Last eighth mile, 12⅕s.

Miss and Out (Professional)—Won by Alfred Goullet, Australia; Joseph A. Fogler, Brooklyn, second; John Bedell, Lynbrook, L. I., third; Percy Lawrence, San Francisco, fourth; Frank Corry, Australia, fifth. Time, 9m. 54s. Distance, 4 miles and 2 laps.

Half-Mile Novice (Amateur)—Won by William Salerno, Newark; Steve O'Panowitz, Newark, second; Dominick Zurile, Newark, third. Time, 1m. 6s. Salerno finished first, but was disqualified for taking his hands off the handlebars.

The Brassard, at One Mile (Professional)—Won by Frank Cavanagh, Newark, vs. Cesar Moretti, Italy. Won by Moretti. Time, 2m. 44s. Last eighth mile, 12s.

One-Mile Tandem Match Race (Professional—Frank L. Kramer, East Orange and Iver Lawson, Salt Lake City, Newark vs. Alfred Grenda, Australia and Fred Hill, Boston. Won by Kramer and Lawson. First heat won by Kramer and Lawson. Time, 2m. 16s. Last eighth mile 11s. Second heat Kramer and Lawson finished first, but were disqualified for switching. Time, 2m. 24⅗s. Last eighth mile, 11⅕s. Third heat won by Kramer and Lawson. Time, 2m. 22⅗s. Last eighth mile, 11⅕s.

Half-Mile Handicap (Amateur)—Won by Albert Baker, Nutley (55 yards); Al Krushel, Buffalo (35 yards), second; Walter White, Newark (35 yards), third; Thomas Smith; Irvington (10 yards), fourth. Time, 56⅘s.

Art Spencer in Saddle

Australian Pursuit Race (Amateur)—Won by Thomas Grimm, Irvington; Fred Taylor, Newark, second; William Weimar, Newark, third; Arthur Spencer, Toronto, fourth; Hans Ohrt, San Francisco, fifth. Distance, 5 miles and ½ lap. Time, 11m. 45⅗s.

Ten-Mile Tandem Paced Match Race (Professional)—Between Oscar Egg, Switzerland; Reginald McNamara, Australia, and Alfred Goullet, Australia. Won by Egg; McNamara, second; Goullet, third. Time, 19m. 17⅗s.

## CRESCENTS ON TWO-DAY TRIP

Baltimore, Md., Sept. 14.—Members of the Crescent Bicycle Club enjoyed an interesting two-day trip to Leonardtown, Md., on Sunday and Monday last, the trip taking them over the Baltimore and Washington Boulevard to the national capital, from which point they followed the new state road through the tobacco growing district of southern Maryland, passing through Mechanicsville and Waldorf to their destination. The return trip was made over the same route.

On Saturday, October 25, Fred M. Sanborn, the well-known road rider of the Crescents, will attempt to break the existing records for the trip from Baltimore to Frederick and from Baltimore to Hagerstown. The old mark for the journey to Frederick is 3 hours and 23 minutes, made by S. M. Warns on June 21, 1896, and the record to Hagerstown is 5 hours 41 minutes and 30 seconds, made on October 15, 1893, by F. H. Harvey.

Details of the open handicap road race which will be held by the Crescents are now being arranged and entry blanks for the race will be in the hands of all local dealers in a few days. This race is open to all amateur bicycle riders, and as it will be a handicap affair the novices will have as good a chance to win one of the handsome prizes offered as the experienced riders. The course will be over a loop composed of the old Harford road, the new Harford road and Taylor avenue, and will be a very easy one, as there are very few grades on the entire course. The distance will be ten and a half miles and the date October 10.

## BOOSTING THE BICYCLE BOOSTER

Louisville, Ky., September 14.—"Let the Smith Motor Wheel ride the boy to school" is the heading on advertisements appearing in the Louisville newspapers for the Sutcliffe company, State agents for the popular bicycle booster. The company lists the price of attachments at the top of its advertisement and then gives the prices of several high-grade bicycles which they feature in its big establishment.

## SOUTHERN TEXAS SELLING BIKES

Dallas, Tex., September 14.—Victor Cortines, secretary of the Cortines Supply Company, has just returned from a trip to San Antonio, Tex. A nice bunch of business was secured on the trip. Mr. Cortines reports a lively bicycle business in South Texas, which is as good if not better than in Dallas. The Hex Cycle Company of San Antonio is doing a bicycle business of from twelve to fifteen wheels a week.

## BICYCLES IN WAR

One Coventry (England) firm recently supplied 100 bicycles finished in khaki to various British regiments, to be used in service on the battlefront. On occupying the small French town of Crepy before their great retreat, the Germans requisitioned all the bicycles in the place, and 91 were thus gathered in, to be used by the Teuton cycle corps.

## PICKLES BACK ON THE JOB

Riverside, Cal.—Fred B. Pickles, one of the veteran bicycle dealers of Riverside, is back in harness again after several months' illness and has opened a shop at 637 Ninth street in order to be ready for the early business of the new season.

## ADDS SMITH MOTOR WHEEL

San Pedro, Cal.—A. L. Rix, Harley-Davidson agent at San Pedro, has taken the agency for the Smith Motor Wheel. He has delivered a two-speed Harley to the local telephone company, and is featuring the Miami and Appeal line of bicycles.

1—Goullet Defeating the Field in the Five-Mile Title Series on Labor Day. 2—Frank Kramer Posing After Winning Sprint and Tandem Championships, Sept. 5. 3—Finish of Tandem Championship Race. 4—Start of Match Race Between Goullet and Clark, Sept. 5. 5—Start of Sprint Championship Race. 6—Beginning Title Series Race on Labor Day

## Wiley Nails 100 Kilometer Revere Race

BOSTON, September 14.—George Wiley won the revenge 100-kilometer race at Revere Cycle Track last Saturday night. Victor Linart, the Belgian, world's middle-distance motor paced champion, nearly ended his racing career in a spill which landed him in front of the motorcycle which was pacing Wiley.

In the fourth lap of the 10th mile Linart got a puncture just as the motorcycle ridden by Jimmie Hunter, who was pacing Wiley, took the bank in an effort to pass the Belgian. Linart made desperate endeavors to keep his machine up, but did not have room at the top of the bank and he fell directly in front of the motorcycle, which hit him and spilled Hunter, who had managed, however, to stall his engine and slow up. Wiley escaped the mixup by a narrow margin and continued the race. In the 20th mile Wiley got a puncture but stayed on his wheel, changed, and kept his lead. Georges Columbatto of Italy finished in second place some miles ahead of Georges Seres of Paris.

The five-mile open professional was one of the best races seen here for some time. Saxon Williams of Buffalo opened up half a lap on the field, and there was a close fight to close this up, Williams winning by a small margin, with L. C. Rollins of Everett second, and Tim Sullivan of New Haven only inches behind. The summary:

Half-Mile Amateur Handicap Race—Won by J. B. Rollins, Everett (40 yards); C. Robinson, Boston (75 yards) second; W. M. Lane, East Boston (95 yards), third; John Fardig, Orient Heights (60 yards), fourth. Time, 57⅕s.

Five-Mile Open Professional Race—Won by Saxon Williams, Buffalo; L. C. Rollins, Everett, second; Tim Sullivan, New Haven, third; Hugh MacPartland, Boston, fourth; Percy Culler, Wakefield, fifth. Time, 11m. 9⅕s. Charles Turville, Jr., Revere, winner of most laps.

Mile Invitation Amateur Race—Won by Kenneth Plummer, Revere; Mike Barber, Brighton, and Lewis Hill, Revere, tied for second. Time, 2m. 15s.

100-Kilometer Motor-Paced Race—Won by George Wiley, Syracuse; Georges Colombatto, Turin, Italy, second; Georges Seres, Paris, third; Clarence Carman, Jamaica, N. Y., fourth. Time, 1h. 29m. 41⅘s.

### TO TRY AMATEUR PACED RACES

Chicago, September 13.—The management of the Riverview Velodrome, Messrs. Walter Bardgett and Carl Lantieri, will attempt to stage an amateur paced race next Sunday night. Willie Kell, the Chicago Cycling Club crack; Charles Minnetti, of the Riverview Cycling Club, and Olaf Lodal, the Danish-American A. C. performer, have all been working out back of the motors, and a match race will be arranged between two of them for the next meet, Sunday, September 19.

### HOUGHTON BIKE TRAILER

Marion, O., Sept. 14.—Houghton, manufacturer of the Houghton Bi-Car, announces that the new Houghton Bike Trailer is another addition to his line. This device is made in various sizes and has a carrying capacity up to four hundred pounds. Three types of bodies will be furnished regularly, including the open style with drop endgate, the full enclosed weather-proof type and the high enclosed van with rear door.

### MOTOR WHEEL CLUB ORGANIZED

San Diego, Cal.—Ten riders have formed a Motor Wheel Club here. The officers follow: Homer Crum, president; M. Carmrike, vice-president.

## Piercey Takes Two Events at Windy City

CHICAGO, September 13.—Charles Piercey, the Australian who holds the Western professional sprint title, and Ernest Kockler, the local champion, were the bright stars at the meet held at the Riverview Velodrome last Sunday night.

Piercey shone in the one-mile point race and the Australian pursuit race, both of which he won. The one-mile point race was run in three heats and Piercey took the first and second and ran second in the third, his total being 13 points. Gus Wohlrab ran third in the second heat and won the third, taking second place with seven points. Ned Young and Floyd Krebs were tied for third with five points. Piercey also won the Australian pursuit race by one of the hardest rides seen here this year, beating Gus Wohlrab, Ned Young and Joe Kopsky in the order named. The race went over five miles.

Kockler's victories came in the half-mile repechage handicap, which he won from scratch in track record time, and in the ten-mile open, in which he beat Roy McWhirter, Charles Minnetti and a large field handily. Summary:

Half-Mile Repechage Handicap (Amateur)—Won by Ernest Kockler, Riverview C. C. (scratch); second, Paul Kell, Chicago C. C. (80 yards); third, Roy McWhirter, North West Skating Club (50 yards). Time, 58⅘s. New track record.

Ten-Mile Open (Amateur)—Won by Ernest Kockler, Riverview C. C.; second, Roy McWhirter, North West Skating Club; third, Charles Minnetti, Riverview C. C.; fourth, George Klasen, Danish-American A. C. Time, 24:03.

One-Mile Point Race (Professional)—Won by Charles Piercey, Australia, 13 points; second, Gus Wohlrab, Jersey City, 7 points; third, tie between Ned Young, Salt Lake City, and Floyd Krebs, Newark, 5 points each. Run in three heats. Times, 2:33, 2:25 and 2:27⅘.

## BOB LAWSON BECOMES A MOTOR WHEEL ENTHUSIAST

**Coast-to-Coast Cyclist Demonstrates Outfit at Recent Baldwin, L. I., Races**

## Northern California Bicycle Sales Brisk

SAN FRANCISCO, September 13.—According to P. E. Sammann, manager of the bicycle department of Baker & Hamilton, northern California distributors of Miami Motor Bicycles, Iver Johnson, Hudson and Savage bicycles, there is a very appreciable improvement in the bicycle business in this territory, and from present prospects, trade in bicycles will be of still greater volume next year.

The present improvement in business is attributed by Mr. Sammann to the revival of bicycle racing, which has aroused the enthusiasm of the younger generation to a pitch approaching that of former years. The need of a persistent and consistent campaign of advertising upon the part of manufacturers is seen by Mr. Sammann, if the popularity of the bicycle is to be increased and maintained.

A material increase in the sales of Miami Motor Bicycles is the territory served by Baker & Hamilton is recounted by Mr. Sammann, who declare that this machine has demonstrated its sturdiness and utility in such an unmistakable manner that it is destined to become very popular in California and to enjoy a very large sale. Numerous dealers in this section of the state have done splendid missionary work for the Miami by hard and constant riding, thereby proving conclusively that the machine will do all that its manufacturers, the Miami Cycle & Manufacturing Company, claim for it. Among the dealers recently appointed as agents for the Miami are the following: A. Brown, Stockton; Bakersfield Cyclery, Bakersfield, and W. F. Barcher, San Jose.

## GREAT WESTERN REPORTS INCREASE

La Porte, Ind., September 14.—The Great Western Mfg. Co., of this city, makers of the Crown, American and Adlake bicycles, announces that during the fiscal year, which closed on August 31, it realized an increase of twenty per cent. in business.

Arrangements have been made with Edw. Hugh Leng, 12 E. 15th street, New York City, to handle the Great Western bicycles in Greater New York and the adjacent vicinity. Mr. Leng has had a wide experience in handling other lines of high grade merchandise.

## Herson Captures New England Wheelmen's Race

FROM a field of 90 cyclists, J. Herson, representing the Acme Wheelmen, won the 10 mile handicap road race promoted by the New England Wheelmen, and held at Floral Park, on Sunday, September 12. Second to the winner came R. Fesselmeyer, a clubmate of Herson. Both riders started from the limit mark of four minutes. After them came a bunch of 25 men jamming across the finish line almost as one man. Tom Bello, of the Empire City Wheelmen, was the first scratch man to finish, his time being 23:08. While the course was generally in good condition, a number of spills occurred on the turn, but no one was seriously hurt. A handsome silver loving cup awarded to the club having the most number of entries was won by the Century Road Club Association with 20 members, and the New England Wheelmen were second with 14 members entered. Summary:

PLACE WINNERS.

| Name | Club | Time | Hdcp. |
|---|---|---|---|
| J. Herson | Acme | 25:45 | 4:00 |
| R. Fesselmeyer | Acme | 25:45½ | 4:00 |

# CROWD OF 12,000 ENJOYS NATIONAL RACE PROGRAM

TORONTO, Ont.—The grand sports day of the Canadian National Exhibition, Saturday, September 11, drew a crowd of 12,000 people who saw riders and athletes from all corners of the continent in competition. The host of cyclists who took part included the one and only Hans Ohrt, of San Francisco, world's amateur champion, while eight Buffalo cracks also went to the post. It was a peculiar feature that it was all United States in the one mile open race, while it was all Canada in the three mile handicap, the American stars finishing outside of the prizes in the long race, in which there were no less than forty-one starters stretched out as far as 450 yards.

Ohrt, without Art Spencer, the Canadian champion, on the rack, found the one mile a fairly easy race, and he kicked out the two laps on the hard and lumpy track in only 2:55⅗, after winning his heat in 2:21⅕. Elmer Bundt, of Buffalo, rode second, while Louis Peterson, the versatile Buffalo crack, finished a bang-up third. Joe Schieder, the Buffalo star, failed in the final spurt, while Gordon McMillan, one of Toronto's best, went down in a spill.

The three-mile handicap was captured by Toronto's young star, Norman Webster of the Classic Club, who left the 250 yard mark. His time was 7:10⅖. Harry Martin, Salem, B. C., of Toronto, rode second, and C. Coleclough, of the Toronto Classics, was right on the leader's rear wheel for third place. On account of the rough going, a nasty mix-up occurred in which E. Levy of Buffalo and R. Goldsmith of the Toronto Salems went down for the count.

The civic reception to Art Spencer, Toronto's good representative in the world's championships at Newark, was called off because of Spencer's alleged attempt to hold up the Exhibition management in the matter of prizes. Spencer did not appear on the track and, incidentally, he missed a chance to make a great name for himself by showing his Toronto crowd how he can hold Ohrt.

### HILL OPENS SHOP IN PASADENA

Pasadena, Cal.—R. E. Hill has opened a motorcycle and bicycle repair shop at 901 East Colorado street. He will carry Excelsior and Pope bicycles as well as a full line of accessories.

### CYCLE SPORTS AT VANCOUVER

The Vancouver Volunteer Cyclist Corps, co-operating with the infantry units, held a sports meeting at Brockton Point on Labor Day.

### A BICYCLE FIRE HERO

Toronto, Ont.—Louis Scarletto, one of the cracks of the local bicycle brigade, played the hero role during a recent church fire, thanks to his bicycle. He was riding home from the Toronto General Hospital, where he had been undergoing treatment, when a wicked thunderstorm broke. Suddenly a bolt of lightning struck the tower of St. Francis' Church, and Scarletto raced with all speed to the scene—almost a mile away. Throwing his wheel on a nearby lawn, he dashed into the burning edifice and soon emerged from the dense smoke bearing several of the valuable gold chancel fixtures. Again he ran into the church and came out with precious paintings and vestments in his arms.

### WINNERS OF N. E. W. RACE

John Herson and R. Fesselmeyer, Who Took First and Second in Ten-Mile Race.
Item Page 92

### GOING TO CHICAGO SHOW

San Francisco, September 7.—Notwithstanding the interest that is being taken in the Chicago Show by local motorcycle and bicycle dealers and jobbers, only two San Francisco jobbers, so far as can be learned, are planning to go to the Windy City, viz.: Messrs. W. H. Jackson, of W. E. & W. H. Jackson, Northern California distributors for the Dayton products, and A. Freed, president of the Pacific Motor Supply Company, distributors in this territory for the Thor line, the Smith Motor Wheel, and a large line of bicycles and supplies.

Mr. Jackson will make the rounds of the retailers in his territory after the Chicago Show, while Mr. Freed will remain in the East for the purpose of attending the New York show and visiting the Thor and Smith factories.

### SCHILLER RESIGNS

San Francisco, Cal., September 14.—J. P. Schiller, of the cycle tire department of the B. F. Goodrich Company branch in this city, has submitted his resignation, to take effect at once. He has accepted the position of Northwestern manager of the Willard Storage Battery Co., Cleveland, O. His headquarters will be at Seattle.

### BARDGETT NOW IN CHARGE

Chicago, September 14.—Walter Bardgett, who has been managing the Riverview Velodrome since it was taken over in the middle of the season by the park management, has with Carl Lautieri, foreign representative, taken the proprietorship of the enterprise and they plan to continue bicycle racing there for the rest of the park season and later should the weather prove favorable. Hereafter races will be held Sunday afternoon.

### STARRING AT RIVERVIEW

Gordon Walker, of Australia, Who Has Taken Many Firsts This Season

### WILKES-BARRE SEES BIKE RACES

Wilkes-Barre, Pa., September 10.—Bicycle races were held at Kingston on Labor Day and resulted in many entrants. Despite muddy roads good time was made R. W. Lacey, of this city, won the 5-mile race in 15 minutes and 5 seconds. Because of the increased interest in bicycle racing the management of the races has announced they will be conducted annually.

The prize winners in the order in which they finished in the 5-mile race, follow: R. W. Lacey, Wilkes-Barre; Clinton Carey, Westmoor; O. R. Davis, Dorranceton; Leonard Pahoonis, Wilkes-Barre; H. H. Smith, Dorranceton; Joseph Straub, Kingston; John Marko, Kingston; George Clark, Kingston; John Thomas, Kingston; Elmer James, Westmoor; Ralph Robinson, Wilkes-Barre; Harry Shaver, Plymouth; Emil Roll, Kingston; Oscar Fish, Kingston; Griffith Floyd, Kingston; Louis Edwards, Westmoor; Lusk Brown, Kingston; Joseph Porphie, Kingston.

The results in the 3-mile race were: First, Nervin Jones, Kingston; E. Gillis, Kingston; Howard Lewis, Dorranceton.

### BICYCLE DEALERS IN DENVER

Denver, Colo., September 14.—The State Cycle Co. has moved its store to 319 Sixteenth street. Mr. Abovitz, the manager, reports that the sales of the leading brand, the Adlake, have been brisk.

The Lewis bicycle shop is one of the oldest in this city. The present owner has been selling bicycles for last twenty years. The lines featured are the Rambler, Crescent and the Lewis Special.

# LATE NEWS CROWDED OUT OF OTHER DEPARTMENTS

## SALESMEN GATHER AT WESTFIELD FACTORY

THE salesmen of the Westfield Manufacturing Co. are in convention at the factory, viewing the new Pope models of bicycles and motorcycles, planning a strong campaign for the coming season, and interspersing the conferences with bits of fun.

The following are in attendance: B. A. Edgar, New York City; M. G. Littlefield, Freeport, Ill.; Joseph Redlinger, Mobile, Ala.; D. G. Ryan, Chicopee, Mass.; Frank R. Swayne, Westfield, Mass.; O. J. Oberwegner, Toledo, Ohio; C. B. Hull, Fostoria, Ohio; T. B. Hallbourg, Westfield, Mass.; C. T. Quinn, Worcester, Mass.; C. A. Leander, Chicago, Ill.; David L. Marshall, Philadelphia, Pa.; Weston Cutter, Peoria, Ill.

The men are enthusiastic over the prospects of the new company and anticipate a greater sale for the company's products than ever before. The officials of the company are gratified at the intense interest of the men in their work, and the product, and altogether the conferences promise to bring great results.

A sight-seeing tour, conducted by John P. Fogarty, secretary and manager, as host, assisted by L. D. Harden, sales manager, enabled the men to see the beauties of the Berkshires from Westfield to Pittsfield, Lenox, Stockbridge, Lee and return. This trip had as a climax a dinner at the Curtis Hotel, Lenox. The western and southern men were particularly enthusiastic over the beauties of the New England scenery.

Each day is taken up with a series of talks on mechanical or commercial matters, the result being that as the men go out to their territories they are primed with complete information about every feature of the products they sell.

### WESTFIELD CO. PAYS DIVIDEND

Westfield, Mass., September 14.—Checks are being received this week by the creditors of the old Pope Mfg. Co., the receivers having declared a dividend of 38½ per cent. George Pope and Charles Parsons have been discharged as receivers by Judge Dodge, of the United States District Court at Boston, and the third receiver, Charles A. Morse, has been retained to settle a disputed claim of $20,000.

### YOUNGSTER ON 949-MILE TRIP

Frederick Mesinger, of the firm of well-known saddle makers of that name, has been seen strutting around with a much-inflated chest lately. Mr. Mesinger was not at all loath to tell the why of his obvious pride.

"My son, Fred, a little over 17 years old, has just come back from a 949-mile motorcycle trip to Niagara Falls and back, which trip took him a little less than four days!

**Fred Mesinger**

What tickles me the most, however, is the fact that this is the first tour he has ever made on a motorcycle."

Fred went through by way of Albany, Syracuse, Rochester, Niagara Falls, and then came back down the west road, through Elmira, Waverley, Windsor and Phoenicia.

be located their western manufacturing and distributing branch. The space occupied is 6,000 square feet. The rapid growth of the Grossman company's business the past year compelled them to create these greater facilities for thoroughly efficient service to their large number of customers in the western states. Rudolph Cony was appointed manager of the Chicago branch.

### EXTRA FIRESTONE DIVIDEND

Akron, Ohio.—The Firestone Tire & Rubber Co. has declared an extra dividend of 4 per cent. on its common stock, payable October 15. This makes 16 per cent. for the year. It is probable that the common dividends hereafter will be paid on a basis of 5 per cent. per quarter.

### NOTES FROM NEWARK

Newark, N. J., September 13.—Walter Gouke entertained the New Jersey M. C. at his mother's place on Greenwood Lake yesterday. In all, there were sixty merry-makers who danced, swam, rowed and motor-boated to their heart's content, then sat down to lunch. Eleven sidecars, fourteen tandem and solo machines and two automobiles brought the visitors to and from Newark without a mishap.

Carl W. Bush and P. W. Stevens, local Harley-Davidson agents, will visit the Chicago Show and then go up to Milwaukee to see the new models at the Harley factory. They will go by train.

Tomorrow "Art" Herrington, Jr., and "Bill" Lawrence will start for Chicago via the latter's sidecar. No record will be sought, but a good time is looked forward to by both men.

The New Jersey M. C. has sent out notices to all other State F. A. M. clubs regarding a move toward a federation of the clubs. The meeting is set for September 25 and each club is asked to send one delegate to start the movement.

The local club protested to Motor Vehicle Commissioner William L. Dill re the practice of automobilists using but one headlight. Not only is it illegal but criminal as well, for any one approaching a vehicle at night with but one light lit is unable to judge clearance.

### FABIAN STARS AT 'FRISCO

San Francisco, Cal., September 13.—"Dutch" Fabian, Indian, cleaned up all four events which were held at Tanforan on Labor Day. In the five-mile Oberg, Indian, was second and B. Walters, Indian, third. The summaries for the other three events are: Roylance, Harley-Davidson, second, and Oberg, Indian, third, in the ten and fifteen-mile races; Roylance, Harley-Davidson, second, and Gilson, Cyclone, third, in the twenty-mile. Slow time was made owing to the bad condition of the track. Immediately after the race the sheriff attached the gate receipts for advertising. The referee did not have the $500 prize money and the riders may lose, for, the attendance having been only sixteen hundred, there was not sufficient money to pay all expenses.

## BIG MOTOR WHEEL STAFF READY FOR SHOW

MILWAUKEE, Wis.—There will be twelve factory representatives in the Smith Motor Wheel section at the Chicago Show, in addition to the corps of demonstrators.

L. R. Smith, president of the A. O. Smith Company, and James L. Sinyard, treasurer, will be present. W. V. C. Jackson, general manager of the Motor Wheel division, will be in personal charge throughout the week, assisted by A. F. Rowell, chief engineer; Sam N. Hope, chief inspector; A. H. Beckman, service manager; J. E. VanToor, assistant sales manager; L. C. Schwab, O. B. Pupikofer and E. R. Sweeney, three of the western traveling representatives; Joseph Weins and Frank Effinger, advertising manager.

Bob Lawson, Atherton Coaster Brake representative, will make the Smith Motor Wheel booth his Show headquarters, as will a number of bicycle manufacturers.

The Smith Motor Wheel section will make of itself a bicycle headquarters. Thirty of the best and latest models of bicycles, including the prominent commercial bicycles, will be exhibited with Smith Motor Wheels attached. A stenographer will be in attendance with service and stationery for dealers who may wish to write or telegraph home during the show, and visitors will find the Smith Motor Wheel section a good place to meet, lounge about and chat.

The display board with Motor Wheel parts, which caused so much comment at last year's shows will again be installed, as also will a Motor Wheel cut in half to show all the interior moving parts of the machine.

The Motor Wheel section will be booths numbers 125, 126, 147, 148, occupying 650 square feet in all, in addition to a private office.

# *"I Specify Morrow Brakes on all Bicycles that I buy"*

# *"I find that the Morrow is the easiest running, most positive brake on the Market"*

Cordele, Ga.

Eclipse Machine Co.,
Elmira, N. Y.

Gentlemen:

I am mailing you under separate cover a few Morrow Coaster Brake Parts for which please ship new parts, and oblige.

I specify Morrow Brakes on all bicycles that I buy, and I use them altogether in repair line.

I have been in the bicycle business about twelve years and have used all kinds of coaster brakes, and I find that the Morrow is the easiest running, most positive working brake on the market; in applying the brake it don't hold with a jerk as most other brakes do, but it takes a firm hold and with very little pressure on the pedal it will stop the wheel instantly.

Trusting that you will ship me the new parts at once, I remain.

Very truly,
G. L. RILES.

## EARL GIVEN KEEPSAKE

Springfield, Mass.—Clarence A. Earl, who finished his duties as general manager of the Hendee Mfg. Co. with the week ending before Labor Day, was given a remembrance to carry with him to Toledo in the form of a handsome watch from the heads of departments. It was inscribed with his name and read "From the heads of departments, office and factory, Hendee Manufacturing Company" and was handed to Mr. Earl by J. D. Stephens, cashier, who represented the organization.

Mr. Earl is taking a three weeks' vacation in Maine and will join the Willys-Overland Company at Toledo in an executive capacity at the beginning of October.

## RIDING MOTOR WHEEL TO SHOW

Columbus, Ohio.—William Maugan, Jr., with the Franklin Cycle and Supply Company, has left Columbus via Smith Motor Wheel for the Chicago Show, where he will arrive Monday or Tuesday.

The Motor Wheel that Mr. Maugan is using has already covered 8,000 miles, having been used by him all Summer in and around Columbus.

En route Mr. Maugan will visit Smith Motor Wheel dealers, who have been notified to be on the lookout for the rider; also he will distribute Motor Wheel literature along the way.

The Smith Motor Wheel officials at the Show will meet the rider on the outskirts of Chicago and escort him to the Coliseum, where he will hold a reception and put the Motor Wheel on exhibition in the condition in which it finishes the trip.

## SCHICKEL STAFF STRENGTHENED

The executive personnel of the Schickel Motor Company, Stamford, Conn., has been benefited by the addition of D. W. Donley, formerly identified with the Persons Mfg. Co., of Worcester, Mass, and S. W. Treat, formerly connected with the Babcock and Wilcox Boiler Co., New York City. Mr. Donley assumed the position of sales manager on September 1, and Mr. Treat the office of superintendent of production. Both men from their past experience are well qualified to give able assistance to the Schickel company.

## DAYTON FIRE APPARATUS AT CONVENTION

Cincinnati, Ohio, Sept. 15.—Dayton motorcycle firefighting equipment was right in the limelight during the national convention of fire engineers, commonly known as fire chiefs, held in this city last week. A big exhibit of various appliances used in the work of extinguishing fires was an interesting part of the convention, and the well-known Dayton line, which is in practical everyday use in many cities, attracted much attention.

## HENDERSONS IN WAR SERVICE

London, England.—A number of Henderson motorcycles which were sold by Robertsons Motors, Limited, English distributors of the four-cylinder American machine, have been in active service in the big war, and letters received from the riders tell of many exciting adventures awheel at the front.

One letter came to Robertsons from an officer in the Russian army. This man, with his Henderson, was in the van of the Russian steam roller when it crushed its way into East Prussia last year. When the Austrians evacuated Przemysl, this machine and its rider were the first of the victorious army to enter the fallen city.

## SNAPPED IN LOS ANGELES

**Miss Mary White, in Saddle, and "Goodrich Girl" on Indian Equipped With Black Tread Goodrich Tires**

## TRIBUTE TO GRINNELL GLOVES

The Morrison-Ricker Company makers of Grinnell gloves, take justifiable pride in a recent statement of Dario Resta, the automobile racer who won the 500-mile race at Chicago on June 26 and the 100-mile race at Chicago, August 7. Resta uses Grinnell gloves in his races and does not hesitate to say that they have a bearing upon his victories. "When you are spinning a track at comet speed it means something to know that your grip on the wheel is sure, and that your hands are going to be kept as cool as possible under the terrific strain," says the racer. "The Grinnell glove, with limp cuff and the ventilation feature, are favorites of mine."

The Grinnell glove for motorcyclists embodies both the special features referred to by Resta, and is one of the firm's best sellers.

## THE GOODYEAR SALES ARMY

"One of the most valuable assets of The Goodyear Tire & Rubber Company is not listed in the financial statement," says C. W. Seiberling, vice-president.

"This is the intense loyalty and enthusiasm of our whole organization. Our own sales force is a real army of 500 men, who work in every State of the Union and are carrying the message of Goodyear to all parts of the world besides. We cannot give too much praise and appreciation to these men, who have fought so tirelessly and successfully to keep Goodyear's place as the largest manufacturer and seller of tires in the world.

"We now use 10 per cent. of the world's production of crude rubber. An expert has figured that the efforts of 97,000 natives, in the various rubber districts of the world, are necessary for the gathering and preparation of Goodyear's requirements."

## WILL MAKE LOCKS FOR BIKES

Westfield, Mass., Sept. 15.—The F. & H. Manufacturing Company has just been incorporated under Massachusetts laws to make a patent lock for bicycles. This patent is being investigated by the

Digitized by Google

Westfield Manufacturing Company. The officers of the new company are: President, H. E. Foucher, of Augusta, Ga.; secretary, Henry W. Hallbourg, of Westfield; treasurer, Thomas B. Hallbourg, of Westfield.

### NEW "KOKOMO KORD" TIRE

From the Kokomo Rubber Co., Kokomo, Ind., comes the announcement that it has added to its already popular and comprehensive line of tires a brand new model which will be marketed under the name of "Kokomo Kord." This tire has an attractive white face and black sides, and is made with two plys of really large cords lying diagonally and transversely. As in all the Kokomo tire products extreme care has been taken to obtain a high grade of rubber.

The "Kokomo Kord" tire will contribute materially to the easy riding qualities of any bicycle, say the makers, and will demonstrate its claim to a place beside the company's "Everlaster" tire as regards length of life. It is not claimed that the new tire will outwear the "Everlaster," but that it will wear every bit as long and provide easier travel because of its special construction. The treads in the "Kokomo Kord" are really cords, making the tire almost immune to stone bruises and naturally harder to puncture.

When the Kokomo company introduced its "Everlaster" bicycle tire a few years ago it was backed up by the firm's declaration that it "would deliver the goods." It became popular at once, and has since held its place among the best sellers. The new "Kokomo Kord" comes into the market with the same backing.

The new Kokomo tire has been subjected to tests extending over a long period by the company's experts, who have been studying bicycle requirements for twenty years. The "Kokomo Kord" sells at $10 a pair.

## A.B.C. GENERATOR FEATURES COMPACTNESS

IN order to meet the demand for a compact electric lighting system, that combined power with small weight, the A. B. C. Generator Company, of 1115 South Olive street, Los Angeles, Cal., has brought out the A. B. C. generator or dynamo which is adaptable to any motorcycle. The machine can be had as part of an equipment consisting of head and tail lamps with brackets, pulleys for the drive and belt and wiring, or it can be purchased separately, ready to put on the motorcycle.

The A. B. C. generator is a self-excited dynamo with two field-coils. There are no permanent magnets in its construction. The armature has the commutator fitted circumferentially along the center line. The armature shaft is carried on ball-bearings. Substantial end-covers incorporating bearing seats are provided. The generator is designed to be belt-driven from the power-plant of the motorcycle.

The dynamo known as Model B is in general constructed after standard engineering practice. There is a magnetic characteristic in the machine, which the makers state is original in the design. The magnetic field is diminished as the speed increases, thus reducing heat and maintaining constant current output. The maximum capacity of the generator is 25 candlepower, at 6 volts.

Regulation is by declutching the drive from the armature at or above a given speed of rotation. A centrifugal governor of the ball-type is employed, these balls and their carriers being hinged to the armature shaft so that the increasing speed causes them to fly outward and compress a spring. This spring in turn releases the pressure on a second spring fitted to a miniature fabric-faced clutch between the driving pulley and the armature shaft. Thus the latter is disconnected until the speed of rotation of the pulley is reduced to enable the clutch to again engage. In order to dissipate heat set up in the clutch members, a copper disc with projecting outer edge is interleaved between the fabric discs, the edge acting as an effective radiating device.

The dynamo is iron-clad and practically indestructible and weather-proof. It can be mounted anywhere, as outside influence will not affect it. It forms a complete generator unit in itself, needing no accumulator or other additional devices to maintain the necessary current for the lamps.

In the complete A. B. C. lighting equipment, the components consist of the generator, a 7½-inch S. & M. head lamp, a tail lamp, mounting brackets, pulleys, belt and the necessary wiring. This outfit, with the lamp and generator body finished black or red lists at $32.50. The generator alone, with compensating or governor pulleys, can be had from the makers for $22.50. No batteries are used.

In addition to the Model B dynamo, another machine is put out. This, known as Model C, is the same as the other generator, but has a new cut-in device or switch controlled by the armature shaft. This switch automatically disconnects the charging current at the desired minimum revolutions per minute, as the generator is intended to be used with a battery. The speed of the armature is controlled by the governor as in the other model. The current is therefore maintained constant and uniform while the switch is in contact. The Model C generator, less lamps and battery, is listed at $27.50.

## BERLINGS USED ON RECORD WAR-PLANE FLIGHT

BUFFALO, N. Y.—A magneto which started in the motorcycle field is responsible for the greatest victory over gravity that has ever been recorded in America. When the Curtis warplane mounted to a height of 8,300 feet with four passengers aboard, it was fitted with an ignition system of which two Berling magnetos were the source of current.

Almost over the big Ericsson factory here on the outskirts of the city, where the Berling magnetos are made, the Curtis tractor biplane described a 15-mile circle. In a far-flung spiral, the military eagle flew over the house-tops of Buffalo and the Tonawandas. It was driven by Raymond V. Morris.

Two flights were made. In the first one, the former record of 5,187 feet was shattered. At the end of 27 minutes Pilot Morris and his passengers had risen 8,200 feet. The eight-cylinder engine worked perfectly. The two giant Berling magnetos—big brothers to the little fellows which have done so well in the motorcycle field—each delivered a spark into each cylinder at every explosion. The eight-cylinder Curtis motor developed 160 horsepower.

This new military bi-plane with which Pilot Morris made the record had a total weight of pretty nearly 700 pounds. As a result, the descent was made at the rate of 100 miles an hour in spots; at least it took one-fifth as long to come down as it did to go up.

The second flight was made with four passengers, totaling 800 pounds. When they had risen this time to 8,300 feet, the barograph stopped recording. They climbed up into the heaven for five minutes beyond that mark, which meant that they could have made another 4,000 feet at least.

These tests were practical, for the reason that military experts want proof that this heavy war-machine is capable of rising rapidly to a great height. Provision is made for carrying 1,500 pounds dead weight, to include gun and bombs.

The magneto is tremendously important, and to it much credit is given for the new record. Dependability is first and foremost. The Berling was chosen after a great many tests, and a thousand cases have proved that it can do the work. Its simplicity and rigidity are other features in its favor, for the aeroplane Berlings are made in the same unit frame as those used in the motorcycle and automobile fields. The housing is a one-piece casting of aluminum. This includes the base and sides, the top and the driving end.

When darting through the clouds there is danger to the engine in the extreme dampness of the atmosphere. If the inside of the magneto should get wet, there would be a chance that the engine might quit—but with the Berling that possibility is remote, because the exterior construction renders the magneto waterproof, as well as dust and oil-proof, and that is done with the fewest number of screws and no packing. That feature, plus the fact that the Berling has an interrupter of maximum rapidity, has made this so successful in use. The quick snappy action of the interrupter is the same at all speeds, and at highest speed the centrifugal force, instead of being a detriment, actually insures a positive action, just as the special construction of the field insures a fat spark at all positions of the timing lever, no matter how slowly the engine might be turning over.

### RECEIVER FOR EXCEL COMPANY

Akron, Ohio, Sept. 13.—The Excel Rubber Co., a manufacturer of tire accessories, with a plant on West Eighth street, has been placed in the hands of a receiver.

# A Record That Inspires Confidence

The record of the Corbin Screw Corporation after many years as manufacturers of numerous hardware and automatic screw machine products as well as bicycle and motorcycle brakes and automobile and motorcycle speedometers, has been one to win the support and confidence of the entire trade. Not only confidence in the products themselves, but also in the people behind the products and the service they give. To the jobber, dealer and consumer the name "Corbin" means one thing—**absolute reliability.**

## *Worked Its Way To Popularity, the*

CORBIN

## DUPLEX COASTER BRAKE

There is no question as to the supremacy of the Corbin Duplex in the bicycling field. The demand of bicyclists in all parts of the country is sufficient to prove this contention. Beyond a doubt it is the most popular bicycle coaster brake made.

Its popularity has been won through hard, steady service. Riders everywhere have found it powerful of grip, smooth and convenient in action, strong, durable and above all, reliable.

The Corbin Duplex has an established place in the bicyclist's preference. Dealers and jobbers have found this true. From year to year the demand grows greater.

When stocking for 1916 include the Corbin Duplex. Write now for catalog, discounts and price list.

## *The Preference of Motorcyclists for the*

CORBIN-BROWN

## SPEEDOMETER

*"The Speedometer of Absolute Accuracy"*

is evidenced by the fact that yearly it registers more miles for them than all other motorcycle speedometers combined. The Corbin-Brown needs no introduction to motorcyclists. It has made its reputation. They know that for accuracy, convenience, and durability it has no equal. They know its principle is sound, its construction perfect. And they know further that behind the Corbin-Brown stands the name Corbin as a guarantee of quality and service.

These are a few of the reasons for the Corbin-Brown's popularity. This popularity is still growing and will continue to grow. No other speedometer enjoys such a steady demand. Include it in your 1916 stock.

Write now for catalog, discounts and price list.

Will exhibit a complete line of Corbin Products—space, 118 Coliseum Show.

### PARDON WILL STAGE RACES

Owensboro, Ky., September 14.—Henry F. Pardon, the local Indian dealer, is working overtime to arouse enthusiasm in the races which will be staged in connection with the Elks Davies County Fair during the five days beginning with September 21. The races are all for single cylinder machines, as the track is only a half-mile circuit. The races will be run on the second, fourth and fifth days of the fair. The distances will be at five, ten and twenty-five miles. A purse of about one hundred dollars will be split among the winners of each event.

### KLINE BROS. HOLD PICNIC

Louisville, Ky., September 14.—The attendance at the annual picnic which was given on August 29 by Kline Bros., the local Harley-Davidson agents, was held down considerably by the threatening weather. About forty motorcyclists, however, were present and enjoyed the baseball game as well as the big supply of refreshments which the hosts had generously provided.

### 1916 PROMISES LIVELY SALES

"Owing to unsettled business conditions we did not expect heavy sales this summer, but it is safe to say that the outlook now is better than it has been in two years," said Manager E. Lebell, of the Pacific Motor Supply Co., Thor distributors in Los Angeles, Cal., recently. Lebell expects 1916 to be a good deal of a lightweight year.

### CHARGES FLAT RATE

Witchita, Kan., September 14.—Walter Cunningham, the local Harley-Davidson dealer, had started a package delivery service and reports that merchants have taken quickly to the modern method of making deliveries. He usually charges a flat rate to each merchant for his service.

### GIRTON FAVORS LIGHTWEIGHT

Tom Girton, of Girton-Hoffer, Excelsior distributors, Los Angeles, Cal., is of the opinion that an entirely new sales field will be opened when manufacturers begin systematically to supply lightweight models. "A lot of professional men, thousands of 'em, will never be brought into the motorcycle ranks," says Girton, "until we give them lighter and less expensive machines. A motor rating at 2¼ to 3 h. p. would be about right."

### DEALERS' OUTING IN LOS ANGELES

The Motorcycle Dealers' Association of Los Angeles, Cal., has completed plans for the picnic to be held September 19 at Newhall, 45 miles from Los Angeles. About 700 riders are expected. All kinds of games and plenty of refreshments, but no races.

### BICYCLE DEMAND STRONG IN OHIO

Columbus, Ohio, September 15.—Demand for bicycles is becoming stronger in Columbus and central Ohio. This is the gist of reports received from all dealers in bicycles and supplies in the Buckeye Capital. The business depression has caused quite a revival in riding as many laboring men have taken to bicycling rather than paying car fare.

### CLEM TO CONTINUE BUSINESS

Uplands, Cal.—G. H. Clem has succeeded the firm of Clem & Gentry, local Indian and Harley-Davidson agents. Clem has just placed a Harley-Davidson for grocery delivery work, and is carrying the Appeal, Columbia and Racycle bicycles.

### HAS POPE AND INDIAN AGENCIES

San Francisco, Cal.—A. Chelini, who carried the message over the final section of the relay, is a Pope dealer as well as having a sub-agency for the Indian at 1010 Golden Gate avenue, this city, under the name of the San Francisco Motorcycle Company. He has been racing since 1908, using Thor and Pope mounts.

### NEW GARAGE IN WHITTIER

C. H. Danforth has opened a garage and salesroom at 144 S. Greenleaf avenue, Whittier, Cal. He will handle the Harley-Davidson line, the Smith Motor Wheel and Pierce bicycles. He is selling the latter on the installment plan, $10 down and $2 to $4 a month, with an extra charge of fifty cents a month until the wheel is paid for.

### AFTER PARCEL POST TRADE

Louisville, Ky., September 14.—Roy E. Warner, Louisville representative for the Firestone Tire & Rubber Co., is advertising for parcel post business on casings and tubes. Repaired tubes are returned on the same day that they are received and all casings are shipped back within forty-eight hours. Mr. Warner guarantees all his repairs.

### MUELLER IN NEW OFFICE

Milwaukee, Wis., September 13.—A. G. "Goodie" Mueller, retired manager of the Mueller Cycle Co., has established an office with the Fulton Mfg. Co., 726 National avenue, where he is looking after business in connection with the old Mueller Cycle Co.

### RISDEN'S NOVEL SUGGESTION

"I believe it would be a good plan to have a motorcycle cost a dollar a pound," said C. Will Risden, Indian distributor in Los Angeles, Cal., in a recent interview. "If a model scales at 150 pounds it should sell for $150. It won't hurt us to sacrifice a little speed if we can get a lighter machine that will be dependable."

### RICHARDSON CYCLERY SOLD

Riverside, Cal.—A. P. Hanson and B. F. Nelligan have purchased the stock of the Richardson Cyclery and have opened a salesroom, under the firm name of Hanson & Nelligan, at 575 W. Eighth street. They have the agency for the Thor, and also carry the Appeal and Emblem bicycle lines.

### GONZALES WANTS NEW LOCATION

Azusa, Cal.—Pedro Gonzales, Indian dealer in Azusa, is looking for a suitable new location for his business. His lease has expired and he may move to a neighboring town unless he strikes a local proposition that pleases him.

### HANDLING MIAMI LIGHTWEIGHT

San Bernardino, Cal.—The E. S. Williams Cyclery has taken on the Miami Power Bicycle and will carry on a spirited campaign with it, in addition to handling the Rugby and Crescent bicycles.

### MONROVIA CO. IN NEW STORE

Monrovia, Cal.—The Monrovia Cycle and Motor Co., J. H. Terry, prop., has moved to 613 S. Myrtle avenue and now occupies more spacious quarters. The firm carries the Excelsior motorcycle line and the Dayton and National bicycles.

The Best Makers
Use This Magneto

# THE HARLEY-DAVIDSON

WILL AGAIN USE THE

# BOSCH MAGNETO

FOR 1916 SEASON

THE reason that the Harley-Davidson Co. has used Bosch Magnetos regularly for seven years is obvious—just a well-directed desire on the part of their engineers to produce a dependable product, a product that would give them a permanent and lofty position in the motorcycle world.

Ignition being vital—more important to the motorcycle than any other unit—the H-D engineers set aside expense and equipt with the best they could obtain. They selected the Bosch Magneto—of course.

BE SATISFIED

For that feeling of confidence
For that extra ounce of power
For that vim, vigor and snap

# CLIMBING STEEP GRADES TO ESTES PARK

## Through a Bit of Colorado's Charming Country

By JOSEPH ESLER

WHILE out at Greeley, Colo., as the guest of "Lucky Horne," the local Indian dealer, I was invited to take a trip to Estes Park, where some of the finest mountain scenery in the country abounds. We started on a sidecar outfit from Greeley late one Saturday afternoon and rode up and down hills, on toward Loveland, thirty miles away, past fields of fine alfalfa and young orchards. At one place the cherries looked so tempting that I asked "Lucky" to stop, but he was too busy watching the road.

We arrived at Loveland after a three-quarter of an hour ride and observed that we were nearing Estes Park. Leaving the city we were soon in the foot hills, climbing rugged cliffs of very fantastic shapes which stood out high against the horizon. Soon Lower Loveland canyon dam came into view and we prepared for a stiff climb. The dam was a pretty sight, but was soon forgotten when the outfit began to chug up the canyon proper. Towering cliffs, thousands of feet above the road and the rushing, winding Big Thompson River that leaped past below us combined to make an impressive scene.

The road leading up the canyon curved sharply and was just wide enough for a sidecar. It was an exhilarating ride and we often found ourselves getting too near the edge of the road for real comfort. We drew up at a hotel seventeen miles from Loveland. Here we fixed the two-speed with some baling wire to make sure that it would hold, for we still had the steepest part of the climb before us. While we were getting things into shape a half dozen "Stanley" steamers came into sight with a crowd of tourists aboard on their way upgrade. It seemed that the hotter the steamers got the better they worked.

Many mountain homes and trout streams were seen while roaring up the steep incline. Some of these homes had very picturesque names, such as, "Laf a Lot," "Rest a Bit," "Bide a Wee" and "More of It." Just a few miles above the Half Way House, "Lucky" Horne gave "her" all the reserve juice and with a bang we hit a thirty per cent. grade with all hands holding on for dear life. This very steep section is known as the "Rapids Hill" and it is about three quarters of a mile in length. There were numerous hairpin turns.

When we got to the automobilist we found that his car was loaded with blasting powder for a construction camp at the top of the divide. He told us that as he made his final spurt to clear "Rapids Hill" his clutch slipped and only by promptly using his brakes had he saved his dangerous load from slipping off the road and down into the river below. With the help of several people who were in cars behind ours, we gingerly unloaded the automobile and saw it slowly continue the ascent on low gear.

It was getting dark now and after roaring up some more we came in sight of the Stanley Hotel which is located on the plateau that constitutes Estes Park. We were surrounded by tall, snow-capped peaks on all sides, and standing on a soft green carpet of grass, Horne and I took deep and long breaths of invigorating ozone. Arriving at the hotel we sat down to a delicious trout dinner.

After dinner we left the machine at the local garage and inspected some of the skins which the proprietor of the hotel had on exhibition, as well as the interesting sights that abounded in the park. Early the next morning we started on the homeward journey and found that it was necessary to muster all our skill in taking the downward grades that led toward Loveland. Once that city was reached, the ride into Greeley, our starting point, was easy.

---

### GALVESTON DROME DESTROYED

The huge motordrome on the sea wall boulevard at Galveston, Texas, which has been the scene of a number of stirring speed events, was completely demolished by the hurricane which recently caused great damage in that city. The motordrome had not been used for several years.

# Cyclemotor

*"One horse power for every wheel"*

THE Cyclemotor makes possible the changing of all bicycles (new and old) into light-weight, easy to handle motor-cycles.

This motor, which is light in weight (21 pounds), high-powered, simple in design and economical in operation, can be applied to any diamond-frame bicycle.

Bicycle dealers will find that sales can be largely increased through the introduction of the Cyclemotor.

The one horse power single cylinder, air cooled motor with high tension magneto, large and efficient muffler, unique oiling system, and controlled by single lever from handle bar makes a simple and satisfactory substitute for the laborious bicycle pedaling. However, should the gasoline supply at any time become exhausted, it requires practically no more effort to pedal to the nearest supply station than if the motor were not attached.

For pleasure and business around the city and suburbs this feather-weight Cyclemotor attached to your bicycle has many advantages over the heavier, more cumbersome, and more expensive motorcycle.

# In Sand and Ruts With a 3-Speeder

## How a Veteran Put His New Mount Through Its Paces

By R. S. SPEARS

THAT a three-speed machine will go anywhere that the wheels will bite was demonstrated by the try-out a Little Falls, N. Y., rider gave his new Indian mount a few days ago. It might be said in passing that Little Falls is at the bottom of a large assortment of hills, and is the center of many different kinds of roads. Out of it radiate numerous types of motorcycle sportsmen also.

The warrior in question had ridden a two-speed mount for at least two seasons. He got his new three-speeder on the Saturday before Decoration Day, and did some pottering about the rest of the day and the following one. He had been coached by Charley Kelsey, who is sachem of the local tepee, as to the uses of the three-speeds: The high for good level roads, the intermediate for fair good road grades, while the low was for rough pasture lots, mud, sand and like traveling.

### The First Test

With these instructions in his ideadigestor, the rider set off in mid-afternoon determined to try out the various kinds of roads for which the various speeds were suitable. He rode out to Dolgeville and cut off just at the town limits to take a dirt road. This road led up and down for a ways and then hit a valley about 100 feet down. This gave the rider ample opportunity to use both brakes and all three speeds.

In the valley was a brook, and across the brook was a gradual rise over newly-worked road, mostly of hard, lumpy clay. This made the machine bound up and down and the saddle and springs were well tested. A mile or so distant there was a cut-across road—one of those grassy lanes with two wheel ruts and intervals of cobbles, juttings out of rock ledges and rounded boulders standing up five or six inches and surrounded by cobbles. This road had proved about the limit of the two speed of 33 gear. It had heated the two-speed's engine, and it had given the rider much anxiety because to get the power the two speed had to be driven at the fast rate of eight or nine miles an hour. The three-speed sauntered along up the grade, over the ledges, among the cobbles, and the top was reached before the rider realized it.

That test of a two-speed was no test for a three-speed at all. He hardly dropped his feet to the ground where previously the two-speed had had to rest overheated.

### Through the Sand

Beyond the cut-across road was a nice piece of sand. It wasn't necessary to go through the sand, but this was three-speed test day. The sand where the two-speed had turned blue with desperation was passed without a thought of trouble. A road which had stopped the two-speed because of sandy grades was followed.

The three-speed was ridden in the middle of the road, punched up by the hoofs of horses, and as it went all right it was tried in the rut, which it navigated nicely. Then—the hard test of riding and machine—it climbed up out of the rut into a side path beside the road, and in and out of the side path across dried mud and onto the State road between Salisbury and Middleville.

The State road on high gave speed enough with the spark and a hair on the gas. It cut out around a huge knoll, but the old road over the hill was run up and then run down again because there were a pair of bars at the top.

So far the test had been very unsatisfactory. The motor refused to grunt half as much as the rider over the roughest and steepest roads available. Coming down into Middleville there looms beyond the West Canada a great ridge. This ridge rises just a thousand feet up from Middleville in the valley. Motorcyclists and automobilists have long wondered about the scene from the top of that ridge. It can be reached by fairly moderate grades from the south and west sides, but the ascent from Middleville is a thousand feet in less than two miles.

### A Jouncy Surface

In the past days of one- and two-speeds few rubber tired gas vehicles have surmounted that stairway. The ascent is by sharp pitches with drain ridges across the road at frequent intervals. It is cut by the pound of horses' hoofs in wet weather and the nubs of stones—a road that is quite hard, dusty in places but "jouncy."

Once a two-speed machine had been started up this road. It was a brave, faithful machine. It turned blue, it puffed smoke, and it quivered and bumped, but the strain was so great that a wise rider would not abuse it by trying to go up mounted.

### Took It Easily

The three-speed sauntered up. Just to try it the machine was stopped on one of the steepest places—a place so steep that the machine ought to have had a sprag on it. Then the clutch was slipped in on low, and the gas was turned on little by little, but without racing the motor. The machine began to pull ahead and away it went with 220 pounds of delighted humanity in the saddle.

The road led into a gap, and just beyond there is a vacant house on one side and a barn on the other. Ahead the road led down into a valley and a hard-pan road. The three-speed was not even hot, but it was rewarded with a squirt gun full of oil, just the same. Past the barn, through a hay field and up a superior grade led a pair of wheel ruts. This was a "road." It was used for hauling cultivators, ploughs and such up to the very summit of the ridge.

### More Bumping

This road, also, had the advantage of being grass-grown, and the grass was tufted and bumpy, showing how it grew in invisible horses' hoof punchings. The three-speed was headed up this grade and it bumped and threshed up so violently that the muscles of the rider's forearms began to have sharp pains in them. The machine climbed half way up the grade, and the rider turned right out into the hay and rode cross-lots upward. Never had he traversed a steeper grade than that one.

There was a moist place on the side hill—a spring-bog. The bog was not quite so steep and the three-speed wallowed through. Then it took the steepest place of all, with a nice, slickery ooze under the grass. The wheel kept right on turning, cutting down into the mud, but the weight was too great to be pushed up with the purchase available.

"There, dad blast you, I found a place you couldn't climb!" the rider rejoiced, but he was doomed to disappointment.

### Climbed Right Along

However, back in the road the machine started on the steepest place, and it climbed right on up the hill into an oat field, and would have gone clear across the field out of the wagon ruts had it been steered that way. Apparently it would have crossed any hay field or potato patch, or market garden.

There was the view—all the southwestern Adirondack mountains. From that height it was pretty nearly all coasting down to the Mohawk valley into North Frankfort. Striking the State Road there it was a lithesome run down through North Ilion, Herkimer, and home to Little Falls.

### Forearms Were Sore

But the forearms, tender and soft after a winter off the motor-bike and unused to handlebar vibrations caused by hard baked roads that had recently dried, were sore along the underside from the elbow joints to the wrists. Every bump sent a thrill along the muscles. However, the three-speed didn't seem to mind bumps.

The day's run was fifty miles by the map. The machine, from Little Falls to Middleville, went over a divide 800 feet above the level of the starting place; it climbed more than 2,000 feet of hills, however, and up the roughest ones. Then on a rough dirt road a thousand feet was gained in about 9,000 feet of road—two stops, one to see if a three-speed could start on such a steep grade, and one in a grassy bog—and all in less than five hours—no speeding on State roads.

### It Fills the Bill

So, the three-speed motorcycle is what the rough-roaders around Little Falls have been looking for. Riders of three-speeds, finding ordinary roads too easy and too commonplace, go hunting for bad places. They are eating up all the spots that stuck the one- and two-speeds. They go into cow pastures and into the wood-trails and cross lots, seeking places to take their machines. They look back with astonishment to the days of one-lungers and running alongside to start the motors.

# A Plea for More Girl Motorcyclists

## Lack of Knowledge Causes Prejudice

By Miss Lillian Hauerwas

CAN a girl ride a motorcycle and still retain every characteristic that is expected of our best young womanhood? I certainly believe so, and my observations cover several years. There is no danger and no coarsening influence incidental to motorcycling unless the rider deliberately injects those elements into the sport. The girl who enters a basketball game, for example, is far more likely to be hurt, and to give way to impulses not exactly ladylike than is the girl who goes motorcycling. Still many careful parents encourage their daughters to play basketball.

Whatever prejudice exists against the use of the motorcycle by girls is due to lack of knowledge on the part of the objectors. I have found the motorcycle a safe, healthful and ever fascinating vehicle, and I feel certain that I can bring any biased parent around to my way of thinking in a ten-minute demonstration. As far as the girl rider is concerned, motorcycling is just what she makes it—and it is so easy to make it simply a pleasant, refreshing and economical pastime that I constantly wonder why more girls do not avail themselves of it.

## Joint F. A. M. Run From Dayton to N. Y. Show

Dayton, O., September 14.—An F. A. M. endurance run will be jointly promoted by the state organizations of Ohio and Pennsylvania, and will start out from this city on October 8 and wind up at the New York show on October 12. The riders will travel through six states, namely, Ohio, West Virginia, Pennsylvania, Maryland, New Jersey and New York.

F. A. M. Commissioner E. A. Robertson, who has charge of the Ohio end of the run, announces the following schedule for the four days: First day: Dayton, Columbus to Newark, noon control, Zanesville, Wheeling, night control. Second day: Wheeling, Uniontown to Keyser's Ridge, noon control, Hagerstown, night control. Third day: Hagerstown to Harrisburg, noon control, Philadelphia, night control. Fourth day: Philadelphia to Newark, noon control, New York City, checking station. An hour will be allowed in Newark for dinner and the same time will be permitted to check in at the New York Show in Madison Square Garden. A penalization of 500 points will be imposed for failure to sign the last checking sheet in time.

Several trophies will be offered. A silver cup has been donated by the Ohio F. A. M. for the manufacturers' team with the highest score; another cup has been given by the Pennsylvania boys for the club team with the highest score, which is open to all club teams of two riders. A third cup, offered by the Dayton M. C., will be given to the highest individual scorer. Each contestant will be given a prize. The course will be covered twice before the run, once to get the exact mileage and again to post signs.

### CHELINI FINE FUND

Contributions, amounting to three dollars, have been received at the office of **Motor-Cycle Illustrated** to start a "Chelini Fine Fund," to reimburse A. Chelini for the fifty dollar fine which was imposed upon him for speeding while he was carrying the President's message over the last leg of the transcontinental relay. The coast riders believe that Chelini should not be made to shoulder this loss, and for that reason have started the fund, contribution to which are limited to one dollar. C. H. Minto, assistant sales manager of the U. S. Tire Co. of California, heads the list of contributors, which includes the 'Frisco branches of the B. F. Goodrich Tire & Rubber Co., and the Hendee Mfg. Co.

### MOVING IN RIGHT DIRECTION

, Toronto, Ont.—An indication that the Provincial authorities intend to make the long-hoped-for arrangement for reciprocity in motor licenses between bordering States of the American Republic, and Ontario was found in the official order that permitted the operation of motorcycles by American riders within the Province during the first two weeks of September for the nominal fee of 50 cents.

## EXPORTING WITHOUT AID OF COMMISSION HOUSE

AMERICAN exporters who have attempted to ship their goods to Latin American markets without the assistance of a commission house or customs broker fully appreciate the difficulties involved in preparing the shipping documents. The customs regulations of Latin American countries are very detailed as to the information to be included in such documents, and a fine is provided for every possible deviation from the prescribed rules. The Bureau of Foreign and Domestic Commerce has been informed of numerous instances where fines were imposed for such slight irregularities as the failure to state the nationality of the vessel in the invoice, the use of ditto marks, or the failure to use the exact idiom in designating the goods included in the shipment. It is not surprising then that some American exporters who have had the unpleasant experience of refunding fines to their consignees occasionally become discouraged and conclude that it is practically impossible to do business in Latin America without the intervention of a commission house.

On the other hand, the commission houses and some of the more experienced customs brokers assert that they have had very little trouble in making shipments to Latin American countries, and, while conceding that the customs regulations are somewhat complicated, claim that fines and delays can be avoided if proper care is taken to comply with such regulations. However that may be, there is no doubt that even an experienced shipper is likely to become confused sometimes and mark his box with a brush when the regulations of the country of destination insist on the use of a stencil; or, in his anxiety to protect his interests, he may attempt to make a "to order" shipment to a country that either

# SKF BALL BEARINGS

## FOR MOTORCYCLES TOO—

## SKF BALL BEARINGS

SKF Ball Bearings have long been used on the leading cars in America and abroad. Their duty is to reduce friction at the vital power points. And they emphatically "deliver the goods."

For that smooth, silent drive of the engine shaft SKF ball bearings are eminently suited. Because the self-aligning feature *automatically* compensates for any shaft deflection, and the double row of Swedish Crucible Steel Balls give increased capacity.

Ball-bearings are one of the "big little" details that count heavily in motor construction. So much so that all HARLEY-DAVIDSON MOTORCYCLES will be equipped with SKF BALL BEARING for 1916. In so equipping their product, HARLEY-DAVIDSON engineers cast aside all price considerations and made quality their aim.

Ask for the SKF Booklet.

## SKF BALL BEARING CO.

## EXPORTING WITHOUT AID OF COMMISSION HOUSE

*(Continued from page 116)*

does not recognize or prohibits such shipments.

From the numerous complaints that have reached the Bureau of Foreign and Domestic Commerce, of the Department of Commerce, it was concluded that American exporters needed a sort of guide book to help them in preparing shipping documents for Latin American countries, and a publication, entitled "Consular Regulations of Foreign Countries (Canada and Latin America)," Tariff Series No. 24, has just been issued by that Bureau and may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., for 10 cents a copy. The 66-page pamphlet contains a complete description of the shipping documents required in all Latin American countries and Canada, gives fac similes of consular invoices used in such countries, and points out such peculiar features as may be overlooked by the average exporter. The material has been compiled with great care, the chapter for each country having been submitted for revision to the consular representative of the respective country in the United States. Some American banking institutions and commission houses have also been consulted, and it is believed that by using this publication the average exporter will be able to prepare his shipping documents in correct form and save his customer in Latin America from fines and delays in the delivery of his shipment.

### PASSAIC ENDURANCE RUN

The members of the Passaic (N. J.) M. C. held their third annual endurance run Sunday and judging from the result—two finishing out of seventeen starters—it was one that taxed the endurance of the best of riders.

The run was 150 miles long, over a three-lap course. The riders left Passaic shortly after 7 a. m. and went to Singac, Pequanick, Butler, Boonton, Pine Brook and back to Passaic. All went well until the riders started over the mountains from Butler to Boonton. There they struck 10 miles of dirt road full of bumps and in many places encountered sand a foot deep. This made the going heavy and when they arrived at Passaic from the start of the second lap, only four riders—Amos Kaune, Edward Baklaar, Archie Rhodes and Frank Kuhn—attempted it. This lap proved Rhodes' undoing, he having to retire with mechanical trouble. Kuhn was forced to withdraw 10 miles from home on the last lap with tire trouble. Kaune and Baklaar were the only ones to complete the circuit three times. Kaune finished with a score of 967, while Baklaar scored 952.

Kaune and Baklaar will each receive a handsome medal, besides a horn and saddle.

### N. Y. GASOLINE GOING UP

Gasoline is selling in New York City for 20 cents a gallon, an advance of 4 cents in four weeks, and garage proprietors predict a further increase. Some garage owners who had a supply of gasoline are still selling it at 17 and 18 cents.

The upward tendency of prices is due to the enormous increase in the demand for the automobile grades, both for domestic and foreign consumption. For the fiscal year ended June 30 the United States exported 240,018,306 gallons of naphthas and gasoline, which compares with 185,578,776 gallons in 1914 and 174,073,477 gallons in 1913. The exports in 1915 were valued at $27,102,501 against $26,568,682 in 1914 and $23,883,424 in 1913.

### FUND FOR GOODYEAR MEN

Employees of the Goodyear Tire & Rubber Co., Akron, O., have received the promised fund of $100,000 given personally by P. W. Litchfield, factory manager of the company. The money has been turned over to the Goodyear Service Pin Association, formed to administer it. It will be known as the Litchfield Fund, and the income from it is to be devoted to the benefit of the factory force. Litchfield recommended that the major portion of the money be invested in Goodyear securities. The officers of the Service Pin Association are as follows: President, William Stephens; vice-president, Ed Nall; secretary, George Miley; treasurer, H. D. Hoskin; chairman of executive board, C. E. Falor.

### FIRESTONE ADDITIONS UNDER WAY

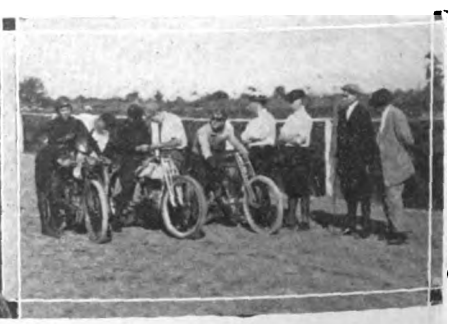
Akron, Ohio, Sept. 14.—The five additions to the Firestone factory, which will aggregate more than 300,000 feet of floor space, are at present well under way and will be completed before winter. These new additions will make possible the increase of the present output of 7,000 tires a day to 12,000 tires daily, which is about a sixty per cent. jump in tire production. Besides these extensive additions a commodious club house is being erected for Firestone employees, which will be completed some time next spring.

### RIDERS IN MIMIC WARFARE

Indianapolis, Ind.—Forty F. A. M. members took part in the military maneuvers at the Indianapolis Motor Speedway on Labor Day. The "War in Indiana," as it was called, was promoted by the business men of the city to help raise enough money to build an armory. Close to 2,000 people witnessed the exhibition. Two thousand seven hundred soldiers, Indiana militia, lodges, motorcyclists and drill teams took part in the mimic war.

A squad of motorcyclists, headed by State Commissioner Jack Carr, led the parade around the two-mile speedway at the start of the maneuvers. The riders were all in military dress, and with the machines all cleaned and polished for the occasion made a fine showing.

## BUCKNER RINGS THE BELL IN 25-MILE SPEEDFEST AT SAVANNAH



SAVANNAH, GA., September, 11.—Fifteen hundred people witnessed the first motorcycle track races on Labor Day when the three events programmed went to Indian, Thor and Harley-Davidson riders. The races were held to raise funds for the construction of a mile flat track.

Caffiero, Harley-Davidson, won the first event, at 10 miles, in neat fashion, his victory never being in doubt. There was a pretty contest for second position, which went to Buckner, Indian. He nosed out Schroder, who mounted a Thor.

**Buckner, Indian Rider, Who Won the Feature Race in Savannah Meet on Labor Day; a Line-Up of Those Who Figured in the Stellar Event**

Schroder came back in the next event with a victory. It was a 5-mile novelty race. Schroder picked up an extra five-dollar bill in this number by proving himself the most capable "hot-dog" eater. Cavey was second and Meyer third.

The big event of the day, the 25-mile race, went to Buckner, on an Indian. Caffiero was ahead until the tenth mile when a blow-out in his rear tire gave the lead to Schroder. Schroder showed the way until the 37th lap when Buckner forged ahead and kept his lead. Schroder was second and Cavey third.

## Here's A Tip To Dealers

Appearances count for much in making sales. On your 1916 machines you can add to their fine appearance and increase their qualities of comfort and convenience by using

LEONARD'S PRESTO-BRACKET

1. Betters appearance of your machine 100%.
2. Takes away danger of striking tank, if thrown.
3. No long tubes to break or clog.
4. Places your Presto Tank in front, where it belongs.
5. Betters light by its direct connection.
6. Permits gas adjustment while lighting.
7. Makes riding easier, because of added weight over front wheel.
8. Tank is removed easier and quicker.
9. Removes all interference with filling gasoline tank and operating machine.
10. Because of its reasonable cost.
11. Because it is the best Presto-Lite Bracket you can buy.

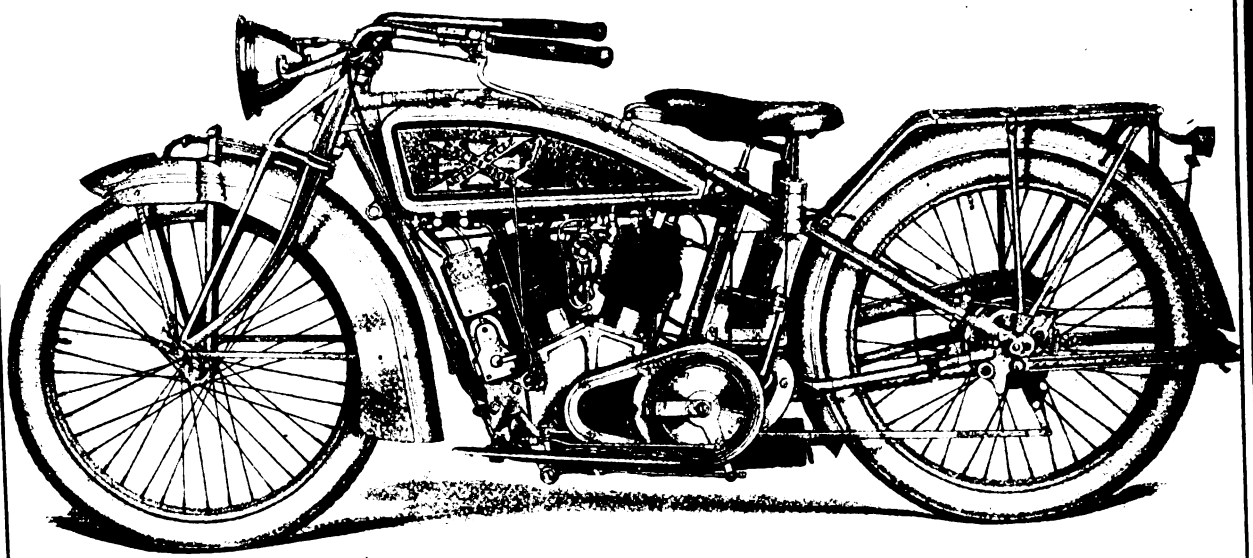
EXCELSIOR MOTOR MFG. & SUPPLY AUTOCYCLE
ALWAYS MAKES GOOD

EXCELSIOR MOTOR MFG. & SUPPLY AUTOCYCLE
ALWAYS MAKES GOOD

# MODEL 16-3 $250.00



## THE COLOSSUS OF THE MOTORCYCLE WORLD

The ULTRA POWER Motor and Transverse Drive Three Speed Transmission comprise the most Powerful and Reliable Power Plant ever put in a Motorcycle.

The EXCELSIOR Nickel Steel Frame meets all the requirements of this great power with an ample factor of safety that insures Maximum Efficiency of the mechanism and the safety of the rider.

The utmost degree of comfort is attained through the Perfectly Lubricated Cradle Spring Fork, Kumfort Kushion Saddle and long Folding Foot Boards.

Excelsior Autocycles now enter into their 9th year of unqualified success, during which time there has been an inflexible adherence to a fixed policy of Quality First.

Many of the standard features of today first appeared in the Excelsior, and maintaining the lead thus established, we have brought every detail to the ultra degree of mechanical perfection and efficiency.

Excelsior motors are the logical result of scientific development of a type that was right in the beginning and no radical changes in design have ever been necessary.

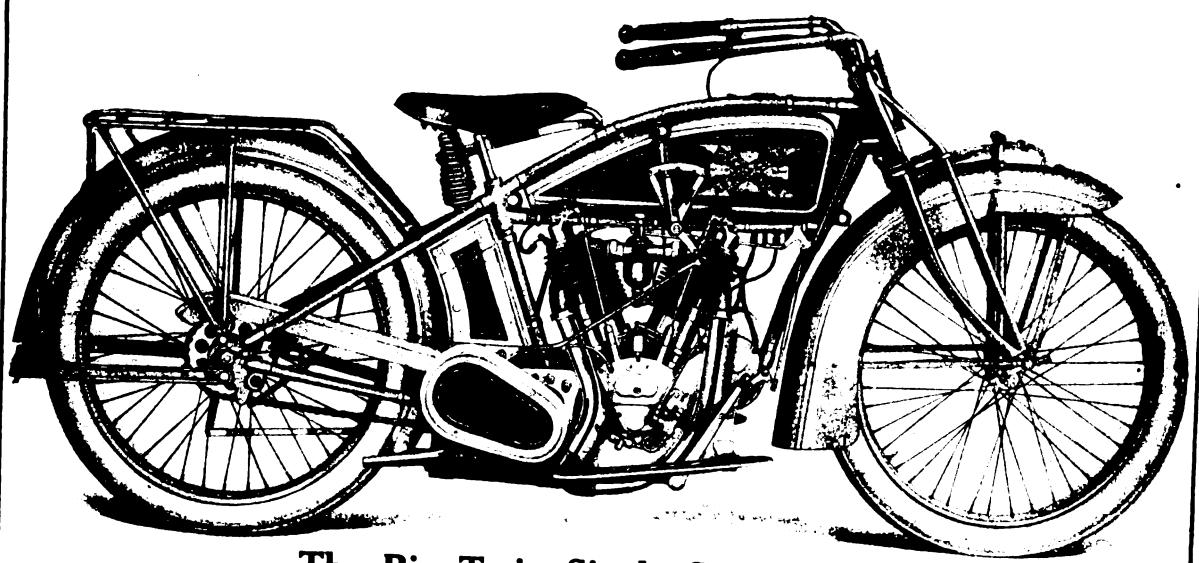
The dominant features of this motor are ultra power, reliability and durability with far more speed than is ever required or ever used in road work.

## WHEN A BETTER MOTORCYCLE IS BUILT IT WILL BE AN EXCELSIOR

Digitized by Google

EXCELSIOR MOTOR MFG. & SUPPLY CO. AUTO CYCLE — ALWAYS MAKES GOOD

# MODEL 16-1 $225.00



## The Big Twin Single Speed "X"

The latest refinements include Enclosed Silent Valve Mechanism; Positive Acting Automatic Oiling System with Forced Circulation and Mechanically-Controlled Distribution; Large Valves; Short Direct Delivery Manifold; Large Exhaust Pipes and a Thoroughly Efficient Muffler.

The Three Speed Gear is a Progressive Automobile Type in which every part, except the Aluminum Housing, is a Nickel Steel Drop Forging. Bearings are Extra Large Annular Ball and the load is equalized and frame strain reduced to the minimum by putting the motor and final drive chains at opposite sides.

The motor starter is the gear and segment type—Substantial, Unbreakable and Efficient.

Equipment and minor details are all in keeping with the superlative qualities of the entire construction.

## MODEL 16-1

This model is in every way identical with 16-3 except that instead of the three speed gear a secondary shaft with neutral clutch is provided, giving a single speed chain-drive with oppositely disposed drive chains.

An important feature of both models is the direct action and simplicity of controls and construction that minimizes the number of parts and insures accurate and efficient operations of all functions of the power plant and brakes.

## ELECTRIC LIGHTING EQUIPMENT

Both 16 models may be furnished with the MIDCO Electric Lighting and Ignition System, which we have selected after most rigid tests of every such system on the market.

This equipment comprises a Generator, Ignition System, Electric Head and Rear Lights and Electric Horn. Price, $30.00 additional on each model.

**The Ultra Power Motor and Direct Chain Drive Give the Maximum Combination of Power and Speed**

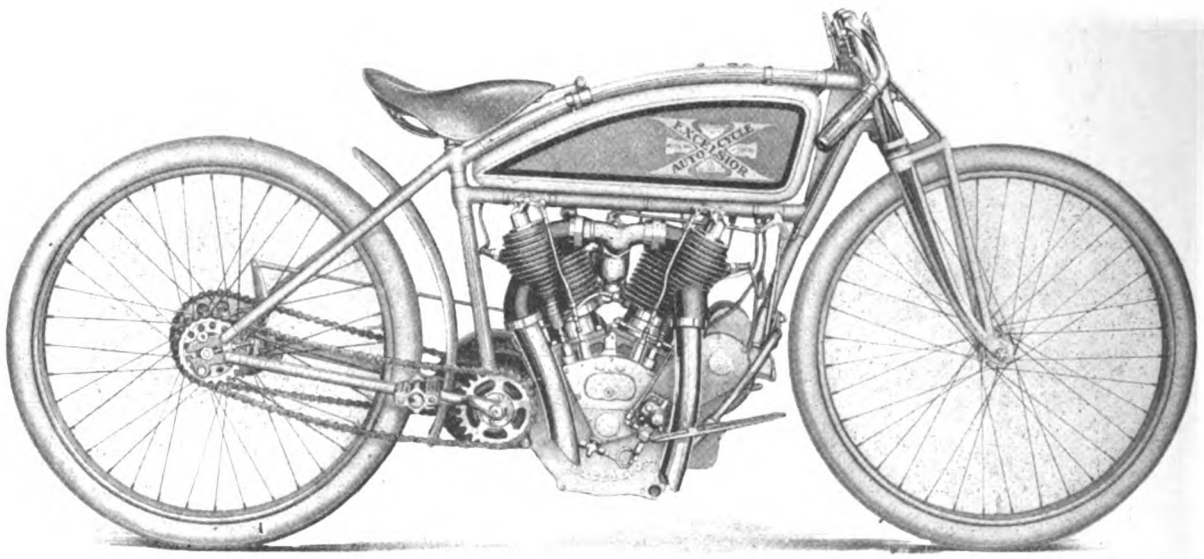
MODEL 16-S. C.
SHORT COUPLED STOCK $250.00



# THE FASTEST MOTORCYCLE EVER BUILT

**Winner of the**

## AMERICAN NATIONAL CHAMPIONSHIP

**and ALL WORLD'S RECORDS 160 MILES and OVER**
**100 MILE DIRT TRACK and OTHER WORLD'S RECORDS**

The Excelsior Ultra Speed Motor, is the Standard Ultra Power Big X Twin, specialized for high speed service, and comprises all the fundamental superiority of that motor together with quality, enlarged valves, over size and hand finished gas passages, lightened reciprocating parts and special balance and timing.

Every motor is most rigidly tested in speed, power, lubrication, and every feature that insures maximum speed, absolute reliability for any distance.

Magnetos, carburetor, etc., are specially constructed and regulated.

Equipment comprises Double Oiling System; Double Brakes; Detachable Folding Foot Boards for any distance races; Extra Large Racing Exhaust Pipes; Racing Saddle; Forks and Handle Bars.

Model 16-S. C. is the highly developed and perfected successor to the earlier X that still holds World's Records for most of the recognized distances up to 100 miles, and is the only motor that has ever attained a speed of 100 miles per hour under F. A. M. sanction and recognition.

**In Model 16-S.C. are embodied to the utmost degree, the Speed, Power and Staying Qualities that make a Winner**

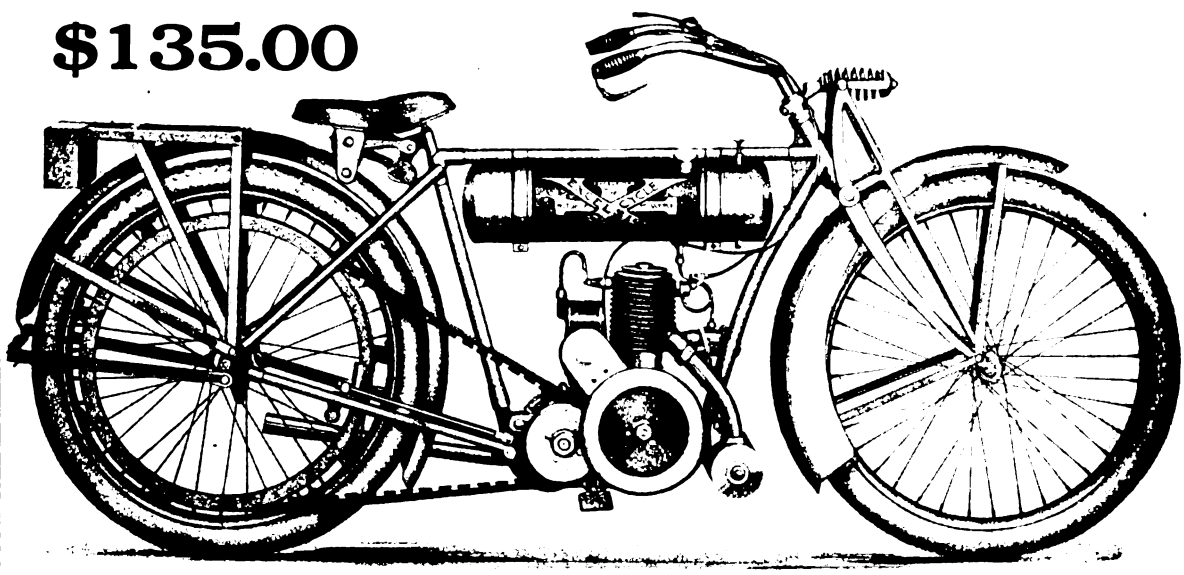
# CONCENTRATED QUALITY

## The EXCELSIOR LIGHT WEIGHT

## $135.00



A motorcycle for the masses. For the business and professional man, the office and factory worker, the man who has reached the age when dignity and personal comfort are of paramount consideration, the boy in the transient period between the bicycle and high speed motorcycle, for every one, regardless of size, age or other consideration, who desires a convenient, economical and efficient means of personal transportation, the

## EXCELSIOR LIGHT WEIGHT

stands preeminently the *real light weight* motorcycle.

The motor is the highest development in two stroke, three port construction with but three moving parts.

No gears, valves or complicated timing mechanism, automatic lubrication without pump or piping.

Speed control by throttle only.

Two speed gear with handlebar control.

Combination chain and belt drive.

Simple, Comfortable and Noiseless Spring Seat; Drop Forged Nickel Steel Spring Fork; Foot operated brake on belt rim.

## The Verdict of Experience

Experienced motorcycle riders know the real value of spark plug reliability.

They know that the violent explosions of motorcycle engines play havoc with any but the best plugs made.

They realize that motorcycling requires spark plugs that will stand this terrific punishment—plugs that are essentially reliable and durable.

**That's why they demand Champions.**

Champion Motorcycle Plugs were developed by actual service tests—speed tests—brake load tests—endurance tests. They were tried out exhaustively in motorcycle engines under every conceivable condition.

They are **right.** And we back them with the most positive guarantee it is possible to give: **perfect satisfaction—free repair, replacement or your money back.**

Insist upon having Champions. Do not accept inferior plugs. Look for the name Champion on the porcelain.

75% of all American made gasoline motors for every purpose are equipped at the factory with Champion Spark Plugs.

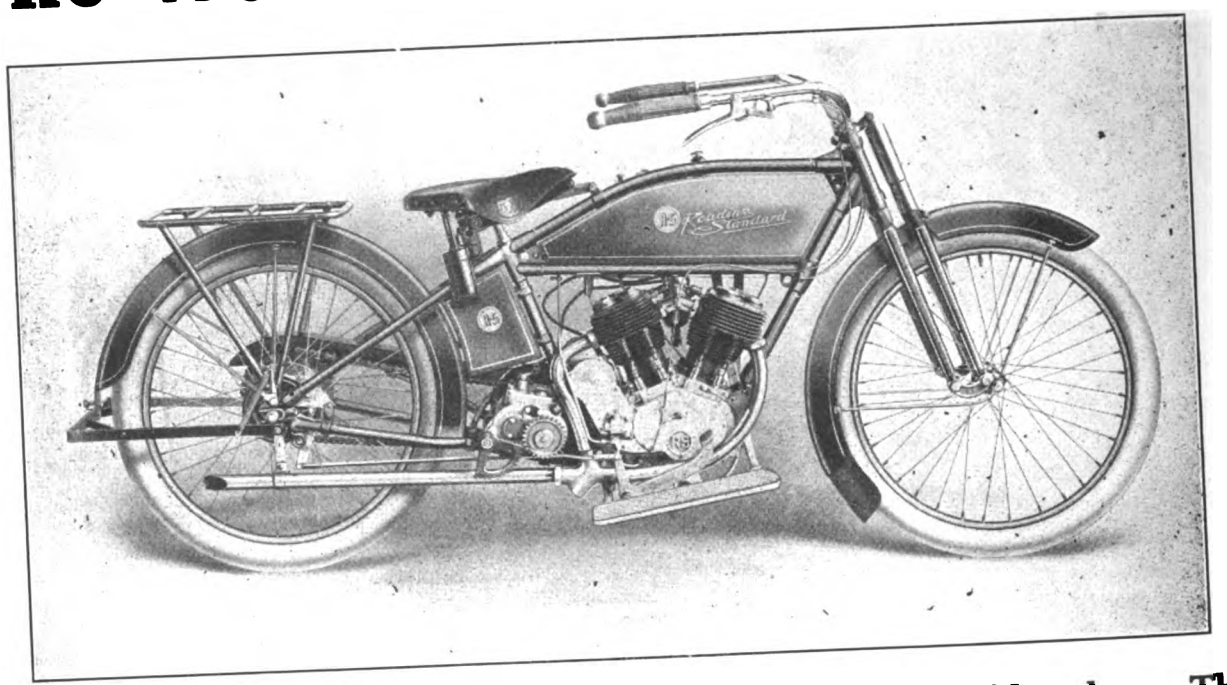
# The "World's Master Motorcycle"



Since 1907 the R-S motor has been made with side by side valves. This construction was adopted only after judicious experimenting warranted it. What better recommendation could be desired than to learn that still another very large manufacturer has adopted our design, acknowledging in bold statements its superiority over all others.

In addition to this wonderful and up-to-date power plant the 1916 R-S offers more than 60 improvements and refinements, the most important being as follows:

SERVICE

- Three Speed Transmission
- Double Locking Device
- Large Countershaft Clutch, foot and hand operated
- New Step Starter
- New Front Fork
- Very Strong Frame
- R-S "Perfection" Seat Post
- 30" Saddle Position
- Long, Comfortable Foot Boards

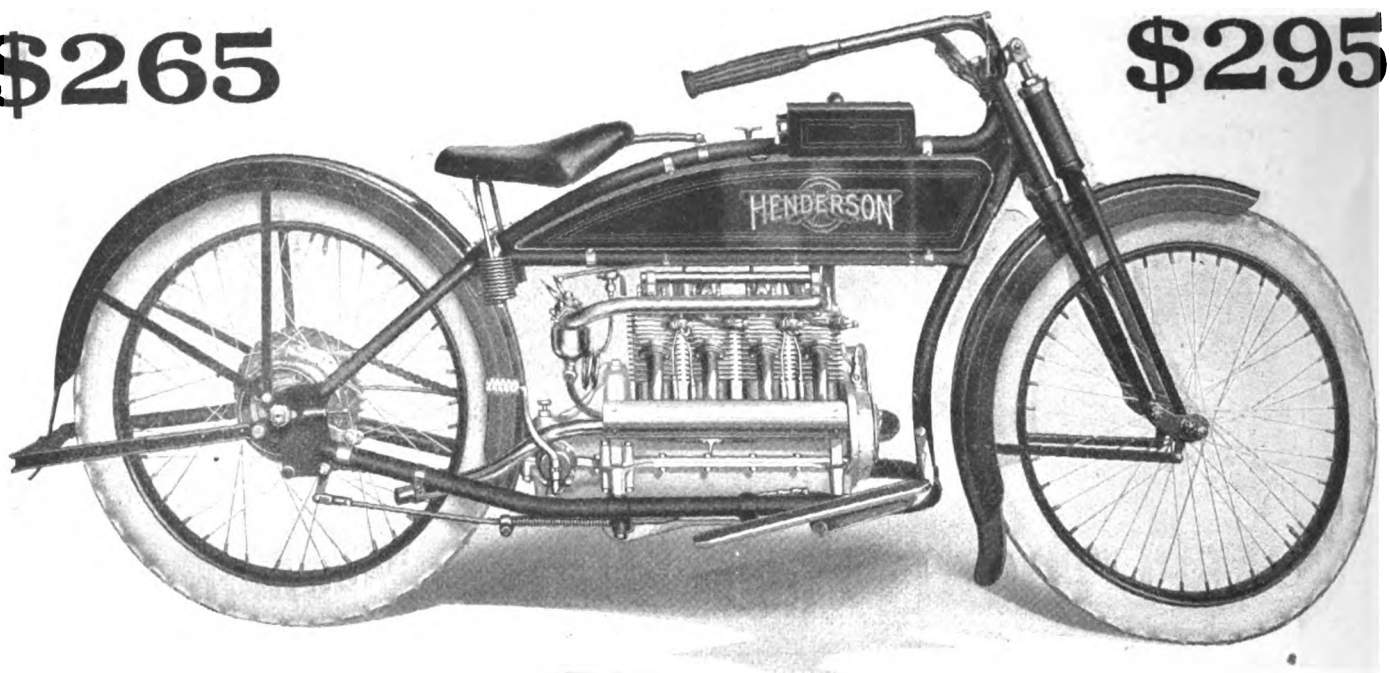
# 1916 HENDERSON

## SINGLE-SPEED $265

## TWO-SPEED $295



**Kick Starter** of distinctly new design, simple and positive. Eight husky steel dogs engaged when starting lever is in position for use, and down kick starts motor quickly and easily. Spring returns starter to top position and automatically folds it back out of engagement and out of the way when the foot is removed.

**Dual Clutch Control,** allowing clutch to be manipulated by hand or foot as preferred.

**Mechanical Oil Pump** of positive plunger type driven by worm gear. Sight feed on oil line showing flow of oil. Hand oil pump for high speed.

**Larger Valves**—both inlet and exhaust now 1¼" diameter—still greater efficiency, more ginger, wider flexibility.

**New Cylinder Design.** Spark plugs in side of valve pockets, placing sparking points in center of fresh, live gas to give quick and thorough combustion.

**Improved Fork Design** with angle of rocker arms altered to give still smoother and easier action, absorbing every shock and vibration perfectly.

**New Floating Saddle** giving extreme range of action and long radius of motion. Saddle built on motorcycle frame, eliminating all superfluous parts so as to add to pleasing appearance and satisfaction of service.

**Motor Refinements** giving even greater power and speed and liveliness.

# the Master Motorcycle That Makes Dealers Proud

THE prestige that comes from association with the acknowledged leaders in any line of industry, rests with the Henderson dealer. He is proud of the machine he sells, proud of its unquestioned leadership, proud of its dominant ability.

For he has learned that every claim of four-cylinder superiority, of excellence, and of service is more than fulfilled by the machine in actual performance.

That's one reason why the 1916 Henderson is so easy to sell.

# Smashing all Sales Records

An unprecedented increase in motorcycle tire sales for the past year.

A flood of orders for these distinctively different tires is sweeping the country like a forest fire.

Riders want the CHAIN TREAD. It pleases them by its looks—it amazes by its performances. It gives more and better mileage—*skidless* mileage—*wasteless* mileage. It resists punctures more effectively than any other pneumatic tire. The solid, heavy chains molded on the powerful, modern tread *bite* into the skiddiest going and give the same steering security that spikes offer the foot-runner.

These are some of the CHAIN TREAD facts that account for the record-smashing sales of CHAIN TREAD TIRES.

*Riders—go to your local dealer and ask him to show you the CHAIN TREAD. He'll SELL you the CHAIN TREAD*

# Lucky Numbers For The Cycle Man

## 147 - 148 ═══ 125 - 126

These numbers represent spaces reserved for the Smith Motor Wheel at the Chicago Show, Sept. 20-25. There you will be able to see in action the biggest seller cycledom has ever known. A year ago the cycle man was just beginning to hear about the

## Smith Motor Wheel

*(Detachable)*

*"The Bicycle Booster"*

Today there are close to five hundred thousand dollars' worth of Motor Wheels in use—and dealers tell us that three out of four Motor Wheel buyers buy bicycles, too, and this is only the beginning.

**What the Dealers are Doing**

*Arizona-Sonora Motor Sales Co., Douglas, Arizona, bought a Smith Motor Wheel from an El Paso dealer August 29 to demonstrate in Douglas—wired us immediately for 4 Motor Wheels, next day ordered two more by letter.*

*F. H. Thompson, Manila, P. I., has sold 61 Smith Motor Wheels and has orders for more, awaiting two shipments of 10 machines each, due the first part of August —August 18 he ordered 25 more.*

The market is practically unlimited and the Smith Motor Wheel comes nearest to being an all-year-around seller in the cycle field.

See the Motor Wheel at the Show, talk to hundreds of dealers who are handling it and you will quickly decide that it's high time you began to participate in cycledom's biggest success.

# Blue Streaks Av
## In 7 Grueling Tests—Average

Blue Streak Racing Tires have won and held all great speed records. But Blue Streaks are built for road riding, too—they're built to withstand the worst attacks that a tire encounters in single or tandem riding. Hundreds of records prove that.

Note the results of seven recent tests of Blue Streak Tires in actual service over all kinds of roads. On front wheels they averaged 9515 miles—on rear wheels 7329 miles.

Such mileage as that would be surprising in any other motorcycle tire but Blue Streak. But this is almost an automobile tire, built of four plies of extra strong fabric, a special breaker strip and the famous All-Weather tread—tough and double-thick.

As made last year, Goodyear Motorcycle Tires excelled all rivals for speed and endurance.

As made this year—$50,000 better—these motorcycle tires far out-distance many automobile tires.

Yet our prices are 15 per cent lower than a year ago—due to the growing demand for Blue Streaks that gives us a quantity production.

Goodyear tires rule in motorcycling about 3 to 1, and the Blue Streak is our masterpiece. Men can't resist its matchless beauty and riding luxury.

Go to the Goodyear Service Station in your neighborhood where these tires are on display and you will get full Goodyear service. Then join the class procession that now rides Blue Streak Tires.

## To Dealers— A Special Offer To Guarantee Sales

Approximately 7800 dealers now have Goodyear Blue Streak Motorcycle Tires in stock.

The Goodyear Dealers' Division is helping hundreds of these men to expand their business. That's a part of the Goodyear selling service, to which you're entitled if you handle these top-class tires.

Our latest plan is a special letter service. And we *guarantee* that it will bring you business.

In a single month Goodyear dealers in various lines used 115,155 of these guaranteed letters. We write them to treat with each branch of your business. And so you can talk to customers or prospects for miles around cheaply, quickly and easily.

Scores of men are having remarkable results by their use.

One man who sent out 1300 letters received 400 answers from prospects. And those letters brought him a splendid volume of immediate orders.

In these and other ways we're helping Goodyear dealers to make things hum the year 'round.

And so we say, based on other men's experience, you're losing money every day you delay in writing for our tested selling plans.

You should have them if you're handling Goodyear Tires—

If you're not—you need *both* these winning tires and Goodyear money-making methods.

Write us today for full particulars. You incur no obligation whatever. Address Dept. 301

### More Laurels Won by Blue Streaks

#### Indianapolis, Ind.

10-mile open professional. Stokes, 1st; Kennie, 2nd; Montgomery, 3rd. Time 8:36 2-5.
Pursuit race. Stokes, 1st; Kennie, 2nd.
1-mile time trial. Kennie, 51 flat; Perry 51 1-5.
50-mile race. Suddeth, 1st; Stokes 2nd. Time 45:37.
All above winners rode Blue Streak Motorcycle Tires without a bit of tire trouble.

#### Columbus, Ohio

200-mile professional sweepstake relays. Perry and Goudy won. Time 2 hours, 58 minutes. Both winners rode Blue Streak tires and the tread was scarcely worn at the finish.

#### Streator, Ill.

Clean sweep for Goodyear Motorcycle Tires in races here.
3-mile stock motorcycle race. Nielson, 1st; Goudy, 2nd; Carter, 3rd. Time, 3:45.
3-mile open. Goudy, 1st; Crevistson, 2nd; Amos, 3rd. Time 3:30.
5-mile stock motorcycle race. Goudy, 1st; Nielson, 2nd; Korn, 3rd. Time, 6:14.
10-mile open. Goudy, 1st; Amos, 2nd; Crevistson, 3rd. Time 11:43.
15-mile open. Goudy 1st; Taylor, 2nd; Korn 3rd. Time 17:33.
All machines were equipped with Blue Streaks.

#### Baltimore, Md.

2-mile amateur. Won by Cox.
5-mile professional. Craddock, 1st; Desrau, 2nd; Gebhardt, 3rd. Time 6:05.
2-mile professional. Denham, 1st; Mears, 2nd; Gebhardt, 3rd. Time 2:32.
10-mile professional. Constant, 1st; Craddock, 2nd; Desrau, 3rd. Time 12:12 1-5.
2-mile amateur side car. Heiz, 1st; Mears, 2nd. Time 7:38 2-5.
25-mile professional. Constant, 1st; Desrau, 2nd; Craddock, 3rd. Time 30:44.
All above winners used Blue Streak Tires.

#### Mineola, Kan.

Goodyear Blue Streaks took all prizes in 20-mile stock road race.

#### Utica, N. Y.

5-mile, Chas. Walker won. 10-mile, Nixon won, time 13:10 2-5. 15-mile, Nixon won; Martin second; Burrett third. Time, 20 minutes.
All above winners rode Blue Streaks.

#### Hold World's Records

And remember, Blue Streak Tires won the world's motorcycle classic September 12th on Chicago's famous Speedway.
They averaged 90 miles an hour for the first 100 miles—speed unknown before. They established new records also for 100, 200 and 300 miles in this great motorcycle meet. Every one of the twenty-five racers staked his safety and success on Blue Streaks.

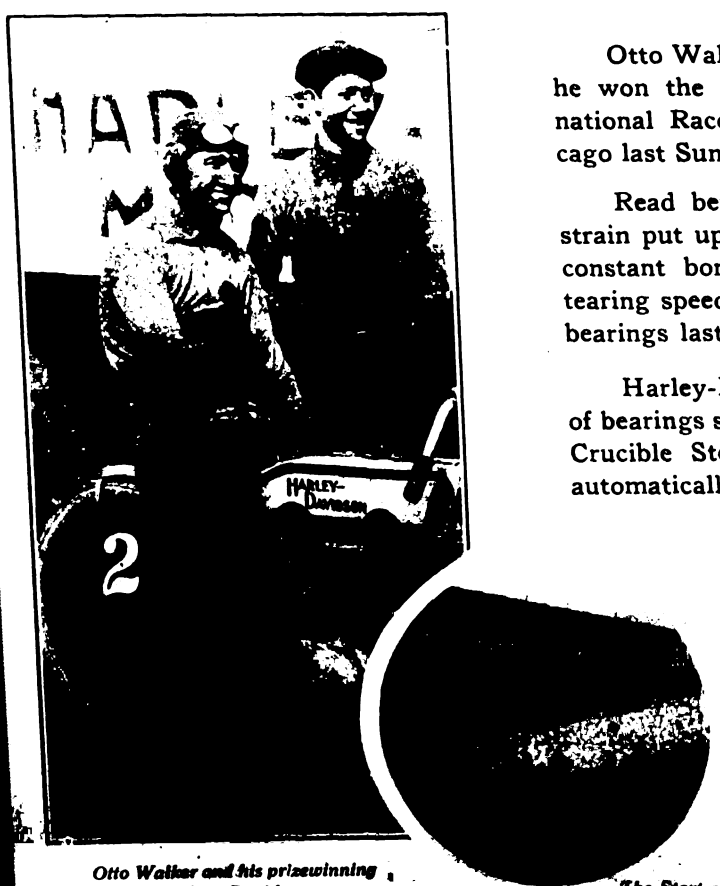
# SKF BALL BEARINGS

*A Sharp Brush At a Curve*

## Speed!

## 89 11/100 Miles Per Hour!



*Otto Walker and his prizewinning Harley-Davidson*

*The Start at Chicago*

Otto Walker, on the same Harley-Davidson with which he won the great three hundred-mile Dodge City International Race, made a new record for 100 miles at Chicago last Sunday. His time was 67 minutes and 21 seconds.

Read between these lines. Think of the tremendous strain put upon the bearings at such a terrific speed! The constant bombardment of explosions on the piston, the tearing speed of the engine shaft—how long would inferior bearings last under such a strain?

Harley-Davidson engineers realized the absolute need of bearings such as S K F Ball Bearings, with their Swedish Crucible Steel Balls and their self-aligning feature that automatically permits shaft deflection.

Every Harley-Davidson victory is a signal triumph for the Efficiency and Dependability of S K F Ball Bearings.

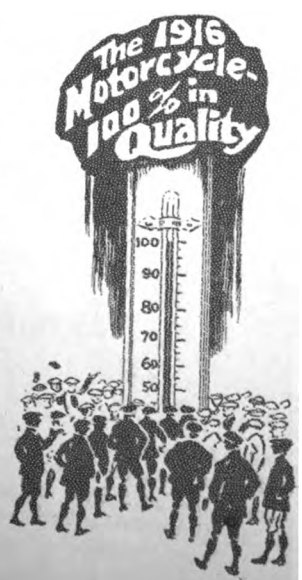
## A 100 PER CENT. QUALITY SHOW

NO visitor to the Chicago Show, whether manufacturer, jobber, dealer, rider or prospect, could have failed to be impressed with the completeness and surpassing excellence of the numerous lines of motorcycles and bicycles on display. This year's Show is in every sense of the world a wonderful one, for the manufacturers are offering the most remarkable variety of well-nigh perfect machines the American public has ever had an opportunity to buy.

Beautiful in appearance, magnificent in construction and luxurious in equipment, the 1916 models ought to have, and will have, a big sale. The makers of these machines are furnishing their dealers with all they could possibly ask for, at prices thought out of the question some eighteen months ago; for goods so closely approaching mechanical perfection and consequently so nearly fool-proof that the market is certain to experience a most appreciable widening and general enlargement during the next twelvemonth.

The modern motorcycle can be applied to as many uses as any manufactured article of which we have knowledge. The small, but powerful motor has demonstrated its ability to withstand atrocious abuse without faltering, and many an automobile manufacturer would be constrained to admit, upon investigation, that his methods of manufacture and quality of workmanship and materials would make a rather poor showing in comparison with those adopted by even some of the smaller makers of motorcycles. The results produced by the latter are consequently a credit to the industry, which has as yet only scratched the market's surface, and which is bound to come into its own some day, possibly sooner than most of us expect.



We have great faith in the motorcycle, simply because of the fact that it constitutes the most flexible and most convenient form of economical and rapid transportation known to the world. In addition, it appeals to the true sportsman, and the time is at hand when this appeal will include the more conservative outdoor-loving individual. The lightweight machine will undoubtedly bring him into the sport.

The very ease and luxury which are now synonymous with automobilism are producing a certain reaction among men who desire a somewhat more active and energizing form of outdoor recreation. These men, who have passed up the motorcycle of previous years, will be attracted to the sport by some of the new models, the middle and heavyweights as well as the light machines. They are going to find that the 1916 motorcycles offer them greater inducements by far than any other class of vehicles, and that their every requirement can be met.

For 1916 motorcycles can be ridden with enjoyment by everybody; and, when you come to think of it, isn't that the answer? Any sport that can be thoroughly enjoyed will be participated in by sufficient numbers to make the business dependent upon that sport a good one. As an exhibit of completely enjoyable motorcycles, we believe that the Chicago Show marks a new era in trade and sport.

# UNHERALDED EMBLEM AND MERKEL TWINS ARE CHIEF SURPRISES FOR VISITORS TO MOTORCYCLE SECTION OF THE CHICAGO SHOW

## Former is Lightweight and Sells for $150; New Merkel Model for Speed Work Sells at $250; Smith Motor Wheel Changes; Indian Twin Refinement; Spring Fork on Schickel Lightweight; Another Pope Bicycle

COLISEUM, Chicago, September 20.—The chap who expected to find in the 1916 announcements of the various motorcycle companies all the new things which were to awe the visitors to the Chicago show, and who stayed away from the present show in the Coliseum for that reason, was certainly fooled. For while the pros and cons of the 1916 motorcycle offerings were discussed full and plenty in the preshow literature, there were several items of real import that escaped publicity of this sort and which were reserved as a surprise for the show visitors.

Without a doubt the most important of these, if, in fact, it is not the most interesting announcement that has come from a motorcycle manufacturer this year, is the new lightweight twin which is offered by the Emblem Manufacturing Co. Equally as important as the bare fact that the Emblem has a light twin is that it is priced at the exceptionally low figure of $150. A twin at this price has heretofore been unheard of. But regardless of reduced weight and unheard of price, no detail common to the higher priced twins, with the possible exception of the multiple gears, has been overlooked in the production of the latest addition to the Emblem line. It is fitted, for instance, with a high-tension magneto, chain-drive, foot boards, kick-starter, spring fork and free-engine clutch. It exemplifies the best practice in every detail. Even the two-speed gear is not denied the rider of this little twin, for an Eclipse gearset can be had at an additional rate of $25.

The motor follows closely the Emblem practice on the larger models. The bore and stroke are 2⅝ by 3 inches, respectively, giving a motor of the long-stroke type which is rated at 7 horsepower. Mechanical inlet valves are fitted over the exhaust valves, the valve mechanism being to all intents and purposes the same as that used on the larger motors. Lubrication is by sight drip feed, supplemented by a hand pump.

### Low Saddle Assured

The frame is of the loop type, sufficiently heavy for real hard service yet light enough to bring the little twin legitimately into the lightweight class. The top tube of the frame makes a decided drop to provide a low saddle position. The spring fork is quite as innovative as the machine itself, the forksides being made of flexible steel. An Eclipse plate clutch is positioned on the countershaft and actuated by handlebar control. The regulation Emblem kick-starter is fitted directly to the clutch. The transmission is by means of roller chain.

The wheels are 26 inches and the wheelbase is 52 inches. Ample mud-guards are fitted, the front guard being fitted with side flanges fully covering the tires. A full set of tools is included, and the model is finished in blue.

### NEW MERKEL TWIN ARRIVES

The Emblem, however, was not the only unheralded twin to make its appearance when the doors swung wide on the fourth National Motorcycle, Bicycle and Accessory Show. There is also a new Merkel twin which failed to appear in the regular announcement of the Miami Company. While the twin is shown at Chicago, it is not presented in its final form. For instance, while the motor itself is final, the frame in which it is fitted for the Chicago exhibit is by no means so. It is understood that the model is intended primarily for speed work, and that a close-coupled frame will be provided.

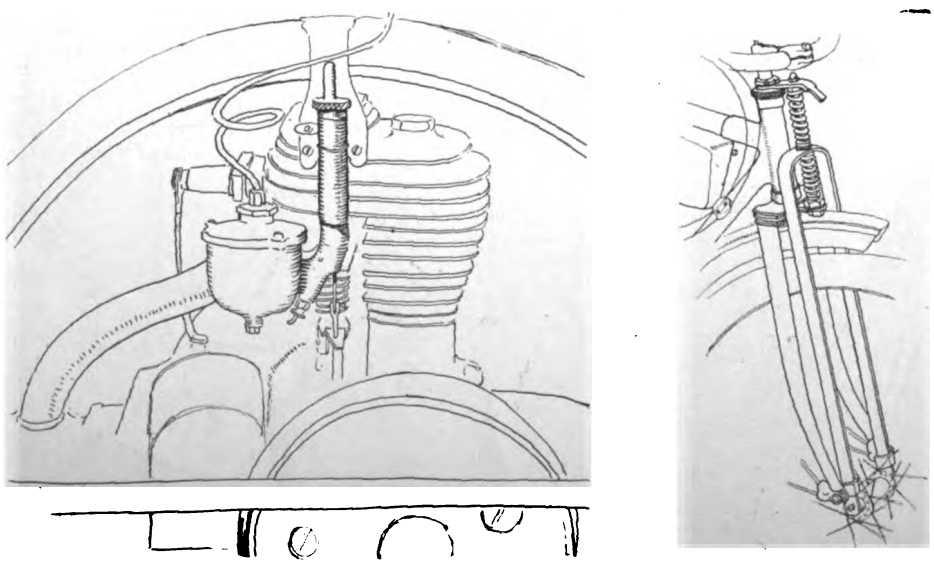
Aside from the fact that the new Merkel motor used in this twin is provided with overhead valves, with high cams for speed work and with cylinders with separable heads, there is not a great deal of difference from the regulation Merkel motor. The bore and stroke are identical with those used on the regular Merkel twin motor, although the power, and consequently the speed, have been increased considerably as a result of the changes in the valve mechanism design. The new Merkel twin is priced at $250.

### SMITH MOTOR WHEEL CHANGES

The casual observer, perhaps, would never notice that a change has been effected in the Smith Motor Wheel. Yet for all the fact that they are not very obvious, several more or less important alterations have been wrought in the "bicycle booster."

Without a doubt the most important is the fitment of a mechanical oiler, of the cam-actuated plunger type, which is housed directly in the crankcase of the motor. The cam is worm-driven off the valve camshaft and the pump forces oil into a tray, or though, into which the big end of the connecting rod dips at each revolution of the crankshaft. The level in the tray is maintained at all times constant; the oil is pumped from the sump into the trough and returns through a passage at the correct level to the sump to be used over again. An oil sight is fitted in the base to determine the correct level of the oil in the base.

But from the standpoint of safety, perhaps the change in the control of the little machine is the more important. The ar-



**Smith Motor Wheel; the Upright Fitment at Right of Carbureter Is a New Spring Device Which Shuts Off the Gas in Case the Control Wire Breaks; at Right, New Spring Fork on Schickel Lightweight**

Digitized by Google

rangement of the control now is such that in case the Bowden wire control for the motor should break, a spring instantly closes the inlet passage, cutting off the mixture and bringing the vehicle to a stop. It is impossible in such a case for the machine to run away. Two other changes, both minor in character, are the fitment of a tickler to the inlet valve for easier starting, and a slight change in the bending of the exhaust pipe, which, of course, affects the operation of the motor not at all.

### ONE CHANGE ON INDIAN TWIN

One change has been made in the Indian twin since the announcement of the 1916 line. This has to do with the three-speed gear, an interlocking arrangement quite similar although much more substantial than was used last year, having been adopted to prevent shifting of the gears while the clutch is engaged.

### SPRING FORK IS FITTED ON SCHICKEL LIGHTWEIGHT

A spring fork of quite simple design has been fitted to the Schickel lightweight, as extra equipment. In its spring action it is not unlike the fork used on the larger Schickel models, but the use of rocker parts has been done away with by continuing the movable fork member through bearings on the end of the rigid fork member and mounting the axle on the movable member.

### ANOTHER POPE BICYCLE

The Pope folks show a new bicycle model known as the Motorbike Juvenile Special. It has an 18-inch frame with 28-inch wheels and is intended for young fellows just between boyhood and manhood. It is small enough to be ridden by the youngster and large enough to take care of the man, so that the boy cannot outgrow it. It is of the motorbike type with truss fork and other Pope features. Also in the line of bicycles was the lock which was shown at the Pope booth for attachment to any bicycle fitted with a Corbin coaster brake. The lock itself is formed integral with an arm which takes the place of the arm on the coaster brake; it is of the tumble type and absolutely cannot be picked. It engages with notches in a collar attaching to the hub of the wheel, so that the wheel cannot be turned with the lock in engagement. The device is simple, well-made and can be readily attached by the dealer or repairman. It sells for $1.25.

# ELECTRICALLY-EQUIPPED HENDERSON MAKES ITS BOW

## Trouble-Proof Lighting System is Entirely Separate From Ignition

AFTER considerable experiment and trial of many ideas and devices, a system of electrical equipment has been perfected by the Henderson engineering department and is offered to the dealers. In preliminary tests covering several months this outfit has been brought to a state of great dependability and freedom from troubles, is not easily damaged by accident, and is not affected by the machine falling over or lying on one side for a long time.

### Two-Unit System

The electrically-equipped machine is of the two-unit type, having the regular high-tension magneto for ignition purposes only. This allows no possibility of causing motor trouble by current leaking, shorting or otherwise going astray in the lighting circuit, and gives the same all-wool dependability that is present with the regular models.

The lighting system is entirely separate, with a generator and storage battery of its own, very simple and trouble-proof.

### Shaft-Driven Generator

The keystone of the lighting system is naturally the generator. This instrument is built in as part of the motor, and is driven by a shaft in a manner similar to the magneto drive on the Henderson.

The generator, of the Rex type, is a six-volt instrument, with self-contained regulator. A battery cut-out maintains a constant charging rate regardless of speed.

The storage battery which is used is a six-volt with 20 ampere hours capacity. A switch is provided for controlling the lights.

The headlight is of the two-bulb type, one for a brilliant long-range beam for country use, and the other a small non-blinding light that complies with all city ordinances. A tail light of neat, substantial construction is included. A big ruby jewel gives a warning red light to the rear, while a white panel illuminates the license plate.

### Horn Is Powerful

The electric horn which is supplied is unusually powerful and penetrating in tone, and so free from delicate or complicated parts that derangement is practically out of the question.

The generator is very carefully constructed and great caution is used to insure its suitability for the purpose intended. The instrument is of the round, bi-polar type, and is compound wound. The armature and field are constructed of a very fine grade of electric sheet steel laminations. The commutator is accurately and carefully made and is mounted on a ⅜-inch steel shaft running on ball bearings.

### Automatic Cut-Out

An automatic cut-out is provided which effectually prevents the battery discharging back through the generator, and no attention is needed for this device at any time.

The generator is neat and compact, and unobtrusive when in place on the machine. Its outside diameter is only 3⅝ inches and in length it measures 5 inches. Built in as a unit with the motor, with silent and efficient shaft drive, it is pleasing in appearance and capable in service.

### Distinctive Regulator

The regulator on the generator is a simple and positive device of distinctive design, which does the work thoroughly. It can be adjusted to any output, from zero up to the capacity of the generator. It is set at 2½ amperes as it comes from the Henderson factory, as this has been found best for all ordinary requirements that the average rider meets. In case a change is advisable, which is seldom, the alteration is little trouble.

The regulator is of the electro-magnetic type, which extended experiments have chosen as the most satisfactory system for all conditions of service. This regulator is so accurate that under test there was a variation of output of only one-quarter ampere between 1,700 and 4,000 revolutions per minute. Thus a constant flow of current is assured, with steady light and absence of troubles which result if electrical apparatus is subject to sudden variations.

With this regulator and the automatic cut-out on the job, the lamps get current from the storage battery when the machine is running at low speed or standing still. As the machine moves faster the generator begins to furnish part of the current. When a speed of about 15 miles per hour is attained, the generator is putting out enough "juice" to take care of the work alone, and above that pace—or if all the lamps are not turned on, the surplus current goes to charge the storage battery. By "all the lamps" is meant the big bulb in the headlight and the tail light.

### Dependable Battery

As much depends on the battery in equipment of this nature, great care was used in the design of this unit. A six-volt battery is used, one that is produced especially for service under the conditions imposed by motorcycle service. It has a capacity of 15 ampere hours.

This battery is encased in a heavy-gauge metal box which is lead plated to prevent corrosion, with a layer of flexible compound between the metal box and the hard rubber jar to provide ample protection against breakage.

The vents of the storage battery used in the Henderson electrical equipment is a unique feature which deserves special attention. These vents are of special patented design which prevent spilling out under any condition. There is no leakage of electrolyte, even though the machine should fall over and leave the battery lying on its side for a long time.

The plates of the battery are of a special composition which has been found particularly suitable for this service, as it does not decompose readily, and is unusually free from tendency to sulphate or buckle. The battery is compact in size in comparison with its capacity, measuring three inches wide, five inches high, and 7⅞ inches long. It has a capacity of 20 ampere hours of six volts. This will furnish sufficient current to light a 12-candlepower headlight and a 2-candlepower tail light continuously for eight hours—union time.

The battery is carried in an inconspicuous place on the machine, out of the way and protected from damage by accident. There is no added bulkiness of appearance, as it fits neatly in place and harmonizes.

### The Prices

This electrical equipment is supplied built into the machine at an additional charge of $45, so that the 1916 single-speed Henderson four-cylinder machine, electrically equipped, costs $310, while the price of the two-speed electric model is $340. This includes the full outfit, generator, storage battery, headlight, tail light, and horn, with all wiring and switches installed complete.

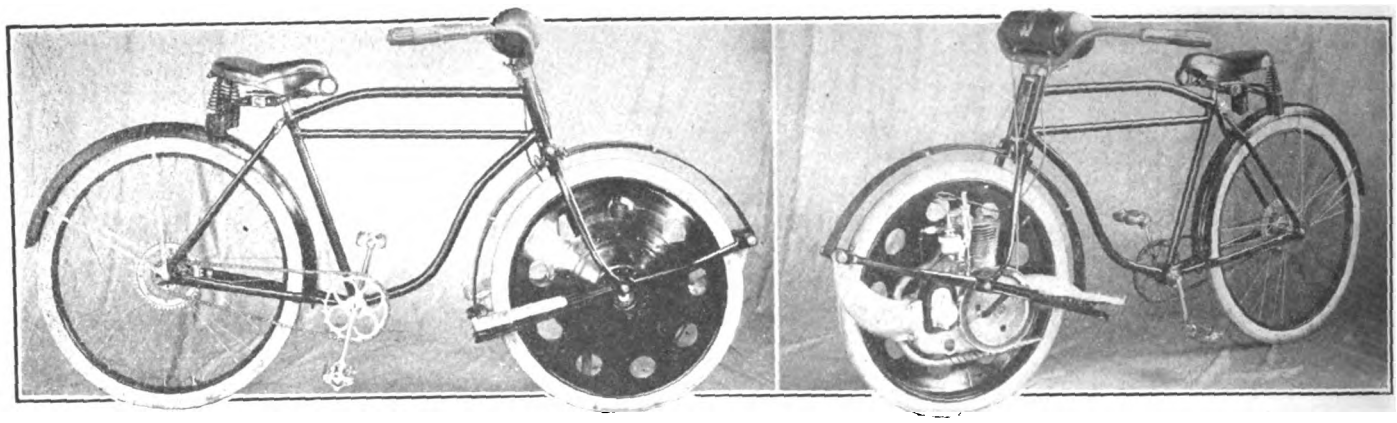
# DAYTON MOTOR BICYCLE HAS FRONT DRIVE



**Left, Right Side of Motor Bicycle Showing Disc Front Wheel, Spring Fork and General Frame Design; Right, View of Powerplant, Steering Head and Fuel Tank in Place—Stand Is Below Aluminum Footboards**

IN addition to the six new models of Dayton motorcycle for the 1916 season, the Davis Sewing Machine Co., of Dayton, O., is bringing out a motor bicycle of light weight along very novel lines. In fact, the machine is a radical departure from all previous motorcycle constructions in having the power plant incorporated in the front wheel. The total weight of the Dayton motor-bicycle is but 115 pounds ready for the road. It is priced at $95.

The power plant of the motor-bicycle is a single-cylinder, four-stroke, air-cooled motor, with automatic inlet valve arranged in a common pocket with and above the exhaust valve. The bore is 2⅜ inches and the stroke 2¼ inches, the motor developing one and one-half horsepower at normal speed. Ignition is by Elkhart magneto, of the high-tension type, the spark-point being fixed. A special carbureter with a vertical piston throttle is fitted. Lubrication is by splash, the oil level in the crankcase being automatically maintained from a reservoir formed in the rear bearer-arm. A valve-lifter is provided and both this and the throttle are operated by a wire mechanism controlled from the right handlebar of the machine. This mechanism is the only control for the power plant. Priming is through the inlet valve dome.

### Novel Suspension of Motor

The method of carrying the power plant is very ingenious. There are hollow bearer-arms of aluminum bolted to the front and rear ends of the aluminum crank-case, these arms tapering and having eyes on their ends to attach to the curved ends of the fore-and-aft type of curved multi-leaf Dayton spring-fork, on the general lines of the device used on the big twins, but constructed to suit the smaller power and weight of the motor bicycle power plant. To the bearer-arm extremities and ends of the springs are attached tubular members, one to each side of the power plant and to lugs at the center of these tubes are attached to arms of the main forks. These arms or sides are pivoted at the crown and the whole fork acts the same as that on the Dayton twin motorcycles.

The motor drives a sturdy but light steel disc or wheel through a reduction gear. This gear is fitted with a compensator to ensure silkiness in the drive in starting, etc.

The disc is shod with a 24 inch tire of 2 inch profile, made especially for the motor-bicycle by the U. S. Tire Co. It will be obvious that the whole power plant in combination with the disc-wheel moves with the spring-fork as a unit in traversing rough roads. To the rear portion of the side tubular members are fitted substantial aluminum footboards, in a very comfortable location for the rider, and a stand of the Adams type is also conveniently arranged so as to be dropped or raised by the rider when in the saddle.

### Front Frame Construction

The front construction of the motor-bicycle frame has a strong head with two sturdy side tubes. The handlebars, made with gunmetal finish, have long lugs which enter into the top of these side tubes, making for a staunch two-point bar attachment an ensuring against loosening and its resulting dangers. On the bars, just above the head, is securely mounted a cylindrical fuel tank, having a capacity of one gallon, the fuel lead to the carbureter being a steel tube to allow for the motion of the unit in relation to the main frame. There is a shut-off cock at the lower part of the tank and a large filler cap at the top. With a full tank, the Dayton motor-bicycle has a radius of action of 100 miles.

The main frame is constructed along motorcycle lines, with curved top tube and straight brace tube. The diagonal tube from the head is curved to the bottom bracket, a regular pedal-gear being fitted in the regular Dayton bicycle manner. The saddle, a special Troxel model, fits in a regular seat mast. The rear construction resembles that of an ordinary bicycle, but like the rest of the frame, with tubing and fittings of such gauge and size as to best accommodate the power of the motor. The rear wheel is 26 inches in diameter and is fitted with a special 2 inch tire. It has a steel rim. An Atherton coaster brake, specially designed for this service is fitted, it being operated by back-pedaling. Motorcycle type rubber grips are fitted on the handlebars.

### The Other Details

As stated above, the control of the motor is by a lever on the right bar, while the brake is operated by back-pedaling. These two controls are the only ones necessary to the Dayton motor-bicycle. The exhaust from the motor passes through a pipe into the hollow front bearer-arm which acts as an expansion chamber, and out through a slotted tail pipe under the power plant. The motor is thus effectually muffled with a minimum of back pressure. The wheelbase is 43 inches and the weight 115 pounds ready for the road. A speed of 35 miles per hour can be readily attained. The price is $95.

In addition to being made with the frame described the Dayton motor-bicycle can be had in drop-frame model of ladies and in juvenile models.

## AT THE WIGWAM

The motorcycle exhibit of the Hendee Mfg. Co. at Chicago consists of four spring frame models, two models with rigid frames and one of the Featherweight models. All of these are three-speed equipped. In addition, there is one cutaway motor, one cutaway clutch and a cutaway three-speed. The Indian line of bicycles, introduced for the first time this season, added to the comprehensiveness of the display in the Hendee Manufacturing Co. section.

The exhibit is in charge of Frank J. Weschler, treasurer and sales manager; J. H. O'Brien, of the Parts Department; E. M. Jackson and J. B. McNaughton, of the Sales Department, and R. L. Harriman, advertising manager. The following Indian salesmen are also on hand: A. Stephens, Colorado and Kansas; N. Gilbertson, the Dakotas and Minnesota; A. Strong, Missouri and Nebraska; Ray Seymour, Iowa; Ivan Jacobs, Ohio; Thomas Butler, Georgia; F. B. McFadden, Illinois and Indiana; Harvey Bernard, Kentucky, West Virginia and western Pennsylvania.

## TWO R-S TWINS AND A VAN

At the show booth of the Reading Standard Company, of Reading, Pa., are exhibited two 1916 twin motorcycle models and one of the company's quick delivery vans. One of the twins is the 12 h. p., three-speed model and the other is a 10 h. p. two-speeder.

The Reading Standard representatives at the show are as follows: E. Theurer, assistant treasurer; G. E. Atkins, sales manager, and W. E. Dewey, special representative.

### HENDERSON MOTORCYCLES

Four-cylinder Hendersons in different models are staged in the Coliseum at the space devoted to the interests of the Henderson Motorcycle Company, 1158 Cass avenue, Detroit, Mich. The first of these machines is a Model F-2 with two-speed hub gear and kick starter, while another is a Model F single-geared. A third model, having a two-speed gear, is shown with a Rogers sidecar fitted, while a fourth has the new Rex equipment for electric lighting, the outfit being designed especially for use with the Henderson. The equipment consists of a Rex generator, storage battery, head and tail lights and horn.

A large display board covered with green felt is a feature of the Henderson stand, and on this board are a number of highly-finished component parts. These include valves and their rigging, steering head, two-speed gear parts and frame fittings.

At the head of the Henderson contingent is President T. W. Henderson, with Vice-President W. G. Henderson. Assisting these executives are Arthur Lemon and D. E. Dunn, both of the sales staff, with Paul J. Bailey, the advertising manager.

### HARLEY-DAVIDSON MACHINES

One each of the full line of Silent Gray Fellows catalogued for 1916 is shown at the exhibit of the Harley-Davidson Motor Company, of Milwaukee, Wis. The three-speed twin, Model 16-F, seems to be the center of interest for all visitors to the stand, but the stripped stock models in single and twin cylinders and the speedy roadster in twin cylinder type draw their deserved meed of notice, particularly from the racing element. The electrically-equipped Model 16-J occupies a prominent place in the exhibit.

For passenger and delivery service the Harley-Davidson sidecar and sidevan are shown, and there is an extensive display of parts, ranging from the cutaway handlebar and dissected controls to the complete motor and three-speed gearset. In all over 50 parts are shown.

President Walter Davidson, Chief Engineer W. S. Harley, Sales Manager Arthur Davidson and Manager of Works William A. Davidson are on hand, assisted by S. L. Crolius, the advertising manager; Frank B. Rodger, the publicity expert; W. Miller, of the sales staff, and a number of traveling and local representatives. Harley-Davidson dealers from all parts of the country have made their appearance and the visitors' book is getting filled up rapidly.

### MIAMI CYCLE LINES

In addition to the three models of Miami Power Bicycles and three models of Flying Merkel single and twins, the Miami Cycle & Mfg. Company, of Middletown, O., is showing a new speed machine, Model 676, which is an overhead valve twin. This mount is the latest addition to the Flying Merkel series. The three Power bicycles include the battery-ignited belt model, the magneto belt-model and the two-speed chain-driven model. Two of the Flying Merkels are twins and the third is a single.

In the bicycle section of the Miami stand are to be seen the Racycle Pacemaker with its special equipment; the Miami Pathfinder; the Hudson Racer, with its new enlarged top tube, and the Flying Merkel Scout. Detailed parts of the various motorcycle models are also shown, as well as a sectioned Miami 2½ horsepower motor.

J. W. Ash, manager of sales, is in charge of the exhibit, assisted by H. C. Forster, advertising manager; W. M. Sheets and F. P. Lee, of the traveling staff, as well as local representatives.

### DAYTON MOTORCYCLES

Dayton 8 and 9 horsepower twins, both single-geared and in two-speeds, as well as the new front-drive lightweight, occupy the stand of the Davis Sewing Machine Company, of Dayton, O., in the Coliseum. The two-speed models exhibited, fitted respectively with Dayton and DeLuxe motors, and known as models D-3 and D-7, vie with the lightweight and its unit powerplant as the chief attractions. The electrically-equipped model D-8 also is hard to get to, by reason of the crowds surrounding it. The single-geared D-1 model is also shown.

The Dayton motor bicycle, with its unique construction, is one of the magnets of the whole exhibition, and the stand attendants are kept busy explaining its novel points.

Cycle Department Manager H. M. Huffman, with Assistant Manager H. W. Webb and Advertising Manager S. H. Ankeney are in charge of the exhibit, with C. W. Waughop and W. A. Harland, road men, as assistants. From the Chicago offices are D. W. Gould and L. B. Gould, with other Dayton agents.

### AT THE POPE HEADQUARTERS

F. W. Starr, publicity manager, has been in charge of the Westfield Mfg. Company's exhibit of Pope motorcycles and bicycles at the show throughout the week, with John P. Fogarty, secretary and manager, and L. D. Harden, sales manager, in almost constant attendance. The officials were energetically assisted in greeting visitors and answering inquiries by the following staff of salesmen: O. J. Oberwegner, M. G. Littlefield, Frank R. Swayne, C. B. Hull, Weston Cutter and Joseph Redlinger.

### CLEVELAND LIGHT MOTORCYCLE

Two models of the Cleveland light motorcycle, one with multiple disc clutch and the other with sliding-jaw clutch are on exhibition at the stand of the Cleveland Motorcycle Mfg. Co., of 7209 Platt avenue, Cleveland, O. There is also a sectioned power plant mounted on a pedestal, to show the operation of the Cleveland two-stroke motor, the through main shaft, cross worm-drive, etc. There are several boards in the booth on which are displayed the drop-forgings and other component parts used in the machine itself.

The single-geared Cleveland, fitted with disc clutch is known as model 1-A, while the sliding jaw clutch mount is entitled Model 1-B.

Secretary W. S. Quinlan is in charge of the exhibit, with H. G. Alexander, the treasurer of the firm; Chief Engineer C. A. Neracher, and George J. Squier of the sales force in attendance.

### THOR TWIN MOTORCYCLES

Only two models are shown at the exhibit of the Aurora Automatic Machinery Company, of the Thor Building, Chicago, Ill. These models are the 16-U twin of 12 horsepower, fitted with three-speed countershaft gear, and the Model 16-V twin of 6 horsepower, three-speed gear equipped and of light weight. The latter model has the new Thor spring fork and starter, as well as the dual clutch control.

In active control of the Thor exhibit is Sales Manager H. N. Kirk, assisted by H. G. Pruett, F. D. Freeman, Claude Freeman, J. M. Brechbeil and H. Fruest, as well as a number of local dealers and their assistants.

### TELLING THE SCHICKEL STORY

President Norbert H. Schickel, of the Schickel Motor Co., of Stamford, Conn., has been at the company's booth since the opening of the exhibition, and his efforts to supply all the informatioon requested have been ably seconded by Sales Manager D. W. Donley, Production Manager W. S. Treat and Frank Albert, of the sales staff.

### CYCLEMOTOR EXHIBIT

Cyclemotors installed in two or three types of bicycle frames and a complete outfit packed in a case ready for shipment are the chief features in the exhibit of the Cyclemotor Corporation, of Rochester, N. Y. A sectional motor showing the working principles and the mechanical arrangement of the various parts is also placed in the booth. The Cyclemotor makes its first appearance at a motorcycle show in the Coliseum, although it has been exhibited in the recent Toronto Exhibition, where it was seen and admired by many of the trade.

In charge of the Cyclemotor stand is General Manager D. G. Anderson, assisted by Chief Engineer L. R. Evans and Sales Manager J. A. Fish.

### ROGERS SIDECARS

Three Model H sidecars adaptable to motorcycles of well-known make, a special van to match the Thor models, and a full line of fittings for the Rogers sidecar and its chassis are displayed at the stand of the Rogers Mfg. Co., of 326 West Madison street, Chicago, Ill. There is a regular Rogers sidecar raised above the rest of the exhibit in addition to the others.

The first sidecar is designed to attach to an Indian with cradle-spring frame. The fittings on this car attach at the same places and in the same manner as those of the regular Indian sidecar. The second car is enameled to match and arranged with fittings to attach to the 1916 Harley-Davidson, using the attachment lugs provided by the Milwaukee company in connection with the Rogers ball-and-socket joint. This car is fitted with a top, side curtains and windshield. The third car is for the 1916 Excelsior in both fittings and finish.

The parts shown include the various types of ball-and-socket joints used in the firm's connections as well as fittings made from stampings or drop forgings. The van is built to conform to the requirements of the Post Office authorities for F. D. service.

In attendance on the exhibit are President R. F. Rogers, who designed the sidecars, and W. H. Fax, secretary of the company.

Digitized by Google

### THE SVENSGAARD EXHIBIT

This is how the show features of the Harry Svensgaard Sales Corporation line up at the show: One Pullman sidecar, complete with top, attached to a 1915 Excelsior; one Pullman commercial van, complete, attached to an Excelsior; one Pullman chassis, showing attachments for the various standard makes of motorcycles; one skeleton wood frame, showing the inside body construction, and one finished body for each of the following makes of motorcycles—Yale, Pope, Merkel, Indian, Harley-Davidson, Reading Standard, Dayton, Thor and Henderson.

The Pullman sidecar has a triangular front attachment on all models, with provision for lateral and vertical adjustments. The fittings are all nickel-steel forgings. The axle is adjustable to various widths of track. Springs are of vanadium steel.

In charge at the Svensgaard stand is President Harry Svensgaard, assisted by Factory Manager J. F. Field and Salesman W. D. Rumsey, as well as a number of other Detroiters.

### "BOOSTER" IN MANY EXHIBITS

One of the very noticeable features of the show is the display of Smith Motor Wheels in the various bicycle exhibits. Not only have bicycle manufacturers put out two-wheelers especially adapted to Smith Motor Wheel use, but they are grasping this opportunity of boosting the bicycle booster. Those using Smith Motor Wheels in their displays are the Pope, Excelsior, Jones and Noyes concerns, while practically all of the prominent bicycle manufacturers supply new models especially for the motor wheel.

### WESTING BICYCLES AND TIRES

Bicycles and tires in full lines occupy the major space at the exhibit of the G. H. Westing Company, of Indianapolis, Ind. The bicycle line includes the Westing Arrow Motor Bike, the truss frame of the same trademark and the Westing single-bar bicycle. These are shown finished in Indian red with green head, in black with green head, and in brown with silver head. All have the rims striped to match.

In the tire line, the Jumbo tread is a newcomer, having studded tread with an extra-heavy fabric. The Motor Bike tire is made with motorcycle fabric, while the Non-Slip has the word "Non-Slip" formed diagonally on its tread. The Korker is a low-priced tire which was a first-class seller last season and has been improved for the new year, in order to come under the firm's full guarantee.

### KOKOMO TIRES AND TUBES

Kokomo bicycle tires in seven different brands of single-tube and four brands of clincher double-tube are displayed at the stand of the Kokomo Rubber Company, of Kokomo, Ind. Representatives of the single-tube line are the Everlaster, with studded tread, and the Kokomo Dotted Tread tires, while the double tube tires are shown in the Kokomo and Everlaster brands, in both single and double clincher. Endless and butt-end inner tubes are also on show.

D. L. Spraker and R. R. Bowen, of the Kokomo Company's sales force are in charge of the exhibit.

# DEALERS VISITING THE SHOW

E. S. CLARK, of C. A. Clark & Son, Indian dealers, Hamilton, O., came over to the Windy City to see the new line of Indians and Indian Maids. Clark believes that commercial signs the country over point to a bigger and better season than that of 1915. He is going after the lightweight sales with vigor.

---

The Dominion Cycle Co., Winnipeg, Canada, was represented by H. S. Crabtree, the genial Johnny Canuck, who is a great favorite with the motorcycle devotees in Winnipeg.

---

L. W. DeLye, of Grand Rapids, Mich., helped to demonstrate the new Excelsiors. DeLye, besides handling the "X" at home, also sells the Iver Johnson bicycles and runs a splendidly equipped repair department.

---

Oren Senter, of Lyons, O., looked after the interests of Ray Metcalf, the Lyons Excelsior dealer. Senter was himself formerly an agent at Bolivar, Mo. He is thoroughly enthusiastic over the lightweight and believes that there is a great market for it, if properly cultivated.

---

An interested visitor to the Smith Motor Wheel section was A. J. Hockett, of Grinnell, Ia. He reported that since his home town had become progressive enough to lay ten miles of "boulevard," the cyclists are found daily spinning over the level stretch of new pavement and many of them are equipping their machines with the little speed demon.

---

All of the Chicago dealers were on hand the opening night and each brought with him his following of "faithfuls."

---

Geo. L. Smith, of Castilia, O., spent most of his time in the booth of the Gray Fellows and seemed so hypnotized by the 1916 Harley-Davidson offerings that it was a mighty hard job for any one to get him away, and there were many others just like him.

---

From Centralia, Ill., E. J. Bierman, Excelsior and Merkel dealer, came to see the new surprises face to face. He said that it was certainly worth the carfare for the inspiration a fellow got by making the rounds of the exhibits and seeing how very big the cycle industry is.

---

Exclusive bicycle dealers were by no means indifferent to the advantages that accrued to those who had the time to visit the annual trade classic. R. C. Jorgensen, "the Bikeman" of Grand Haven, Mich., was one of these interested show guests who feasted his eyes with the "wonders of cycledom."

---

Not satisfied with just visiting the show, P. S. Coulter, who handles the Indian at Homestead, Pa., made himself useful at the Hendee booth for the first few nights. He simply radiated enthusiasm because of the new Featherweight and got into "lightweight" selling trim by talking these machines to booth visitors.

---

The honor of purchasing the first new motorcycles at the show is claimed by Jno. C. Ridder, Indian dealer at Quincy, Ill. "Doc Yak" Magill, of the Hendee staff, was the lucky man to land this order which called for four new mounts.

---

The Pacific coast was also represented. The big "X" man from Los Angeles, Hoffer, was at the show with the glad hand and the happy smile. And he says that he certainly is not disappointed that he came.

---

One dealer visiting the show took advantage of its advertising possibilities by boosting a racemeet with a small souvenir pennant. He was Blankenheim, the Chicago Excelsior dealer.

---

### CANADIANS AT SHOW

Among the Canadians at the Chicago Show are J. W. Gibson, General Manager of the Canadian Cycle & Motor Company, Limited, West Toronto; A. E. Humphrey, President of the Humphrey Bicycle & Motor Company, Limited, Toronto; Percy A. McBride, Excelsior and Henderson distributor for Eastern Canada; Ed. Buffum, Manager of the Hendee Mfg. Company, Limited, Toronto; Walter Andrews, Toronto, Merkel distributor for Ontario; Wilfred Morrison, Toronto, a well known motorcycle traveler in Eastern Canada, and Joe Downey, editor of the Canadian Motorcycle. These do not, of course, include the Canadian members of the Cyclemotor Corporation of Rochester whose motor attachment for bicycles is being shown for the first time.

---

### EIGHT MAKES BOSCH-EQUIPPED

Eight of the fifteen makes of motorcycles at the show are equipped with Bosch magnetos. There are sixty-four machines all told in the lineup. Twenty-eight of the total number are Bosch-equipped, despite the fact that nine methods of ignition are found throughout the displays.

---

### ROGERS SIDECAR BUSINESS

From the Rogers Mfg. Co. comes the announcement that the company now has all the sidecar business of the following motorcycle manufacturers: Dayton, Henderson, Merkel, Thor, Pope and Yale. For all of these machines the Rogers folks have provided special attachments, thus facilitating the hooking up of the sidecar to the machine and giving more rigid connection.

---

### A DISCRIMINATING BUYER

Among the first retail sales made at the show was a Cleveland lightweight to Victor Kliesrath, chief engineer of the Bosch Magneto Co. The fact that Mr. Kliesrath, with his engineering experience, picked out a lightweight is regarded by lightweight advocates as a tribute to the new class of motorcycles.

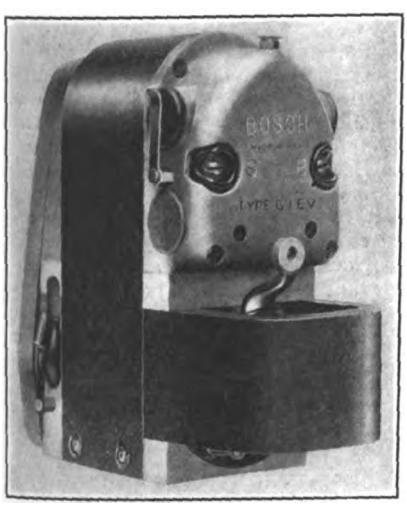
# UNUSUAL ARRAY OF NEW AND IMPROVED ACCESSORIES AROUSES RECORD INTEREST IN THAT DEPARTMENT OF COLISEUM SHOW

## Innovations Are More Numerous Than in Previous Years and General Lineup of Offerings for the Cyclist Sets a New Mark for Comprehensiveness and Artistic Arrangement

COLISEUM, Chicago, September 20.—In point of interest, at least, the almost unheralded appearance of the Bosch combined ignition and electric system was the outstanding feature of Accessory Row. That such a system was "in the works" at the Bosch Magneto Company's plant had been known for some time, it is true, but that it was near enough to completion to be announced at the pesent show was altogether a surprise to many.

The system is unique in many ways. First of all, it embodies two separate and distinct systems, each one a complete unit



New Bosch G I E V Type Magneto

in itself, in the one machine. That is to say, there is a complete Bosch high-tension magneto there to do the ignition work, which differs not at all in principle, and but slightly in practice, from other magnetos in the Bosch line; which, save for the drive system alone, is entirely distinct from the direct-current, shunt-wound generator which is built into a single unit with it. The ignition system is entirely distinct from the lighting system, and either one can be used without in any way affecting the other.

### The Interchangeability Feature

A feature on which special emphasis is laid is the fact that the Bosch combined system is interchangeable with the standard Bosch magneto, so that any motorcycle fitted with a Bosch instrument can with little or no trouble be equipped with the new combined lighting and ignition system.

The ignition section of the system, as was said before, is a true high-tension magneto embodying all the characteristics and superior features of the standard Bosch magneto. The connections comprise, just as with the ordinary magneto, only the necessary cables between the magneto and the spark plugs. There is no coil, no separate timer, and no complications of wires and other contraptions. The battery is used only in the lighting circuit and is in no way part of the ignition system.

### Novel Lighting Generator

The lighting generator is novel as to the winding. It is an ordinary shunt-wound generator while it is simply charging the battery during daylight hours. But the lighting circuit is connected through a series or "booster" field so that immediately the lights are turned on the field strength is increased in proportion to the amount of current being used and the output of the machine is increased accordingly.

As regards wiring, nothing could be more simple, another feature that makes the Bosch system pre-eminently adaptable to the machine already in service. There is but one wire from the generator to the battery, and another wire from the battery to the distributing switch, from which the usual wires run to the lamps in circuit. The normal capacity of the generator is 4 amperes at 7½ volts—or 30 watts, to express it in terms of power. The machine is 7¾ inches long, 7½ inches high and 4 inches wide and weighs 19 pounds.

### REMY COMBINATION SYSTEM

The Remy combined ignition and lighting system made its appearance in revised form, the revision being chiefly in the way of minor improvements tending to better the all-around efficiency and performance of the outfit. Perhaps the greatest change is the elimination of the vacuum cut-out switch which formerly was used to disconnect the generator from the battery when the motor was not running, thus preventing the discharge of the battery through the winding of the generator.

The vacuum switch is replaced by a very simple manually-operated switch, operated by means of a key, and is practically trouble-proof. The main drive pinion on the generator, formerly keyed with a single key, now has two and a lock nut besides, insuring it against working off. The wiring has been changed slightly so that with the switch turned off, the motor cannot be operated with the battery supplying the ignition current—with the vacuum switch this formerly was possible.

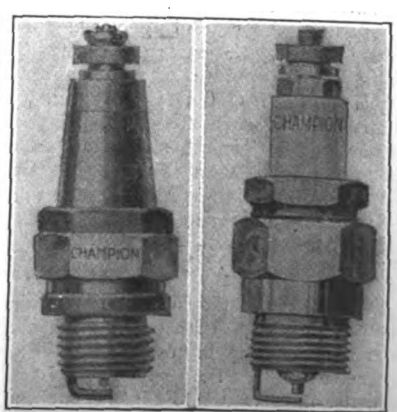
### Ignition System Improved

The ignition end of the system also has been improved. For instance, by substituting a brass casing for the Bakelite one formerly used on the condenser, it has been found possible to increase the capacity of that device materially, the increase bearing directly upon the production of a hotter spark at the plug gap, and the elimination of sparking and consequent burning of the points at the circuit-breaker. Tungsten points are now used instead of platinum, it having been found that the tungsten gives longer service. In place of two springs—one on the distributor-blade and another on the circuit-breaker—a single spring now is used with better all around satisfaction, and all the contact springs now are reinforced with spring steel.

The Remy system, which has been used on the Harley-Davidson motorcycle during the past season with success, is continued on the 1916 models and it has also been adopted by the Miami Cycle & Mfg. Co., and is shown at the show fitted on a couple of the Merkel models.

### HEISSLER STORAGE CELLS

A new-comer in the lighting accessory field is the Heissler Storage Battery Co., 1436 Michigan avenue, Chicago, which showed for the first time the Heissler storage cells. The Heissler battery is novel in that it is absolutely unspillable, a special vent system absolutely guarding against leakage of the electrolyte, regardless of the position of the battery. It is also claimed to have a greater capacity than other bat-



Improved Champion Mica and Porcelain Spark Plugs

Digitized by Google

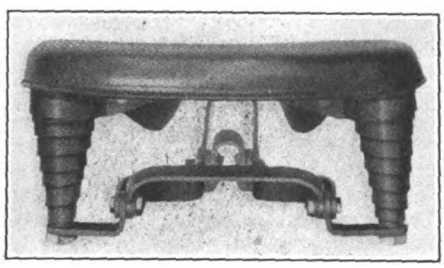
teries of equal weight, and to be fitted with plates of special construction, eliminating all possibility of shedding the active material. All connections are lead burned and the battery is said to be as near to "fool-proof" as it is possible to render a cell of its type.

### THE "EXIDE" BATTERY

The "Exide" battery, made by the Electric Storage Battery Co., Philadelphia, Pa., and which has been used in connection with the Remy system on the Harley-Davidson motorcycles during the season just ended, was shown without any change.

### NEW SADDLE OFFERINGS

A brand new line of bicycle and motorcycle saddles cropped out at the booth of the Superior Metal Products Co., of Elyria, Ohio. The motorcycle saddle is made in but a single model, while 13 different styles of bicycle saddles and six different styles



**Superior Motorcycle Saddle**

of tool-bags are also produced by the Elyria saddle-maker. The outstanding feature of the Superior motorcycle saddle is the novel spring suspension, with helical springs formed of flat tempered vanadium steel wire—tempered before and afterwards to eliminate all imperfections. The saddle is of the padded type with a base made of special analysis steel, while the trussed braces, etc., are formed of cold-rolled steel, blanked the long way of the grain to ensure strength. The top is made from the best grade of oak tanned, double-dyed leather procurable, with a full padding of curled hair. The saddle, which is designed to fit any make and model of motorcycle, is claimed to give lower riding position than any other saddle on the market.

#### Shock-Absorbing Bike Saddles

Emphasis is laid particularly on the shock-absorbing models in the bicycle saddle line. These saddles are suspended on a spring system comprising a tapered helical spring above and enclosed helical springs below, the enclosed springs partaking of the nature of shock-absorbers and tending to eliminate vibration. The construction is such that the springs are always kept in perfect alignment, so that the saddle is kept in shape at all times. The shock-absorbing saddle is made in five models, varying in size and shape.

### IMPROVED ECLIPSE CLUTCH

At the booth of the Eclipse Machine Co., of Elmira, N. Y., they point with pride to a new model of the famous Eclipse clutch —the model which is now fitted to Excelsior motorcycles. In general principles, it is identical with the Eclipse clutches of other years, with the added virtue of greater frictional area and an accompanying all-around greater ruggedness that comes as a matter of course. The frictional surface has been increased from 144 square inches in the 1915 model to 207 square inches in the newest clutch creation; quite naturally, the spring tension has been increased to meet the greater needs of this increased area and the other parts in proportion.

Aside from the use of a heavier hub-shell on the coaster brakes, nothing else that is properly termed new was disclosed at the Eclipse booth. The standard line of clutches, Eclipse and Morrow coaster brakes and two speeds was displayed.

### PULLMAN SIDECARS MAKE DEBUT

While not distinctly new, inasmuch as it has been on the market for some time past, the Pullman sidecar, made by the Harry Svensgaard Sales Corporation, Detroit, Mich., made its debut into motorcycle showdom when the doors swung wide on the present Chicago exhibit. Its cardinal features are the use of a coach-built body of pleasing lines, nickel-steel forgings throughout, and a nickel-steel frame, making for maximum strength and minimum weight. The car is attached at two points on the front tube of the motorcycle, thus eliminating the twisting strains which come of a single point of attachment, while the same result is achieved at the rear by the use of a hinged joint. The car is fitted with an adjustable tread to fit it for use on any sort of road. It is finished and upholstered in true coach fashion. It lists at $75.

### NEW KINKS IN SCHRADER VALVES

It would seem, perhaps, to the layman, that the simple tire valve which came into being with the introduction of the pneumatic tire years and years ago had long since reached its most perfected state, but at the booth of A. Schrader's Son, Inc., it is demonstrated that such is not the case. While the Schrader and Twitchell tire pressure gauges which are shown at the Schrader booth are identical with those shown at shows which have passed into history, the standard Schrader tire valve embraces no less than three improvements.

First and foremost comes the special formation of the bore in the valve stem, by means of which there is a recess left giving the plunger a greater clearance and considerably facilitating the passage of the air into the tire. This, of course, makes for greater ease in inflating the tire. The valve mechanism itself has been refined slightly to the end that sticking has been eliminated. With each valve there now is included a deflating cap—a little screw cap intended to screw into the valve stem and hold down the plunger, permitting the escape of the air.

One other bit of "newness" loomed up at the Schrader booth in the shape of a valve tool for cleaning, retapping and threading the stems and otherwise putting damaged or dirty valve stems into perfect condition. The tool is easily carried on a watch chain and sells for a quarter.

### NATIONAL COIL CO.'S MAGNETO

For sheer diminutiveness, the little magneto whih made its bow at the booth of the National Coil Co., Lansing, Mich., "takes the cake." It is designed especially for use in connection with lightweights of the single-cylinder, two-cycle type, and is said to be from two to three pounds lighter than any other "mag" on the market. For all its minuteness, however, it embraces all in its make-up that goes to make the high-tension magneto a success and is quite capable of delivering a hot, fat spark at the plug gap. The magneto weighs only 3 pounds 10 ounces. It is fully enclosed, water and dustproof. This product is more fully described elsewhere in this issue.

### ANOTHER GREAT WESTERN MODEL

The Great Western Mfg. Co., of Laporte, Ind., announces a new motorcycle type of bicycle at the show. It is known as Model 54 and is distinguished by double-bar curved top bars and a new braced motorcycle type of front fork. The model is fitted with mudguards front and rear, double braces front and rear, stand, coaster-brake, motorcycle type saddle and Fisk white anti-skid tread tires. It is made with both 18-inch and 20-inch frames.

### BEEJAY HORN LINE

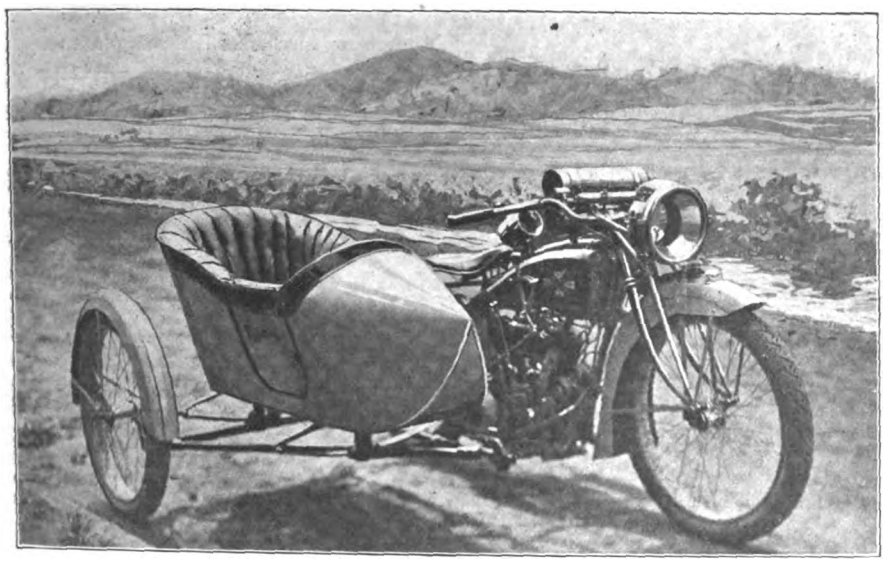
The Beejay mechanical signal is shown at the booth of the Nonpareil Horn Mfg. Co., of New York City, along with their full line of bulb horns. Its outstanding features are a spring-released rack engaging with the vanadium steel cam or ratchet, which in turn contacts with the steel diaphragm. The horn weighs only 21 ounces, and sells for $2.75.

### HANDY BICYCLE CARRIER

A new carrier type of bicycle is offered by the Handy Bicycle Co., of Chicago. It comprises a bicycle with a small front wheel over which is mounted a substantial but light wicker carrier basket on a rigid frame of tubing. The machine is provided with a front wheel stand that is very novel in that when it is in position for the machine to stand an arm raises up over the top of the wheel and provides the means of locking the stand so that the machine cannot be stolen while the rider is making his deliveries. Pleasure cycles fitted with similar front wheel stands also are included in the Handy line.

**The Handy Bicycle Outfit**

Digitized by Google



**New Flxible Sidecar, as Fitted to Excelsior Motorcycle**

### GREATER COMFORT IN FLXIBLE

The riding and comfort-giving qualities of the Flxible sidecar, shown by the Flxible Sidecar Co., of Loudonville, Ohio, have been increased for 1916 by a few changes in the construction, all of secondary importance and in no way affecting the features that have made the Flxible remarkable among motorcycle sidecars. The full elliptic cross springs, both front and rear, for instance, have been increased in length slightly, while outside joints have replaced the flush joints formerly used in the chassis construction. The tubing has been increased to 5/32 of an inch and a new and heavier axle has been fitted. A one-piece forward clamp now is used as well as one-piece connections to the motorcycle. The car is now fitted with 3-inch rocker support.

Following closely the tendency that has prevailed in the automobile trade for the past few years, the Loudonville folk have increased the depth of the upholstery by way of obtaining increased comfort for the passenger. The well spring seat now is seven inches deep, as against four inches last year, while the depth of the back upholstery has also been materially increased.

### IMPROVED ROGERS CONNECTIONS

Speaking well for its state of "near perfectness," the Rogers sidecar is displayed at the Chicago show without material change. The principal "change" from last year is not a change at all; simply the additional fitments for adapting the sidecar to various makes of machines. For instance, on the Excelsior motorcycle, the Thor and one or two others, provision has been made for the attachment of sidecar connections, and the Rogers Mfg. Co. has adapted its connections to meet these special requirements, giving the rider at once a sidecar that is easier to attach than one with universal clamps and which at the same time is to all intents and purposes an integral part of the motorcycle when once in place. As for the rest of it, the one-piece welded metal body, the ball and socket connections, the curved rear brace, the light weight and the many other features that have gone to build up the reputation now enjoyed by the Rogers sidecar are retained and even enhanced where that has been found possible.

### SCHEBLER LIGHTWEIGHT CARBURETER

The only "newness" from the works of Wheeler & Schebler at Indianapolis, Ind., was not on view at the Schebler booth. That is a carbureter adapted especially to the needs of the lightweight motorcycle. In designing this little fuel preparer, the Schebler engineers have endeavored to produce a carbureter that would be entirely automatic and which at the same time would produce a perfectly constant mixture under any and all conditions; such has been their success along these lines that the new Excelsior lightweight is fitted with this newest and smallest Schebler. Needless to state, it embraces all of the features that have gone to make the Schebler famous.

### STOLL "DREAM" TANDEM

At the booth of the Stoll Mfg. Co., of Denver, Col., the "Dream" tandem is shown with a few minor changes, chief among which is a reduction in price, made possible by increased output. The new price is $20. The double set of vertical and horizontal enclosed springs provides the comfort in the Stoll tandem and while the tandem sets low on the motorcycle, such is its design that the possible range of action of the springs is exceptionally long, while at the same time bottoming is impossible. The tandem is fitted with a sliding adjustable backrest and with a quick detachable cushion. The tandem is made for leading makes of motorcycles, and the make of machine on which it is to be used should be specified when ordering.

### "DIMMER" GOGGLE NOVELTIES

At the booth of the Chicago Eyeshield Co., makers of the "Dimmer" goggles, special emphasis is laid on a new model designed to fold perfectly flat and fit snugly into an imitation leather case which takes up no more room in the pocket than an ordinary envelope. The goggle is made of flexible transparent pyraline with a soft, cool leather binding. The ends are provided with fasteners so that when it is snapped into shape it conforms to and fits the face of the wearer perfectly. The goggles are provided with non-binding round rubber cord with a small hook to be either hooked around the head or over the ears. The goggle is perfectly ventilated, thus eliminating all tendency to dim when used in fog or mist.

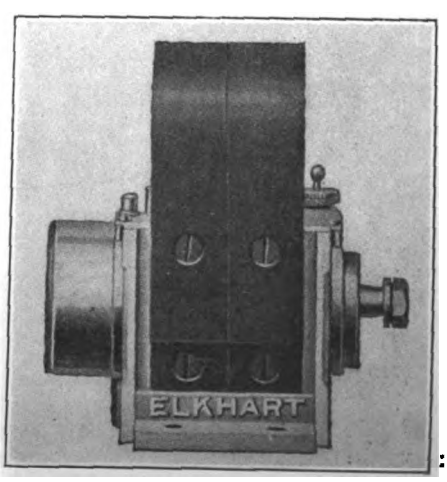
The goggle is made in two styles, with one piece of pyralin, either white or amber, or with the "dimmer" feature, the latter comprising a lower section of white pyraline and an upper section of either green or amber, to be used in strong sunlight or to dim the glare of automobile headlights. The goggles sell in the former style, with case, for 65 cents, and for 85 cents in the two-color style. A full line of other dimmer goggles also is shown at the show booth.

### CHAMPION SPARK PLUGS

Stress is being laid at the booth of the Champion Spark Plug Co. on the heavy duty plug, a one-piece porcelain plug absolutely leakproof and highly adaptable to use where room is at a premium. It possesses all of the good qualities of the regular Champion plug, besides which it is compact and more than ordinarily rugged and substantial. On view also, besides a full line of automobile spark plugs, are both the porcelain and mica type of motorcycle plugs which are continued without substantial change. The Champion people, it is said, are putting out 40,000 plugs a day at the factory in Toledo.

### ELKHART LIGHTWEIGHT MAGNETO

From Monroe, Mich., comes the Elkhart magneto, made by the Elkhart Mfg. Co. The Elkhart line comprises high-tension magnetos, both for singles and for V-twin motors, but at the present time special emphasis is laid on the Model HB1, the smallest of the line, which has been developed especially for use in connection with lightweight motorcycles. The Elkhart has been revised to the extent that a single magnet now replaces the double magnet formerly used, and the mechanism is fully enclosed with die cast end plates absolutely insuring tightness against the ingress of dirt, oil or water. The Elkhart magneto is used on the Smith Motor Wheel and also on the new Tiger autobike.



**Elkhart Lightweight Type**

Digitized by Google

### AN INGENIOUS STAND

The second Pioneer innovation is the Ideal motorcycle stand, which has the virtue of being adjustable to keep the motorcycle upright when it is placed on the stand on ground that is not level. The stand is made with an inverted arched bow at the bottom which is housed in a sheet steel case provided with the legs on which the motorcycle stands. The arrangement is such that the sheet steel casing can slide around the arched bow on specially provided rollers, and a lock is fitted for locking the casing at any convenient point. In use the lock is released and the machine is set on the stand. Then the motorcycle is held upright and the casing automatically works around far enough to compensate for any inequalities in the surface, when a small toe lever is operated locking it hard and fast against further movement. The stand sells for $4.

### "HALCO" ARTILLERY PUTTEES

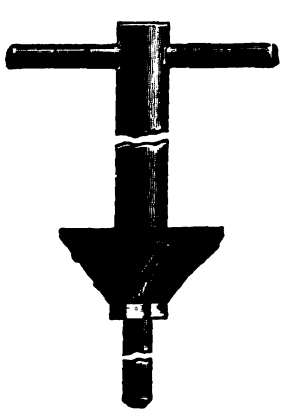
The Hagerstown Shoe & Legging Co., of Hagerstown, Md., are showing a new series of "Halco" Artillery Puttees, made of artillery leather specially tanned and otherwise prepared for legging use. The new leather is made up in a great many of the famous "Halco" legging styles, including the "Q. D." or quick detachable types which have won the universal favor of the motorcycle rider.

### ENGLISH TYPES OF PUTTEES

The Army Legging Co., Sand Springs, Okla., are newcomers in the motorcycle legging field. They offer a line of English puttees under the Ciociola patent. The construction is such that there are only two sizes needed to take care of all comers, the adjustable feature of the legging being flexible enough to adapt the legging to the intermediate sizes. For motorcyclists, nine different styles or finishes are offered in two colors, either black or tan.

### CORBIN-BROWN REFINEMENTS

At the booth of the Corbin Screw Corp., of New Britain, Conn., appeared the latest revision of the Corbin-Brown speedometer. The changes are by no means vital. Chief among them is the fitment of a maximum speed hand fitted with a special lock so that the hand cannot be set back unless the rider is in possession of the key, and the adoption of an "open face" arrangement on the odometer dial. The front drive system has been redesigned to bring the greatest part of the braces and arms in a position behind the fork truss and out of sight, and also out of harm's way in case of a fall. In basic principles, the speedometer is the same as heretofore. The remainder of the Corbin line, comprising brakes, bicycle two speeds and other fitments is continued unaltered.



**The Bean Valve Reseating Tool Which Sells Complete for $1.00**

### NEW KELLEY RACING HANDLEBAR

They refer to it as No. 177 at the Kelley Handlebar booth, but the average rider will call the "newness" offered by the Cleveland concern a very handsome type of racing bar. It is slightly different in shape from anything that has heretofore been offered, and has the additional feature of a serrated ferrule to provide against twisting of the bar. As for quality, it's Kelley—which is sufficient on that score.

### HANDY "SPEEDNUT" WRENCH

The "Speednut" wrench made its bow at the booth of the Cochran Pipe Wrench Co., Chicago, Ill. It is an open-end wrench automatically adjustable to all nuts within its range. It is simply necessary to place the jaws over the nut, pulling closes the jaws on the sides of the nut and the harder the pull the tighter the tighter the grip. It acts as a ratchet on nuts, the jaws being released on pushing the handle back so that they slip over the corners to assume a new position and new grip on the next faces of the nut. It sells for from $2 up, and is made in several sizes.

### KOKOMO KORD BICYCLE TIRE

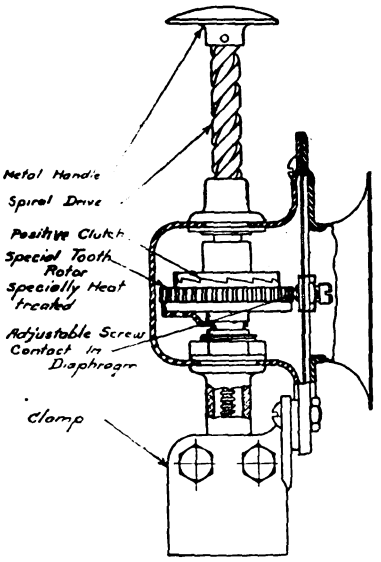
Quite the most interesting thing that made its appearance at the show in so far as tires are concerned, is the new Kokomo Kord bicycle tire offered at the booth of the Kokomo Rubber Co., of Kokomo, Ind. The feature of the new tire, as the name would imply, is the fabric, which is made up of two layers of specially-treated sea island cotton cord wound spirally around the tire, lying diagonally and transversely with a layer of black rubber between the cords. There is no woven fabric, and the friction, or at least a great deal of the friction, caused by the strands of the usual fabric working on one another is done away with and the life of the tire is greatly increased. The Kokomo Kord tire is provided with an inner tube of black rubber over which are placed the two layers of cord with the layer of black rubber interposed. Over the top layer of cord is another covering of black rubber, and over this is an extra high tread of white rubber, corrugated, with two ridges. It is claimed that this construction makes the tire quite immune from the evil effects of stone bruises, while at the same time the tire is harder to puncture, owing to the thickness and the toughness of the cords. The Kokomo Kord is said to be wonderfully effective and durable besides possessing unsurpassed running qualities.

### BICYCLE AND SADDLE DISPLAY

G. H. Westing Co., the Indianapolis jobbers, showed a full line of Westing-Arrow bicycles, including a new autobike model, as well as a line of both Mesinger and Troxel saddles.

### "HECO" WARNING SIGNAL

A new mechanical warning signal was seen at the booth of the Heinze Electric Co., Lowell, Mass. The cam wheel, bearing specially shaped teeth, is set in motion through the intermediary of a worm formed on the stem of the handle which acts to turn a positive acting clutch which engages with the cam wheel. "Heco" horns are extremely light and simple. Gears are eliminated by this worm action and there is nothing to get out of order. The horn sells for $3.



**Section of New Heco Horn**

### BERLING LIGHT-WEIGHT MAGNETO

Emphasis is being laid on the new type "S" Berling magneto at the booth of the Ericsson Mfg. Co., Buffalo, N. Y. The magneto is an extremely small, compact and withal efficient device, intended primarily for use in connection with light-weight motorcycles. It is made in both single and twin cylinder types and bears all of the characteristics of the regular Berling models, including the special frame construction and the breaker box with cams integral. The magneto is of the fully-enclosed type and is well adapted to carry out the slogan of the Berling folk: "Pep, Power, Permanence."

### VARIETY IN CORNISH EXHIBIT

L. H. Cornish, the Stamford manufacturers' agent, shared a booth with Fred Pierce, of Jersey City, who displayed both 20th Century and Brown motorcycle and bicycle lamps. Cornish lays emphasis on a set he is selling including everything to make a complete motorcycle except the rims, spokes and tubing. There is the motor, all the frame fitments, the bars, hubs and other incidentals, all for $50. He also has a number of Black Hawk motors for sale. In his line of accessories are found Waterbury motorcycle locks, Standard speedometers and gasoline strainers, Anderson spark plugs, the Weed folding backrest, Leonard's Prest-O-Lite bracket. "Becco" wrench sets, American Pennant Co.'s pennants, Austin pumps, Marforco bicycle and motorcycle specialties, and a full line of Lamm Bros.' motorcycle clothing.

Digitized by Google

### THE PEERLESS CHAIN TOOL

Caillet Bros., who come from Wellington, Col., displayed for the first time the Peerless motorcycle chain tool, which operates quite differently from any other tool for chain work now on the market. It looks for all the world like a conductor's ticket punch, and for the matter of that it is very little different save that it is made more rugged, of course. A perfectly-tempered steel punch is operated to drive out the chain rivet when the two handles are compressed, the leverage being so great that the task is readily accomplished without undue work on the part of the operator. There is no twist, so that the chain is not marred. A feature worthy of note is that the tool is universal and will take any size of motorcycle chain. It can be carried in the tool kit with ease. It sells for $1.50.

Peerless Chain Tool

### KICK-STARTER FOR INDIANS

From the Pioneer Mfg. Co., of Milwaukee, Wis., newcomers in the motorcycle field, come two new devices. Perhaps the most interesting, if it is not the most novel, is the Indian kick-starter which is adaptable to any Indian machine fitted with pedals. It is of the segment and pinion type, with the sector bearing the folding foot lever pivoted on a plate bolted to the motor base, and the pinion carried on a steel disk which bolts to the clutch housing. The pinion is fitted with ratchet teeth which release it from the clutch plate when the lever is being returned after the motor starts.

### THE JONES & NOYES LINE

Jones & Noyes display a full enameled model of the Commercial bicycle, as well as a number of the machines fitted with carriers for varying service. Also shown was the new revised edition of the Jones tire pump, the pump that is the whole tire repair kit in itself. The plunger is hollow, the interior being used for the reception of the tire patches, cement, sandpaper, etc.; it is closed ordinarily with a screw cap. The hose connection ordinarily is covered with a tubular tool which serves not only as a pump handle when inserted in the ring in the cover of the kit cap, but also as a tire tool to facilitate the removal of the shoe from the rim. A pair of ball and socket clamps are provided with each pump, one for front and the other for rear attachment, and the pump fastens to these clamps when in use so that the whole motorcycle serves as a brace to hold the pump when the tire is being inflated. The pump sells for $3.50.

### ADDITIONS TO WALD SPECIALTIES

Two new types of combination carriers and stands for use on bicycles have been added to the line made by the Wald Mfg. Co., of Sheboygan, and displayed at the show for the first time. The No. 510 combination is made of heavy-gauge steel with the stand of channel iron; the No. 512 is quite similar save that the cross strips on the carrier are placed on end, making for greater rigidity. Both come in black enamel.

For the front of the bicycle two new metal basket types of carrier have been added, known as models 521 and 523. A line of cushion straps, both plain and adjustable, has also been developed and added to the line since the last show.

In the motorcycle line, a new motorcycle tandem attachment, intended to fit on top of the luggage-carrier of any motorcycle on the market, has been added, as well as a revised edition of the Wald tandem which sells for $8.

### DIAMOND CHAINS

When the name "Diamond" appears on a show stand, along with the characteristic trademark, the motorcyclist and bicyclist immediately says "chains" and he is never disappointed. In the Coliseum, the chief feature at the stand of the Diamond Chain & Manufacturing Company is the firm's No. 149 Extra Heavy roller motorcycle chain, of ⅝ x ⅜ inch and adaptable to the heaviest service. In the bicycle section of the exhibit, the new roller models of 1915 also have their meed of admirers. The full Diamond line is tastefully arranged so that each type can be examined in detail.

President L. M. Wainwright is in charge of the exhibit, with J. W. Spray and S. C. Hurley, of the traveling staff, as assistants.

### SHOWING COVENTRY CHAINS

A full line of Coventry chains for motorcycles, in both heavy and light types, as well as an assortment of bicycle chains, has attracted attention to the show stand of the Herbert F. L. Funke Co., Inc., of New York City, throughout the week. In addition the firm is exhibiting several new types of Brown & Barlow carbureters, especially those models which are suited to two-cycle machines.

### RENOLD CHAINS

Complete sets of Renold motorcycle and bicycle chains are to be seen at the stand of Peter A. Frasse & Co., Inc., of 417 Canal street, New York. In the motorcycle series, the line is headed by the Special Service Chain of ⅝ x ⅜ inches, and includes the ⅝ x ¼ inch also. The starter and racing chains in ½ inch and ⅝ inch pitches are also exhibited, as well as a variety of sizes from ½ inch to ¾ inch pitch, and from ¼ inch to 5/16 inch wide.

The bicycle line consists of the ½ inch single roller, and one inch pitch twin roller sizes, in addition to the one inch pitch block chain in ⅛, 3/16 and ¼ inch widths.

John R. Cautley, manager of the chain department, is in charge of the booth.

### MOSSBERG WRENCHES

Socket wrenches in sets and singly, with or without ratchets, open end straight and S wrenches, and monkey wrenches for both the motorcyclist and bicyclist are shown at the stand of the Frank Mossberg Co., of Attleboro, Mass. The open end and monkey wrenches naturally hold the greatest interest for the riders, the former being shown in sizes to fit any nut on a motorcycle or bicycle without recourse to outside aids. The line of bicycle wrenches is most complete, being representative of the entire bicycle series made by Mossberg under the various trade names.

In the space given over to wrench sets, the "Quickkit," consisting of a wrench, screwdriver and a pair of pliers, packed in a canvas kit of small size, and the No. 715 set of four double-end wrenches for motorcyclists were admired on all sides. One of the wrenches has an alligator end, and comes in handy for use on pipe and other round objects.

The Mossberg stand is in charge of the Hastings & Anderson Co., Chicago representatives, with E. W. Scott, Middle Western traveler, as aide.

### BERLING MAGNETOS

Magnetos, from the new Type S for lightweights, to the big A-88 for eight-cylinder aviation and automobile motors are on view at the stand of the Ericsson Manufacturing Co., makers of the Berling magneto, at Buffalo, N. Y. The motorcycle machines, in addition to the Type S, are the N-11 for single, N-21 for twin motors and the N-44 for four-cylinder power plants. The S models are the S-13 for singles and the S-21 for two-cylinder machines.

In the multi-cylinder line, the B-41 and B-61 are for four and six-cylinder motors. These are distributor machines, whereas the N and S models need no such device. The A-41 and A-61 are for similar motors, while the A-81 and A-88 are for eight-cylinder motors.

### PREST-O-LITE BOOSTERS

Among the features of special interest at the show stand of the Prest-O-Lite Co., Inc., of Indianapolis, are the company's automatic reducing valve, an automatic friction lighter for motorcycle headlights and stem-and-burner connections for camping. An unusually interesting line of literature is on hand for motorcycle dealers who are attending the show.

The Prest-O-Lite exhibit is in charge of W. H. Adkinson, of the Chicago branch office, who is assisted by the company's Chicago salesmen in addition to A. G. Rundle, who travels in middle western territory, and C. F. Mitchell, Milwaukee branch manager. Among the company's Chicago representatives who are at the booth are C. M. Wills, branch manager; C. B. Sanderson, F. Michaelis, E. H. Godfrey and H. J. Haines.

### BADGER BRASS LAMPS

Headed by the two-bulb electric headlight, no less than six different models of Solar head and tail lamps are shown at the stand of the Badger Brass Mfg. Co., at Kenosha, Wis. The electric line includes two styles of electric cycle lamps, the one being in full nickel and utilizing a single dry-cell, while the other has a pair of dry-cells in a metal case.

The electric motorcycle line includes the two bulbe headlights and a tail light finished in Harley-Davidson gray to match that make of motorcycle. On this motorcycle the Solar equipment is standard for 1916. A set in full nickel for the Excelsior is also shown. In the gas lamp section of the exhibit, the different big headlights are seen in black, black and nickel, and full nickel, with tail lamps to correspond.

Digitized by Google

Badger Brass officials who are in attendance on the stand include Secretary L. J. Keck and W. A. Bell, the western sales manager, Harry G. Haft, of the New York branch, assists Mr. Keck.

### EXTENSIVE VAN CLEEF LINE

At the show stand of Van Cleef Brothers the firm's comprehensive line of cements and other specialties is on display, the newest product of the company being an improved non-collapsible tube motorcycle cement. The firm has discarded the friction top and is now using on the tube an interior screw cap with a special top which enables the cap to be unscrewed readily or screwed back very tightly. This eliminates danger of evaporation or of the cap coming off.

All the members of the Van Cleef firm are in attendance at the show stand, and in addition two of the company's representatives, L. C. Davis and J. G. Littlefield, are helping to entertain and enlighten visitors.

### DUCKWORTH CHAINS

While the exhibit of the Duckworth Chain Mfg. Co., of Springfield, Mass., is for the most part a display board of easel effect, the line of bicycle and motorcycle chains shown thereon is very complete. In both block and roller types, with pitches varying from the smallest bicycle to the 5/8 x 3/8-inch motorcycle, the demand of every chain user could be satisfied. Of interest to lightweight devotees are the small-pitch block and roller chains for driving the magneto.

### HAGERSTOWN LEATHER OFFERINGS

A complete line of puttees and leggings, as extensive as ever and with refinements of interest showing here and there, is to be found at the booth of the Hagerstown Shoe & Legging Co., of Hagerstown, Md.

# MIDGET LIGHTWEIGHT MAGNETO FOR NATIONAL COIL CO.

FROM the laboratory and shops of the National Coil Company, of Lansing, Mich., comes the Model R National magneto, an ignition current generating machine which weighs 3 pounds 10 ounces and is adapted for lightweight motor service. It is also known as the "Midget," and is shown at the booth of the National company in two models.

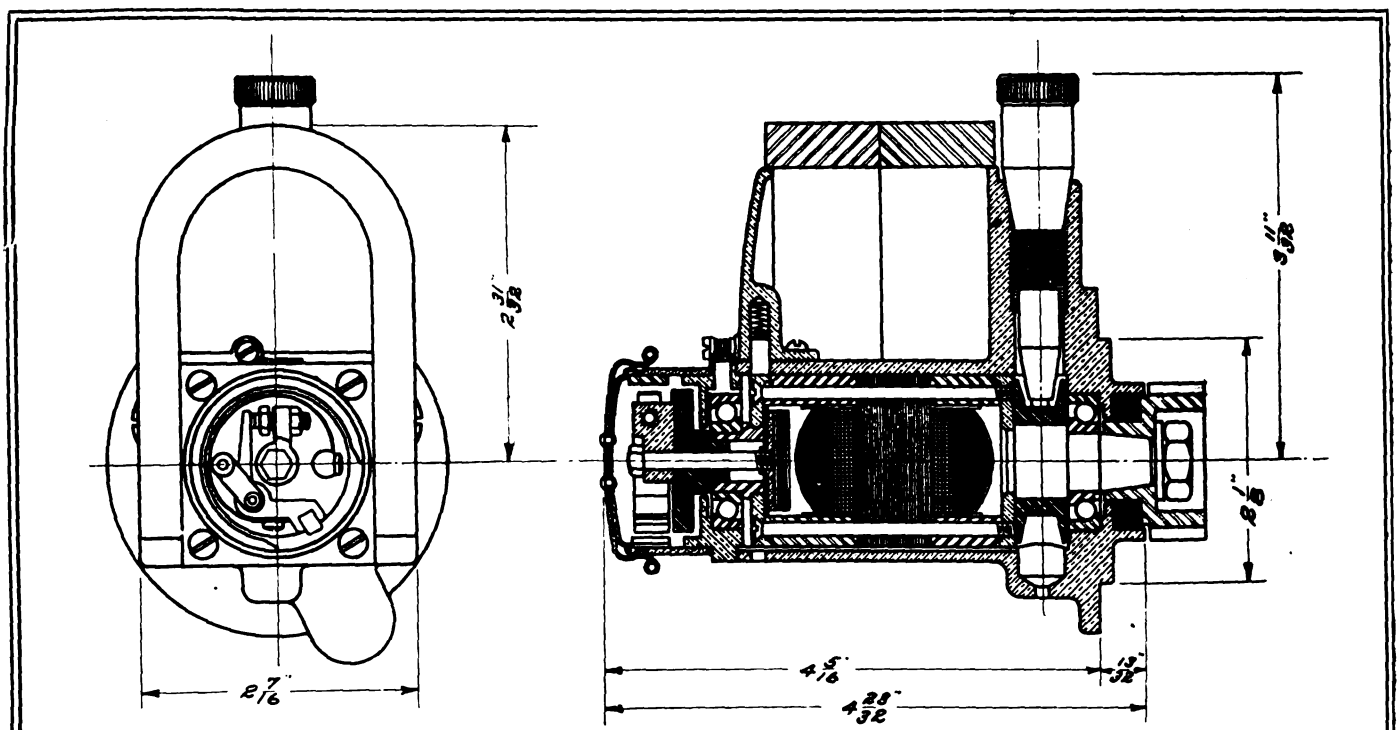
The National "Midget" magneto is of the true high-tension type, both windings being on the armature. There are but two horseshoe magnets. The armature is laminated, each lamination being made from sheet steel of special soft composition. The primary winding is made with Cotenamel wire, tested and carefully wound on, insulators being of varnished silk. The secondary is of the same make of wire, only finer, to take the high-tension current. The secondary winding is tested for continuity and for leakages before being assembled in the magneto.

The condenser is fitted to the armature end plate, and is of the regulation tinfoil and mica construction. The contact-maker is of the rocker type, with fibre block contacting with the steel cam in the casing. The stationary electrode is adjustable.

Current is taken off by a substantial carbon brush, set in a compressed hard-rubber plug. This plug screws into the bracket at the distribution end and is cut with steam-tight threads to ensure a waterproof connection. Both ends of the magneto are fitted with plates in order to render it waterproof. The armature shaft is carried on imported ball-bearings.

The "Midget" magneto is made in flanged base (Model A) and regular square base (Model B.). The base in both models is of aluminum, die-cast in one piece with the frame and high-tension bracket. The field poles are assembled and anchored in one operation in this magneto. The aluminum structure enables the National company to bring out a genuine light magneto.

The Model A magneto allows the machine to be mounted on the motor directly without the use of a bracket. The Model B is intended to fit on the regular magneto foot or bracket on the motor crankcase.



End and Sectional Views of the Midget Magneto, Made by National Coil Co.

C. E. Pearson, the National electric engineer and designer, is in charge of the stand, with General Manager M. M. Seabolt and F. E. Legg, of the sales force, as assistants.

### FORSYTH METAL PRODUCTS

The Forsyth Metal Goods Co., of Buffalo, N. Y., includes in its exhibit at the show mudguard braces, both single and double; sets of mudguard fittings in envelopes, luggage-carriers, bicycle stands, fork ends and assortment of lamp brackets.

The exhibit is under the direction of H. N. Rose, who is secretary of the Forsyth Company.

### INDIAN BICYCLE TIRES

Single tube bicycle tires in fifteen different qualities and treads are to be seen at the stand of the Indiana Rubber & Insulated Wire Co., of Jonesboro, Ind. Clincher bicycle casings made under the firm's special process and designed to fit either single or double clinch rims are also on view, with a series of inner tubes of different sizes.

K. Franklin Peterson, of the Chicago representatives of the company, is in charge of the exhibit, with H. V. Greenwood and F. R. Peterson as his associates.

Digitized by Google

### HEARSEY-WILLIS BICYCLE TIRES AND ACCESSORIES

Hearsey tires and things which pertain to the pneumatic rim covering for both bicycle and motorcycle are arranged tastefully at the stand of the Hearsey-Willis Company, of 339 North Capitol avenue, Indianapolis, Ind. The leaders in the 1916 bicycle tire line are the Tough Treads, in Grecian as No. 222 and in red and gray. The '16 Road tire is also shown in Grecian tread and all gray plain.

The full Hearsey line shown includes the 777, the 999 High Duty, 664 White Wing and the 339 Clincher, as well as the five of the Aladdin series, the Tabasco, the latter being unguaranteed. In the tube line for bicycles, red and gray varieties are on show, as well as the Ruby for motorcycles. Cements, gaiters and repair materials, as well as reliners and patches are also on view.

The stand is in charge of President H. L. Hearsey and Fred I. Willis, secretary-treasurer of the company. Chester Oldham, the sales manager, is also in attendance.

### CORNISH SHOWS ACCESSORIES

L. H. Cornish, manufacturer's agent from Stamford, Conn., is showing a variety of accessories at Space 110. Among these are Anderson, Benton and other standard spark plugs, J. H. Just valve grinders, Heitger carbureters, Standard speedometers and separators, Marfco bicycle attachments, Leonard's Prest-O-Lite brackets for motorcycles, 20th Century lamps, Waterbury & Fraim locks, Weed folding backrests, Warren lubricants, Austin pumps, Lamm Brothers' clothing, Wye Knitting Company's sweaters and knit jackets.

In addition to these Mr. Cornish is showing a set of parts which include a 2 horsepower motor from which one can make his own lightweight motorcycle. This set, costing $50, includes an entire power plant, controls, frame parts and accessories and tools to assemble the whole.

### HEISSLER BATTERIES

A battery for every type of motorcycle is to be found at the stand of the Heissler Storage Battery Company, of 1436 Michigan boulevard, Chicago, Ill. These batteries range from the little accumulators for 2-volt work up to the 7 and 8 volt, three lamps service, for sidecar use. They possess a large acid chamber and non-leakable vents and can withstand the hardest usage. The plates are so constructed as not to sulphate abnormally, buckle or shed active material.

William E. Poole, the Heissler superintendent and designer, is in charge of the stand, along with General Manager Arthur J. Baracree.

### VICTOR LAMPS AND BRACKETS

While many styles of lamps for both electric and acetylene are to be seen at the booth of the Victor Auto Parts Co., of Cincinnati, O., the "Old Reliable" and "Pilot," each of 2,000 candlepower, interest the night-riding motorcyclist chiefly, while the after-dark cyclist is drawn as by a magnet to the electric lighting outfit bearing the Victor name. For the motorcyclist who uses electric current, the stand gives a wide range of head and tail lamps, and there are brackets for all the Victor models.

The electric lighting outfit, which is designed for motorcycles, as well as bicycles, consists of a reflecting headlight with double adjustable bracket, a metal battery-case and the necessary twin cables. The headlight is 4¼ inches in diameter and is fitted with a bayonet-joint switch. The battery casing has a three-point attachment, two to the top tube and the third to the seat-mast.

Fore-door and windshield spotlights in electricity for automobiles, are also shown.

Harvey R. Corcoran, vice-president of the Victor firm, is in charge of the stand in co-operation with Sales Manager W. R. Hughes.

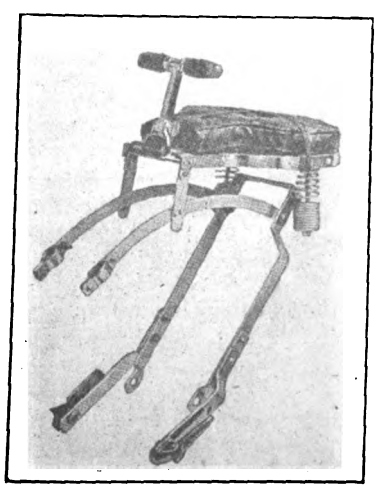
### SEISS HORNS AND LAMPS

The Seiss Mfg. Co., of Toledo, O., is showing its line of warning signals and lamps at the show as follows: Seiss Model M double-acting mechanical horn, Seiss Model A double-acting mechanical horn, the "Clear-O-U-T" horn, the "Root-O-U-T" horn, the firm's lightweight oil lamp and the Breckenride Model 12 acetylene gas lamp, together with the various styles of brackets and the different parts used in the construction of the Seiss line of horns.

George B. Seiss, president and manager, and H. B. Eyer, traveling salesman, are in charge of the exhibit.

### F-N TANDEMS AND BACK RESTS

The initials F-N spell "tandem attachment" to the motorcyclist of any experience, and the familiar F-N of attachments are to be seen in the Coliseum at the booth of the Fentress-Newton Mfg. Co., of 253 Lafayette Boulevard, Detroit, Mich. The regular tandem seat, with its component parts, is very much in evidence, in addition to the tandem with Prest-O-Lite holder and tool case, with back-rail and footboards, and the special model for Indian spring frame and Harley-Davidson machines. The F-N backrests, carrier cushions and lamp brackets are also shown, as well as parts for all goods.



**F-N Tandem Attachment**

Frank P. Fentress, president of the firm, with Irving Beck, sales manager, presides at the F-N booth, and J. C. Sage, the factory superintendent, assists Messrs. Fentress and Beck.

### NEW HAWTHORNE PRODUCTS

In addition to its already widely known lines of lamps, generators and brackets, the Hawthorne Mfg. Co., Inc., of Bridgeport, Conn., is featuring at its Chicago Show booth three new products: The "Old Sol Hornlite" outfit, a new style of tail lamp with license plate bracket, the Hawthorne carbureter, and a lightweight motorcycle lighting outfit.

The "Old Sol Hornlite" outfit consists of an electric searchlight, seven inches in diameter, with one or two bulbs and focusing device and with a horn vibrating mechanism in the body of the lamp. The latter is operated by a switch from the handlebar and is used in connection with the regular lighting and battery system on a motorcycle. Needless to state, there is no horn in the company's new style tail lamp. This is simply a neat and efficient rear lighting device, with license plate bracket, and adapted for use in connection with the "Old Sol Hornlite" outfit.

The Hawthorne carbureter, which is credited with extreme simplicity in both construction and operation, has been adopted for service on the Indian lightweight model and the Auto-Bike for 1915-16.

The electric lighting outfit for service on lightweight motorcycles consists of head lamp, battery container for two dry cells and tail lamps (with license plate bracket) complete with wiring.

The Hawthorne booth is in charge of E. Horace Hawthorne, sales manager and treasurer. In addition, the following have been in attendance throughout the week: President E. A. Hawthorne, F. C. West, Middle Western representative; W. R. Hicks, southern representative; W. A. Prince, representative for Hawthorne products in Cleveland, Ohio, Indiana, Kentucky and West Virginia.

### BOOSTING THE BICYCLE

Attracting attention because of its comprehensiveness as well as through individual features, the New Departure Mfg. Co.'s display at the show includes coaster brakes, hubs, bells and cyclometers of New Departure manufacture, and special emphasis is being placed on the "Red Book" publicity campaign for boosting interest in the bicycle. This campaign is being waged along lines certain to make a wide appeal, and no end of the company's special bicycle literature has been passed out since the show opened.

The company is represented by General Manager DeWitt Page, with Milo J. Horton and Edward W. Mink, salesmen, as his assistants.

### REX BATTERIES AND OUTFITS

Rex batteries separately and in connection with the firm's lighting system for motorcycles are shown at the booth of the Rex Battery Company, of 2505 South State street, Chicago, Ill. The exhibit includes a number of accumulators designed to furnish current for existing lighting and signal systems, as well as complete systems on the Rex arrangement, with lamps, etc.

In charge of the booth is President D. J. Gilleland, with General Manager P. H. Gilleland and G. B. Albright as assistants.

Digitized by Google

### SPLITDORF SPECIALTIES

Dixie and Splitdorf magnetos and Splitdorf spark plugs in full line are to be seen at the exhibit of the Splitdorf Electrical Company, of Newark, N. J., at the Coliseum show. For the big motors in single and twin models, the Dixie Models M1 and M2 are exhibited, while for the lightweight single-cylinders the Dixie S1, a recent model, is right to hand. The Splitdorf Mag-Dynamo, for use with electric lighting and ignition systems, occupies a prominent place in the attractive row of current-producers. The Splitdorf plugs are, of course, exhibited well to the fore.

In charge of the Splitdorf exhibit are General Manager C. W. Curtiss and D. R. Walls, advertising manager. Michael E. Toepel and W. J. Murray, the latter a member of the Splitdorf sales staff, assist Messrs. Curtiss and Walls.

### ECLIPSE BRAKES AND HUBS

Coaster brakes in the Morrow line for bicycles, and front and rear hubs and clutches of Eclipse models are seen at the stand of the Eclipse Machine Co., of Elmira, N. Y. The Eclipse hubs are shown in both bicycle and motorcycle sizes and the clutches range from a capacity for the smallest-powered mount on the market to that of the most powerful twin. Dissected models are on hand for examination by visitors.

President E. J. Dunn heads the contingent from the Elmira factory, and he is ably assisted by General Manager J. C. Ferguson and Sales Manager A. C. Rice. F. S. Ellett, the mechanical engineer, is on hand to explain matters concerning the constructional details, while the sales force is represented by T. N. Biddle, H. C. Bush, L. S. Pugh and G. A. Christopher.

### STANDARD WELDING TUBING AND FORMED PARTS

Tubular products pertaining to all parts of the motorcycle and bicycle are to be seen at the exhibit of the Standard Welding Co., of Cleveland, Ohio. There are also a number of intricate bent parts which should be seen to be appreciated, but the frame components are the things which attract most attention.

Bert Quayle, of the Chicago office, and A. F. Stengle, of the main office, are in charge of the exhibit. Messrs. Flagg and Manternach of the company are also at the show.

### PREMIER CYCLE WORKS

The distinctive features of the exhibit staged at the show by the Premier Cycle Co., of Chicago, consist of a display of several high grade English, French, Swiss and Belgian accessories, such as the line of Powell & Hammer bicycle lamps, Brampton Bros. chains and pedals, several makes of featherweight celluloid bicycle frame pumps and flash back mirror danger signals. In addition to these the Premier company is showing the Aztec Record Clincher, and Samson Red Velvet Cushion Tires, and the complete line of Premier bicycles. The racer is the machine that is being strongly brought out, as well as the Motorbike, equipped with electric lights of distinctive pattern. The Hurry Cycle, which is being given prominent display, is arousing much interest among dealers who are looking for small quick delivery vehicles.

### THREE-SPEED HUBS AND MUSSELMAN PRODUCTS

Bicycle visitors to the stand of the Cycle Mfg. & Supply Co., of 180 North Dearborn street, Chicago, Ill., naturally examined the Sturmey-Archer three-speed coaster hub first of all, that is, when the crowd permitted them to get close enough. This hub incorporates a series of planetary gears, and gives a direct drive on the intermediate, a rise of 31 per cent. on the high gear and a reduction of 33 per cent. on the low. It is operated by a neat hand lever through Bowden wire and is adaptable to any bicycle. It is shown in section and also mounted on one of the Musselman bicycles.

The Musselman combination bicycle carrier is shown attached over the rear of a bicycle in this exhibit. A line of Atco chains for both bicycle and motorcycle is attractively displayed, as well as several of the new Pye-Musselman racing tires. The latter are made along automobile cord tire lines and can be inflated to 150 pounds pressure if desired. The Musselman line of bicycles, which take up much of the stand, is one that is of high-grade, the machines being largely hand-made and embodying the finest fittings.

Manager A. J. Musselman and Treasurer C. R. Wagner are in charge of the exhibit, with L. H. Keuhl, of the sales staff, as assistant.

### NEW YORK LUBRICANTS

Motorcycle oils and greases are included in the show display of the New York Lubricating Oil Co., and an interesting line of literature deals with the lubricating problem in a way that will prove helpful to riders.

Those in charge of the company's exhibit are W. M. Crotty, branch manager; Howarth B. Beaumont and Rudolph A. Janze, salesmen.

### DELIVERY BIKE AND ACCESSORIES

A delivery bicycle built on somewhat the same lines as the Handy is offered at the booth of the Premier Cycle Works, of Chicago. The Premier people also offer a complete line of bicycle accessories and a representative line of motorcycle and automobile accessories from European makers.

## ACCESSORIES AT HARLEY-DAVIDSON BOOTH

A FEATURE of the Chicago show, that did not fail to attract the attention of all comers and that was most appealing to the dealer, was the Harley-Davidson service exhibit, to which a goodly portion of the space in the Harley-Davidson booth was devoted. The exhibit was in two sections. First there was the accessory exhibit, in which was shown a representative line of motorcycle accessories sold, for the most part, under the Harley-Davidson name-plate. The accessory exhibit was staged with the sole idea in view of bringing home to the dealer the real importance of stocking the smaller fitments that go toward increasing the comforts or convenience of motorcyclists, and at the same time of giving the dealer some idea of just what he should carry along these lines.

The Harley-Davidson accessory display comprised lamps, both head-tail and trouble; warning signals, cushions made especially to fit the Harley-Davidson carrier; gloves, jerseys, motorcycle clothing, including a line of "Coverall" waterproof clothing, speedometers and cyclometers and a line of tire specialties. The materials were displayed in an eye-pleasing array, which caught the eye easily and held the attention.

The second section comprised an exhibit of tools only. There were all kinds and sorts of wrenches—some orthodox, and some of very special design, to take certain of the Harley-Davidson parts, as well as jiggs, templates, a flywheel truer, etc. All were mounted up neatly on display boards and the number was lettered on each one. The display was calculated to show the dealer who handles Harley-Davidson repair work the special tools that make for greater speed and better work—both of which are a means of keeping customers satisfied.

### F. A. M. ATTORNEY DROWNED

Chicago, Ill., September 20.—The death of M. J. Wangerein, F. A. M. attorney at Portland, Ore., which occurred while he was attempting to rescue a woman from drowning, was reported to the F. A. M. Board of Directors by Legal Action Chairman William Johnson at its meeting here, and the following resolution was unanimously adopted

"Resolved, That the Federation of American Motorcyclists learns with profound regret of the death of Mr. C. J. Wangerein, of Portland, Ore., one of its ablest attorneys, who has rendered to our members and many motorcyclists willing service and secured splendid results.

"With our sympathy goes our profound admiration of his exhibition of manly courage and regard for the well being of others which indicate him to be the kind of man his friends, the motorcyclists, and the world at large can least afford to spare.

"Resolved, That the trade journals be requested to publish this resolution and the same be copied by the Portland Newspapers."

### CLUTCHLESS CLEVELAND AT $140

From the Cleveland Motorcycle Co. comes an announcement that a model of the Cleveland lightweight will be marketed to sell at $140. This machine will be the same as the one already on sale except that the clutch is omitted.

Mose Leavitt and Jack Nightindale, of the parts department of the Hendee branch in San Francisco are on a hunting trip in the wilds of Nevada. They promised to bring back some black bears to hang up as trophies.

# A LOT OF REASONS WHY THE SHOW WAS A HUMMER

ALL the show staffs that have not been dealt with paragraphically elsewhere in this issue are included in the mighty energetic-looking lineup given below. Look 'em over and you will form some idea of why business hummed throughout the big week. Here they are:

Excelsior Cycle Co., Chicago.—Peter O'Horo, James Paine, A. W. Cuddy, C. E. Mearns and C. C. Cone.

Duckworth Chain & Mfg. Co.—O. L. Barger, in charge; George H. Empsall, Treasurer; Vincent Bendix, W. C. Little.

Eclipse Machine Co., Elmira, N. Y.— J. C. Ferguson, General Manager; A. C. Rice, Sales Manager; T. N. Biddle, H. C. Bush, Pacific Coast Representative; E. J. Dunn, President; L. S. Pugh, Fred Ellett.

G. H. Westing Co., Indianapolis, Ind.—C. R. Sheets and F. S. Hassler, in charge; Mr. and Mrs. G. H. Westing; Robert H. Strum and J. C. Carr.

Hearsey-Willis Co., Indianapolis, Ind.—F. I. Willis, Secretary and Treasurer; C. A. Oldham, Sales Manager.

Badger Brass Mfg. Co., Kenosha, Wis.—L. J. Keck, in charge; W. A. Bell, C. Crawford and Harry G. Haft, of the New York office.

Champion Spark Plug Co., Toledo, O.—F. B. Caswell, Sales Manager, in charge; G. A. Kraus, W. J. Shay, Advertising Manager Corey. R. A. Stranahan, President of the company, visited the show for a brief period.

Ericcson Mfg. Co., Buffalo, N. Y.—T. S. Hemenway, Treasurer, in charge; H. R. Dilks and J. L. Brothers.

Amana Society, High, Iowa. (Exhibit of bicycles.)—G. R. Myers, William Stumpf and William Foerstner.

Monogram Oil Co., 1549 Michigan avenue, Chicago.—W. M. Crotty, Branch Manager, in charge (Chicago branch); H. D. Beaumount, R. A. Janze.

Stoll Mfg. Co., Denver, Colo.—Frank M. Stoll, M. Walter Stoll and Morris Hayutin, of the Western Supply Co., of Denver.

Harry Svensgaard Sales Corp., Detroit, Mich.—Harry Svensgaard, President; J. F. Field, Factory Manager, and W. D. Rumsey.

Loewenberg Co., Newark, N. J.—L. N. Smith, Sales Manager.

A. R. Moslar & Co., Mt. Vernon, N. Y.—J. W. Fischer, Ernest Gluckauf and H. A. Wattensheit.

Wheeler & Schebler, Indianapolis, Ind.—G. T. Briggs, Sales Manager, in charge; B. E. Okey, C. K. Alexander and F. H. Thompson.

Troxel Mfg. Co., Elyria, O.—H. T. Roberts and J. W. Brandt.

L. H. Cornish, Stamford.—Mr. Cornish, unassisted.

Wald Mfg. Co., Sheboygan, Wis.—E. and H. Pawsat.

A. O. Smith Co., Milwaukee, Wis.—W. V. C. Jackson, general manager of the Motor Wheel Division, in charge of the display; James Van Toor, Assistant Sales Manager; A. F. Powell, Chief Engineer; Sam Hope, Otto Pupikofer, Leon Schwab, J. J. Weins, H. L. Schwind, Frank Effinger, Ed. Sweeney, Carlton Richter. L. R. Smith, President, and James L. Sinyard, Treasurer, also visited at the show.

Standard Welding Co., Toledo, O.—H. A. Flagg, Sales Manager; J. C. Marternach, General Manager; A. Stengle and B. A. Quayle.

Pioneer Mfg. Co., Milwaukee, Wis.—L. K. Anderson and J. L. Christensen.

Indiana Rubber and Insulated Wire Co., Jonesboro, Ind.—R. W. Seiberling, Secretary; K. Franklin Peterson, Western Sales Representative, in charge; H. V. Greenwood and F. R. Peterson.

Corbin Screw Corporation, New Britain, Conn.—R. A. Sundvahl, in charge; S. J. Bonner, S. W. Ford, N. B. Ford and A. F. Breither.

Kelly Handlebar Co., Cleveland, O.—Chas. E. Weaver, in charge; G. J. Gifford.

Louis Rastetter & Sons, Fort Wayne, Ind.—R. W. Dick, unassisted.

Frank Mossberg, Attleboro, Mass.—E. W. Scott, R. W. Jones and F. A. Hastings.

Van Cleef Bros., Chicago, Ill.—Maxime E Van Cleef, in charge; Noah Van Cleef, Paul Van Cleef, L. C. Davis and J. L. Littlefield. Felix Van Cleef, who is usually so prominent at the Motorcycle Show, is making an extensive tour of the Pacific Coast. Those in charge of the exhibit say that every second person that comes along asks for Felix.

A. Schraeder's Sons, Brooklyn, N. Y.—B. W. Yockers, in charge; J. Bailin.

Kokomo Rubber Co., Kokomo, Ind.—D. L. Sprakers and R. R. Bowen.

## FIRST LIGHTWEIGHT TO SHOW

Frank Albert, salesman and demonstrator for the Schickel Motorcycle Company, of Stamford, Conn., was not only the first rider of a lightweight motorcycle to reach Chicago, but his trip to the Windy City was the longest made by any rider. Albert reached the show headquarters Saturday, September 18, having been on the road six weeks, during which time he covered about 7,000 miles. He made numerous side trips for the purpose of calling on dealers, and reports the sale of 220 of the lightweight models on his trip. With the exception of the breaking of the gas line connection, the ex-bicycle champion reports no mechanical trouble. He averaged one hundred miles to the gallon of gasoline, while his oil consumption did not exceed one pint to the hundred miles. He used two sets of Continental tires on the trip.

**Albert and His Schickel Lightweight**

Remy Electric Co., Anderson, Ind.—L. L. Kershner, in charge; F. L. Creager.

Jones & Noyes, Chicago, Ill.—H. B. Jones, in charge; T. E. Tucker, manager; Emil E. Wedig, James McTavish, J. Gotlieb and J. D. Hawkes.

Buffalo Metal Goods Co., Buffalo, N. Y.—J. T. McKenneth, in charge; W. F. Emmerson, President; Bob Lawson.

Autobike Co., 2011 Michigan avenue, Chicago, Ill.—L. R. Acton, General Manager, and C. S. Beardsley, Sales Manager, in charge; C. E. Frederickson, President; W. H. Stenger, Vice-President; F. K. Parke, Richard Roehl and C. W. Rambo.

Cycle Mfg. & Supply Co., 180 North Dearborn street, Chicago, Ill.—Also International Stamping Co., of Chicago, same booth; same men in charge.—A. J. Mussleman, C. R. Wagner, L. H. Kuehl and Russel Smiley.

Forsyth Metal Goods Co., Buffalo, N. Y.—H. N. Rose, Secretary, unaided.

Handy Bicycle Co., Chicago, Ill.—J. R. Fullam, in charge; A. D. Meiselbach.

National Coil Co., Lansing, Mich.—C. E. Pearson and T. E. Legg.

Chicago Eye Shield Co., 128 South Clinton street, Chicago.—Robert Malcom, President, in charge; R. H. Wagner and F. E. Weeks.

Army Legging Co., Sand Springs, Okla.—G. Ciociola, President, unassisted.

New Departure Mfg. Co., Bristol, Conn.—M. J. Harton, in charge; E. W. Mink.

Premier Cycle Works, Canal and Washington streets, Chicago.—George S. Lewis, Vice-President and General Manager, in charge; A. L. Perrottet, Treasurer; W. C. M. Foster, Advertising Manager; F. C. Gruss, Sales Manager.

Herbert F. L. Funke, New York, N. Y.—President H. F. L. Funke, unaided.

Militaire Auto Cycle Co., Buffalo, N. Y.—N. R. Sinclare, President; E. E. Richter, Engineer; H. J. Schnauffer, and Chas. Eden.

Peerless Chain Tool Co., Wellington, Colo.—L. L. and C. C. Caillet.

Heinze Electric Co., 1256 Michigan avenue, Chicago.—A. R. Bliss, in charge; W. A. Burke.

Rex Battery Co., 2509 State street, Chicago.—P. H. Gilleland, in charge; G. A. Albright and H. R. Thennis.

Emblem Mfg. Co., Angola, N. Y.—W. G. Schack and Fred P. Ames, Kansas City.

Persons Mfg. Co., Worcester, Mass.—C. A. Sawyer, unassisted.

Majestic Mfg. Co., Worcester, Mass.—O. A. Jones, unaided.

Hagerstown Shoe & Legging Co., Hagerstown, Md.—L. V. Hershey, in charge; R. C. Hershey.

Superior Metal Products Co., Elyria, O.—H. A. Jackson, President and General Manager, unaided.

American Wood Rim Co., Onawag, Mich.—A. B. Coffman, when finding a few spare moments from the big job of managing the show, sees that everything is O. K. at this booth.

Electric Storage Battery Co., Philadelphia, Pa.—G. H. Atkins, in charge; George Neth, T. M. Milton, D. Houlihan, T. Cressey, T. Clarke, H. Marsh and Representative Dunn.

# EXPORT NEWS GATHERED FROM MANY SOURCES AND BOILED DOWN TO FACTS FOR THE BENEFIT OF BUSY MANUFACTURERS

**A New Department Which Will Appear Hereafter in Alternate Numbers of Motor Cycle Illustrated and Which Aims to Give Practical Assistance Along Export Lines.**

## WANTS $15,000 WORTH OF BICYCLE ACCESSORIES

THAT the war is playing havoc with the exports of those countries which formerly supplied the world's markets with cycles and cycle materials—principally Germany, France, Belgium and Great Britain—is indicated in the following extract from a letter received from a Swedish cycle dealer by the Empire Produce & Export Co., 247 Washington street, New York City:

"As perhaps you know, I am carrying on a cycle business in Eslof, Sweden, and as the present war makes it next to impossible for me to get my supplies of bicycle goods from the usual sources, owing to the prohibits in the different countries, I am going to get my requirements filled from the United States. I enclose a list of various items of bicycle goods for which I am in the market and would be very glad if you would quote me on them direct. I am willing to pay for the goods on receipt in New York through banker."

Incidentally, cycle parts makers are urged to get in touch with the export house in connection with this possible order, for in its entirety it aggregates between $15,000 and $20,000. Hubs, both front and rear, saddles, tool bags, pumps, bells, valve rubbers, wrenches, pedal axles, steel balls, tire pump hose and solution tubes are called for. The complete list follows:

10,000 bicycle pumps.
2,000 bicycle bells.
2,000 saddles, bicycle, men.
500 saddles, bicycle, ladies.
2,000 bicycle tool bags, men.
500 bicycle tool bags, ladies.
1,000 yards tire pump hose.
100 kilograms valve cap rubbers.
3,000 Sterling wrenches.
5,000 hubs, rear.
5,000 hubs, front.
2,000 pedal axles, King ½ inch.
1,000 gross steel balls.
10,000 ¾-inch solution tubes (tire cement?)
100 kilograms solution tubes.

The export house is soliciting bids on any or all of the equipment. Estimates should be addressed to Mr. Fernandez, care of Empire Produce & Export Co., 247 Washington street, New York City. Package sizes, gross and net weights, etc., should accompany the bids.

### AN OPENING IN NORWAY

A chance for American motorcycle makers to advance their interests in Norway is indicated in a letter to **Motor Cycle Illustrated** from E. P. Rose & Co., exporters at 17 Battery place, New York City. The firm explains that it is in touch with Norwegian clients who are desirous of obtaining territorial agencies for American power-driven two-wheelers in that country. The exporter is desirous of having motorcycle factories interested in a proposition of this sort forward details as to prices, deliveries, etc., to them together with complete specifications of the machines and a supply of catalogs.

### HELPING TO EXPAND TRADE

Manufacturers who do a considerable amount of business with Dutch firms will find it to their advantage to keep in touch with the American Export Chamber of Commerce, Amsterdam, Holland, which is showing commendable zeal in its efforts to connect importers of the Netherlands with exporters in the United States.

### CYCLES AND PARTS NEEDED

D. J. Ruarus, representing M. Adler, of Amsterdam, Holland, is at the Hotel Astor, New York, and wishes us to announce that his firm, one of the largest of its kind in Europe, is anxious to get in touch with American manufacturers of motorcycles, bicycles and motorcycle and bicycle parts and accessories. This concern already handles many American lines, selling the same all over Europe. It has its own branch offices in Birmingham, England, in Paris, France, and in Java, and is in position to give first class American references.

### NEW AGENTS IN FAR EAST

Manufacturers and others who are giving consideration to export opportunities will be interested in an announcement made by Messrs. Gaston, Williams & Wigmore, 140 Broadway, New York City, that their Far East Division, organized and equipped to develop markets for American industries, will hereafter be in charge of Joseph J. Keegan and Hilliard J. Rosencrantz as the managing directors. These two men have represented American manufacturers in the Far Eastern countries for the last sixteen years.

### GREAT BRITAIN AND ECUADOR

Two inquiries for American motorcycles have come to A. A. Levy, an exporter at 260 West Broadway, New York City. One comes from Great Britain, where a firm is desirous of getting in touch with producers of seven-horsepower machines of the very latest design; the other is from Ecuador, and the principal is anxious to handle the agency for an American machine in his locality. Mr. Levy would like to hear from interested manufacturers.

### OUR SOUTH AMERICAN TRADE

Since March last, there has been a steady increase in our trade with South America, as the following comparative figures will show:

| | |
|---|---|
| March, 1914 | $8,400,000 |
| April, 1914 | 9,000,000 |
| May, 1914 | 10,200,000 |
| June, 1914 | 7,600,000 |
| March, 1915 | 10,500,000 |
| April, 1915 | 10,800,000 |
| May, 1915 | 12,000,000 |
| June, 1915 | 13,700,000 |

During the year 1914, imports of motorcycles and bicycles into Trinidad, British West Indies, were valued as follows:

| | |
|---|---|
| Motorcycles, from the United Kingdom | $7,129 |
| Motorcycles, from the United States | 3,246 |
| Total | $10,375 |
| Bicycles, from the United Kingdom | $19,789 |
| Bicycles, from the United States only | 19 |
| Total | $19,808 |

It will be noted that although we export half as many motorcycles as does Great Britain to Trinidad, our business in bicycles is practically nil, as against nearly $20,000 done by English manufacturers.

Bermuda, another island of the British West Indies, takes $1,523 worth of bicycles from the United States, as against $14,449 from England.

It is evident from the above figures that there is a chance for a big improvement in American bicycle business in the British West Indies. This fact has been called to our attention by the American Consuls in those islands, who state, however, "that there is a decided belief in Bermuda that the British bicycle is much superior to the American product." Here is an opportunity for the American manufacturer to prove that the contrary is the case.

### INQUIRY FOR BAND BRAKES

An inquiry for band brakes for motorcycles has been received by Frederick H. Cone, 176 Front street, New York City. The specifications call for a "hand applied, back wheel, rim or band brake for motorcycles." Mr. Cone will be glad to hear from makers of brake equipment and requests full specifications, prices, etc.

### DUTCH MARKET IS INVITING

We are in receipt of a letter from F. Smits, of Arnhem, Holland, in which he says: "Owing to the present war, both Germany and England seem unable for some considerable time to come, to fill the demand in this country, so there should be some good business for American manufacturers if they care to supply what is here."

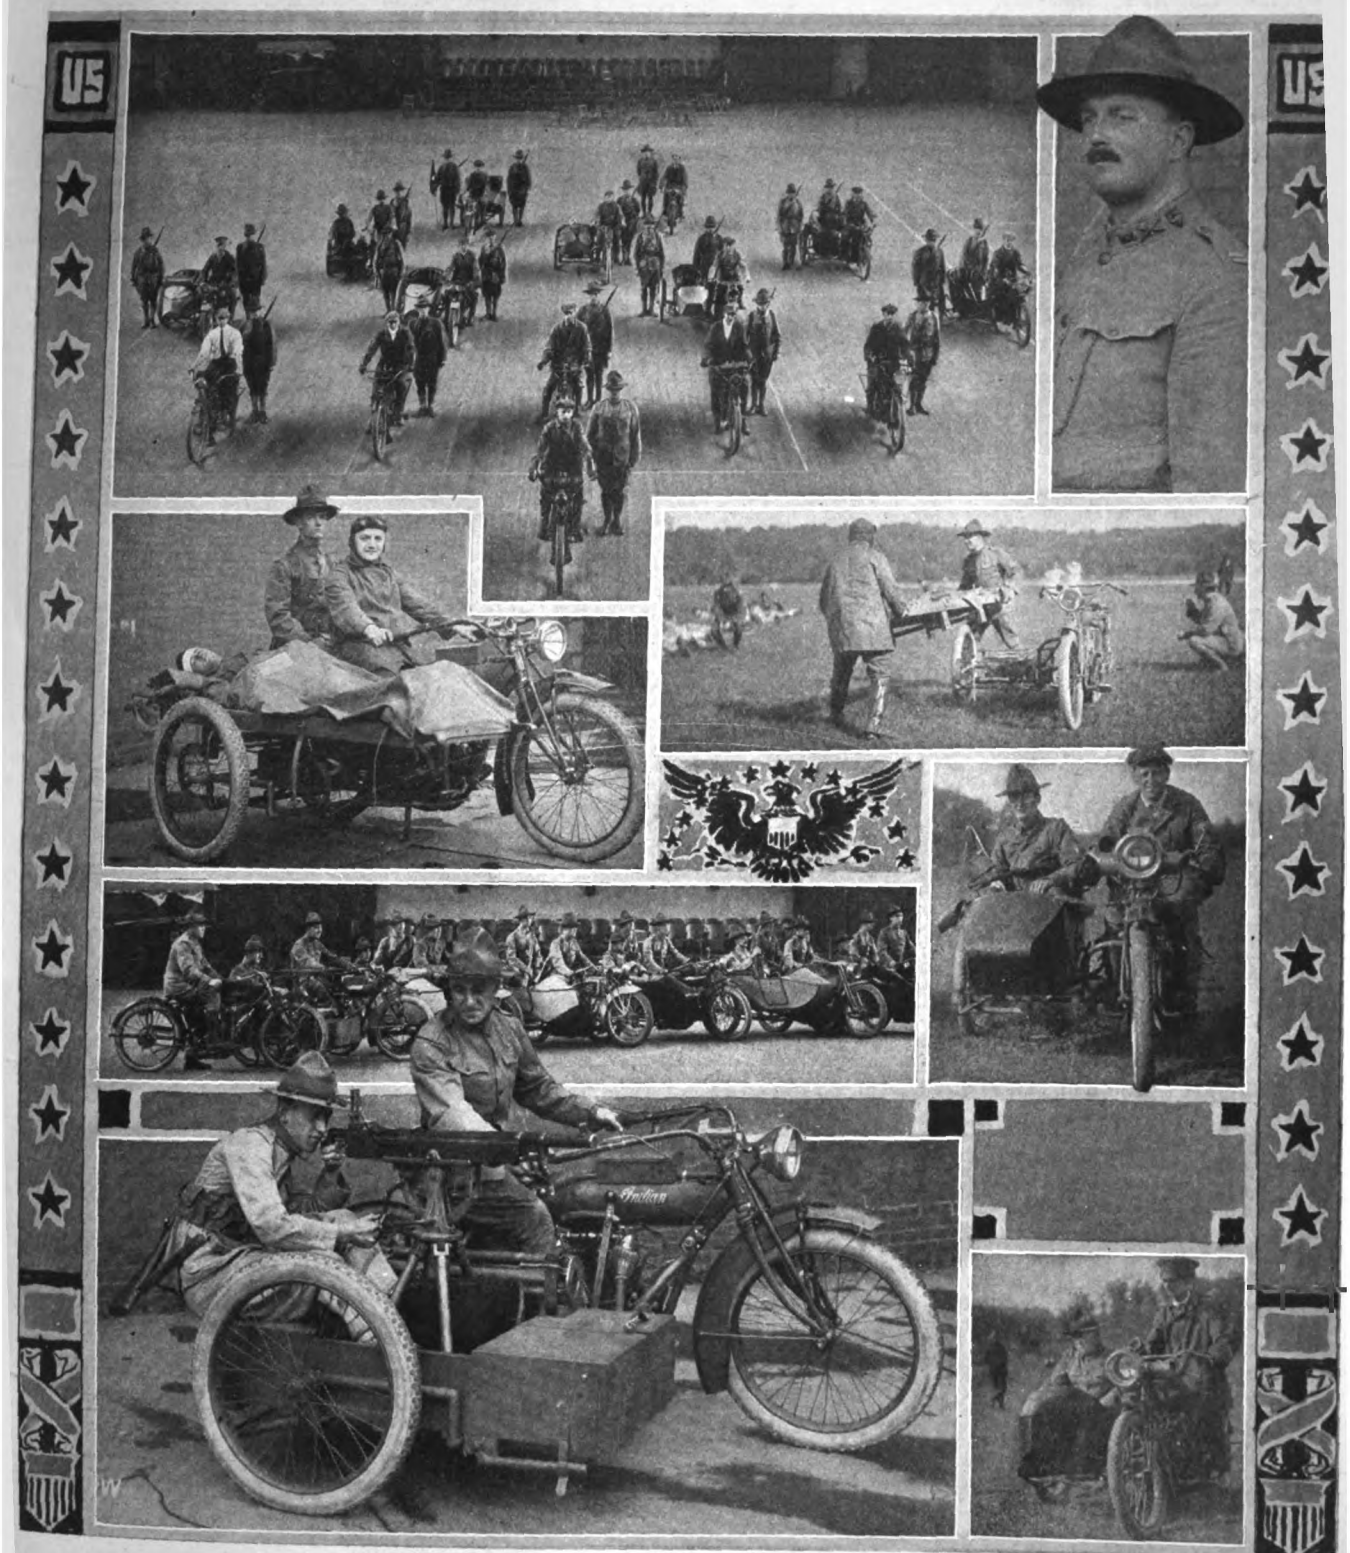
# NEW YORK MOTORCYCLISTS TRAINING FOR ARMY SERVIC



THE unusual photographs shown above were taken at the Coast Defense Armory, Ninety-fourth street and Park avenue, New York City, and at Van Cortlandt Park on Sunday, September 19, when motorcyclists of the metropolis drilled under New York National Guard officers in preparation for the maneuvers of State troops, to be held in Van Cortlandt Park, Saturday, September 25. About 150 motorcyclists participated in these drills, and there was every indication that the riders of the power two-wheelers will make a fine showing at the maneuvers, both in numbers and efficiency.

In the photo at the top of the page appear a few of the solo riders and some of the sidecar outfits lined up in formation at the armory. At the right is Lieut. Lorillard Spencer, the N. Y. N. G. officer in charge of the organization of motorcycle detachments. Below are two views of a sidecar stretcher, loaded and in the field. The narrow panel gives another view of the sidecar lineup at the armory, and the remaining pictures show a machine gun outfit and two of the sidecar combinations used by officers during the practice in Van Cortlandt Park. All these machines and riders, and at least a hundred others, will figure in the field maneuvers on Saturday. These will be reviewed by the state officials, headed by Gov. C. S. Whitman.

# CARL GOUDY, ON EXCELSIOR, WINS AT PROVIDENCE

PROVIDENCE, R. I., September 19.—Carl Goudy, on an Excelsior, won the one-hour motorcycle race at the opening of the new Narragansett Speedway yesterday afternoon. He covered 71¼ miles in that time. Teddy Carroll, Indian was second, with 71½ miles, and Otto Walker, Harley-Davidson, third with 68 miles. Fourth and fifth places were obtained by W. P. Leahy, Indian, and B. M. Spencer, Indian, with 65 and 61 miles respectively. The sixth man was Ray Weishaar, Harley-Davidson, who covered 59 miles.

At the finish of the hour, although Goudy was leading and had never been lapped, the officials announced that Teddy Carroll, of Springfield, Mass., on an Indian was the winner. Goudy protested and after Carroll had admitted that he had not finished first, the officials awarded the race to Goudy, giving Carroll second place. Otto Walker, on his Harley-Davidson, having covered the next greatest number of miles was given third place.

There were fourteen starters, but only thirteen actually competed. George Hamilton, of Montclair, N. J., the only Merkel entrant, could not get started and so withdrew. Following the preliminary line-up Referee B. A. Swenson in a sidecar combination led the field around the track for one lap and then dropped the flag, and the race commenced.

In a short time it was seen that either Carroll our Goudy was to be the winner, bar accident. The Harley-Davidson contingent had barely time to get their mounts uncrated before the start and had to ride with cold motors. Carroll and Goudy alternated in position during the 60 minutes and finally the checkered flag came with Goudy to the fore, and Carroll a quarter-mile behind. Otto Walker, of the Milwaukee contingent, hung on gamely, finishing 2½ miles behind Carroll.

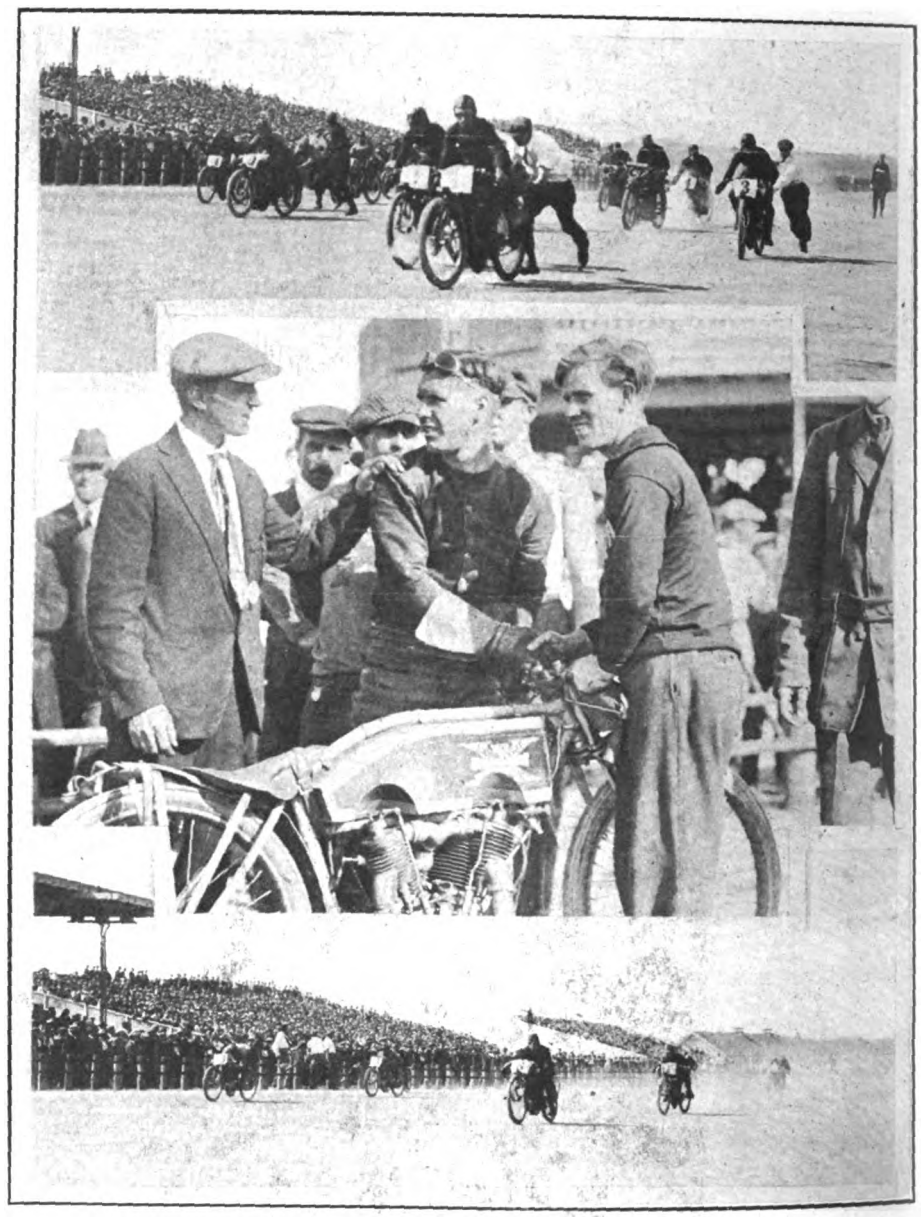
Earl Gove, Indian, was the first to stop. He halted in the second mile to set up on a loose sprocket and was obliged to repeat the operation later in the race. Spencer, Indian, stopped in the 50th mile with plug trouble and took on oil and gas. Weishaar, Harley-Davidson, experienced plug trouble and made one stop at the pits. Eugene Walker, Indian, had motor trouble and lost much time, not qualifying among the first six.

Bob Perry suffered from the jinx once more, blowing a hole in one cylinder and going out on the same lap. This left Goudy to represent the Excelsior camp, as Smith of New Bedford, Mass., was not an experienced man. Goudy, however, was well ahead at this time, and only an accident could eliminate the "Big X" rider. Goudy went the entire 71¼ miles without a stop, and Carroll covered his distance in the same manner.

Charles Helander, a local speedster, had his chance dashed by much misfiring, but pluckily rode several miles on one cylinder. The pace was too hot for this "one lunger" progress and he did not qualify for the money. He came in seventh. After Helander finished the remaining contestants were flagged down.

The race was started at 1:33 promptly, in spite of a request on the part of the automobile management to have the get-away at 1:10. The motorcycle hour event was succeeded by a 100-mile automobile race, on admission being charged for both events. A crowd of close to 40,000 spectators witnessed the day's sports, and cheered loudly for the motorcycle event, which was one of the most exciting they had ever seen.

On the completion of the motorcycle race Referee Swenson paid the prizes to the winners. Goudy received $500, Carro



**Carl Goudy, the Victor, in Center; Top, a View of the Field Getting Under Way; Bottom, the Leaders Hitting Up Top Speed in Front of Grandstand**

**Carroll, Goudy and Gene Walker at a Critical Moment**

Digitized by Google

$250, Otto Walker $100, Leahy $75, Spencer $50 and Weishaar $25. Following is the list of entrants and their machines:

Carl Goudy, Excelsior, Chicago, Ill.

Bob Perry, Excelsior, Chicago, Ill.

George Hamilton, Merkel, Montclair, N. J.

Teddy Carroll, Indian, Springfield, Mass.

Otto Walker, Harley-Davidson, Los Angeles, Cal.

Earl Gove, Indian, Brockton, Mass.

Eugene Walker, Indian, Birmingham, Ala.

A. J. Kenehan, Harley-Davidson, Providence, R. I.

Charles Helander, Indian, Providence, R. I.

Ray Weishaar, Harley-Davidson, Milwaukee, Wis.

B. M. Spencer, Indian, Providence, R. I.

W. P. Leahy, Indian, Hartford, Connecticut.

H. F. Smith, Excelsior, New Bedford, Mass.

A. B. Carlson, Indian, Providence, R. I.

# INDIAN SALESMEN GATHER AT ANNUAL BANQUET

## Treasurer Weschler Announces Hendee Company's Bicycle Plans

SPRINGFIELD, Mass., September 20.—That the Hendee Manufacturing Company will once more enter the bicycle field on a large scale in addition to its motorcycle business, was formally announced last Friday night, by Frank J. Weschler, treasurer of the company, in an address before 36 Indian salesmen from all parts of the country, who assembled for the third annual banquet in Highland Hotel, Springfield.

Mr. Weschler explained that the Westfield Manufacturing Company will make these machines to Indian specifications, for the reason that if these bicycles were manufactured by the Indian factory considerable delay would be caused to the trade. Therefore, in the interest of all dealers who will handle Indian bicycles, arrangements have been made for their manufacture at Westfield in 1916.

The salesmen have been in this city several days, during which they have familiarized themselves with the new models and plans at the Hendee factory. The members of the sales staff came from Toronto, Chicago, Toledo, Atlanta, Kansas City, Needham, Minneapolis, Asheville, N. C.; Dallas, Tex.; St. Louis, Mo.; Newark, N. J.; Los Angeles; Auburn, N. Y.; Wheeling, W. Va., and other places. Mr. Weschler was toastmaster at the banquet. Addresses were made by E. M. Jackson, of the sales department; R. L. Harriman, advertising manager, and C. N. Hinckley, assistant treasurer.

Mr. Weschler reviewed and discussed the new line of 1916 motorcycles, which are expected to be a feature of the market this year and next. The members of the sales force agree unanimously that the new machines are far advanced mechanically over the output of the past and the greatest value that the company has ever produced. In announcing that the company will resume its sale of bicycles, Mr. Weschler touched on the tremendous annual bicycle output of this country and its relation to the new line of Indian bicycles.

E. M. Jackson, of the sales department, followed Mr. Weschler in a detailed outline of sales methods adopted for the coming year. R. L. Harriman, advertising manager, spoke on the advertising plans for 1916 and the great selling force of advertising. He dwelt particularly on the influence of sincere, truthful advertising, saying that the policy of the Hendee Company has always been along that line. C. N. Hinckley, assistant treasurer, touched on both the sentimental and business side of the selling of Indian motorcycles, and the high importance of the sales staff in the general prosperity of the company.

In concluding, Mr. Weschler made the hit of the evening by announcing that sales in the last year have exceeded his estimate made a year ago. This, in view of the abnormal and unfavorable conditions, was considered most gratifying.

This year's sales convention was the most successful in the company's history. The salesmen left Saturday for the national show at Chicago, which opened Monday. At the close of the show they will depart for their respective territories.

The banquet tables were arranged in the form of a capital I. Those present were as follows: F. J. Weschler, E. M. Jackson, C. N. Hinckley, R. L. Harriman, E. A. Buffum, F. D. Shomo, W. E. Johnston, A. H. Crocker, H. C. Shaw, John McDowell, J. B. McNaughton, William Shields, Arthur Anderson, H. H. Noyes, W. A. Prentice, W. G. McCann, J. A. Priest, J. D. Milne, Thomas C. Butler, Jr., Z. Godin, C. K. Andrews, H S. Barrows, Arthur Stephens, E. H. Towle, J. L. Seidell, Arch R. Strong, Harvey Bernard, O. V. Atwood, J. J. O'Connor, J. S. Mabbett, E. Drake, Robert Gilbertson, E. A. Robertson, Ray Seymour, F. B. McFadden and I. F. Jacobs.

### SIGNS FOR 1,000 MOTOR WHEELS

J. W. Grady, Smith Motor Wheel dealer in Worcester, Mass., is one of the early visitors at the show and the first to sign up at the show for next year. Grady renewed his contract and signed for 1,000 machines. "And," said Grady, "I'll eat my hat if I don't sell 2,000." Probably Grady's contract is the first which was signed for the entire show.

How the Wigwam Salesmen and Some of the Department Heads Lined Up at the Banquet

## A Lot of Reasons Why the Show Was A Hummer

(Continued from page 43.)

Flxible Sidecar Co., Loudenville, O.—Hugo H. Young, in charge; F. G. Schnittke and F. M. Exline. Mr. Exline made the trip from the factory at Charleston, W. Va. J. H. Hubbard, J. F. Durr and A. H. Weimer are also there.

Excelsior Motor Mfg. and Supply Co., Chicago.—George Mathis, Sales Manager; Gid Haynes, Arthur Rochow, P. E. Zimmerman, Geo. Evans and Mark Erskin.

Nonpareil Horn Mfg. Co., New York, N. Y.—Carl Kaufman, President; Lincoln T. Kauffmann, in charge.

### SEES SHOW DESPITE HANDICAP

That S. C. Hamilton, the Harley-Davidson dealer of Pittsburgh, Pa., believes the motorcycle shows to be of inestimable benefit to the dealers is evidenced by his presence at the Coliseum this week. Mr. Hamilton has been on the sick list for the last two months, with no less an affliction than a serious attack of blood poisoning in the left limb. Until the time of his starting for Chicago Mr. Hamilton was forced to use crutches, in order to walk at all, and even now finds it difficult to walk with the aid of a cane. With such courage, grit and enthusiasm, no wonder the dealer from the Smoky City can emphatically say: "I had a fine season." Hamilton has, of course, signed up for next season and sees prosperity ahead.

## 340-MILE RUN TO SHOW ON DAYTON MOTOR BIKE

CHICAGO, Ill., September 19.—Covered with mud both as to machine and clothing, yet without a falter in the motor, C. W. Waughop, Dayton traveler, rode up to the Coliseum at 1.30 this afternoon on a Dayton motor-bicycle, just 50 hours out of Dayton, O. In all, Waughop rode the little front-wheel drive mount for 340 miles, averaging 18 miles per hour throughout.

Waughop left the factory of the Davis Sewing Machine Company, on Davis

**Waughop on Dayton Lightweight**

avenue in Dayton, at 11.30 on the morning of September 17, on what was the first cross-country run on a light-weight machine. It was not long after his departure on Friday that he ran into a rain storm, which had its effect on the roads over which the Dayton and its rider were to pass. From late that afternoon until Sunday morning, Waughop rode through mud of varying depth and stickiness, encountering fogs and rain storms. There was no mechanical trouble during the run and no difficulty at all in handling the mount.

Waughop claims not only to have made the first cross-country trip on a light machine, but also to be the first rider of a light-weight to reach the Show. "She burned 3½ gallons of gas on the trip," said C. W., "and only one pint of oil was needed. There was some oil left in the base when I finished, too. The motor-bicycle handled easily in mud and I am convinced that a girl could have handled it all the way."

Following a short reception, Waughop and his motor-bicycle went into the Coliseum, and the machine was placed on exhibition at the Davis stand. Waughop's performance was considered a remarkable one, as outside of the factory testing staff and a favored few in the trade, no one had ever ridden the motor-bicycle for any distance. The trip served to convince many skeptics that the little mount with its powerplant in the front wheel was all that it claimed to be, in spite of the rather radical nature of its design. (A description of the Dayton motor-bicycle is on page 32.—Ed.)

# PARKHURST NABS MILWAUKEE CENTURY RACE

### Wolter and Fredericks, His Team-Mates, Finish Second and Third

MILWAUKEE, Wis., September 19.—The Harley-Davidsons made it one, two, three in the 100-mile feature event of the race meet held here this afternoon on the State fair track under the auspices of the Milwaukee Motorcycle Club. "Red" Parkhurst, the popular local idol with the speed fans, established a new track record when he finished first in 90 minutes and 54 seconds flat for the century.

While the attendance was smaller than at any of the previous meets held in this city, today's speedfest was an exhibition of the fastest motorcycle riding that has ever been shown here. Incidentally, this is Parkhurst's second consecutive 100-mile victory, the last time being 91 minutes flat.

Not having to make a single stop contributed largely to the fact that the gray fellows copped the first three places. Up to the ninety-third lap it was a neck and neck fight between Parkhurst and Bill Brier for first position, the two alternating in the lead on an average of five laps. Then Brier was forced out with a broken chain that put his frame on the hummer. This left "Safety First" Joe Wolter in second position, with Maurice "Curly" Fredericks third. Alva Stratton, on an Indian, was fourth; Lewis Hadfield, fifth, and S. H. Tinsley, Excelsior, sixth.

It was a fine day for Mr. Jinx. Don Johns, who probably is on more intimate acquaintance with this esteemed gentleman and all the little jinxes than any other rider performing in the State of Wisconsin, had the misfortune to drop a push-rod after finishing the 10-mile event and that left his start in the long race a vacant spot. Stratton inherited the deadly affects of Mr. Jinx's work when he got through with Johns, Alva running out of oil on the far side of the track and five laps to the bad when the puffing pitman finally arrived with the precious lubricant. The hungry eight-valve yelped for oil again in the eighty-fourth lap. Then to cap the climax Stratton blew a tire in the eighty-sixth that put him out of the race. The Colorado Springs boy must be given credit for doing some of the fastest riding of the meet in his efforts to make up for lost time. He had been able to make up for all but one of the lost circuits when his tire went.

Stanley H. Tinsley came all the way from Knoxville, Tenn., where he is in partnership with James A. Knox in The Motorcycle Store, to get a taste of mid-western speed, but all he got was the experience of going through a mid-western fence. From the stands it looked like a bad accident. Three finishers had been flagged off when the crowd surged on the track and caused Referee Baldwin to flag the rest of the field and award the prizes according to the place occupied at the time of the accident. Tinsley escaped with a bad shaking up, scalp and body wounds, but with no serious injuries.

The ten-mile curtain raiser was a walkaway for Don Johns and his Indian. Parkhurst and Brier on Harley-Davidsons finished second and third. The Harley-Davidson entries all were pocket valve type of motor.

F. A. M. officialdom was well represented. J. J. Lantry, Wisconsin commissioner, superintended the running of the meet; H. E. Baldwin, State referee, was starter, and Arthur L. Johnson, Illinois State commissioner, was announcer. Determined to avoid any repetition of the last checking mixup, the club officials had arranged for a double barreled checking system. The meet was one of the best of the season in scoring, announcing and checking.

The results:

Ten-mile, non-port—First, Don Johns, Indian; second, Leslie Parkhurst, Harley-Davidson; third, William Brier, Harley-Davidson.

One hundred-mile, non-port—First, Leslie Parkhurst, Harley-Davidson; second, Joe Wolter, Harley-Davidson; third, Maurice Fredericks, Harley-Davidson; fourth, Alva Stratton, Indian; fifth, Lewis Hadfield, Harley-Davidson; sixth, S. H. Tinsley, Excelsior.

# UNUSUAL INTEREST CENTERS IN FOUR-STATE RUN

DAYTON, O., September 23.—Great interest is being aroused in the Ohio State F. A. M. Fourth Annual Reliability Run, which, under the joint auspices of the Ohio and the Pennsylvania F. A. M. organizations, will start from Dayton, October 9, and wind up at the New York Show on October 12. Many of the motorcyclists who contemplate visiting the show are availing themselves of this opportunity to travel to the big cycle exhibition in genial company.

A meeting will be held at the Dayton Motorcycle Club rooms, corner Broadway and Germantown streets, at 8 p. m., October 8, at which special instructions will be given to all contestants. Any competitor not at the meeting in time will be penalized. Entrants' machines must be left at the North Main Street Garage, 211 North Main street, Dayton, O., not later than 3 p. m., October 8, for inspection and sealing. Each competitor must present his F. A. M. card at the meeting in the Dayton M. C. club rooms.

From the court house in Dayton, the solo riders will start at 6 a. m., and the sidecars at 5 a. m., October 9. Contestants will be allowed to remove their machines from the official garage thirty minutes before starting time and will ride them to point of departure immediately.

Three diamond medals will be given to the manufacturers' team, consisting of three riders, that finishes with the highest consistent score. Only one manufacturer's team of each make is eligible to compete for this prize. To the team of two riders with the highest score will be presented a silver cup, given by the Pennsylvania State F. A. M.; a diamond medal will be given to the professional rider with the best score, which has been hung up by Ohio State F. A. M. Commissioner I. J. Jacobs. Commissioner Robertson, of Pennsylvania, has contributed a diamond medal to be presented to the amateur with the most consistent standing, while the best sidecar contestant will be awarded with a silver cup.

The approximate mileage for the four days' trip is 814 miles. The first day of the journey will see the riders travel from Dayton to Wheeling, W. Va., on the second day Chambersburg will be the objective, while the third day will bring the contestants into Philadelphia, and the last day will witness the end of the run at the New York Show.

Entry fees have been arranged as follows: Professional, $6; professional post entry, $10; amateur, $2, club teams, $4; sidecars (professional), $10. All entries close at noon, October 6. Further information and entry blanks can be secured by communicating with Commissioner I. F. Jacobs, 208 North Main street, Dayton, O.

# GRAVES SHATTERS CENTURY RECORD

## Also Cleans Up All Sweepstakes at Intermediate Distances—Creviston Second

DETROIT, Mich., September 19.—In winning the 100-mile National F. A. M. Championship today, Morton J. Graves, Indian, set a new world's dirt track record for the distance his time being 84:41⅗.

"Morty" won only after the hardest kind of a fight all the way, and after matching skill and nerve with Ray Creviston, Indian, in one of the most thrilling track duels that ever happened. It was nip and tuck between these two all the way, and Graves led over the tape at the finish by a margin of only a dozen feet.

Graves took the lead on the very first lap, with Creviston only a yard behind and Kinnie, on a Cyclone, coming a close third. "Crevvy" tried hard all the way, but Graves was ready and willing to match him at every stage of the game, and their relative positions "stayed put."

Besides getting first prize money and the championship gold medal, Graves cleaned up all the sweepstakes money for leading at intermediate distances. Graves crossed the 25-mile mark in 21:59. He made the 50 miles in 42:03, and rolled past the 75-mile station in 63:28.

At the finish Creviston was making another desperate bid for the lead again, but Graves held him off and won by a narrow margin of little more than a machine's length. Kinnie, on the Cyclone, rode to a good third place.

In the preliminary races, Graves took the first 5-mile heat, with Stokes, Excelsior, second, and Lochner, Excelsior, third. Time, 4:14⅗. Creviston grabbed the second heat in 4:08⅕, with Kinnie, Cyclone, second, and Montgomery, Excelsior third. The final heat, ten miles, was a close win for Graves, with Creviston second and Kinnie third. The time was very fast, 8:18½.

Creviston and Kinnie each rode two time trials of a mile each in an effort to set a new track record. Each made the same time on the trials, 49 seconds flat.

## Miami Sales Force in Busy Annual Conference

MIDDLETOWN, O., September 20.—The entire sales force of the Miami Cycle & Mfg. Co. attended a conference which was held at the home office last week, preparatory to the regular fall campaign. Those in attendance were C. A. Van Doren, New England branch manager, and his assistant, Geo. Schueller; E. W. Adams, Pacific coast sales manager, and his assistant, J. E. Steuer; and also A. D. Webster, H. A. Gliesman, W. M. Sheets, Chas. Weiss, A. J. Chapple, C. F. Pineau and F. P. Lee.

Chapple is a new addition to the Miami sales force and will travel in the Southeast exclusively on Flying Merkels and Miami Power Bicycles. C. F. Pineau, while not new to the Miami organization, is making his first appearance in the sales activities as assistant to R. D. Webster. Pineau will travel through Pennsylvania and New York. Weis also makes his debut as a new member of the selling staff and will cover Wisconsin and Minnesota. He has been Racycle agent for twenty years in La Crosse, Wis.

## F. A. M. Directors Take Up Important Matters

CHICAGO, Ill., September 22.—An informal meeting of the directors of the F. A. M. was held today in the Coliseum, at which a number of important matters were discussed and passed on. The first subject that came up for consideration was the protest filed by John Hess, the Excelsior rider, who claims that the Bosch trophy and the amateur championship race, which was run at Sacramento, Cal., on July 25, was unjustly awarded to Thomas Liggett, the Indian contestant, whom Referee John L. Donovan declared the amateur champion. Hess insists that he was the real winner of the race and hence entitled to the Bosch trophy.

The F. A. M. directors, after mature deliberation, declared that a copy of the protest should be mailed to all of the F. A. M. directors and that a mail vote should be taken. In that way only, was the consensus of opinion, could a really fair decision be rendered.

The status of the Smith Motor Wheel was next considered, and it is now certain that favorable action will be taken with reference to motor wheel races. A report from Legal Actions Committee Chairman Johnson was read and accepted.

After fully discussing the letters from former New York State Commissioner John A. Hall, whose recent election at Saratoga was declared void by the delegates to the 1915 F. A. M. Convention, it was decided that a communication be sent to all of the trade journals which would explain the position of the directors regarding Mr. Hall's case. Those present at the meeting were: President A. B. Coffman, Chairman Johnson, Messrs. Castle, Ash, Hunt and Campbell.

### A CORRECTION

In the report of the 300-mile race at Chicago which appeared in these columns it was stated that all the Indian machines entered were equipped with Splitdorf magnetos. A revised statement from Chicago says that the Indians used by Johns, Whittler, Gene Walker, Taylor and Seymour carried Bosch magnetos.

### FOR EMERGENCY SQUAD

Lincoln, Neb.—The local gas company has purchased two Thor machines from the Tubman-Grone Cycle Co., for use by its emergency squadron. This cycle concern has the exclusive agency for the Pierce and Pope bicycles.

# SHE TOOK KIDDIES ON 500-MILE TRIP

EDITOR: I have read with much interest articles appearing in **Motor-Cycle Illustrated** from lady riders, telling of their road experiences. My husband being the Harley-Davidson agent in Waterbury, Conn., I have occasion to ride a machine frequently and enjoy it thoroughly.

It so happens that in our town the express company does not deliver goods, and since we have "stuff" coming to us nearly every day, it devolves upon someone to make the trip to the express company's headquarters. I found that Mr. Lang had to neglect much of his work to make these trips daily, and decided that I would learn how to ride a machine and take this pleasant burden off his shoulders.

Now I've got three jobs in the Waterbury Harley-Davidson agency, to wit, clerk, bookkeeper and "express woman." And the last mentioned job is the one I like best.

After my husband returned from his vacation I decided to treat myself to a little recreation and take the four children with me. What could I do to make the most of this vacation? It didn't take me long to ponder over this question and find a dandy solution. I just hauled out the sidecar combination and piling the kiddies in it, started my Harley three-speed going and off I went.

The first day I rode to Springfield, Mass., a distance of sixty-one miles, and found the roads in splendid condition. We travelled by way of Hartford and the children were delighted to see the men working in the tobacco fields. It seems that every time a motorcyclist stops, people think that there must be trouble of some sort. Quite often along the route into Springfield, I paused so that we might better view the scenes, and almost without exception an autoist would pull up alongside and ask if he could be of service. Very kind of the autoists, but decidedly little they know of motorcycles.

We stayed at Springfield for a few days and then departed for Boston, about one hundred miles away, arriving there at four o'clock in the afternoon. I stored my machine at the Harley-Davidson Motor Co., on Huntington avenue, and called on some friends in the Hub. After several days of sight-seeing, we got our outfit and left for

**Mrs. Lang and Her Youngsters On Road to Boston From Waterbury**

Pawtucket, R. I. The remainder of the return trip, which covered a number of days, was made by way of Worcester and Springfield. The length of our little vacation journey was nearly 500 miles. Did we enjoy it? You bet! And for next year we are looking forward to a still longer trip.

MRS. S. LANG,
Waterbury, Conn.

## NEED $42 MORE IN THE CHELINI "FINE FUND"

Motorcyclists who desire to show their sporting spirit by contributing to the fund which will be used to pay the fine of A. Chelini, the rider who was arrested for speding through Alameda County, Cal., on the recent Transcontinental Relay, are invited to forward their donations to **Motor Cycle Illustrated.** Only fifty dollars is needed, and individual contributors are not expected to give more than one dollar each. As soon as the required amount has been raised it will be sent to Chelini.

For the benefit of those who have not followed the developments in the Chelini case, it may be stated that this rider, mounting a Pope machine, was delegated to carry the President's message on the last leg of the Transcontinental Motorcycle Relay. While passing through Alameda County on his way to San Francisco, Chelini was chased twelve miles by a motor-cop, who also fired half a dozen shots from his revolver at the rider's tires. Chelini continued his ride and delivered the message in San Francisco. Later he was arrested and a fine of fifty dollars was imposed. Chelini was obliged to pay it or submit to a jail sentence. It is the amount of this fifty-dollar fine that Chelini feels should be returned to him, and motorcyclists along the coast seem to feel the same way about it.

Just prior to the publication of the September 16 number of **Motor Cycle Illustrated** a letter was received from a well-known California motorcycle dealer requesting that this journal give publicity to the fund idea, and the announcement was made. From now on acknowledgment will be made of each contribution received.

Those who have so far contributed are as follows: C. H. Minto, assistant sales manager of the U. S. Tire Co. of California, $1.00; San Francisco branch of B. F. Goodrich Tire & Rubber Co., $1.00; San Francisco branch of Hendee Mfg. Co., $1.00; **Motor Cycle Illustrated,** $5.00.

## EFFICIENT POLICE WORK

Reading, Pa.—The usefulness of the motorcycle in police bureaus was strikingly exemplified here several days ago. A passenger, Edward Hunsberger, on a northbound street car noticed that another passenger who looked like a tramp paid his fare from a roll of greenbacks as thick as his wrist. The man asked the motorman how to get to Allentown and was told he would have to change cars at Temple, four miles north of the city.

At Temple Hunsberger telephoned to the city police station and in a trifle under 10 minutes from the time he hung up the receiver Motorcycle Officer Francis Franckowiak, one of the city's gasoline squad, was in Temple. He won the race against the Allentown car going to Temple and placed the stranger, William Green, under arrest. At police station Green confessed that he found the money in a wallet near the city limits and restored the whole amount, $95.90, to the owner, Elmer Marks.

## A VISITOR FROM NEBRASKA

C. H. Miller, who recently left his home in Red Willow County, Nebraska, for a leisurely tour by the southwest route to New York City, arrived in the Metropolis a few days ago, and is now on his way back to Nebraska by the central route. Miller uses a three-speed Harley-Davidson, and reports that his mount stood up without a whimper through all kinds of rough going. He is of the opinion that there is little to choose between the sand of Oklahoma, the swamps of Louisiana and the mountain roads of Virginia, but admits that Virginia has a "shade" on most other states when it comes to hard traveling. Miller intended to travel eastward by one of the central routes, but the floods forced him to swing to the southwest. He is loud in praise of Texas roads.

## CARR ON STATE F. A. M. TRIP

Indianapolis, Ind., September 20.—Starting the first of October Jack Carr, Indiana F. A. M. commissioner, will make a tour of the entire State and call on every F. A. M. member and dealer in the State. The State federation is rapidly regaining the ground lost during the past few years.

During the past four months the membership in the State has been increased almost one hundred per cent., but the State officers are not satisfied with this increase, as it is not representative of the large number of motorcycle riders in the State. A strong appeal will be made to all the dealers who are not members to join the organization, as their influence is the most desired of all. An effort will be made to affiliate more clubs with the national organization. At present there are several new clubs which have sprung up in the State that have not affiliated with the federation. Commissioner Carr hopes to gather in these clubs. Carr will use a motorcycle and sidecar throughout his trip in the Hoosier State. He will act as the Indiana representative of **Motor Cycle Illustrated.**

## RACINE CLUB ORGANIZES

Racine, Wis., September 23.—The Racine Motorcycle Club has filed articles of incorporation with the Secretary of State The purpose of the organization is stated as purely social. The incorporators are W. R. Wadewitz, Arthur Naleid and Car Anderson.

# On the Pacific Coast

## ART HOLMES BREAKS LOS ANGELES-SAN DIEGO RECORD

Los Angeles, Cal., September 21.—Art Holmes, on a stock three-speed Harley-Davidson machine, broke all previous records for the ride between this city and San Diego. He left Maple and Seventh streets, Los Angeles, at five o'clock in the morning of September 16 and reached the office of the San Diego Sun at seven thirty-six the same morning, his time being two hours and thirty-six minutes. The previous record was three hours and fifteen minutes, made by Paul Derkum two years ago. The total distance of the route through Rose Canyon, between Los Angeles and San Diego, is one hundred and thirty-three miles.

## EAGERLY AWAIT LIGHTWEIGHT

San Francisco, Cal., September 18.—That riders in northern California are eagerly awaiting the arrival of lightweight machines was the opinion of Edwin F. Merry, the Northern California distributor for the Excelsior, when recently interviewed. He believes that there will be a large field for the light models and states that many prospects in his section of the Golden State are waiting for complete announcements before placing their orders.

In Merry's opinion the second hand problem could be greatly simplified by referring to a used motorcycle as a rebuilt machine and having the dealers make such repairs as are needed to put the old mounts in good riding condition. The "X" distributor averred that the "agency bicycle," by which he meant the bicycle bearing a well established trade mark,, is witnessing a larger sale than the brands of unknown origin, for makers' nameplate, he said, inspires confidence.

## SHORTENS DISTANCE

Bakersfield, Cal.—Over a score and five miles have been clipped off the riding distance between this city and Los Angeles with the recent completion of the new ridge road that connects the two municipalities. Though the new highway leads through primeval country, the grades have been "ironed out," affording easy and enjoyable motoring and cycling from one city to the other.

## COMMERCIAL SALES IN LOS ANGELES

Los Angeles, Cal., Sept. 15.—When asked how the commercial business in Smith Motor Wheels was developing in and around this city, Mr. J. O. Benson, of the Southern California branch of the A. O. Smith Co., referred to the varied services to which the attachment is put. Numerous bicycle messengers are using the booster and putting it to strenuous service. In addition to that, drug stores, and other retail stores and public service corporations have found that the motor wheel fits in well in their various departments, insuring quick work and a big saving. Mr. Benson also states that collectors and solicitors, who have bought the attachment on their own initiative, find it both efficient and economical as a means of rapidly covering considerable territory.

## NORTHWEST HIGHWAY NOTES

Tacoma, Wash.—Motorcyclists from all parts of Grays Harbor were present at the opening of the new road to Lake Quinalt, near Hoquiam, Wash. The road is a section of the Olympic Highway, which is to encircle the peninsula. On the section between Quinalt and Queets, a distance of eighteen miles, the survey is now under way, the last legislature having appropriated $48,000 for its construction.

It has been definitely announced that the tollgate between Milton and Joseph, Ore., in the heart of the Blue Mountains, is to be eliminated. A toll of $1 has been collected from all motorcyclists passing the gate. About one mile from the old stile it is proposed to construct a new road paralleling the ancient trail.

The Waterfront road, the one missing link of the Pacific highway in Washington, will be opened by November 1, and will remain open throughout the winter.

## WILL EXHIBIT AT FAIR

Riverside, Cal.—Clyde Hafer, manager of C. Will Risden's local branch, will exhibit at the Riverside annual fair this year. He will show a complete line of motorcycles and bicycles, demonstrating his machines to all prospects. Hafer's past experience with fairs has shown him that they are among the best means of securing live prospects.

## LAND TWO COMMERCIAL SALES

San Bernardino, Cal.—Two commercial sales of Smith Motor Wheels have been made by William Gurr, the Indian agent in this city. One of the attachments will be used by a tailor and the other by a grocery house. Gurr carries in stock the Princeton and Cleveland bicycle.

## WEISSER IS NOT COMPLAINING

Julius N. Weisser, Harley-Davidson agent at National City, Cal., near San Diego, sums up the situation in his district as follows: "Motorcycle sales have been only fair of late, but our line of Miami bicycles seems to be meeting a popular demand."

## BIG PRIZES FOR BELL COUNTY MEET

Two hundred and fifty dollars will be distributed in prizes among motorcyclists participating in the six motorcycle events of the Bell County Fair, which will be held at Midway, Texas, October 8 and 9.

The racing program, under the direction of the F. A. M., will be as follows:

Five miles, novice, first prize $15, second $10, third $5. Five miles. free-for-all, first prize $20, second $15, third $10. Ten miles, professional, first prize $25, second $15, third $10. Five miles, novice, first prize $15, second $10, third $5. Ten miles, open, first prize $20, second $15, third $10. Fifteen miles, professional, first prize $25, second $15, third $10.

## MICHIGAN CITY RACES

Michigan City, Ind., September 20.—The Michigan City Motorcycle Club will stage four F. A. M. races on the LaPorte one-half-mile dirt track, October 3. There will be a five and twenty-five-mile professional, the winners of which will split up seventy-five dollars between them. For the amateur have been arranged a novelty and a ten-mile event. The entry fee will be one dollar. The races will start at 1:30 p. m. sharp.

## HUMPHRIES GETS LION'S SHARE

Terre Haute, Ind.—First and second honors in the Labor Day races were shared by John Ellis, V. R. McMillan and Homer Humphries, all mounted on Indians. Three events were run off on the fairgrounds track and Humphries accounted for the pursuit race and the ten-mile open. McMillan was second and Ellis third in the latter race. The time was 13:32⅗. Ellis romped home the winner of the five-mile race and was closely followed across the tape by McMillan. The time was 7:27⅕.

## SILVER LAKE PARK RACES

Akron, O.—Shorty Mathews, Indian, won the five-mile and the fifteen-mile open at the races at Silver Lake Park on September 11. T. Marks, Thor, took the ten-mile open and came second in the five-mile. J. Lipstrue, Thor, won the three-mile sidecar event. A three-mile race was called off by reason of one contestant skidding into the fence. A crowd of 7,000 attended the meet. Following are the summaries:

Five-mile open, 30½ cubic inches—Mathews, Indian, first; Marks, Thor, second; Amos, Merkel, third.

Three-mile sidecar race—Lipstrue, Thor, first; Bertle, Merkel, second; Myers, Harley-Davidson, third. Time, 4:14.

Ten-mile open, 30½ cubic inches—Marks, Thor, first; Sudduth, Thor, second; Amos, Merkel, third. Time, 12:34⅗.

Fifteen-mile open, 30½ cubic inches—Mathews Indian, first; Sudduth, Thor, second; Amos Merkel, third. Time, 18:29.

## TINSLEY SETS NEW TRACK RECORD

Knoxville, Tenn.—Stanley Tinsley, a Excelsior rider, riding one of the new model 16 racing machines, recently hung u a new record for Johnston's half-mile trac when he negotiated the distance in 32⅘ seconds. Tinsley was taking the turns wid open at about seventy miles an hour an resembled a motor plow on high speed i a river bottom, while making the turns.

# SKIRTING THE COAST OF FLORIDA TO KEY WEST

## A World Sidecar Tourist's Interesting Trip Through the Semi-tropics

By DELLA CREWE

WHEN I was in New York last Fall and told my friends that I would start on a sidecar trip down the Florida coast, I explained to them in a very wise way that the tropics and semi-tropics ought to be visited between October and May, for that was the dry season, and hence the best part of the year for touring.

"Yes," these New Yorkers replied, "we've heard people say that before. At this time of the year you're bound to have a pleasant journey in balmy Florida. Goodby, Della, and here's good luck to you."

### Forcing Down "Goose Bumps"

Good luck! Those two words seemed like cruel sarcasm when I arrived in Jacksonville and was trying to force down the "goose bumps" which were asserting themselves strenuously. The weather was cold, damp, bleak—it was awful. I had left New York City in the middle of a spring-like January, and five days later entered Florida badly drenched, my teeth—and they're all my own—literally rattling with cold.

For five weeks I waited for the sun to smile down, and then one Sunday it actually peeped out of the clouds. Jumping into my outfit I soon found myself spinning along a brick highway and into the ancient city of St. Augustine. I said that the sun peeped out—that's just what it did. Nearing St. Augustine, the clouds again completely covered the sky and it rained, rained rained.

The saint like old city inspires one with a deep confidence in ones fellows, so I thought nothing of leaving my outfit unprotected. When I returned to the combination to continue the journey, I discovered that some misguided soul had relieved me of my extra set of inner tubes. Wonder he didn't steal the Harley-Davidson and Roger's sidecar? That thief was dense.

### Negotiating Sandy Roads

For diversity of attractions, to test the qualities of a machine and the stability of a rider, there is nothing like the trip down the east coast road. From St. Augustine to Moultrie, a distance of six miles, the road was hard surfaced and presented no difficulties. But from the latter point for about forty miles down the coast the traveling was in a mixture of sand and clay, from six to ten inches deep.

The Florida State roads are sometimes less than sixty inches wide. In meeting autos and heavy trucks, the drivers frequently requested me to give them all the road and then promised to help me back after they had passed. Houses are miles apart, making it necessary for the motorcyclist to equip himself with plenty of food and lots of "drink" both for the rider and the machine.

### Asked for Cigarettes

I found a number of automobiles stalled on the roads and not infrequently met drivers who, sitting with their legs dangling over the side of the auto, asked me for cigarettes, drinks and eats. I carried no smokes, but gave away what water and food I could, for some of the men, if their stories were to be believed, had had nothing to eat for twenty-four hours and were patiently waiting for some kind person to give them a lift.

After crossing the Tomoko River, one soon strikes better roads and the going into Ormond, sixty-eight miles from St. Augustine, is exceedingly good. For several miles out from Daytona the roads are badly in need of repairs. Between that place and Titusville, you encounter nothing but boggy, marshy and mixed sand roads.

### Caught 900 Pounds of Fish

At Titusville, I was met by some fishermen motorcycle enthusiasts who invited me on a fishing trip with them. We caught 900 pounds of good "aquatic flesh," which was more than we needed for a substantial dinner. These new found friends escorted me over the heavy roads leading out from Titusville, and, then bidding them farewell, I continued on to Rockledge, one hundred and seventy-five miles from Jacksonville.

The ride out from Ft. Pierce and cross the San Sebastian river is over improved highways and through the pineapple section where one must tarry to eat this luscious fruit. You take a splendid chance of losing all the religion that's in you, when traveling toward West Palm Beach. The patience bump on your cranium must be indeed large, for the roads in that district tax the rider most severely.

### The "Four Hundred" on Wheels

From Palm Beach to Miami is strictly a bicycle country. The "four hundred" are seen going to card parties, afternoon teas and theatres, robed in pure linen and silken hose, leisurely pedalling on their trim bicycles. One also sees quite often the popularly termed "Afromobile"—a comfy cane seat with a bicycle attachment behind—which the negro wheels along, charging his passenger a dollar an hour.

The section of the country toward Miami is a veritable paradise—covered with fruit cultivations and masses of varicolored flowers. The city of Miami I found to be the cream of the motorcycle world on the lower east coast. Dealers representing all makes of machines report a good business, for the boys have three hundred miles of hard rock road to travel on and the purr of the motor is constantly heard in and about the thriving town.

### Would Test Job's Patience

Attractive Miami is no longer the terminus of the east coast, for convict built highways now lead one to "Florida City," until recently known as Detroit. At that point end the good roads and then you strike a "highway hash" of sand, marl, clay and broken rock. Rideable? Yes, if you have the patience of Job and a reliable motorcycle and sidecar. And also a quantity of stick-to-it-iveness. You've got to pet your two-wheeler with the best food obtainable to get through.

When I reached the end of the Florida coast road, I reluctantly departed with my outfit and shipped it via the seagoing freight car to Key West. This extension of my trip proved to be rather expensive, for the charge of shipping a motorcycle is everything but cheap. The trip to Key West was a beautiful one. The train took eight hours to bring me to the Key—eight hours away from any restaurant and buffet car. You've got to take your lunch—and if you go, be sure and make it a great big lunch. You'll eat it all.

In the early evening, with everything blue around you, for blue is the predominate color in Key West, you arrive in very fine spirits—nothing blue about your spirits, you bet—in beautiful Key. I found that the city was a big naval center and that the two most important products coming from there were sponges and cigars.

Oh! If I were a man, I'd have bought some cigars, sat down in a cozy hotel chair and reviewed in the puffs of curling smoke my glorious motorcycle trip which I had so happily ended in Key West.

---

## JAMAICA M. C. TO STAGE RUN

Jamaica, N. Y., September 20.—The Jamaica M. C. will hold its Fall endurance run on Sunday, October 24, under the rules and sanction of the F. A. M. The route lies over the best roads of Long Island and totals a mileage of 215 miles. The run will start at 7 in the morning from Hurvin's motorcycle establishment, arriving at Freeport at noon and returning to the starting point at six in the evening. The outward journey will be along the south shore of Long Island and the homeward trip along the north shore. Cups, accessories and medals are being offered as prizes by the club.

---

## MEN BEHIND CINCINNATI SPEEDWAY

Cincinnati, Ohio, Sept. 23.—The names of the stockholders of the new Cincinnati Speedway Co., which have just been made public after several months of quiet but exceedingly effective work on the part of the promoters, include those of many of the most prominent business men of the city. The project has now reached a stage where it is an assured success, and Harry Hake, who has been active in pushing it, will leave shortly for New York to inspect the new track there, in order to get ideas for use in connection with the construction of the Cincinnati track and stand. The officers of the company are as follows: E. W. Edwards, president; H. S. Leyman, vice-president; T. J. Davis, treasurer, and W. T. Foley, secretary. Many leading automobile and rubber men are among those interested. It is planned to hold an early spring meeting, as it seems certain that everything will be completed in ample time for a meet.

# 1916

## *GEORGE N. HOLDEN, Indian Dealer at Boston, says:*

**Nineteen-sixteen will see the sale of Indians doubled. I realize that, with the exception of one year, this means a bigger increase than we have ever made in a season's output, but nevertheless I believe my prediction to be justified by all indications that in the past have unfailingly served to point the way.**

**To begin with, our card indexes show an increase of over two hundred per cent in the number of "casual inquirers." By that term we designate those who drop in, ask a few questions and depart, always with a catalog and always leaving a new name and address for our file of prospects. This remarkable growth is unquestionably due to the activities of the Factory Advertising Dept., to whom the agent is indebted for the 1915 campaign of billboard and road-sign publicity. Backed up by local newspaper advertising on a liberal scale, this campaign has been productive of better results than any similar movement ever attempted in the history of the industry.**

**Second in the list, but perhaps first in importance, is the unfailing satisfaction that the 1915 models are giving. Never have I had the pleasure of listening to such a rabid bunch of partisans as are the members of the '15 clan and we all know that the best advertising experts in the world have as yet to create a system to equal the word-of-mouth boost of the satisfied user.**

**In addition to these important factors, we must consider the rapidly growing use of the Indian in commercial lines and for side-car outfits, both of which fields, while yet in their infancy, are adding thousands of new members to the Tribe every year—members who would not be making use of the motocycle as a solo mount.**

**Of course, these indications, favorable as they are, are not orders and they can be productive of orders only by the hardest and keenest kind of persistent plugging.**

**Without push and salesmanship any retailer of any product will soon be compelled to step down and out. With these forces fully developed, every man in a position to take advantage of the opportunities created by the Hendee Mfg. Co. (and this, of course, means every Indian agent) can undoubtedly double his sales in the forthcoming season.**

dian

## *C. F. WRIGHT, of Ballou & Wright, Portland, Oregon, says:*

**The writer has very carefully surveyed the motorcycle field in the Northwest and sincerely feels that 1916 will bring forth a tremendous increase in the volume of Indian business.**

**You may wonder why we are making such a broad assertion, but we have various good reasons for thinking as we do in regard to the prospects for the Indian motorcycle business next year. Some of these reasons we will endeavor to outline.**

**The roads in this section of the country are being improved very extensively, and with these improved roads and the wonderful scenery that there is in Oregon and Washington motorcycling in general will be much more popular. Every indication at the present time tends to make us believe that there is going to be a tremendous amount of money disbursed in this section during the next year on account of the wonderful grain and fruit crops that are being harvested, and last, but not least, the one main reason that will make Indian business increase is the fact that Indian motorcycles are giving first class satisfaction in every respect. The riders are well satisfied with their mounts and are boosting them to their friends, so we can see no reason why an agent in our territory, who is alive to the situation, follows up his prospects in a careful manner, should not meet with wonderful success in marketing Indians.**

**The tremendous advertising campaign carried on by the Hendee Mfg. Co. has been productive of many sales, and we have only just begun to feel the real benefits of this extensive advertising, which, when carried on through another season, will be the results of a tremendous business on Indian motorcycles throughout the country, thus adding handsome sums to the bank account of every Indian agent.**

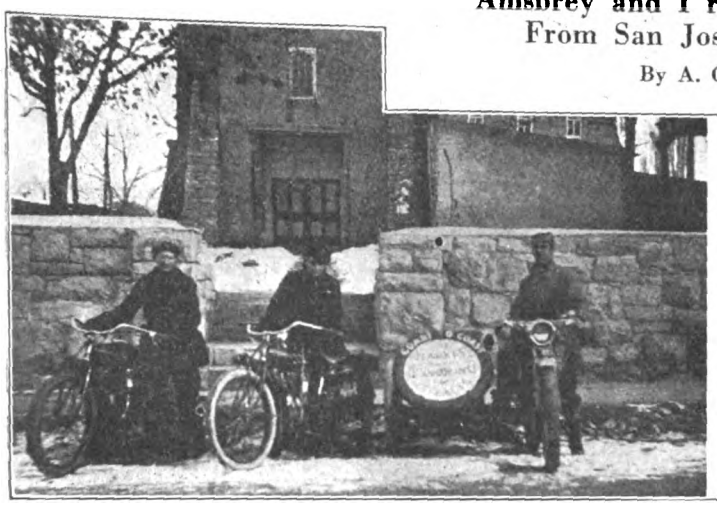
# That Coast to Coast Sidecar Trip

## Amsbrey and I reach San Francisco From San Jose, New Mexico

By A. G. HERRING



**The Sidecar Tourists Resting Before San Miguel Church in Santa Fe, New Mexico, Which Was Founded in 1606. Right—Stopping for the Night at a Deserted Adobe Hut in Hell's Canyon, New Mexico**

WHEN Amsbrey asked the two genial prospectors, whom we met camping out a short distance west of San Jose, New Mexico, the way to the nearest town they were unable to give any definite information. They told us, however, of a railroad station that was located some distance away. We decided to trust to luck and, starting our motor, plowed through the deep snowdrifts which were piled so high in places that we had to use all our strength in pushing the sidecar combination through. This was undoubtedly the hardest going which we had experienced since leaving our starting point in New York.

### Exhausted Pushing the Outfit

About a quarter of a mile from the railroad station, Amsbrey and I came near collapsing with exhaustion. We had to abandon the outfit under a nearby pine and hoof it to a ticket agent's shack. The fellow in charge of the station told us that it was against the rules of the railroad company to permit strangers to take shelter there. We, therefore, had the choice of freezing to death outdoors or returning to share the hospitality of the prospectors. Back to the camp we went.

Of course, the prospectors were willing to have us share all that they had and they immediately set about preparing supper of biscuit, fried salt pork, coffee and karo. The outfit of the prospectors consisted of a prairie schooner, drawn by a mule and a horse, in which were contained all the necessary supplies. Amsbrey and I slept that night on a bed of pine, covered with canvas, quite warmly tucked under thick blankets. After breakfast the next morning I asked our hosts how much we owed them and received the curt but good-natured reply that they were not running a boarding house and would positively accept nothing. Such is the spirit of these western prospectors!

We got back to the machine, which we had left standing near the railroad station. The snow was so deep that it was impossible to plow through it for any distance and under the strain the two-speed gear broke. Lee went to the station and telegraphed the factory to send a new gear on to Santa Fe, while I started out for the next town, a distance of ten miles, to find some one to pull the machine through. I found walking difficult, for I had to cross arroyos and came near being snowed in under drifts. A few miles from the town I espied railroad tracks and just barely managed to drag myself to them. I rested on the track a while and then followed the ties to the town of Rowe.

### Only Two Trains a Day

In the railroad station at Rowe the agent was kind enough to let me get warm and rest up a bit before going to the general store to obtain some supplies. Returning to the station, I was told that only two trains went back to the point where I had left Amsbrey. The next train started out at midnight, which meant a long wait.

Lee Amsbrey in the meantime had persuaded a Mexican, who dwelt in a little adobe hut, to give him shelter and a warm cup of coffee by letting him have the motorcycle lamp and promising to pay two dollars. When the midnight train arrived, he came down from the hut and met me. Early the next morning, we placed the machine in a barn and hopped on the train to Santa Fe.

### Hunting in the Mountains

In the city we again came upon the prospectors who invited us to go on a hunting trip with them. Having lots of leisure at our hands, for we were still waiting for the new two-speed to come from the factory, we readily took up the invitation and spent nearly two weeks shooting rabbits and deer in the snow covered mountains outside of Santa Fe. When the new two-speed arrived, we took the railroad back to the point where the machine had been stored and fitted on the new gear.

While pushing through the Glorieta Pass, Amsbrey and I paid a farewell visit to the prospectors' camp. We smelled the venison from the distance and knew that a fine dinner was waiting for us. Our friends had everything in readiness, and we had just to sit down and eat until we couldn't eat any more. For three days we remained in camp and then proceeded to Santa Fe, where we were met by the governor, the secretary of state and the state engineer. We visited a number of the many historical places in the city, among which was the San Miguel church, built by Franciscan monks in 1606.

### A Mexican Holdup

Leaving Santa Fe, we managed to reach Domingo, after a day of gruelling riding through snow and up and down mountains. Lee and I went to the general store for supplies, and while the clerk was kept busy wrapping our parcel, two forbidding-looking Mexicans entered. One fellow knocked off the clerk's glasses, while the other drew a long stiletto and was about to stab the clerk, when both Amsbrey and I drew revolvers and backed them out of the store. That night, the only lodging we could find was at a hut kept by a Mexican, and after the hair-raising experience just encountered with Mexicans, you can bet that we got mighty little sleep.

On the following day we got into Albuquerque. Getting out from that city, we hit the wrong road and sailed into Hell's Canyon to inquire of the fellows at the Forest Rangers' camp the best way to return to the right route. Coming through an arroyo, we broke the frame of the machine, pushed the outfit along for seven miles and came upon a deserted adobe house. Here we camped for the night. The next day, we got back to Albuquerque and had the broken frame welded.

### At Elephant Butte Dam

Eagle was reached after a few days of hard riding. Here we were royally entertained by a rancher who invited us to dinner. We left for Hillsboro the following day, after spending a few minutes at Elephant Butte Dam, a marvelous and beautiful irrigating dam which the government is building. Night came before we had reached Hillsboro and we were forced to stop at a ranch kept by freighters. We slept on a canvas bed, and in the morning found ourselves rolling in dew. Arriving at Hillsboro, we replenished our stores and then made a bee line to a town called Wilma.

Digitized by Google

We found Lordsburg, a mining town of about eight hundred population, and a lively little place, like all mining towns. Hardly had we put up at the local hotel, when the news went round that a fellow had committed suicide because of the girl he loved, then a head popped out the hotel window and yelled fire.

### Three Days at Ashpeak

Within the next few days we crossed the border into Arizona, the first place we struck being Duncan, there we turned in for the night. We had hardly gotten twelve miles out from Duncan, when Lee and I were stuck in the mud at a place called Ashpeak Mine, and found that further traveling was impossible for the time being. We therefore stopped with a miner who showed the many inspiring views of the section. Early in the next morning when the clouds had lifted sufficiently we could see mountain range after range rolling off in the distance. For three days we stayed at Ashpeak and then left for San Carlos.

It required nearly two days to get to that point, for we had quite a number of streams to ford and found it necessary to hire an Indian to act as guide. We next arrived at Globe, where we enjoyed three pleasant days, and then left to inspect the Roosevelt Dam. We then crossed the Continental Divide and breezed into Phoenix.

### California at Last

We were certainly two happy fellows when about a week after arriving at Phoenix, we crossed the desert and entered Yuma, Cal. But crossing the desert was not an easy task. We ran out of gas and found it difficult to replenish our supplies. Besides that inconvenience, there was the greater handicap to progress—we had to eat stale bread. So when Amsbrey and I finally arrived at Yuma, we were tired and hungry as bears, but we were happily able to satisfy both our want of sleep and food.

Our journey through California was delightful. We leisurely rode through Holtville, El Centro, and arriving at San Diego visited the exposition there. Six weeks were spent with some friends and relatives in Pomona, while waiting for the factory to send a new brake. Leaving Pomona we started for San Francisco, and arrived there by way of Bakersfield, after resting up at the latter place for two days. At 'Frisco, we saw the great exposition from end to end. Our trip having been brought to a close, Amsbrey started back to New York by train, while I decided to remain in California. All things considered our sidecar journey across the continent was a happy experience; it was gruelling in spots, but there was no end of adventures and the scenes which we passed were ever-changing and became more interesting and beautiful as we neared the Pacific coast.

# ACCESSORIES NEEDED BY SIDECARISTS

## Hints on Protecting Driver and Passenger in All Weathers

By GOSLIN

WHEN we stop to consider that 3,300 sidecars of only one make are scooting over the highways and byways of these United States in the hands of satisfied owners, we are likely to be impressed by the idea that this means of transportation has real merits. Then when we keep in mind that other manufacturers of the third-wheelers are constantly adding to the sidecar army we feel safe in estimating that no less than 10,000 combinations are in use in this country. Very good; but there is no reason why the number of sidecarists shouldn't be twice as large. And it will be before many moons have passed.

Great little vehicle, the sidecar—rideable any old time, winter or summer, in snow, rain or shine. That is—if one has the proper equipment. The sidecar, like many other articles, requires reasonable handling and thoughtful equipping if it is to give the greatest possible returns. Now, let us say that we sidecarists are 10,000 strong; has any keen manufacturer of accessories, or retail house, for that matter, gone after our trade properly? Hardly. How many articles have been produced to add to our comfort and ease in the sidecar? Very few.

### English Riders Well Supplied

Our English motorcycling cousin has every necessary, and unnecessary appliance offered to him to assist in making all-year riding safe and comfortable. What would some of our fair-weather sidecarists do in England, where waiting for a clear day is often a very tedious occupation? They might never find a chance to ride. But the English rider is protected against his rather uncertain climate by the sidecar and accessory manufacturers, who provide everything from foot-warmers to limousine bodies.

Here are some of our real needs—and may a wideawake manufacturer let this little screed sink in and try to help us a bit. His reward, I feel sure, will be immediate. We need waterproof clothing, ponchos that will fit the sidecar and light hip boots to protect the feet and legs. Then we need trunk, suitcase and tire racks, but not as keenly as the first-named articles. We have none of these accessories upon the motorcycle market in this country at the present time, and this lack will cause many sidecar owners to put their combinations away just as soon as the first chill winds begin to blow.

### What the Sidecarist Needs

The ideal sidecar outfit should have, in addition to regular motorcycle equipment, a cover, a poncho for the passenger, an auto-shirt or oil skins for the driver and sou'westers or rubber caps for both passenger and driver. Thus outfitted, one could defy anything short of a deluge. A cover for the sidecar usually comes with it; this works well enough when fitted over an empty car, but affords small protection to the passenger in rainy weather. A poncho of rubber or painted cloth would serve the purpose better, for this article, if large enough, would completely cover the sidecar and passenger, and still permit the latter to have his head out. An oilskin poncho 66 by 90 inches, retailing at $2.50 has found favor with a number of sidecarists I know, but this of course is not made or marketed especially for the sidecarist.

An auto-shirt of rubber, with elastic bands at the wrists and double buttons at the neck is better than a poncho for the driver, for it permits of free use of the hands. An auto-shirt retails at $5. Neither of the foregoing articles afford much protection to the wearer from the knees down, so that to keep dry one should have a pair of light hip boots to pull on over shoes and trousers. Such an article is on sale in England, where it is known as a "wader." Unless the motorcyclists can get something similar in a sporting goods store, something made for duck hunters, he must go without. Under these circumstances it seems that the accessory manufacturer who would produce such an article, adapted to the special requirements of the motorcyclist, would find a surprisingly large market for it.

To complete one's rainy day outfit a sou'wester of oil skin or painted cloth is needed. For the more fastidious rider there is the sheet rubber cover that fits over the wearer's cap and comes down over his shoulders. These articles are sold for fifty to seventy-five cents each.

### For Cold Weather Riding

For the cold-weather rider there are a number of articles made for the automobile market that the motorcyclist can adopt. Buffalo robes, mackinaw coats, fur caps, arctics, etc., all help one to defy Jack Frost and make winter riding less rigorous. Handlebar gauntlets are already on the market, but a windshield that would effectually protect the legs and knees against the chill blasts has not yet made its appearance in this country.

All the articles mentioned should find a ready sale among the 10,000 sidecarists in these more or less United States. That the sidecarist deserves more attention than he has so far received from American accessory manufacturers can hardly be denied. There appears to be a large sales field that no one is working as yet. Will some enterprising manufacturer take steps to place the sidecarists of this country on a par with those of England and Continental countries as regards comfort? Let's put our heads together, clasp hands (after the manner of the trance mediums) and hope—hope hard.

# MOTORCYCLE CONDITIONS ON THE PACIFIC COAST

By B. ANDERSON
Pacific Coast Branch Manager, Hendee Mfg. Co.

WHILE the Pacific Coast territory is an exceedingly prosperous one, it is badly handicapped by a lack of factories. The majority of riders in this part of the United States work in stores and offices as well as on farms and ranches, but the fact remains that they are all more or less dependent upon the sales of farm products or of the live stock from the ranches. Therefore, the fall of the year, when the farmer markets his products and obtains his money in the lump, is the banner season for the motorcycle trade in California and the States north of it. The manufacturer should favor his Coast agencies during the fall season for this reason.

While competition is keen, it is clean with but very few exceptions and salesmanship, with goods of quality, generally wins out.

The riding season is longer in the Pacific Coast sections than in other parts of the country. It lasts practically ten months in the year. In the more southern parts in particular, the two months of the rainy season do not prevent the acclimated Coast rider from using his mount just the same as in the others, but he generally limits himself to city riding, leaving the long-distance touring for better weather. In the northern parts, the winter with its heavy snows prevents riding until the thaws come.

California, Oregon and Washington offer much to the motorcycle tourist. A few hours' ride will take the traveler from summer to winter in many parts of the country, as most of the tall peaks are accessible by motor roads and the snows of the peaks are in turn forgotten a few hours later, when the rider returns to the general level of the country surrounding or to the ocean shore. With the fine systems of highways which the Coast States are building, it is only a question of a few seasons before the country will be provided with a network of fine roads that will be the peer of those of France and Germany at their best.

My own experience on the Coast has been that the proportion of cash business to the number of sales has been greater than in other parts of the United States. Of course, the business depression of the past season has caused an increase in the number of installment sales. The second-hand motorcycle has cut a big figure in sales during 1914, and many purchasers acquired such mounts because their financial circumstances last season prevented them from acquiring new models.

With the advent of the lightweight, a new field will be opened out here. Many people who have heretofore used bicycles, street cars and jitneys will undoubtedly take advantage of the new mounts. However, for touring purposes, I am of the opinion that the mountain grades which occur in such numbers in all directions call for the heavier motorcycles with their two and three speeds. In the coastal cities, an all-weather finish in place of nickel plating would prove the better, as the action of the moist salt air on the nickel has an acid effect. We have lots of room to expand out here, and when one realizes that we have in the whole State of California less population than the city of Chicago it is easy to realize the immense possibilities of this section of the country.

During the past season, the open-air market for second-hand mounts has made its appearance. Many riders have placed their machine in these marts to be sold on a 5 per cent. basis or at a fixed price in some cases. These open-air markets are generally located on some prominent corner in the business quarter of the city and transact a thriving business as a rule.

Regarding the outlook for 1916 in California in particular, a banner year is expected.

## WHAT ORGANIZED EFFORT HAS DONE IN NEW JERSEY

By GOSLIN

WERE motorcyclists as a body alive to their power when effectively organized, many of the bad conditions on the road and adverse legislation now existing might be stamped out. Organization has helped in New Jersey when wide-awake fellows start things going.

There are in the State many trolley and railroad crossings where the planks and the pavements are so worn out that it is dangerous to cross over them on a two-wheeler. It remained for one lone F. A. M. rider, David C. Leonard, of Leonards, N. J., to stir up action in his section regarding the dangerous condition of the brick pavements between the rails of the Monmouth County Traction Company line in the Red Banks district.

Not knowing what to do single handed, Leonard wrote to Chairman Johnson, of the F. A. M. legal actions committee, who advised him to complain to the Public Utilities Commission. This he did and was requested to be present at a hearing of the commission and present his case. Accompanied by the State F. A. M. commissioner he appeared at the meeting, with the result that the commission ordered an inspection and compelled the traction company to repair 2,200 feet of their line by December, 1916.

Thousands of automobilists, motorcyclists and pedestrians used the streets crossing the traction company's rails and suffered the inconveniences of holes and worn pavements. But it required one lone, live motorcycle enthusiast to start something with the assistance of the national body. His case shows what the F. A. M. can do, if the riders who are affiliated with it will only come to life and help to stamp out evils.

Here is another case in point. Several weeks ago a member of the New Jersey Motorcycle Club, which is affiliated with the F. A. M., while returning home from Atlantic City was forced off the road because of the dazzling automobile lights. He suggested that the club take the matter up with the Commissioner of Motor Vehicles, Mr. Wm. L. Diehl, for the "anti-dazzling light law" was certainly being flagrantly violated in many sections of the State. A letter was sent to the commissioner.

Mr. Diehl replied to the club that his department was too small to cope with all the automobile violations and that his efforts in abating the light nuisance did not seem to bring any results. Through the efforts of the New Jersey M. C., much publicity was given this matter in the local papers. Results soon followed. A week later the entire motor vehicle inspection squad and a large force of motor cops held up motorcyclists and autoists on the main streets of Newark, and twenty-eight were found to have violated the light law and were asked to appear in court.

# KRAMER TAKES FIRST NATIONAL TITLE RACE

NEWARK, N. J., September 19.—Frank Kramer drew very near to the national championship on Sunday at the Velodrome, when he defeated Alfred Goullet in the first of a series of three match races to decide the best rider in America. The distance was at a quarter-mile. There are two more races to be run, one at a mile and the other at five. If Kramer should win the next race he will be crowned the champion, but if he does not the third and deciding race will have to be contested. The race today was the best two out of three heats. Kramer won the first and was given the second when Goullet was disqualified for switching. Goullet admitted that he had offended.

In the first heat Kramer rode from the rear and made his bid on the back stretch of the last laps. He drew up on Goullet as they took the last turn, and as they made for the home stretch, Goullet switched the champion up the bank. Kramer kept right on going and had enough speed to lead "Goullie" home by about a foot. The second time Kramer rode practically the same sort of a race, but in trying to go around, he was again switched and sent far up the track. He raised his hand in protest and the referee disqualified Goullet, giving Kramer the heat and match.

Goullet got some of the coin of the realm when he came home first in the ten mile race in which all the stars with the exception of Kramer competed. Goullet took the lead on the back stretch of the last lap and, with Fred Hill trailing, went to the tape a winner. Reggie McNamara finished in third place, Harry Kaiser came in fourth and Frank Corry was fifth.

Iver Lawson easily won the Brassard race at one mile against Cesar Moretti, relieving the big Italian of his title. Lawson won with plenty of day light between the two bicycles. He rode from the rear until the lap when he drew upon Moretti on the back stretch and then beat him easily down the home stretch.

The three cornered match race was easy "pickins" for Bob Spears, as Harry Kaiser and Francisco Verri offered very little resistance. Spears won in two straight heats, Kaiser finishing second while in the next one. Verri followed him over the line. Ernest Ohrt won the two mile handicap for the "pros" by stealing out and getting a big lead on the field. No one would go after him, and when the race was over Willie Coburn was set down for a week for stalling. Coburn used abusive language to the referee and was suspended for the balance of the season.

Fred Taylor won the two mile open for the amateurs by sneaking between Tommy Grimm and Frank Whitney on the back stretch of the last lap and getting a substantial lead, then holding it to the tape. Hans Ohrt chased him home and got second place. The summaries:

The Brassard Race, at One Mile (Professional)—Iver Lawson, Salt Lake City, vs. Cesar Moretti, Italy. Won by Lawson. Time 2m. 43s. Last eighth mile, 12⅕s.

Half-Mile Novice (Amateur)—Won by Albert W. Reinhardt, Newark; Harry Strecker, Newark, second. Time 1m. 6s.

One-third Mile Handicap (Professional)—Won by Thomas Smith, Newark (40 yards); Floyd Krebs, Newark (40 yards), second; Worth Mitten, Davenport, Ia. (35 yards), third; Ray Eaton, Elizabeth (25 yards), fourth; Ernest Jokus, Newark (40 yards), fifth. Time, 35s.

Three-Cornered Match Race (Professional)—Harry Kaiser, Bronx; Francisco Verri, Italy; Robert E. Spears, Australia. Won by Spears; Verri and Kaiser tied for second place. First heat won by Spears; Kaiser, second; Verri, third. Time, 2m. 31⅘s. Last eighth mile, 12⅘s. Second heat won by Spears; Verri, second, Kaiser, third. Time, 2m. 36s. Time for last eighth mile, 12⅗s.

Quarter-Mile National Championship (Professional)—Frank L. Kramer, East Orange, vs. Alfred Goullet, Australia. Won by Kramer. First heat won by Kramer; Goullet second. Time, 32s. Last eighth mile 12⅕s. Second heat won by Kramer; Goullet finished first but was disqualified for switching. Time, 34s. Last eighth mile, 12⅘s.

Quarter-Mile Handicap (Amateur)—Won by Otto Brock, Waterbury, Conn. (40 yards); Fred Taylor, Newark (scratch), second; Arthur Spencer, Toronto (scratch), third; William Jacobson, Newark (20 yards), fourth. Time, 28⅗s.

Two-Mile Invitation Handicap (Professional)—Won by Ernest Ohrt, San Francisco (140 yards); Lloyd Thomas, San Francisco (25 yards), second; Menud Bedell, Lynbrook, L. I. (60 yards), third; Martin Ryan, Newark (65 yards), fourth; Raymond Eaton, Elizabeth (20 yards), fifth. Time, 3m. 47¾s.

Two-Mile Open (Amateur)—Won by Fred Taylor, Newark; Hans Ohrt, San Francisco, second; Arthur Spencer, Toronto, third; Edward Byron, Australia, fourth. Time, 4m. 11⅗s.

Ten-Mile Open (Professional)—Won by Alfred Goullet, Australia; Fred Hill, Boston, second; Reginald McNamara, Australia, third; Harry Kaiser, New York, fourth; Frank Corry, Australia, fifth. Time, 20m. 21⅗s.

## New Century Wheelmen Win Pursuit Race

SAN FRANCISCO, Cal., September 18.—The New Century Wheelmen won the second annual unlimited pursuit race of the California Associated Cycling Clubs on Sunday, September 12, at the Park Stadium. The race went to twenty-two miles and one lap before the New Century men were declared the winners. The Acme Club of Oakland finished second. The time for twenty-two miles was 48:11.

**Walter Hammitt and A. Sangalli**

The winning New Century team consisted of Albert Sangalli, Walter Hammitt and Harry de Brie. The New Centurys started on the back stretch, while the Acmes went from the tape. When the tenth mile was reached, Carroll Young, of the Acme Club, rubbed tires with his team mate and fell, which put him out of the running and left Ray Girard and Walter Jones to fight it out against the New Centurys. As the twentieth mile was reached, Harry de Brie, of the New Centurys, was forced to discontinue on account of a flat tire. At the twenty-second mile, the New Century boys passed the Acme Club. The Garden City wheelmen came up, but one of their riders was injured before the race, and they refused to ride.

### BERMUDA'S BICYCLE FIELD

We are informed by Carl R. Luke, American Consul at Bermuda, that although cycling is very popular there, most of the bicycles used in Bermuda are imported from England. Those who have had occasion to travel in Bermuda know that a Colonial Law prohibits the use of any mechanically propelled vehicles in Bermuda, and that all classes of people consequently use bicycles.

The Bermuda field is an excellent one for development by American bicycle manufacturers. To those who are interested, we shall be pleased to send an up-to-date list of Bermuda bicycle dealers.

### BECOMES PIERCE AGENT

Alhambra, Cal.—The latest entrant in the cycle field here is A. Balling, who has just opened a well-equipped bicycle and repair shop. He has secured the exclusive agency for the Pierce bicycles.

Digitized by Google

### TOURIST WHEELS TO WESTFIELD

Westfield, Mass., Sept. 14.—One of the most interesting bicycle visitors to the

Roger W. Ebert

Westfield Mfg. Co., formerly the Pope Mfg. Co., was Roger W. Ebert, of Allentown, Pa., who made a trip on his Motobike from his home town to the local factory. After leaving the plant, Ebert wheeled to Boston, then through New Hampshire and Vermont to New York State and back to Allentown.

### BIKE TRADE IN GRAND JUNCTION

Grand Junction, Colo.--So prosperous has the bicycle business been in this section during the year that most of the cycle dealers are laying in a stock of new bikes.

A. C. Fletcher has the only exclusive bicycle store in the city and he features the Iver Johnson and Viking brands. Fletcher claims that the demand for the better grade of machine is becoming stronger every day. In his sporting goods store, H. F. Vorhees has developed a brisk trade in Pierce and Reading-Standard bicycles. Peter Fox, the Indian agent, has just completed the best year he has ever had in the "push bike," and believes the motorcycle and bicycle business dove-tail excellently.

### CATER TO RACING ENTHUSIASTS

Jersey City, N. J., September 20.—Yengo & Force, the local agents for the Pierce bicycle, have worked up a big business among the two-wheeler racing enthusiasts of the city. They are interested in the various bicycle clubs and have developed a large following of wheelmen. One of their strong points is the rapid and thorough repair service they give.

### SCOUTING FOR AGENCY

Alhambra, Cal.—Parker Bros., who have recently opened their cycle repair shop, are now scouting around for a motorcycle agency. They have had some experience in the trade and are well liked by the local riders.

### WILL ADD BICYCLES

Grand Junction, Colo., Sept. 20.—Quite a number of commercial sales are listed among the machines put on the road this year by J. Felix Carson, the local Harley-Davidson dealer. An electrically equipped model was purchased by the chief of the Redlands Power Co., a truck was sold to a local laundry concern, while a speed cop bought a machine and three were placed with the "trouble shooters" of the telephone company. Carson says that the passing season has witnessed a hundred per cent. increase in his business. He contemplates putting in a complete stock of bicycles and is anxious to have manufacturers of standard makes get into communication with him.

### BICYCLES ON INSTALLMENT

Aurora, Ill.—A. B. Crosby, the local Harley-Davidson agent, reports a successful year for the Gray Fellow and also for the several lines of bicycles which are handled in his establishment. He has exclusive agencies for the Racycle, Miami, Great Western and Excelsior bicycles. Crosby sells bicycles on the installment plan, asking ten dollars for the initial payment and eight to ten dollars on monthly payments.

### MAKES FOOT REST FOR BIKE

Kansas City, Mo., September 21.—That necessity is still the mother of invention was well demonstrated in this city re-

Homemade Footrest

cently when Master H. M. Taylor, a youngster twelve years of age, exhibited to his friends a foot rest which he designed for his motor wheel equipped bicycle. Soon after purchasing the motor attachment, he found some difficulty in resting his feet comfortably on the pedals. Taylor, therefore, made a foot rest consisting of steel bars fastened to the frame of the bicycle, as shown in the accompanying illustration.

## C. R. C. of A. Will Stage Tri-State Century

WEST HOBOKEN, N. J., Sept. 22.—The New Jersey Division of the Century Road Club of America will stage a tri-State century on Sunday, September 26. The riders will start from Columbus Circle, New York, at seven fifteen in the morning and will proceed to New Rochelle, Rye, Portchester and Stamford, Conn. They will then return over the same route to West Twenty-third street, ferry to New Jersey and ride to the headquarters of the promoting club.

All the riders who finish will be awarded a sterling silver medal. The pace will not exceed twelve miles an hour and will be set only by experienced pacemakers. The roads of the route chosen are reported as being in splendid condition. Cyclists, whether club members or unattached, are invited to participate in this event. The entry fee is only fifty cents, blanks can be secured from Emile E. Fraysee, 724 Syms street, West Hoboken, N. J. In case of rain the run will be postponed until October 3.

## Sanborn Smashes Two Long Distance Records

BALTIMORE, Md., September 22.—Two more records fell on Saturday, September 18, before the flying wheels of Fred M. Sanborn, the Crescent Bicycle Club champion and long distance performer, when he set new marks for the ride from Baltimore to Frederick and from Baltimore to Hagerstown, covering the 48 miles of hilly roads to Frederick in 2 hours and 55 minutes and continuing on from Frederick over the 27 miles of mountainous roads to Hagerstown in 5 hours and 9 minutes for the total distance of 75 miles from the City Hall at Baltimore.

The old record to Frederick was 3 hours and 23 minutes, made by S. M. Warns in 1896, and the old mark for the trip to Hagerstown was 5 hours and 41 minutes, made in 1893 by F. H. Harvey, and it would therefore appear that the Crescent road plugger has something on the old-timers.

### WHEN RAIN CAME NEAR MARRING A RACE IN CLEVELAND

At the Finish Line of a Recent Twelve-Mile Grind in the Sixth City, Which Was Won by Ed. Norgar, Using Goodrich Palmer Tires

# LAST NIGHT MEET HELD AT RIVERVIEW

CHICAGO, September 20.—The last evening meet of the season at the Riverview Velodrome was staged Sunday night and drew a small but enthusiastic crowd. Racing was good, but was marred by a heavy dew that settled on the track, which made racing rather hazardous, and brought a bad fall to Norman Anderson, the Danish pacemaker. Anderson's accident happened when he attempted to get on the track for the second heat of the "Willie Kell and Ralph Schepens Paced Race," this being the initial attempt to stage amateur paced races at the local track. Anderson's motorcycle skidded on the damp track and fell on the Dane, injuring his left leg.

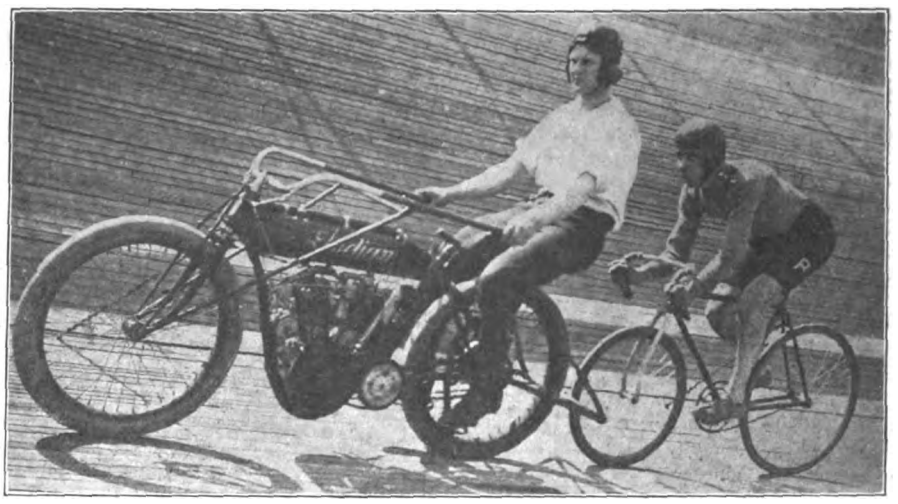
Charles Piercey, the Australian, was the winner of the one-mile point race for the professionals, which was run in three heats. Piercey won the first heat, finished fourth in the second heat, and annexed the third heat, his total being eleven points. Joe Kopsky took second honors with eight points and Ned Young annexed third honors with seven points. Owing to the elimination of Anderson by his accident from further competition the team race for the professionals was changed. Piercey and Kopsky met Gus Wohlrab, Ned Young and Rudi-Russe in a pursuit race, and despite the loss of Anderson the Piercey-Kopsky team caught the trio in 2 miles 1½ laps.

Henry Hendrickson, an unattached rider starting from the 90-yard mark, won the half-mile repechage handicap for the amateurs from George Klasen and E. Kockler. George Klasen won the three-cornered match race from Fred Samlow and Olaf Lodal by taking the second heat and finishing second in the first and third. In the motor-paced race Schepens caught and passed Willie Kell in three and a half miles, and owing to the damp track the other two heats and the five-mile open for the amateurs were called off. The next races will be held Sunday afternoon, September 26. Summaries:

Half-mile repechage handicap, amateur.—Won by H. Hendrickson, unattached, 90 yards; second, George Klasen, Danish-American A. C., 15 yards; third, Ernest Kockler, Riverview C. C., scratch. Time—58 seconds.

Two-third-mile match race, amateur.—First heat won by Olaf Lodal, Danish-American A. C.; second, George Klasen, Danish-American A. C. Time—2:13. Second heat won by Klasen; second, Lodal. Time—1:28. Third heat won by Fred Samlow, unattached; second, Klasen. Time—2:02⅗.

One-mile point race, professional, run in three heats.—Won by Charles Piercey, Australia, 11 points; second, Joe Kopsky, Bohemia, 8 points; third, Ned Young, Salt Lake City, 7 points; fourth, Gus Wohlrab, Jersey City, 4 points. Times—2:31⅗, 2:26 and 2:49.



**George Wright, of the Classic Bicycle Club of Toronto, the Champion Amateur Motor-pace Follower of Canada. The Pacemaker Is Bill Spencer, of Toronto**

Team pursuit race, professional.—Won by Chas. Piercey, Australia, and Joe Kopsky, Bohemia; second, Ned Young, Salt Lake City; Gus Wohlrab, Jersey City, and Rudolph Rudi-Russe, Austria. Time—5:24. Distance—2 miles, 440 yards.

Motor-paced race, amateur (pursuit style).—Won by Ralph Schepens, Chicago, C. C.; second, Willie Kell, Chicago C. C. Time—5:43⅕. Distance—3½ miles. Second and third heats called off on account of damp track.

### BACK FROM GOODYEAR CONFERENCE

San Francisco, Cal., Sept. 16.—Mr. F. L. Ryan, sales manager of the motorcycle tire division of the 'Frisco branch of the B. F. Goodrich Company, has just returned from a three weeks' trip in the Northwest covering 2,500 miles. While on the trip he attended a conference of the Goodrich salesmen from Spokane, Seattle and Portland. All of the salesmen, so Ryan reported, were enthusiastic over the new line of Goodrich motorcycle and bicycle tires.

### KHAKI UNIFORMS FOR CORPS

Vancouver, B. C., September 20.—The Cyclists Corps of the Vancouver Volunteer Reserve has been equipped with a most pleasing uniform of Khaki and a noticeable improvement has already made itself felt in the attendance at the drill. The next thing that is eagerly desired is the provision of rifles, so that the regular gun drill may be engaged in. Privates H. Pierce and J. Speer have been promoted to lance-corporals in the corps.

## Professional Swiss Cyclist Condemned as Spy

GENEVA, Switzerland, September 17.—The professional bicyclist Doerflinger, a resident of Basel, has been condemned to death as a spy by a German court-martial. The Swiss government has intervened in his behalf with a request for clemency.

An account of Doerflinger's experiences is given by the *Journal de Geneve*. It appears that after the war began he traveled in Alsace and Baden as a representative of a business house. He received an anonymous letter asking him to meet a stranger at Montreux, Switzerland. It is said this man engaged him to supply military information.

Through his acquaintance with a German, now an aviator, who had conducted a factory at Freiburg at which military aeroplanes were manufactured, Doerflinger was able to take a trip in a war plane.

All he learned he is alleged to have communicated to a foreign agent, being heavily paid for the information he gave. Also, it is averred, he made arrangements with the wives of German soldiers at the front to secure military information through these women, for which they were paid. It was one of these who denounced Doerflinger. When it was necessary to put anything into writing he is said to have made use of the inside band of his collar.

Doerflinger, who was condemned to death by a court-martial, has appealed to a higher military court, where his case is pending.

### Rode in 6-Day Race

C. A. Doerflinger, the cyclist, is widely known in this country as a professional rider. Several years ago he took part in a six-day race in Madison Square Garden, New York and also appeared in some of the American Velodromes where he was a favorite of the fans and made a good showing in many events.

# NEW YORK TO BOSTON BY BICYCLE

## Flying Trip Taken by Long Distance Cyclists to the L. A. W. Dinner

TWO husky cyclists were eagerly discussing, on the night of September 6, in the New York City club rooms of the Century Road Club Association, the possibility of pedalling to the annual assembly of the League of American Wheelmen, which was to convene at Boston, September 9. Sylvain Segal and his friend, Capt. George Steppello, realized only too well that they would have to do some tall hustling the next two days to arrive in the bean eaters' village in time for the L. A. W. banquet—the opening feature of the assembly. But they decided to take a chance.

### The Journey Starts

At 1:20 p. m., on September 8, the start of the trip was made, the riders carrying small bundles of extra clothing strapped to their saddles and repair kits—subsequently found to contain just enough repair material to patch one puncture.

Riding along Seventh avenue to 125th street, and east to the Willis avenue bridge, Segal and Steppello followed Boston Road as far as Southern Boulevard and then over the Fordham Road and the Boston Post Road as far as Mount Vernon, N. Y., where Steppello had to adjust a loose toe-clip. When the adjustment was made the wheelmen proceeded through New Rochelle to Larchmont for the first check-up on the forms used in Century riding. After a cooling drink, a new start was made, and after a climb of various hills and "letting 'er-slide" on the down grades, Greenwich, Conn., was reached, and a stop was made at the home of the national treasurer of the Century Road Club Association, John M. Mitchell. Mrs. Mitchell, Sr., received the cyclists, asking them how they could possibly ride in the blazing sun while her guests were refreshing themselves with lime-ade.

### Supper at Bridgeport

Pushing on, Westport was the "luncheon" stop, and then the trip was continued on to Bridgeport, which was reached at 6 o'clock, 55 miles having been covered. After supper, inquiries were made of a motorcyclist as to the roads to Boston, with the result that the State road to Milford was followed, a detour leading the tourists over to the shore road and into Savin Rock and New Haven.

Leaving New Haven, Meriden was next reached, where a second check-up was made. A policeman seeing the bicyclists go by, told the riders that they had better carry lamps, to which they replied that they had lamps. He then remarked that they were not very bright. Some cops like to show off! However, the cyclists silently proceeded on their way and expressed their thoughts afterwards when they were within safe distance.

About midway to Hartford from Meriden, a sign advised the riders to take the detour as the road was closed to vehicular traffic, for a bridge was being replaced. However, their experience on detours taught them that they had better stick to the direct route, with the result that after riding perhaps half a mile, the red lights in the road stopped them short and the captain went ahead to find what the obstacles were.

Steppello and Segal (Wearing C. R. C. A. Jerseys) Greeted by L. A. W. Men in Boston

Climbing over various obstructions in the shape of derrick-booms, concrete mixers, stone, sand and mortar barrels, the New Yorkers found themselves on the brink of a chasm, 25 feet long and about 20 feet deep, with a solitary plank for a bridge, over which Steppello clambered on hands and knees. He came back to report the passage safe enough, whereupon bicycles were placed on shoulders, and the cyclists crept to the other side, and were finally on the State road again with Hartford still in the distance. But it required a very few minutes to see the lights of the city, for traveling was easy over the concrete road. Segal and Steppello soon registered at "Delaney's Hotel," where they spent the night. The first day's riding totaled 116 miles, in 10 hours and 25 minutes, while the same mileage was still to be covered in order to reach Boston for the L. A. W. dinner at six o'clock the following evening.

The next day saw Segal and Steppello leave Hartford at 6:55 a. m. The cool morning air soon made them whistle tunes to the enjoyment of the farmer lads who stopped to look at the two "racers" as they went by. The first stop of the day was made at Warehouse Point, where the initial soda was hurriedly drunk and a start made for Springfield, Mass. It was only a short way out that the captain scored a blowout in his rear tire. This blowout, by the way, was the only tire trouble that was encountered, and the condition of the road in many places was far from being ridable for bicycles.

### Fake Chicken Pie

Springfield loomed up before the riders; a great panorama of beautiful buildings and the broad beautiful river came into view. Arriving in town the wheelmen mailed postal cards and snapped a few photographs. Pushing on over the oiled concrete roads and then rough and hilly "tarvia" roads they passed the Indian motorcycle factory. At Palmer, the New Yorkers ate some "chicken pie" that had never known a chicken. After a short rest, Brookfield, with its winding creek and busy factories, and Warren with its busy railroad station were soon passed, and later Leicester hills, with its two-mile climb and dangerous descent.

When Worcester was reached, a telegram was sent to Mr. Abbot Bassett, secretary of the League of American Wheelmen, informing him that he might expect two cyclists to arrive in Boston in time for the reunion dinner. It was then 2:40 p. m., and there were still 46 miles still to go in three hours time. They left Worcester on the trail of a "Boston Limited" no stop trolley car, and kept up with the car for a distance of four miles until the White City was reached.

Weston was next in order, and not forgetting their appointment for 6 o'clock, the wheelmen hastened on to the Charles River Boulevard, past the Harvard stadium and finally rode on Massachusetts avenue to Dreyfuss Restaurant, the scene of the L. A. W. dinner, reaching the place at 6:15. They covered a distance of 128 miles.

### Good Time at Classic

An account of the "Wheel About the Hub" has already been written by Abbot Bassett and appeared in last week's issue of this journal. The two Century Road Club Association cyclists enjoyed themselves immensely both at the banquet and the first day's run. Late in the afternoon of September 10, Segal and Steppello had to leave the merry company of wheelmen and turn their bicycles homeward. The start of the return journey was made at 3:45 p. m.

Passing through Attleboro and Providence, the cyclists reached Wicksford at 9:15 at night and stopped over at "Mother" Prentice's Wickford House. The next day's ride proved uneventful, but mighty pleasant. After a long journey, the New Yorkers put up at the Adams House, in Bridgeport, Conn., having traveled one hundred and thirty miles over good roads and past beautiful scenes. Early on Sunday morning, September 12, Segal and Steppello were again on the road and with-

Digitized by Google

out accident passed through the towns indicated in the table below, making the distance of one hundred miles in good time. The journey was certainly one of the most enjoyable that the two husky long distance men had ever taken and, though they were tired and worn out when they arrived in dear old New York, the cyclists were happy to have undertaken the long grind to Boston and return.

**Mileage Schedule**

The total mileage for the trip was 547 miles, and the time approximately four and one-half days. The following schedule shows in detail the daily progress made on the trip:

| Date. | Time. | City. | Miles. |
|---|---|---|---|
| Sept. 8 | 1:20 p. m. | New York | 0 |
| | 2:40 p. m. | Larchmont, N. Y. | 16 |
| | 3:45 p. m. | Greenwich, Conn. | 27 |
| | 5:15 p. m. | Westport, Conn. | 45 |
| | 6:00 p. m. | Bridgeport, Conn. | 55 |
| | 8:20 p. m. | New Haven, Conn. | 76 |
| | 10:20 p. m. | Meriden, Conn. | 96 |
| | 11:45 p. m. | Hartford, Conn. | 116 |
| Sept. 9 | 6:55 a. m. | Hartford, Conn. | 0 |
| | 7:55 a. m. | Warehouse Pt., Conn. | 14 |
| | 9:30 a. m. | Springfield, Mass. | 28 |
| | 11:00 a. m. | Palmer, Mass. | 43 |
| | 1:00 p. m. | Brookfield, Mass. | 61 |
| | 2:40 p. m. | Worcester, Mass. | 79 |
| | 4:05 p. m. | Marlboro, Mass. | 95 |
| | 5:10 p. m. | Weston, Mass. | 110 |
| | 6:15 p. m. | Boston, Mass. | 125 |
| Sept. 10 | 9:00 a. m. | Boston, Mass. | 0 |
| | 3:45 p. m. | East Sharon, Mass. | 24 |
| | 5:30 p. m. | Attleboro, Mass. | 43 |
| | 6:45 p. m. | Providence, R. I. | 55 |
| | 9:15 p. m. | Wicksford, R. I. | 76 |
| Sept. 11 | 6:55 a. m. | Wicksford, R. I. | 0 |
| | 7:55 a. m. | Narragansett Pier, R. I. | 13 |
| | 11:00 a. m. | Westerly, R. I. | 38 |
| | 1:30 p. m. | New London, Conn. | 55 |
| | 4:00 p. m. | Saybrook, Conn. | 75 |
| | 5:50 p. m. | Guilford, Conn. | 93 |
| | 7:35 p. m. | New Haven, Conn. | 109 |
| | 9:50 p. m. | Bridgeport, Conn. | 130 |
| Sept. 12 | 6:35 a. m. | Bridgeport, Conn. | 0 |
| | 8:20 a. m. | Greenwich, Conn. | 28 |
| | 10:45 a. m. | Clason Point, N. Y. | 52 |
| | 12:00 m. | Floral Park, N. Y. | 64 |
| | 3:30 p. m. | Bedford Rest, N. Y. | 81 |
| | 6:45 p. m. | New York City | 100 |

## BIKE RACES AT SOUTHAMPTON

Southampton, N. Y., September 18.—Several hundred persons witnessed the bicycle races which were held at Lake Agawam on Tuesday, September 12. There were sixteen entrants and all but one started. They were M. Bennett, C. Schnerders, H. Ostlund, M. de Rose, A. R. Taab, E. Crippen, G. Ronbez, W. Staubbs, T. Saila, O. Guldi, C. Culver, N. McArdle, J. Wilson, J. Bennett and M. Soderlund.

The course was twice around the lake, starting at the Library corner, and finishing in front of the post-office, a distance of six miles.

The first lap was made in 8 minutes and 25 seconds, and the winner, Clayton Culver, made the full course in 18 minutes and 22⅕ seconds. McArdle was only a second behind and Ostlund crossed the line four seconds later.

There were four prizes—a silver cup for first, pair of bicycle tires for second, pair of military brushes for third, and a basket of lemons for the last man. No one claimed the "booby" prize, so it was not awarded.

## TO SHOW BY MOTOR WHEEL

Chicago, Ill., September 21.—Prominent among the visitors to the Chicago Show who made the trip awheel was a sixteen-year-old lad, named Wm. Maugan, who came all the way from Columbus, Ohio, on a bicycle equipped with a Smith Motor Wheel. Young Maugan is employed in his home town by the Franklin Cycle & Supply Co. as a demonstrator for the bicycle booster. He has covered over six thousand miles with his motor wheel, showing Columbus prospects what the little speed demon can do. After the show Maugan will ride to the A. O. Smith Co. factory at Milwaukee, Wis.

## WORKSMAN VANS IN THREE MODELS

M. Worksman, of 14 Vesey street, New York, is showing several models of bicycle delivery vans, to be driven by the rider or by a Smith Motor Wheel. The Model A van, which is typical in the running gear of the entire Worksman line, has a rear axle carrying the body which measures 27 by 23 by 24 inches and has a capacity of over 300 pounds. The tread of the van is 33 inches, and 28-inch wheels with wood rims, and 1⅝-inch heavy service tires are used all around. The pedal gear drives a countershaft from a regular bottom bracket or hanger, a 1-inch chain being used. The coaster brake is mounted on this countershaft and final drive to the axle is by a chain.

When used with the Motor Wheel, the latter is attached by a special fitting to the rear of the body, with the control on the main tube. The price of the Model A van for pedaling is $75, and with Motor Wheel, $60 extra.

The Model B van is longer and narrower than the Model A, the body measuring 42 inches in length, and 18 inches in height. The width is 33 inches. The body slopes upward at the front and there is a top door opening to the left. This van is sold at the same figure as the Model A, i.e., $75. The Model T, a special van for dyers, merchant tailors, etc., has an upright body of 42 inches in height, with a width of 23 inches and a length of 24 inches. It is designed to allow the owner to hang clothes direct in the body without creasing. It lists at $75. On both this and the Model B, a Smith Motor Wheel can be had for $60 extra.

## JUST LIKE THAT!

Los Angeles, Cal., Sept. 20.—Forty bicycles were sold by C. L. Smith, the southern California distributor for the Great Western bicycles, on the arrival of a new carload lot of machines recently. According to Smith the demand for the Crown, Adlake and America models was never so brisk as it is at the present time, and he has added to his force of men who thoroughly cover all of the Southern territory. Business in bicycle accessories, says Smith, is also showing a good increase.

## SHOULD ADD BICYCLES

Louisville, Ky.—Henry F. Pardon, the Indian agent, of Owensboro, Ky., who has been handling bicycles for about ninety days, reports that in his opinion every motorcycle dealer should handle bicycles, and those who do not handle the line are losing money as a consequence. Mr. Pardon is handling the line of bicycles jobbed by G. H. Westing & Company, of Indianapolis. Sales have been big so far on both bicycles and supplies. This was Mr. Pardon's first attempt with bicycles.

## GREAT WESTERN BICYCLES

Six models of the Crown bicycle, two of Adlake model and three bearing the American nameplate, are attractively shown at the stand of the Great Western Mfg. Co., of La Porte, Ind. The Crown series includes a Model 66, two Model 46—one having a straight double bar—two juveniles and one of the new motorbike models with 18-inch frame. The American line shown consists of one each of Models 33, 46 and 48. The tiny bicycle built for the baby son of Vice-President Lonn, with 10-inch wheels, is also on show and draws its admiring crowds.

General Sales Manager C. A. Lonn is in charge of the Great Western exhibit and has as his aides A. E. Lonn, H. A. Schaffer, G. Wright, J. Kanney and D. McKee, all of the firm's factory and road forces.

## OPEN CANADIAN BRANCH

Bridgeburg, Ont.—The Buffalo Specialty Company has established a Canadian branch in this city in order to take care of an increasing Canadian business. Bridgeburg is directly across the Niagara River from Buffalo, and the Canadian office is under the control of the Buffalo headquarters of the company.

# HOW AMERICAN MACHINES STAND IN AUSTRALIA

## Their Premier Position Due to Yankee Enterprise

By WILLIAM JOHN BEACH

ALTHOUGH a "speed merchant," I do not purpose touching upon that subject so much as upon the commercial side of the question in my country, Australia. With regard to the suitability of American-constructed machines for Australian road conditions, I will say that as our conditions on the other side are very similar to those here in America, we find the American machine quite meets the bill. In fact, it does so to a greater extent than do English machines from the frame and transmission viewpoints.

The English built engines are quite satisfactory and the old battle between J. A. P.-engined machines and the famous Indian prevails in Australia as it does in England, but I must admit that in Australia the honor stands to our red American friend. This is largely due to enterprise, as you will agree when I have placed the following facts before you:

### Why Machines Are Costly

In Australia, all motorcycles are handled by agents and consequently, after paying freight, duty, etc., the machine becomes a costly proposition. Local agents are in no position to encourage speed enthusiasts, so the boys wade into the game. They are always good sports, paying everything. Now, up to a year or so ago, the Indian was represented by an agent, its price being colossal, with the result that very few of the fine red mounts were to be met with on the road.

The Hendee Manufacturing Company, appreciating Australia as a big country and a big market, soon opened up a real tip-top show that made us talk "down under." They cut out the agent and cut down the price, snared all the best riders, contested in all the big events. And they cleaned right up, too. Today, one sees Indian machines everywhere.

### What Indian Enterprise Did

This was enterprise and enterprise appreciated in Australia and rewarded accordingly. The Indian now holds the market and I often wonder how some of our agents are coming on trying to sell 2¼ horsepower machines at prices equal to that of the Indian. We want more firms like this and not only in the motorcycle field, but in every other direction.

I would say that there is scope for a firm manufacturing a good tire, providing that they open out in the proper manner.

I am tired of waiting to see an English concern do something, as that country never does display any enterprise in Australia. From picture-shows to the sale of souvenirs at a football match, the ideas—everything, has originated from America. A motorcycle meet on an ordinary push-bike track is a very fine day's entertainment on the other side.

### At One Track Meet

The last meet of this kind I attended offered all the excitement one expects to find at a display of speed. There was a huge crowd present and the organization of the whole was most perfect. I was invited to contest with my N. U. T., the one which I had been tuning up at Brooklands track in England, but I had been down a few days before and found that I could not do more than 45 miles per hour as the banking would not hold me. Naturally, I was content to be a spectator, and after seeing the way those boys rode then and on other occasions, I decided that my share of motor racing off a speedway would always be as an onlooker.

The riders blind around corners and over roads with great holes in them and appear to have no value on their necks whatsoever. I am considered daredevil enough for anything, but I am not in it out there.

As I say, this track meeting was really exciting. In one event, three riders sparred for an opening at the same time when one rider's belt came off. Then came a crash, and when the smoke cleared away, two riders could be seen hanging over the rail like wet towels, one being dead while the other so near that it did not matter much. There are great possibilities in it for any syndicate to go out to Sydney or Melbourne and build a real good speedway, as the public is very keen on the sport.

### No American Opposed Models

America having been the pioneer in horizontal opposed-engine construction, it appears very strange to me that there has been no good motorcycle fitted with such an engine brought to light there. After riding a machine fitted with an opposed engine it becomes an endurance test to ride machine fitted with the V-type. Again, an opposed engine is practically vibrationless and has better balance. On a brake test, it will develop much greater power than any other engine of similar capacity.

The wonderful results achieved by the famous little Douglas machine in Australia paves the way for some firm to market there an opposed engine machine of larger capacity. I would suggest that the engine should be nothing less than 500 cc. (30½ cubic inches).

ENTERING THE STRAIGHT ON THE CHICAGO SPEEDWAY

**Showing Construction of New Two-Mile Track with Carefully Calculated Curves Allowing of High Speeds with Full Throttle at All Times—Note Stout Fences**

### THREE-CENT GASOLINE?

St. Louis, Mo.—The perfection of a process whereby 100 gallons of crude oil will yield 100 gallons of a kind of gasoline 50 per cent. more efficient than the present grade of automobile gasoline, is the achievement claimed by W. H. Stevens, for many years a St. Louis city employee.

Stevens, after experimenting for three years to find a substitute for gasoline, has obtained a patent on his process. He is now negotiating with the Standard Oil Co. for the sale of his patent and the formula of chemicals used in his process. This process, Stevens says, is not simple, but is very economical and can produce gasoline at a cost of 3 cents a gallon.

### SARGENT RECOVERING

Indianapolis, Ind.—Spick Sargent, the Indianapolis Indian speedster who was injured in a collision with a rider at Vincennes on Labor Day, and at first reported seriously injured and not expected to live, is now fast recovering.

# With the Manufacturers

## S. K. F. CO. IS CAPITALIZED AT $2,000,000

THE S. K. F. Ball Bearing Co., with a capital stock of $2,000,000, has just been incorporated under Connecticut laws, with headquarters at Hartford. The company is the American offshoot of the "Svenska Kullager Fabrik" at Gothenburg, Sweden, the initials of which constitute the "S K F" trademark for its products. Heretofore the American end of the S K F business has been handled by a selling organization, incorporated for $50,000 under the name S K F Ball Bearing Co., of which F. H. Poor was manager, while S. G. Wingquist, of Sweden, was managing director. The new enterprise has substantial local backing, among those interested being B. W. Hanson, vice-president of the Pratt & Whitney Co., of Hartford.

It is planned to erect at once a substantial factory building at Hartford, the site for which already has been selected. Manufacturing will be carried on under the general management of the Connecticut concern, from raw steel imported from Sweden. It is pointed out by the officials of the company that the particular grade of steel turned out in the Swedish plant, owing to local manufacturing advantages, has proven superior to other steels for its ball bearings, and that therefore the same grade and quality of steel will be continued in the American product.

### WIGWAM IN FEATURE FILM

Springfield, Mass.—The big Hendee factory figures largely in a feature moving picture film produced by one of the major companies. The subject of the film is the tour of a princess from one of the mountain kingdoms of Europe, during the course of which she sees many interesting things on visiting this city. The Indian part of the film shows the entrance to the factory and "Long John" O'Connor, the tallest man in the city, coming down the steps and greeting the royal lady and her party, afterwards escorting them through the several departments of the works. Another view shows the employees leaving the factory at noon.

### FIRESTONE HOUSE ORGAN

The Firestone Tire & Rubber Co., Akron, O., has started publication of "The Firestone," a house organ for circulation among its employees, including those of the branches. It is a newsy four-page paper telling about the plans and prospects of the business and stimulating enthusiasm by precept and example.

### HELPS FOR THE DEALER

How the tire dealer can benefit by the advertising helps offered by the tire manufacturer is interestingly told in "Boom," the dealer's helps book just issued by Firestone Tire and Rubber Company.

On every page pictorial treatment of the subject discussed is made by means of clever cartoons. The dealer is shown in various humorous poses in connection with the different advertising helps.

The "reason-why" copy is full of helpful suggestions to the dealer as to how he can best take advantage of different forms of advertising assistance put out by the tire manufacturer. Suggestions are made for him to follow out and he is urged to secure his share of the advertising helps. Everything from catalogs and folders up through stationery, posters, signs, "movie slides," to electrotypes and window displays is featured and each is accompanied by many valuable suggestions.

### POOLE IS HEISSLER SUPERINTENDENT

W. E. Poole has resigned his position with the Rex Battery Company, of Chicago, Ill., and is now general superintendent of the Heissler Storage Battery Company, of 1425 Michigan Boulevard, Chicago, Ill. Mr. Poole, who has been responsible for a number of ingenious devices in connection with accumulators, will devote half of the Heissler plant to the production of a motorcycle battery, he announces and there have been a number of his features incorporated in the new cells.

W. E. Poole

Among Mr. Poole's inventions in the storage battery field is the "non-leakable" vent which he has applied to the new motorcycle accumulators. The latter will be of such size as to be very convenient for the machine, being of small size and weight with a big ampere-hour capacity and long life on recharge.

Arthur J. Baracree, general manager of the Heissler firm, will concentrate his efforts in the selling and distribution of Mr. Poole's new Heissler motorcycle battery.

### PRESIDENT SEIBERLING ON COAST

San Francisco, Cal., September 14.—Mr. F. A. Seiberling, president of the Goodyear Tire and Rubber Company, was an interested visitor to the Panama-Pacific Exposition. When interviewed by a representative of **Motor Cycle Illustrated** he gave it as his opinion that the country was coming upon one of the greatest eras of prosperity that it had ever known.

Mr. Seiberling gave it as his opinion that the European conflict had less of a detrimental effect on the tire industry than other lines of manufacture. The tire makers, he said, soon got their bearings before the war had advanced many months, and, with the settlement of the crude rubber situation with England, the output of the Goodyear company increased, necessitating several additions to the Goodyear plants at Akron. President Seiberling concluded the interview by stating that reports from his salesmen indicate that some of the plants now under construction will have to be put into use before they are fully completed.

### LEE WALSH, TIRE MAN, DIES

Cincinnati, Ohio.—The tragic death of Lee Walsh, manager of the Cincinnati branch of the Fisk Rubber Co., on Friday night of last week was a shock to his numerous friends among motorists in general. The accident which caused his death occurred when the automobile driven by Mr. Walsh overturned on the road from Hamilton, O. He was 35 years of age.

### KRAUSS IS SECRETARY-TREASURER

Philadelphia, Pa.—The L. H. Gilmer Company, makers of belting, webbing and tape, at 52 North Seventh street, announces that Manning J. Smith, formerly treasurer, has severed all his connections with the firm. At the last meeting of the directors, J. S. Krauss, the secretary, was elected to the office of secretary and treasurer, to succeed Mr. Smith.

### BIG PAYROLL FOR RUBBER WORKS

Columbus, Ohio.—According to a report made by the Ohio Industrial Commission, the amount of wages paid out by all rubber factories in the state for the year 1914 was $18,079,901. This includes factories for the manufacture of automobile and motorcycle tires. The amount of the pay roll is fourth in the list of manufacturers.

Cincinnati, Ohio.—The Double Life Tire Co. has been organized by Harry Frank and others, to handle automobile and motorcycle tires.

Digitized by Google

## THREE BELLIGERENTS ORDER BETHLEHEM SPARK PLUGS

The manufacturers of the Bethlehem five point spark plugs announce that during the past two weeks more than 100,000 of their plugs have been shipped to the war departments of three European belligerents. The decision in favor of the Bethlehem plug was rendered, the makers state, only after a rigorous test under the most adverse conditions.

Inasmuch as substantial quality was considered of extreme importance in view of the tremendous strain to which plugs would be subjected in meeting the demands of war service, and the Bethlehem plug passed the scrutiny of the various officials, the makers consider that their product has received an enviable endorsement. Absolutely no price concessions were said to have been made in landing the big Bethlehem war orders.

## EMPLOYEES GUESTS OF REMY FACTORY ON "HIGH TENSION NIGHT"

In line with its policy of looking after the welfare of its employees, and encouraging social and athletic organizations on their part, the Remy Electric Company, of Anderson, Ind., gave a lawn party and dance to the employees on the evening of September 10. The affair was given on the lawn of the Columbus avenue side of the works, and was in celebration of the opening of two new buildings.

The affair, which was known as "High Tension Night," opened with a grand march, led by Mr. and Mrs. F. L. Atwood, the procession passing through the new building No. 1½, through all the factory corridors and finally returning to the new building once more. Dancing then took place, ten numbers with extras being played. Spotlights were thrown on the dancers during each number. A feature followed in the form of a monster magneto, out of which emerged two classic dancers, who performed amid the applause of the guests.

A vaudeville entertainment was held as well as a band concert in another portion of the plant. Refreshments were served for all in Department 24. Searchlights were constantly being played from various portions of the plant and festoons of incandescent bulbs outlined each building. With the completion of the full dance program, the affair came to an end, the guests going home in the many special trolley cars which had been hired by the company to bring them to and from the entertainment. All voted the affair a complete success. Over 2,500 attended.

## KITTY-KIT REPAIR OUTFIT

Rapid repair of punctures in inner tubes without the use of cement or other solution is obtained by the use of the Kitty-Kit, the product of the Broadway Merchandising Company, of 475 Broadway, New York City. The kit has for its feature a new style of patch, made of soft rubber over a soft metal skeleton, each patch being double and connected by a collapsible post. This patch construction or plug is placed in the puncture and compressed or squeezed tight with a pair of specially-constructed pliers, forming an air-tight repair in one minute, and one that is absolute and permanent.

The Kitty-Kit plug has no sharp edges on the metal skeleton, the rubber covering preventing chafing of the tube. The kit itself consists of a pair of the special pliers, a cutting tool to make a clean hole in the tube, a wire spreader and a number of plugs. These are all carried in a folding cover which fits easily in the rider's pocket or tool box. There being no cement employed, the rider will not have his clothing or tool box contents smeared. The tools in the kit are well made and will last a lifetime.

## BOSCH DONATES BIG CASH PRIZES FOR ASTOR CUP RACE

In keeping with the usual practice in offering prizes in important motor events, the Bosch Magneto Company, of 225 West Forty-sixth street, New York, has donated a number of cash prizes for the Astor Cup motorcar races to be held at the new Sheepshead Bay Speedway, Sheepshead Bay, N. Y., on October 2. The prizes are as follows: $500 in gold to the winner, $300 in gold to the driver who gets second place, and $200 to the driver who obtains third place.

In addition to the above, the company offers an additional bonus of $100 for each place, provided that the winner makes a better average than the best time made in an American long-distance contest, i. e.—an average of 101.86 miles per hour, and provided that the second drive makes a better average than the best time made by the second man in a similar long distance contest, i. e., better than an average of 100.58 miles per hour. The third man will get his bonus if he averages better than 97.78 miles per hour. The conditions attached to these prizes are that the first, second and third placemen shall employ Bosch magneto ignition during the entire race.

A letter to this effect has been sent by the Bosch company to Harry Harkness, the president of the Sheepshead Bay Speedway Corporation, and Mr. Harkness has replied accepting the offer and congratulating the Bosch firm on its sportsmanship and for the encouragement offered to drivers by the donation.

## U. S. TIRE MANAGER ON VISIT

Resident Manager J. H. Johansen of the Washington and Baltimore branches of the United States Tire Company is in New York for a few days. He expresses himself as delighted with the hold the popular U. S. Chain Tread motorcycle tires have taken on his territory.

## BAKER USED V-RAY PLUGS

In a telegram from E. G. Baker, immediately after the finish of the "Three-Flagg Record" run, the V-Ray Company, of Marshalltown, Iowa, was exceedingly gratified to hear that Baker used the V-Ray spark plug throughout the long grind from Vancouver to Tia Juna, and that the plug gave one hundred per cent. service.

This was the second occasion on which Baker employed V-Ray plugs in long-distance record achievements in 1915, the other being the San Diego to New York trans-continental run made earlier in the season. On both runs Baker used the plugs on his Indians.

## NEW TIRE FIRM INCORPORATES

Huntington, W. Va.—The Huntington Tire & Rubber Co., recently incorporated here by J. F. Schmidlapp, F. M. Bailey, P. M. Walker and others, with a capital stock of $25,000, will handle a general tire and motor accessory business.

# SPECIAL TRAINING BIG FACTOR IN PETERICK'S SUCCESS

## Milwaukeeite Used Experience Obtained in College and Shop to Perfect Business

By THE PATHFINDER

WERE one to ask what attribute more than any other is the cause of the success achieved in the retail motorcycle selling field by Louis W. Peterick, the young and enterprising proprietor of the Mueller Cycle & Supply Co., at Milwaukee, one would be surprised to receive such a commonplace answer as "Brains."

It is a well known fact that every enterprise depends on brains for its maintenance and growth. But the particular brand of gray matter bearing the Peterick label is of different variety. It is not very often that you hear of motorcycle dealers who have taken a college and university course specializing on subjects calculated to be of benefit in their particular field. But that's exactly what Peterick did.

Louis W. Peterick

The subject of the story is the new proprietor of Milwaukee's oldest bicycle and motorcycle establishment conducted formerly by A. G. Mueller, Milwaukee's veteran bike man, who has retired from the business after a score of years that have seen "Goodie" Mueller's little shop grow into a big salesroom doing a business amounting to more than $100,000 in 1914.

Louis Peterick comes from Manitowoc, Wis. When he was a growing lad, his brother, Joseph Peterick, was selling bicycles. That was before motorcycles were generally known. About all that Manitowoc knew concerning the new contraptions of bicycles with motors in them was what knowledge filtered into the town in the newspapers, and the editors were not nearly so kind in those days as in 1915.

Manitowoc had its first look at a real motorcycle in 1901 when a Merkel came to town. It came to stay and Louis, being the only person in Manitowoc sufficiently interested in the mechanics of the motorcycle to study out its repair work, naturally inherited the job of being its chief nurse. A little later Joseph Peterick became the Harley-Davidson dealer in Manitowoc and it was based on his observations of the motorcycle business as it came to his brother's shop that convinced Louis that there were immense possibilities in it. Finishing public school grades he determined to make himself more proficient by taking up two years of preparatory work at Lawrence college and then three years at the State university at Madison in the engineering course, specializing on internal combustion. Peterick improved his opportunities while at the university by managing the store of H. H. McDaniel, the Harley-Davidson dealer in the university town.

His university education completed, Peterick was offered a job as assistant foreman at the Harley-Davidson factory, and later advanced to chief complaint correspondent in the office. Louis had been working at the Milwaukee factory close to a year when his ability attracted the attention of A. G. Mueller, who was in need of a capable man to manage his South Side and main store.

Mueller's prediction that if he could find a successor worthy of carrying on the business he would sell out had been treated with scorn by those in the business who knew him, but the threat found a happy culmination in the announcement, coming just a year after Peterick assumed management of the Mueller store, that the old place was going to change hands. The new concern retains the good will of the old and will be known as the Mueller Cycle & Supply Co. Harley-Davidson motorcycles are sold exclusively, the firm also carrying a line of bicycles. The financial backing of the new concern is being taken care of by S. J. Strachota, a Milwaukee contractor.

### Has Pronounced Ideas

Peterick has some very pronounced ideas. The account in a large measure for his rise in the retail motorcycle sales world. Faith in the product being sold is the basis of every transaction carried out in the Peterick store. And the proportion of Harley-Davidsons in the home town stands up very well in proportion to the other makes, a fact that includes the type of model sold during Mr. Peterick's management.

### What Customer Wants

"See what the fellow wants," in plain words, covers the principal Peterick principle in motorcycle sales. "I want my salesmen always to feel out thoroughly every customer before deciding on which model he is most likely to buy for his particular needs," he says. "In following out this idea the sales force is kept at the highest point of efficiency and waste effort is kept at a minimum.

"There are very few cases where riders that we have sold machines have come back expressing regrets that they did not purchase another model from the one they own for the simple reason that we figured out their needs. It is very rarely that we make an effort to sell single cylinder machines, because a rider is thereby lost as a sidecar prospect. Sidecars are the biggest boost in selling motorcycles that a dealer can have. Once established the sale of sidecars is easy. They not only sell themselves, but they help wonderfully in the sale of new machines. Most sidecar passengers are of the feminine kind and I have found the ladies to be a powerful influence in many prospects to whom I have made sales and also to be a big factor in bringing in of new sales from quarters unexpected.

### Many Time Payment Sales

"A great deal of our business is on the time payment plan," continued Peterick. "You can't get away from partial payments in selling motorcycles, and I believe every dealer will have to come to it. In this age of increased competition in motorcycle sales the fellow who makes the best terms for the class of buyers to whom the time payment makes special appeal is going to get the business.

"An initial payment of $125 is the usual rule for sales of twins on time payments. The installments are figured out so that the final payment is made within ten months of the date of the sale. This ten months time portion of our time payment policy is imperative."

# DEALERS' SECTION

### OLD TIMER LOCATES AGAIN

Washington, D. C., September 20.—T. N. Mudd, Jr., is again connected with the motorcycle and bicycle trade of the city. Mudd was a well known bicycle racer in the early days of the bicycle industry, he then became manager of the local branch of the Pope Manufacturing Co., later he embarked in business for himself handling the Reading Standard line of bicycles and motorcycles.

Mudd is now manager for Harry F. Seamark, who is located at Sixth and G streets N. W. Mr. Seamark is one of the oldest and largest dealers in bicycles and motorcycles in Washington, D. C., handling the Merkel, Emblem, Thor, Miami motorcycles, and Flying Merkel and Emblem bicycles.

### NEW TEPEE FOR MILWAUKEE

Milwaukee, Wis., September 21.—The old Wisconsin Motorcycle Co., 304 West Water street, Wisconsin and upper Michigan distributor for the Indian, is no more. Hereafter all dealer transactions will be handled through the Chicago branch. The Badger State Motorcycle Co., 2220 Meinecke avenue, now handling the Reading-Standard will be the Indian dealer for Milwaukee County.

### 8 CYCLONES FOR GAS COMPANY

San Francisco, Cal., September 24.—Ludenclos & Henry, northern California distributors of the Cyclone, have just reported the sale of eight machines to the Pacific Gas and Supply Company. This company maintains a fleet of one hundred machines for various purposes.

### UTILIZES MOVIES SUCCESSFULLY

Louisville, Ky.—Roy E. Warner, the local representative for the Firestone Tire & Rubber Co., is handling some very clever moving picture advertising to show Louisville people the class of service he has to offer. A short film, of a few hundred feet, is thrown on the screens at some of the leading moving picture shows. This film is of the type known as the animated advertising film. A machine is seen to blow a tire. Warner's service machine dashes up, the repair man makes about three movements, and the damaged machine is on its way.

### THE POWER OF ADVERTISING

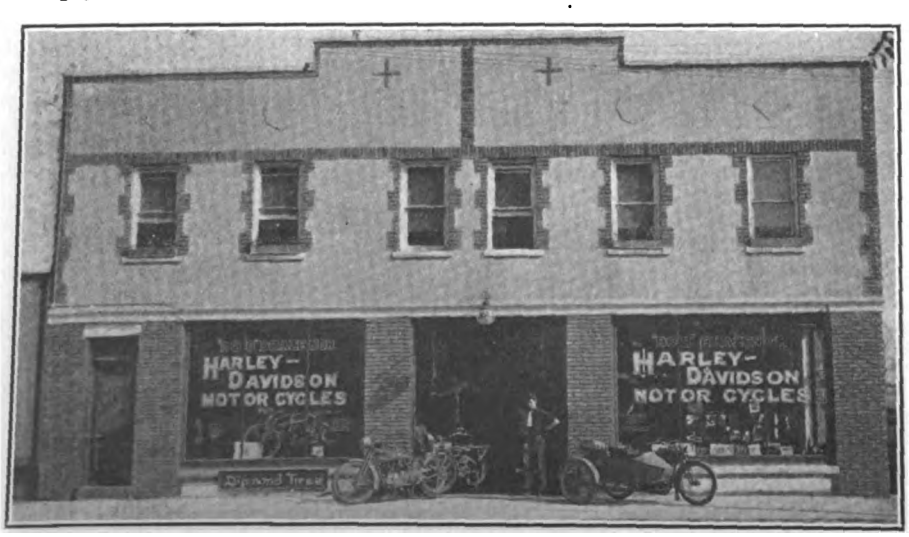
Brooklyn, N. Y., September 14.—Otto Sohofer, the manager of the Eastern Cycle Co., agent for the Emblem motorcycle in Brooklyn, reports a three-fold increase in Emblem sales for the present season and attributes his wonderful progress to the extensive advertising campaign which he has waged. At the end of 1914 he had sold nineteen machines, and by increasing his advertising in 1915 he claims to have tripled that number. Sohofer distributed three thousand three-sheet posters and placed full-page advertisements in ten theatre programs throughout the current season.

### WELLS, VETERAN DEALER, RETIRES

Louisville, Ky., September 14.—This week witnessed the retiring from active business of Prince Wells, the veteran bicycle dealer, when he sold his entire stock and good will to the Century Cycle Co. For many years Wells was the leading dealer in the city.

### ON THOUSAND-MILE TRIP

Paterson, N. J., September 20.—Orie Steele, the local Indian dealer, and Chas. Versele, of the Haledon M. C., have just returned from interesting motorcycle trip to various historical points. Their itinerary took them through Allentown, Gettysburg, Carlisle, Berkley, Martinsburg, Washington, Trenton. They covered over one thousand miles.



**Where Harley-Davidsons Have Their Home in Cypress Hills Section of Brooklyn, N. Y.—Establishment of "Bob" Brazenor at 594-596 Jamaica Avenue**

### POLICE ORDER NEW INDIANS

Paterson, N. J., September 20.—John Steele, the Indian distributor of Passaic and Bergen County, has received and placed in his showroom the first "powerplus" Indian to be seen in the city. Crowds of riders flocked to the store to give the 1916 machine the "once over" and Steele claims to have received a number of orders. The local police department has placed an order for five of the new models for their patrolmen, giving in part payment the old 1914 police machines.

### MAGGINI NOW "DAD"

San Francisco, Cal., September 23.—Great rejoicing prevails in the store of Maggini & Perkins, Harley-Davidson dealers, since Al Maggini announced the arrival of a little boy. The youngster tipped the beam at eight pounds, and "Dad" Maggini is one proud man.

### HANSON HEADS PARTS DEPT.

Kansas City, Mo., September 21.—Albert Hanson, formerly in charge of the parts department of the Hendee branch in this city, now holds a similar position in the Indian agency owned by his father. With the closing of the factory branch here, the elder Hanson purchased a large stock of its parts and supplies.

### GETS CYCLONE AGENCY

Washington, D. C., September 20.—J. S. Berryman, of the Harley-Davidson Repair Company, located at 1013 Ninth street N. W., Washington, D. C., has taken the agency for the Cyclone motorcycle, in addition to the Pope motorcycle, which he has handled for several months with pronounced success.

### MORE INDIANS FOR POLICE

Kansas City, Mo., September 21.—Four more Indian motorcycles were placed with the Kansas City Police Department last week by C. Hanson, the Indian agent here. About two months ago Hanson sold seventeen new machines, fully equipped, to the local police. The department has forty-two motorcycle officers, who are divided into a day and a night shift.

### WILL SEE THE BIG SHOW

Pittsburgh, Pa., September 13.—S. C. Hamilton, the local Harley-Davidson dealer, has good news to bring to the Chicago show when he tells of the business prosperous year which has just closed. He claims to have sold nearly two hundred machines and thirty-five sidecars.

### PLACES FIRST ORDER

Modesta, Cal., September 12.—Walter Johnson, the local Indian dealer, has placed his first order for a 1916 machine with the Hendee branch at San Francisco.

Digitized by Google

# DEALERS' SECTION

### REMODEL ESTABLISHMENT

Omaha, Neb.—The Nebraska Cycle Co., Excelsior distributors for this city and vicinity, has just completed remodeling its salesroom at Harney and Fifteenth streets, at an outlay of $5,000. Large plate glass windows have been added and the interior of the store has been remodelled along modern lines. E. Mickel, the manager, reports the sale of two machines to the telephone company and a very lively demand for bicycles, the Excelsior line being featured. The repair department is housed in a separate store and is in charge of an experienced mechanic.

### THREE MACHINES FOR POLICE

Aurora, Ill.—Another progressive dealer who has succeeded in convincing the local police department that motorcycle cops are indispensable in protecting the public against speed maniacs is Charles Hickney, Jr., the local Indian agent. He has sold two three-speed, electrically equipped, machines to the guardians of the law. During the year Hickney claims to have placed fifty-one machines on the road and twelve sidecars. He has the agency for the National and the Pope bicycles and states that he may add other lines for the new season.

### GOLDFISH AND MOTORCYCLES

Burlington, Iowa.—Five orders for the new three-speed Indians have been booked by the Ashborne Goldfish & Supply Co., the only goldfish house in the country which "sells Indians in the summer and little fishes in the winter." The prospects, according to the proprietors, is that Indians will now be sold all year round. Their 1916 demonstrator has already arrived and crowds of riders are reported as flocking to the store to see the new offering. Pope and Great Western bicycles also find a place in this establishment.

### "REBUILT" SALES GOOD

Lincoln, Neb.—The Frazier Cycle Company has taken the Lancaster County agency for the Smith Motor Wheel and has already sold five of the bicycle attachments. Though the season has been rather quiet in motorcycles, because of inclement weather, the sale of rebuilt machines has been usually brisk. The Frazier company handles the Reading-Standard and Flying Merkel motorcycle as well as Reading-Standard and Columbia bicycles.

### COMPLETES EIGHTH YEAR

Lincoln, Neb.—The Lawlor Cycle Co., has completed its eighth year as the Harley-Davidson distributor of Lancaster, Otoe and Saline counties. The season has been backward owing to almost continual rain. Four twins were placed with a number of city departments. The company features Racycle, Iver Johnson and King bicycles.

### HAD TENT AT FAIR

Louisville, Ky.—The Sutcliffe Company, dealers in bicycles and local representatives for the Smith Motor Wheel, had a tent exhibit of bicycles and motor wheels at the Kentucky State Fair during the week of September 13. As a rule the crowds were too thick on the fair grounds to do much practical demonstrating, but some business was obtained, and a large number of good prospects dug up.

### ALAS, POOR HOOLIGAN

Santa Monica, Cal., Sept. 17.—Count Sergius Apraxin's famous horse "Hooligan," which for the past six months has carried Mounted Officer Wright on his rounds, has just been turned over to the City Health Department to be used for collecting garbage and other menial tasks. "Hooligan," despite his name, was an aristocratic horse. In him ran the blood of some of the prize winners of the country. He was the pet of Count Sergius Apraxin, an Austrian who made his home on Santa Monica Bay for several years. Gasoline, steel and rubber combined to cause Hooligan's demotion to the "white wings." Officer Wright recently purchased a speedy red Indian motorcycle from C. Will Risden.

### DAYCOCK IN FATAL ACCIDENT

Buffalo, N. Y., September 20.—Late yesterday afternoon Charles Daycock, a salesman and demonstrator for Neal, Clark & Neal, the Bison City Indian agents, was instantly killed while trying out a motorcycle at the Columbia Park dirt track. Daycock's chest was crushed and his neck broken when he ran into a horse which was being pastured in the center of the track.

### INDIANA JOBBERS GROWING

Indianapolis, Ind., Sept. 20.—The Kinney-McKee Co., of this city, which jobs both bicycle and motorcycle accessories, bids fair to become one of the biggest jobbing houses in the Middle West since the firm was strengthened by the entrance of Art McKee, formerly associated with the Beckley-Ralston Co., of Chicago, Ill. J. H. McKinney started the business under the style of the J. H. McKinney Co., and enjoyed a large trade, having a host of friends and followers in Indiana and Illinois.

The company maintains a well-appointed and completely stocked salesroom, centrally located in the business district of the Hoosier City and within a block of the traction station by which most of the buyers from various points in the Middle West enter the city. A large share of the city business comes to the Kinney-McKee Co., for this concern does not sell at retail, sticking strictly to jobbing. All the employees have been in the services of the J. H. Kinney Co. since its inception several years ago.

### ROCKAFELLOW'S SALES

Flemington, N. J., September 20.—Carl Rockafellow, Excelsior distributor for Hunterdon county, has disposed of an even score of new and second hand motorcycles. Two of his fourteen sales of 1915 machines were of single speeds, while all were Presto tank equipped.

### BERGES OPENS THOR AGENCY

Bakersfield, Cal., September 17.—J. A. Berges, a member of the local motorcycle club, has opened up a new repair shop and will handle the Thor machine, as well as a first class line of bicycles. Berges' shop has new fixtures and is efficiently equipped.

### KEPT HIM STEPPING

Grand Junction, Colo., Sept. 20.—Peter Fox, the proprietor of the F. A. M. Motor Shop, reports the sale of thirty new machines, eight seconds and six sidecars, showing, he claims, an increase of one hundred and fifty per cent. over the sales of last year.

# HOW DAYTON DEALERS SOLVED USED MACHINE PROBLEM

## Success Obtained by Plan Which Was Adopted by Ohio City Agents

By E. F. HALLOCK

THERE is not a doubt in the world but that the question of the proper allowance to be made on a trade in motorcycles is one of the most, if not the most, perplexing one that the motorcycle dealer has to contend with. At the same time the question is a most delicate one. Delicate, not only because in settling it the dealer is likely to make bad friends either with the prospective purchaser of a new model, or with the other dealers of his town—even perhaps with both—but also because his decision, be it high or be it low, must negatively affect his pocket book.

This means that if the dealer allows too much on the old machine, when it comes to a resale the difference between the resale price and the price allowed for the machine will represent his loss in profits on the sale of the new motorcycle. On the other hand, if he sets the allowance too low, the otherwise live prospect will betake himself off to some more liberal competitor and the chance of making a sale is lost.

### A Successful Plan

Out in Dayton, O., the dealers have got together on this question and adopted a plan for concerted action which has been in operation throughout the present selling season. Judged solely by that comparatively brief tryout, it works like the proverbial charm. Stated, simply, the plan is as follows: The dealers have signed an agreement not to allow for a used machine, one year old, more than 40 per cent. of the catalog price of the same make and model of the new machine. Thus if the 1915 "Exceeder" lists at $250 in a certain model, the allowance on a 1914 "Exceeder" of the same model could not under any circumstances be greater than $100. That maximum, of course, would be allowed only on machines in very good condition, while for machines that are not all that is to be desired in the way of "shipshapeness," the dealer is at liberty to use his judgment as to how much to take off for this lack of condition.

So much for the machines only one year old. The "two-year-olds," the "threes" and the "fours" also are dealt with, and in a very simple manner. The same rule applies, save that for each additional year over the first, a deduction of 30 per cent. from this maximum is made in the case of twin machines, while in the case of the single deduction is raised to 40 per cent. Thus if the "Exceeder" mentioned above had borne the name plate "1913" the maximum allowance possible on it, were it a twin machine, would be $70, or $250 less 60 per cent. less 30 per cent. In the case of a single it would have been $60, or $250 less 60 and 40.

### Every Dealer Profits

The arrangement is one that makes it possible for every dealer in Dayton to make money on deals involving the trading-in of a used machine, for the figures are well within the market values of the used machines. The dealer can thus always make a resale and not lose a penny of his profits on the transaction. The fact that all of the Dayton dealers are "in" on the arrangement precludes the possibility of the "prospect" toting his used machine around to all the dealers and letting the highest bidder make the sale.

The agreement is drawn up in contract form, and is signed by all the local motorcycle dealers, all of whom, by the way, belong to the Dayton Motorcycle Dealers' Association. This is an organization formed with the special object of looking after the best interests of the two-wheeler trade in that city. Those interested in the organization are: Harry A. Gross; the B. B. L. C.; O. E. Evans; Harley-Davidson Sales Co. (L. E. Fluke); W. F. Meyers; Niehous & Dohse and W. J. Teubner & Co. It might be said in passing that this association has more than justified its existence and that the example set by it is certainly worthy of emulation by dealers in other cities.

### Scope of Agreement

The agreement drawn up by these dealers goes a bit further than the used-machine question. It deals also with the installment end of the business and with the repair trade. It is agreed, for instance, that when motorcycles are sold on installments, at least one-half of the purchase price must be paid down, while a charge of 10 per cent. of the remainder must be made for the accommodation. This latter charge, however, is refunded to the purchaser, provided he meets all payments when due and settles the entire account within sixty days from the day of purchase. This, of course, acts to bring in the payments on time and to settle the accounts quickly.

It is agreed that repair work will be charged for at a uniform rate of 60 cents an hour. The agreement also stipulates that all new machines are to be sold at the manufacturer's catalog price, and that no premiums or discounts shall be allowed under any circumstances. The full agreement of the Dayton dealers follows:

THE DAYTON MOTORCYCLE AND BICYCLE DEALERS' ASS'N.

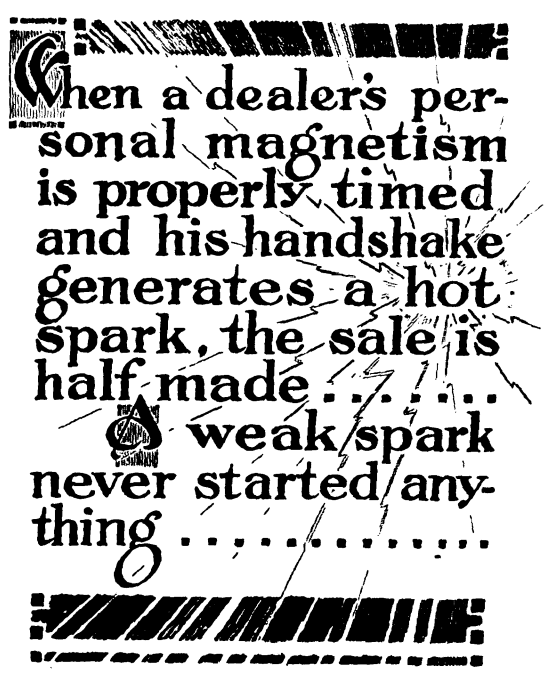
We, the undersigned motorcycle dealers of Dayton, Ohio, hereby agree to the following:

That the catalog prices set by the motorcycle manufacturers shall be the cash purchase price and that no premium shall be given or discounts allowed under any circumstances.

That the first payment on all motorcycles sold on credit shall be at least one-half of the catalog price and an additional charge of 10 per cent. of the unpaid balance shall be added to the list price with this concession: that if the purchaser makes all payments when due and settles the account in full within sixty days from the date of purchase, this additional 10 per cent. shall be deducted.

That the allowance on all motorcycles taken in trade on new machines shall not be in excess of 40 per cent. of the 1915 list price of the same make for 1914 models and for each year preceding an additional deduction of 30 per cent. on twins and 40 per cent. on single models shall be made.

That the charge for all repairing shall be at the rate of sixty cents an hour.



## MOTORCYCLE BROUGHT UP FROM RIVER-BED AFTER 8 MONTHS

Milwaukee, Wis., September 23.—William Wagner, a local rider, recently had his Harley-Davidson motorcycle returned to him, after it had been lost at the bottom of a river for eight months. One eventful day Wagner, with a friend on the tandem, was speeding towards the East Water street bridge (which is of the bascule type) when the lift slowly began to rise in front of him. The tandemite slipped off backwards, and when Wagner saw that he could neither leap the gap nor stop his machine in time he also hopped off. The motorcycle went over into the river.

Wagner fished the stream for several days without getting even a nibble from his machine. Then he had a diver prowl around a bit on the river-bottom, but the motorcycle was not located. A few days ago a city dredge brought the machine to the surface without injuring it. The tires still held air and there was gas and oil in the tanks. Resuscitating operations chiefly with an air hose, brought the gray boy back to life in jig time and with scarcely any ill effects to show for its long sojourn on the river-bottom.

## TWIN CITY SPEEDWAY TROUBLES

Minneapolis, Minn.—Attempts to burn the grandstand and other demonstrations of hostility have been made at the Twin City Speedway, between this city and St. Paul. Delays in paying the workmen are said to be the cause. Director J. F. Sperry says that all bills will be paid by a $350,000 bond issue.

Cleveland

LIGHT MOTORCYCLE

1916 Model

# A Year Ahead

The new Cleveland Motorcycle, as it stands today, is the most advanced 1916 motorcycle on the market.

A glance at the specifications on the opposite page will easily convince you of this fact.

In design, construction and running ability it establishes a standard which is *entirely new* in the United States.

We readily admit the idea is not altogether our own. The Cleveland is the type which is the *one big motorcycle success* abroad.

It is unusually light in weight, silent in operation, clean, simple and accessible.

Its single cylinder, two-stroke motor has all the advantages of a "twin," minus the increased operating expense. It is remarkably smooth-running with a low, gentle hum in marked contrast to many motorcycle engines.

The Cleveland is in every respect a *high class* motorcycle—the first one—the only one to sell at so low a price.

Our factory facilities enable us to build them in large quantities. This is the secret of our ability to make the remarkable price of $150 and, yet maintain strictly the highest quality.

Since our first announcement a few weeks ago, we have received hundreds of applications for territory from successful motorcycle dealers.

Every progressive dealer in the country should be interested in our proposition. It means big sales—big profits—an unlimited market—unlimited opportunity.

We want dealers in every city and town in the country.

Here is your chance—*the big chance* you have been looking for.

Do not let it slip out of your hands.

Write us today for full information.

Quick action is imperative.

# $150

## *Specifications*

UNIT POWER PLANT—Single cylinder, 3-port, 2 stroke motor, 2½-inch bore and 2¾-inch stroke, air cooled.

GENERAL DIMENSIONS—Wheelbase 53 inches. Ground to top of saddle 29 inches. Ground to crankshaft center 10 inches.

FRAME—Heavy gauge seamless steel tubing with drop forged fittings. Low substantial and effective spring fork.

TRANSMISSION—Two speed spur gear and free engine clutch.

CARBURETOR—Brown and Barlow float feed single jet type.

DRIVE—Final drive by roller chain from counter shaft to rear wheel.

IGNITION—Bosch High Tension Magneto.

LUBRICATION—Motor lubricated by mixing oil in gasoline. Gears lubricated by running in oil bath.

BRAKE—Contracting band operated by foot pedal.

WHEELS—Steel clincher rims, heavy spokes, dust proof hubs.

TIRES—Extra heavy, double tube clincher, 26 x 2¼ anti-skid.

CONTROL—Bowden wire control from handlebar to compression release, throttle and auxiliary air. Spark position controlled through linkage from lever conveniently located on frame. Gears shifted with right foot.

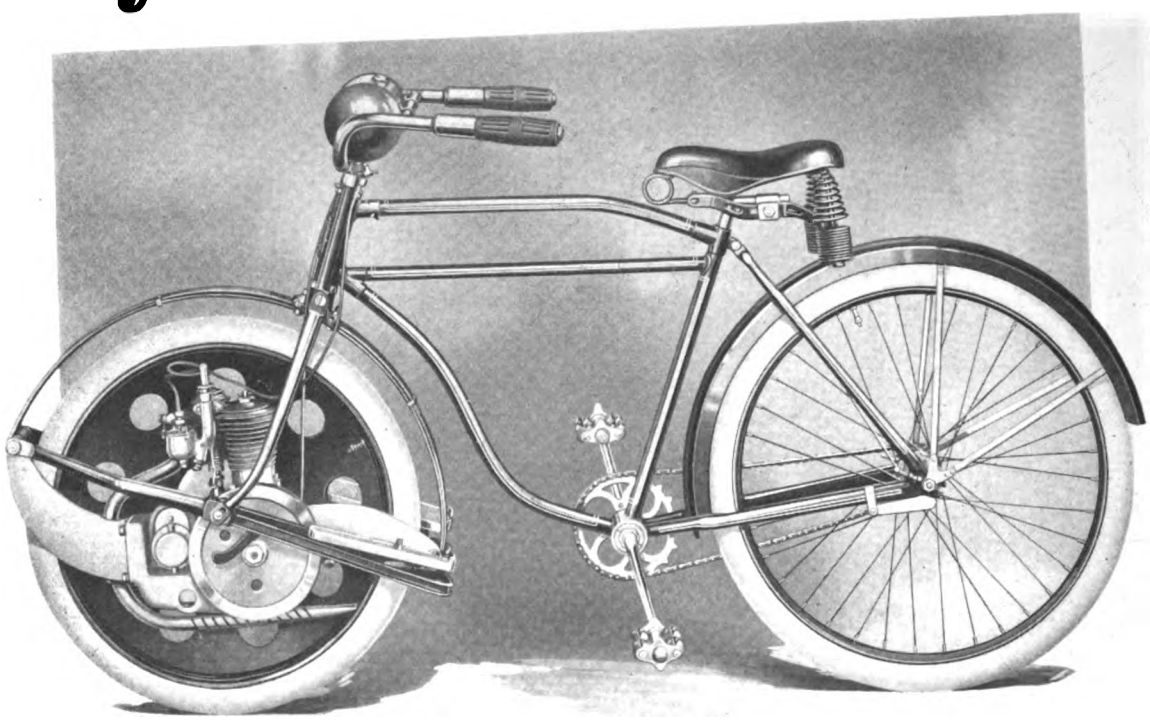
ANNOUNCING THE

# Dayton Motor Bicycle



## The World's Lowest Priced Complete Motor Vehicle

Getting from one place to another is everyone's daily problem. The Dayton Motor Bicycle solves the problem. It is not necessary to create a demand for it. The demand is here. Hundreds of thousands of men and women, boys and girls are literally clamoring for just such a low-priced, simple, safe and dependable means of transportation. It is a motor vehicle of universal use.

The Dayton Motor Bicycle is not a light-weight motorcycle. It is a bicycle of special design and construction driven by a small power plant located entirely in the front wheel. It is as easy to ride as a bicycle. It is as dependable as the highest priced motorcycle. It carries one quietly and comfortably at any rate of speed from 5 to 25 miles an hour wherever and whenever one wants to go.

Absolutely direct transmission of power, simplicity of construction, better distribution of weight, elimination of motor vibration as far as it affects the rider, and perfect cleanliness are features obtained by the location of the motor wholly within the front wheel.

The driving force is applied to the front wheel, the braking force to the rear wheel. Friction losses are eliminated. The frame is relieved of the usual stresses and strains. There is a very low center of gravity, more perfect balance and easier riding. The flexible fork springs reduce the vibrations. The rider does not come in contact with the motor, and is clean and comfortable. There is plenty of power and speed for all ordinary conditions and the control is extremely simple and safe.

## TABLOID SPECIFICATIONS

MOTOR—Single cylinder, four-cycle, air-cooled, 1½ h. p., 2⅝ in. bore and 2¼ in. stroke. Piston displacement 9.97 cu. in. Motor support arms of aluminum.

DRIVE—Direct through special Dayton compensator applied between motor and wheel.

IGNITION—High tension magneto, gear driven. Simply pedaling the bicycle starts the motor.

CARBURETOR—Automatic float feed type controlled by throttle operated by twisting right handle bar grip.

LUBRICATION—Mechanical oiler operated directly from drive shaft. Oil supplied from crank case.

GASOLINE TANK—Capacity 1 gal., sufficient for 100 miles. Tank securely clamped on handle bars.

FRAME—1 in., 18-gauge best drawn steel tubing triple reinforced at head. Dropped 2 inches at cluster, giving low and easy riding position.

FRONT WHEEL—24 in. diameter, pressed steel, strong and light; clincher rim.

REAR WHEEL—26 in. diameter. Steel rim, motorcycle type. Diamond E Tandem spokes.

FRONT FORK—Three stem. Wheel attachment patented. Famous Dayton Rocker Spring Fork crown connection. Double springs of chrome vanadium steel.

TIRES—United States special motor bicycle tires. Extra heavy tread, motorcycle fabric.

BRAKE—Atherton Special Coaster Brake of heavy Motor Bicycle type fitted to rear wheel.

FOOTBOARDS—Aluminum, pyramid faced, 9 in. long, 3½ in. wide.

WHEELBASE—43 in.

WEIGHT—115 lbs.

PRICE—$95.00 F. O. B. Dayton.

The Chart of Thirty Reasons

**$95**

THE **DAYTON** **MOTOR BICYCLE** Must Appeal to You Because

Why The Dayton Is the Best

**$95**

### Its Field Is Unlimited—because

1—Its cost is so low.

2—It is clean and comfortable.

3—It gives pleasure and health.

4—It is safe and easily controlled.

5—It is a new sport and recreation.

6—It is light and simple to operate.

7—It saves car fare to and from office and shop.

8—It is a much-needed means of transportation anywhere.

9—Not only men and boys, but women and girls will ride it.

10—It meets the demands of commercial use—collectors, salesmen, field superintendents, repairmen, messengers, delivery boys, etc.

### Its Quality Is the Best—because

1—Its fork attachment is a patented feature.

2—It has ample speed—"as fast as the law allows."

3—It is the lightest "light weight" on the market.

4—The distribution of its weight gives it perfect balance.

5—It has been thoroughly tested in the factory and on the road.

6—It has ample power for universal use over bad roads or steep hills.

7—It has a special frame and is equipped with special tires of extra tread stock.

8—Its motor is built on well-established principles and has been proven successful by daily use.

9—It embodies the most direct power transmission. No loss by friction in chain, belt or shaft drive.

10—It is built and guaranteed by an old, reliable firm, with many years' experience in the manufacture of bicycles and motorcycles.

### Its Cost Is the Lowest—because

1—Its construction is simplicity itself.

2—There are few parts to get out of repair.

3—It is the lowest priced complete motor vehicle in the world.

4—Its operating expense is negligible. 100 miles to a gallon of gasoline.

5—Only the best materials are used in its construction, resulting in satisfied customers.

6—It will stimulate sales in the dealer's other lines.

7—It will be a great advertisement for the dealer.

8—It will sell for cash, eliminating loss on time payments.

9—It will be a training school for the heavy-weight motorcycle.

10—It will be a quick selling line, meaning frequent turnovers of stock.

# Are You Satisfied With Your Bicycle Sales?

If not, you can be so for the coming season. Specify the MORROW on all the wheels you sell. You can easily show the prospect that a wheel without the MORROW gives but 50% service.

You can easily convince him of the remarkable safety and pleasure to be derived from the fitment of the MORROW.

Let him try for himself the marvelous ease of forward operation, the smooth, sure, gripping power of the brake, the airy coasting of the MORROW.

The MORROW saves his strength that would ordinarily be wasted in continuous pumping of the pedals, in the exertion of holding the pedals to slow turns on a down grade—in every way the rider learns the true fun of bicycling.

That man, Mr. Dealer, fill become a real, live prospect for the bicycle equipped with the MORROW.

It is up to you to show him that the MORROW, with its largest braking surface within the limits of a bicycle hub, with its slipless forward drive, its perfect braking, is the one essential to making his bicycling joy 100% flawless.

You need blame none but yourself if next season's bicycle business is not a better business all around—with the help of MORROW equipment.

Write for full information—we co-operate with our dealers.

# SAMPLING WISCONSIN MUD ON A SIDECAR TRIP

## These Roads Ranged All the Way From the Best to the Worst

By HUGH SHARP

"YOU and Ted Werle are getting awfully interesting."

The foregoing, written on the back of a fancy colored label that goes around one of the favorite brands of Porto Rico tobacco, came from Miss Della Crewe the other day. Miss Crewe is sojourning in that land of sunshine and cigarette smoke as part of her trip thither and yon over the continent with her motorcycle and sidecar.

I showed the note to Fred.

"Humph, wait till she reads about what happened to us at Marshfield. That's what I call interesting."

When Ted and I woke on the third morning of our week's trip in search for material to be incorporated in the new health exhibit which he was preparing for the Wisconsin Anti-Tuberculosis Association it was to the accompaniment of a steady and persistent patter of rain on the windowsill of our room at the hotel.

"How would you like to be out in some lonely field cooped up in that little pup tent of yours now?" I asked.

### Clay Roads Ahead

It was an extremely fortunate whim that prompted us to stay at the hotel at Marshfield and not to push on beyond the outskirts of town and pitch the shelter tent for the night, for the rain came down in a deluge. It was with more than an ordinary feeling of comfort that we watched the main street of Marshfield being transformed into a quagmire—from the dry and deeply-cushioned chairs in the lobby of the hotel.

"Now if we only had yesterday's interminable sand stretches to travel over after this rain, tomorrow's trip would be a pipe; as it is, we face the worst section of the state for clay roads. We are in for it."

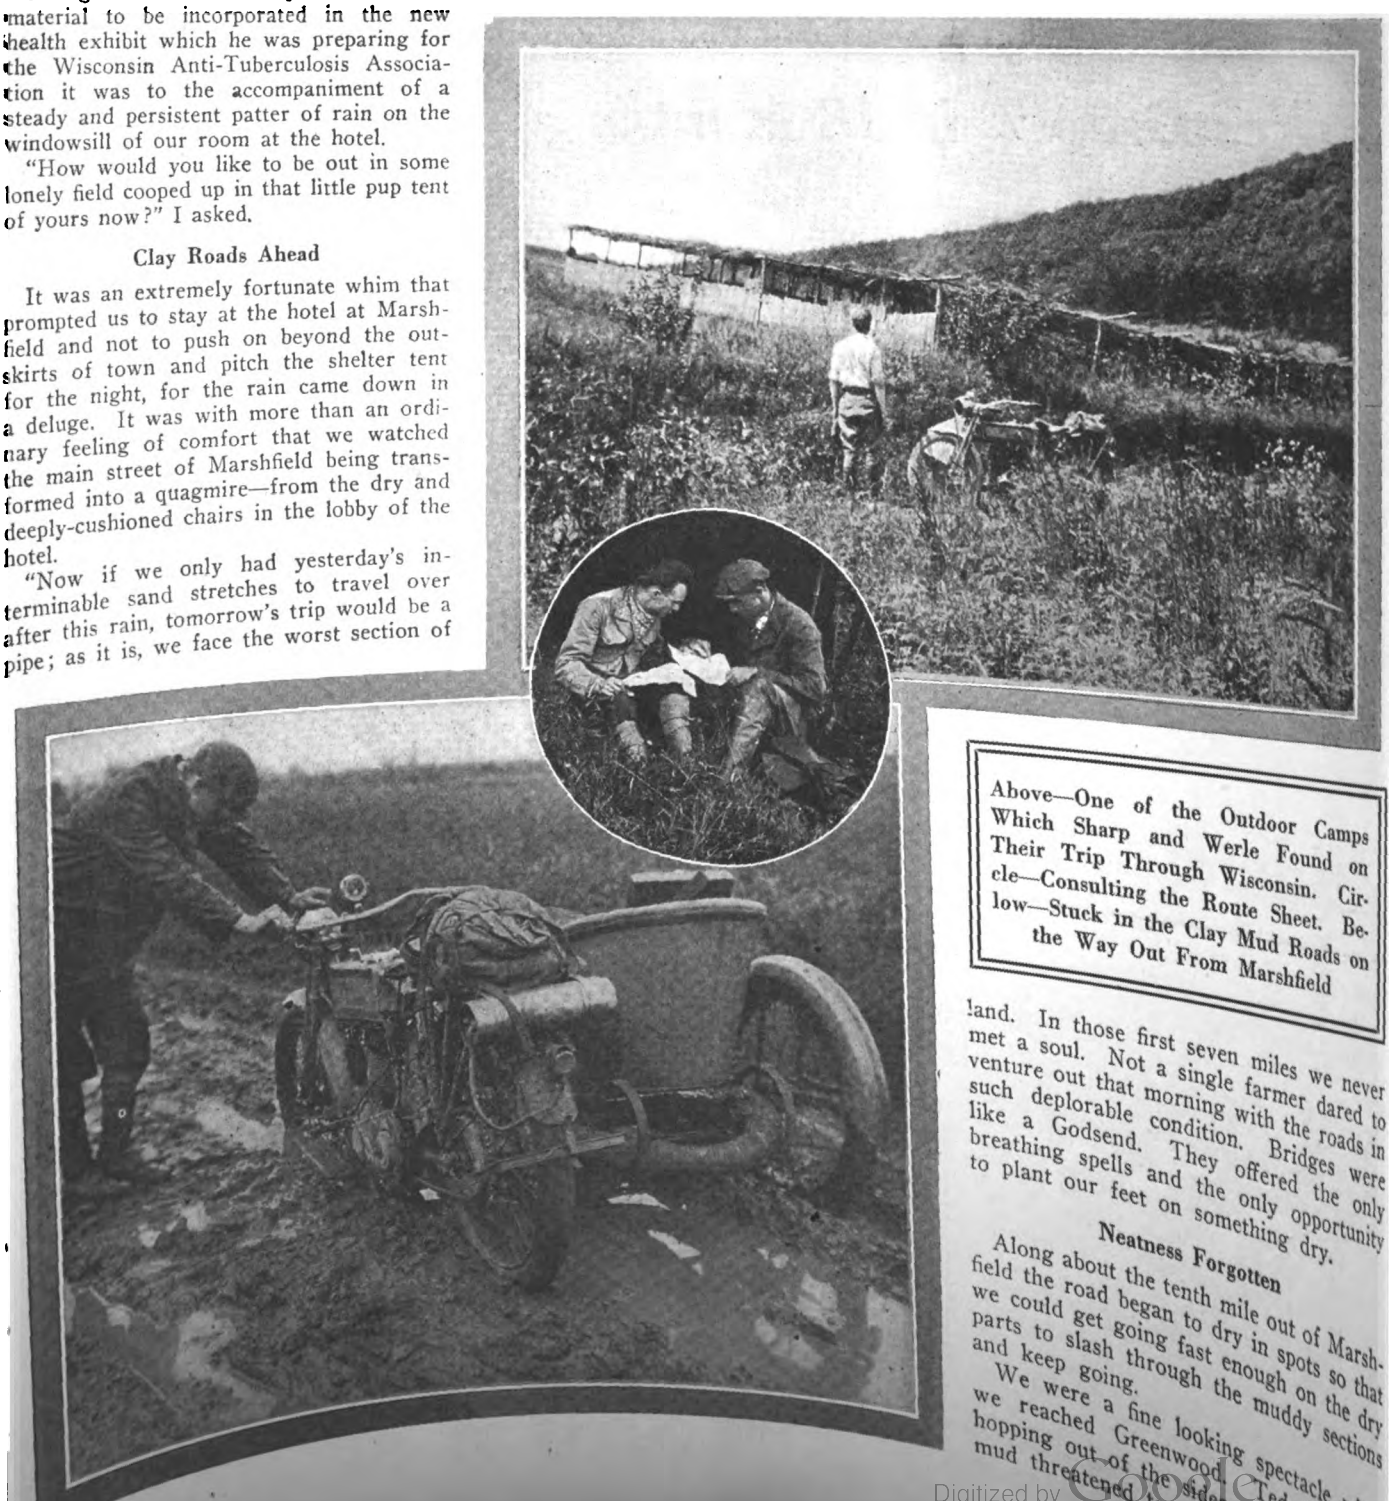
About noon the clouds broke and we were treated to intermittent sunshine for the rest of the day. It was a very dubious crowd of Marshfieldians that watched us depart next morning. Over at the garage that morning one of the attendants pointed out an automobile that came in the night before over the road we were to take. There was mud up to the hub of the wheels and still more mud spattered clear over the top. So our little health party toted a good-sized cargo of gloom out of Marshfield.

Talk about mud!

We were three hours traveling the first seven miles. Marshfield lies in the lowlands, and how the farmers near there ever manage to nurse a crop of even the hardiest vegetation to the stage where it can be harvested is a mystery.

The very character of the farmhouses along the way was evidence of the poverty of the soil. I'll bet we pushed the outfit fully five miles through that sticky yellow clay. There was nothing else to do. The wheels would not move. The clay packed so tight between the guards and the wheels that it was easier to slide the outfit along than keep picking the mud out of the fenders.

Along each side of the road was marsh



Above—One of the Outdoor Camps Which Sharp and Werle Found on Their Trip Through Wisconsin. Circle—Consulting the Route Sheet. Below—Stuck in the Clay Mud Roads on the Way Out From Marshfield

land. In those first seven miles we never met a soul. Not a single farmer dared to venture out that morning with the roads in such deplorable condition. Bridges were like a Godsend. They offered the only breathing spells and the only opportunity to plant our feet on something dry.

### Neatness Forgotten

Along about the tenth mile out of Marshfield the road began to dry in spots so that we could get going fast enough on the dry parts to slash through the muddy sections and keep going.

We were a fine looking spectacle when we reached Greenwood. Ted [illegible] hopping out of the sidecar [illegible] mud threatened to [illegible]

Digitized by Google

tainly was a pretty looking sight. So was our Harley-Davidson and sidecar.

The livery stable man offered the use of his garden hose to wash the accumulation of clay off of the sidecar outfit, and while I was busy concentrating the full force of the hose on the mud, Ted bought a pair of heavy woolen socks to change into. Ted's feet being dry, and the absence of mud, made a world of difference in our progress for the rest of the day.

The roads cleared up in great shape after we got out of the rain belt and we were able to make Owen, famed for its logging operations, for dinner. It was here that I got my first glimpse of the process of converting the rough logs into a semblance of lumber on a large scale.

Chippewa county offers some of the best roads in the entire state of Wisconsin for the tourist. We paused in Chippewa Falls long enough to take a good look at the falls after which the city was named, and then continued on seven more miles to Eau Claire. That afternoon's travel more than made up for the terrific going of the morning. We had sampled the worst and the best highways of the state.

We were to visit the new Eau Claire county tuberculosis sanatorium here, situated across the picturesque Eau Claire river on a high bluff outside of the residential district. Chippewa Falls and Eau Claire are twin cities offering exceptional scenic beauty to the visitor. A mere ride through the town with a casual glance at the pretty places in and around these two towns is not enough. One must spend several days at each place to appreciate what has been done in the way of enlarging on Nature's handiwork through civic enterprise.

### MOTORCYCLIST NOW AN AVIATOR

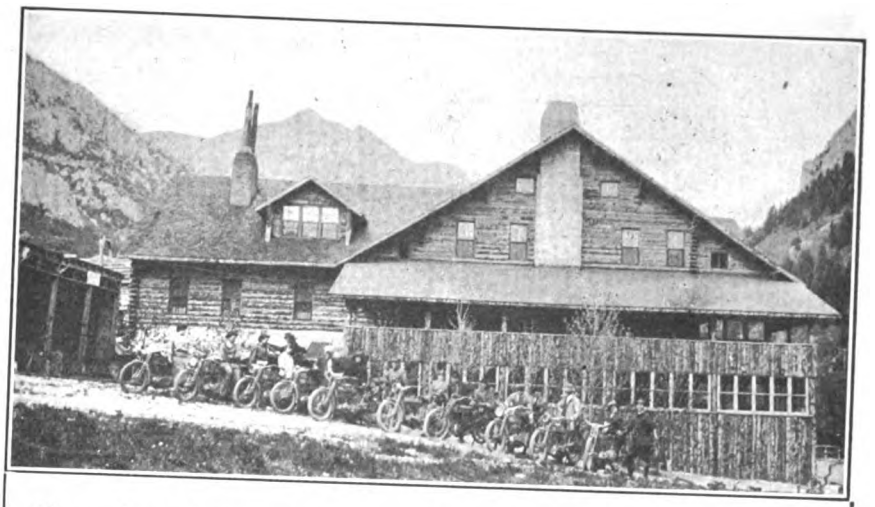
C. O. Raynor, a well-known motorcycle rider of Vancouver and Victoria, and holder of a number of speed trophies, has been appointed to the flying committee of the Aviation Corps recently formed in Vancouver to train pupils in aviation for service under the British Army in Europe. Lulu Island has been chosen as the training centre.

### REWARD OF PATRIOTISM

Portage la Prairie, Man.—When Clayton Lowry, a young local rider, offered his services to the country and was accepted for the Divisional Cyclist Corps, his employers, Brown's Limited, presented him with a Thor twin-cylinder two-speed motorcycle so that he could become an efficient despatch rider.

### OHIOAN YEARNS FOR WAR SERVICE

Ottawa, Ont.—So anxious is a young motorcyclist of an Ohio town to enlist for active service with the Canadian Expeditionary Force that he has offered to donate his motorcycle for war purposes and is willing to "throw in" his sweetheart into the bargain as a Red Cross nurse. The man, who is Phillip Vessey, of Zanesville, Ohio, has written to this effect to the Canadian military authorities here. He wants to become a despatch rider or would join the cyclist corps and bring his own new motorcycle. His best girl, a qualified nurse, would also enlist at his suggestion.



## Enjoying Unusual Scenery in the Cottonwood Canyon Near Salt Lake City

By Joe Esler

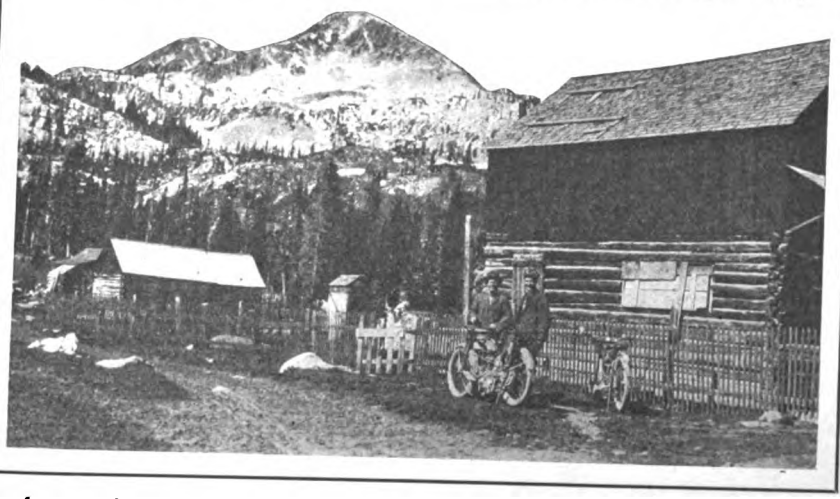
"LET'S hit the Cottonwood Canyon trail if you want to see some of the finest scenery around Salt Lake City," said Ray Peck, assistant to Mr. Brewer, of the Bicycle Supply Co., Excelsior distributors for Salt Lake and vicinity, when I visited him recently. We started. The foothills leading to the canyon were soon passed and we struck the canyon proper. The mountain walls towered above us and the scene was very impressive. Roads—dusty but quite ridable.

We passed the first power station of the Utah Power Co., whose electrical energy is generated by the Cottonwood river. Ray threw 'er into intermediate and we started to climb. Beyond the second power station the "stairs" begin. The grade is about 35 per cent., and half a mile long. We went into low and reached the top. Some view!

"Where are the ore wagons today?" Peck inquired of a prospector who was making his way afoot to the mines in the upper stretches of the valley.

"Bridge down up above us," was the reply.

That settled it. We would not waste time by going farther. The down trip started, we slid and bumped perilously with the brakes hard on. Peck knew his machine and the road and we came through without trouble. Here and there we stopped to enjoy the scenery. There surely was oodles of it. Back at the agency I learned that there are several other picturesque canyons near Salt Lake City, among them being Emigrant Canyon, where the Mormons first caught sight of this "promised land" when they emigrated to Utah; Parley's Canyon, Mill Creek Canyon, 10 miles to the eastward, and several smaller ones, all worth while seeing because of their rugged beauty.



A platoon of the cyclist corps, numbering thirty men was enlisted here within two days' time by Lieut. Urquhart.

E. H. Beltzig is now in charge of the St. Louis branch of the Firestone Tire & Rubber Company, of Akron, O.

### MACHINES FOR HEALTH DEPT.

Buffalo, N. Y., September 4.—H. L. Peters, the Bison City Harley-Davidson agent, sold two machines, electrically equipped and sidecars to the Buffalo Department of Health which are to be used for inspection service.

Digitized by Google

# SOME COMPARATIVE FIGURES ON RENOLD CHAINS

By JOHN R. CAUTLEY,
Manager Chain Dept., Peter A. Frasse & Co. Inc.

FOR a long time, it has been the purpose of the Renold Company in England to produce the best possible chain without regard to price, and then after producing such a chain to bring the price down to as reasonable a figure as possible. Coupled with this has been the production of a chain which shall be as light as possible, consistent with a reasonable strength, in order to obtain the best results as regards noise and wear.

From the time of the 2¼-horsepower single-cylinder machines up to the 1914 twin mounts, which developed over 10 horsepower, the same size and approximately the same strength of Renold chain has been used with great satisfaction. When the horsepower began to go over the two-figure mark, the Renold factory realized that something special had to be made. Accordingly, a new series, known as the 8198 and 8199 chains, the latter for the ⅝ x ⅜ inch pitch, was brought out.

A comparison of the figures for the old standard Renold 7198 chain and the new Special Service chain, No. 8198, will be of interest, it showing the great strength of the latter, as well as its light weight. On the old chain, the average breaking strength was somewhat over 3,000 pounds, with a weight per foot of only 0.41 pounds, or slightly over ⅜ of a pound per foot. On the new 8198 chain, which runs on the same sprockets, the Renold firm was obliged to increase the weight slightly, and the chain scales 0.465 pound, or a little less than 15-32 of a pound per foot.

With the increase in weight, however, has come a great increase in strength, and the new Special Service chain, while it weighs 13½ per cent. more than the old standard chain, has an average breaking strength of over 5,000 pounds, an increase of over 66⅔ per cent. This big increase would not have been possible a few years back, but for improvements in steel manufacture and the knowledge obtained in some 35 years of experimenting.

## CEREALS CROP TO SWELL FARMERS' WALLETS

IN view of the fact that increased sales of motorcycles in many districts have been due to rapidly growing interest in the power two-wheeler among the agricultural class, the following statement concerning cereal crops, published a few days ago by the Department of Agriculture, is worthy of note. The Department says that "the forecast of the total production of corn is 2,985,000,000 bushels, 67,000,000 more than forecast a month ago and 312,000,000 bushels more than the final estimate of last year.

"The spring wheat prospects improved in August, the forecast of September 1 being 322,000,000 bushels, 15,000,000 more than the August 1 forecast and 116,000,000 bushels more than the final estimate of last year. Applying the present forecast of spring wheat to the estimate made last month in winter wheat production makes a total production of wheat indicated of 981,000,000 bushels, by far the largest amount ever produced in the United States, comparing with 891,000,000 bushels last year—itself a record.

"The oats forecast on September 1, 1,408,000,000, was slightly higher than the August forecast and is close to the record crop of 1,418,000,000 bushels estimated in 1912."

### ON WHITE MOUNTAIN TOUR

Pawtucket, R. I.—Edward Lutz, who with B. A. Swenson runs the local Motorcycle Supply Co., Percy Bromley, George Peck, Ellis Dyson, Percy Schofield and Louis Sumner left this city last Saturday, at 3.30 p. m., on Indian motorcycles, with the White Mountains as their destination, making Manchester, N. H., their first stopping place, arriving there at 7.30 on Saturday evening. The following morning the journey was resumed, with short stops at Plymouth, N. H., for dinner, visiting the Flume, Old Man of the Mountain, Echo Lake and Mt. Washington, ending the day's run of 170 miles at North Conway, N. H. The return trip was through Dover, Portsmouth, and thence to Boston, a distance of 192 miles. Messrs. Schofield, Sumner and Dyson left the party at Portsmouth for a trip through Maine. The entire trip, a distance of 460 miles, was made in two days and a half and was void of mechanical trouble, punctures, etc., and the party returned much in praise of the beautiful scenery along the way.

### KELLY-SPRINGFIELD TO ADD

Akron, Ohio.—The Kelly-Springfield Tire & Rubber Co. is to add two new buildings to its plant here, to cost $12,500. One of these, 33 by 45 feet, will be used as a laboratory, and will cost $6,500, while the other, which will cost $6,000, will be 42 feet wide and 52 feet long, and will be used as an oil and cement house.

### SEBRING TIRE INCORPORATES

Sebring, Ohio.—The Sebring Tire and Rubber Co., has been incorporated with a capital of $200,000, to manufacture automobile and motorcycle tires. The incorporators are John Hotchkiss, Wm. F. Smith, C. B. Smith, H. D. Weaver and W. B. Stevenson.

### CLUB RIDERS WEAR ARM-BANDS

Indianapolis, Ind.—The Consolidated Motorcycle Club of Indianapolis are sporting bright new arm bands made up with the F. A. M. colors and bearing the letters C. M. C. Every rider in the club ... an arm band and wears it ...

## MONTREAL SHOW OPENS IN JANUARY

Montreal, Que.—What will probably be the only strictly motor show again this season in the British Empire will be the annual motor display in Montreal next January. Automobile, motorcycle and bicycle shows have been held in connection with the fairs at Toronto and Vancouver, but the coming event here will be a distinct motor attraction with only motor vehicles, including motorcycles and accessories in the exhibits. The show will be held for the ten days starting January 19. The building to be used has not yet been selected.

An idea of the lay-out and condition of the highways in the vicinity of Montreal is contained in the fact that it has been found necessary to erect no less than 1,450 danger signs on the roads within a few miles of this city. There are many places still unmarked and a further order has been placed for 1,000 danger notices, half of which are to be printed in French. The signs are posted at sharp curves, railway crossings, steep hills, approaches to schools, hidden intersections, rough road stretches and other points.

Several local oil authorities are of the opinion that the price of gasoline in Eastern Canada will jump from 18 cents to 25 cents per gallon before Christmas.

### DOINGS IN TORONTO

Toronto, Ont.—D. G. Anderson, president and general manager of the Cyclemotor Corporation of Rochester, and also an officer of the John T. Wilson Co., Toronto, Canadian makers of the Cyclemotor attachment for bicycles, has been spending considerable time in Rochester during the past month for the purpose of completing arrangements for the production of the motors for the American trade. It is understood that deliveries in quantities will be made to dealers in the States on or before December 1.

Gus Edwards, formerly in the mechanical department of the John T. Wilson Co., maker of the Cyclemotor, has been engaged by the Cleveland Motorcycle Company, Cleveland, who have introduced a new lightweight motorcycle.

According to a recent census, there are no less than seventy motorcycle and bicycle stores and repair shops in the city of Toronto, or an average of one store for every 7,500 persons here.

### MANY SPEED FANS IN WINDSOR

Windsor, Ont.—So successful have motorcycle races been on the one-mile dirt track at the local fairgrounds that the officers of the Canada Motorcyclists' Association are considering a proposition to have the Canadian National championships staged here in October. If the arrangements are made, it is expected that many Michigan speedsters would participate, owing to the proximity of Windsor to Detroit. One who is very much in favor of the proposal is President Jack Scott of the C. M. A., who resides in Toronto.

### HILLYARD IN SASKATOON

Saskatoon, Sask.—This hustling Western city has been honored by the presence of Douglas Hillyard, of London, England, one of the foremost motorcycle racing men of the British Isles, who is here on a prolonged visit to relatives. Hillyard is a trade rider for the Singer factory and is a team-mate of the famous Stanley, the English racing wizard. Hillyard himself holds a number of speed and reliability records and one of the reasons for his protracted holiday is that he is convalescing from injuries received during a trial on Brooklands track.

Hillyard made a trip to Chicago to see the recent motorcycle feature on the Windy City speedway and it is also rumored that he may participate in a series of races in Winnipeg, Toronto, and other Canadian centres as soon as he is fit. Hillyard may also hook up as a factory rider for one of the big American motorcycle producers.

### TRAFFIC TO THE RIGHT

Victoria, B. C.—After a careful study of the by-laws of a number of large Canadian and American cities, it has been decided that traffic here should keep to the right—in other words, that passing traffic should be given the right-of way on the left of a vehicle. Victoria is very English in many of its characteristics and the custom has been to allow traffic to hug the left side of the road as in the Old Country. This has also been the road custom in a number of places in Eastern Canada, including the Province of Prince Edward Island. The recommendation is receiving the attention of the local council.

### ANTI-NOISE AGITATION

London, Ont.—The authorities in no less than three Canadian cities have given consideration to open-muffler offenders in the motorcycle class during the past two weeks, and the indications are that a wave of anti-noise legislation will follow in the wake of present agitations. The subject of the use of muffler cut-outs on motorcycles was brought up for discussion before a meeting of the London council soon after the matter was considered by Toronto officials. Then, over on the other edge of the country, Vancouver authorities brought up the matter at the suggestion of the Vancouver Automobile Club, whose members argued that motorcyclists were gross offenders in the improper use of the cut-out. A closed-muffler by-law is promised in London immediately.

### TRAVEL TO CHICAGO

Toronto, Ont.—The experiences of two Toronto motorcyclists in a tour to Chicago and return were interesting. They made the journey in order to take in the opening motorcycle grind on the Chicago speedway, but according to their own reports, the biggest surprise they saw was a workout of a Henderson racing machine on the great course. The two riders were W. McDonald and Ford Hands, and they rode Excelsiors. They encountered considerable rain but suffered little inconvenience until they neared Chicago, when they were forced to sleep in the open because no one would accept their Canadian money, they declare.

### DISCOURAGING SPEEDSTERS

Winnipeg, Man.—A warning has been issued by the Winnipeg Motorcycle Club to all motorcyclists of the city that the club has pledged itself to report to the authorities all apparent infractions of speed and traffic laws within the municipal limits.

The club recently held a successful social run to Selkirk and return, the trip occupying one afternoon.

### DUKE TO SEE DESPATCH RIDERS

Vancouver, B. C., September 20.—On the occasion of his coming visit to British Columbia, His Royal Highness, the Duke of Connaught, is expected to review the motorcycle despatch riders now encamped at the Concentration Camp in Vernon. The despatch corps has put in a few months of hard training at the camp.

### WILL HAVE MOTORCYCLE COP

Winnipeg, Man.—Kildonan, one of the smallest centers in the Province, and located near here, is to have a motorcycle policeman, according to the decision of the Kildonan council. It is probably one of the smallest places on the continent to have a civic motorcycle for police purposes.

## The Demand Is Here

RESPONSES from recent announcements prove conclusively that there is a universal demand for the *Cyclemotor*.

Bicycle riders all over the country desire to be relieved from the effort and fatigue of pedaling. There is no simpler nor better substitute for bicycle pedaling than the *Cyclemotor*.

This motor, which is light in weight (21pounds) high powered, and simple in design, when applied to any diamond-frame bicycle, converts it into a light-weight, easy-to-handle motorcycle of graceful appearance.

Bicycle sales can be largely increased through the introduction of the *Cyclemotor*.

Dealers applying for territory should act quickly. *Give full particulars and mention line of bicycles carried.*

# SIDELIGHTS ON BAKER'S TRIP

## The "War Horse" Answers a Few Questions in Milwaukee

MILWAUKEE, Wis., September 21.—Some interesting sidelights on Erwin G. "Cannon Ball" Baker's famous Three Flag Record ride were revealed at a meeting of the Milwaukee Motorcycle Club where "Bake" was prevailed upon to recount, as he probably has done over and over again, the story of his trip.

The story was not told by Baker. The club members sort of chopped it out of the old vet. Baker never was strong on the speech stuff, and at Milwaukee it was only occasionally that excitement got the better of him and he let loose as many as a dozen words in one string. The "talk" sounded something like this:

"How many spills d'you take?"

"Didn't take any, never even had a bad wobble."

"Your long legs help you a lot, don't they?"

"No, never take 'em off the foot boards. I want all my weight on the foot boards when I strike rough stuff. Keep my balance better."

"What d'you have in the Thermos bottle?"

"Cold milk."

"Why do you carry a camera? Shouldn't think you'd have time to take any pictures."

"Oh, I found time to take some snapshots and got some fine ones. Lost lot of time on ferries that I occupied with taking snapshots."

It developed in the course of the rapid fire talk that the old war horse might not have gotten those first six hours of sleep if he hadn't burned out his switch box. It was while an electrician repaired the damage that Baker threw himself across a bed with his clothes on, shoes and putties off, and snatched half a dozen precious hours of repose.

When asked how he kept on the right road Baker stated that he remembered the route backwards, some remarkable achievement when it is considered that the average rider has difficulty going over the same route the same way for one-tenth the distance that Baker traveled. Baker went over the route from south to north with his transcontinental machine, and when he got to Vancouver replaced his motor with one that the factory had sent him.

Baker had made all his arrangements on the way up. He talked to the police departments in the large cities and arranged with the ferry men along the route; there were three of them. But he upset all these plans by running way ahead of his schedule. At the first ferry he had arranged to be taken across at 2 or 3 o'clock in the morning. He reached the place at 9 o'clock the night before. So it was all along the line.

At Seattle "Bake" was way down town and scooting out the other side of the city when the speed cops reached the outskirts to welcome the record breaker. The old boy related with unusual gusto his meeting with Paul Derkum, who rode out of Los Angeles to meet the hero. Baker roared out of some pass with a funny name at about seventy per when he met Derkum coming in the opposite direction also wide open.

"D'you stop?"

"No, gave him the high-sign and kept on. It took him almost ten miles to get stopped and turned around, and then he came after me with his nose down on the magneto."

## HANDLING A LEAK IN THE GAS RUBBER TUBING

IF a machine is equipped with a head and tail light, the rider should keep a careful watch of the rubber tubing to see that a leak doesn't develop. This is especially true if a long section of rubber tubing runs from the Presto tank on the handlebars to the tail light. It is much more satisfactory and economical in the long run to use copper tubing here, with short lengths of rubber tubing for connections.

If the Presto gauge shows a good pressure and it is difficult to get a decent flame at the head light burner, the gas is undoubtedly escaping through a leak somewhere. Turning on more gas can only give a slightly higher flame, but the waste is increased tremendously. The leak can usually be located easily by smelling, and can be repaired temporarily by tire tape or surgeon's plaster, provided no new tubing is available. but the best thing to do is to shut off the tail light entirely and use only the front. The easiest way to make this possible is to have a gas tubing cock fitted where the tail light tubing joins the lead to the head light. The cock can be turned so that all the gas flows to the front lamp, and there will be no waste in case the tubing to rear leaks. If the tail light is removed from the machine for any reason, it is not necessary to tie up the end of the tube.

## NERVY CHEYENNE SPEEDSTER

**Arthur W. Smith with His Cyclone at Denver Races on Labor Day**

## FOUR MORE POINTERS OF VALUE TO REPAIRMEN

WHILE the shop or frame pump is employed in the big majority of cases for inflating tires or tubes, it can be well adopted to additional services. In kerosening out a change-gear casing, for example, blasts of air from the pump sent into the casing will greatly assist the kerosene in "cutting" the oil and in distributing the cleansing liquid to all the bearing surfaces. The pump should be used after the casing is from half to quarter filled with the kerosene, and a thick rubber washer should be placed over the oil-filler in order that all the air from the pump enters the casing. Clogged pipes can be cleared by the use of the tire pump, the air being sent into the pipe in the contrary direction to that in which the liquid flows ordinarily.

### Safe Handling of Acids

In handling acids, such as are used for battery solutions, metal working or the like, it should be remembered that their effect on the human skin is corrosive and bad burns will be the inevitable result of any contact with the hands or feet. Acids should be kept in glass vessels at all times, unless hard rubber or celluloid ones are obtainable. A vessel containing acid should have a cover on it at all times to prevent accidents, as many acids resemble water in appearance and might be mistaken for the latter. In handling electrolyte or battery fluid, the windows of the room in which the work is done should always be opened to carry off any fumes that may arise. The safest way is to handle acids in the open air.

### Lubricating Hub Gears

The repairman is occasionally confronted with a job of fixing up a hub-located two or three-speed gear, and often puts the wrong oil in when the work is oompleted. The nature of the pinions in gears like the Sturmey-Archer motorcycle or bicycle types is such that a heavy oil or cylinder oil will not allow them to operate properly. Sperm oil or cycle oil only should be used, and the dose should be repeated every 150-200 miles. Where the makers of a hub gear specify the use of a heavy oil or grease, it is always best to follow their instructions.

### An Anvil Substitute

While many shops have little use for an ordinary anvil and hesitate to spend the money for one accordingly, there are occasions when something in the nature of that tool would be desirable. A good substitute is a section of railroad T-rail. about 20 inches long, which may be either allowed to rest on the bench or can be spiked to it with an end projecting. The surface offered by the rail is greater than that of the anvil section of a bench vise and it can be used for bending pipe or flat pieces over with the aid of a hammer. The rail forms a strong lever or rest of no mean order when a frame has to be bent to shape.

# Historic Ticonderoga Calls the Tourist

## How Motorcyclists Can Visit Two Fine Lakes and Inspect the Storied Ruins

By ROBERT BRUCE

THE unique geographical situation of Lake George and Lake Champlain makes it necessary for all motorcyclists traveling between northern New York State (especially the Adirondacks and the St. Lawrence river) to cross one of them in following any direct route to Vermont, or to the White Mountains, the Maine coast or eastern Canada across the Green Mountain state. While most of the travel north and south between New York, Albany, Plattsburg and Montreal naturally follows either the New York side or the Vermont side all the way (near to or some miles away from the lakes, as the case may be), many avail themselves of the opportunity of taking boat up part of one or both of these lakes, frequently using stretches of road on both sides, which of course gives the greatest variety, especially in making a round trip.

It will particularly interest the stranger to learn how many landing places for boats there are on both lakes, and especially the facilities for crossing Champlain—all of them available for the motorcycle tourist for about seven out of the twelve months. From Saratoga to Glens Falls and Lake George village there are two standard routes—the old, short line through Wilton, and the new and longer but more scenic way through Corinth and Luzerne. At Lake George village, the main route from Albany and below divides into two main streams, one bearing to the left to pass through Warrensburg, Chestertown, Elizabethtown and Keeseville to Plattsburg, and the other bearing to the right along the lake, as the map shows.

### Attractive Highway Route

It is possible to take boat all the way from Lake George village, but the perfect road and fine scenery to Bolton and Sagamore encourages the motorcyclist to make that short, easy trip over the highway. Above Bolton Landing, however, conditions radically change, for the route on the west side of the lake, passing over Tongue Mountain, is rough and dangerous; so practically everyone takes the boat at the "Landing" or Sagamore to Sabbath Day Point, Silver Bay, Hague, Rogers Rock or Baldwin. Here the good road begins again, and furnishes an excellent ride up to the historic Ticonderogas. So far there has been no east-and-west crossing, as the district immediately east of Lake George has no through routes into New England; in fact, there are none of any consequence between Glens Falls and Ticonderoga.

Speaking particularly of the Tongue Mountain Road, for the benefit of those who may happen to miss a convenient boat, or who may think it worth while to ride over the mountain for the sake of the superb views, the trouble is not so much with the extreme steepness of the grade as in its length and continuity, all the way to the top, about midway between the lower levels. The road is narrow and turnouts few and far between. No one who has gone over it will regret the trip, but probably few would care to repeat it. From Sabbathday Point a good country road leads up close along the lake past Hague to Ticonderoga, directly east of which the first crossing of lower Lake Champlain can be made.

Another View of Ruins of Fort Ticonderoga

View of Ruins of Historical Old Fort Ticonderoga

### Where the Fort Ruins Are Viewed

To do this, turn right in the village of Ticonderoga, passing considerably to the west of the ruins of the old fort, to Montcalm Landing; or if one wishes to visit the ruins, go more to the east to the actual site of the old fort, thence around to the Landing. Here boat may be taken to the Vermont side, thence by fair road to Orwell, where connection is made with the route from Troy to Burlington via Fairhaven, Orwell and Vergennes, on the east side; or, if desired, one can stay on the regular lake boat and go north to one of the upper landings.

Another important crossing is reached by going nearly direct east from Ticonderoga village (above the old fort ruins), to Fort Ticonderoga station, on the D. & H. R. R., a short distance east of which a steam ferry is taken to Larrabee's Point, Vt. About three miles out from the "Point" connection is made with the important north-and-south route referred to in the preceding paragraph, and also with the various roads leading to Brandon, Middlebury and northern and eastern Vermont.

### A Stretch of State Road

From Ticonderoga village there is state road the greater part of the way north to Crown Point, 9.5 miles, thence eight miles more to Port Henry, from which point the steam ferryboat "G. R. Sherman"—leaving at 7:30, 9:30 and 11:30 a. m. and 1:30, 3:00 and 6:00 p. m.—makes six daily trips (four on Sundays) to Chimney Point on the Vermont shore, connecting with a fair road to Vergennes, ten miles distant. From Port Henry a good though hilly road, changing into a fine six miles of state road (10 miles altogether), brings you to Westport, where the Champlain Transportation steamer may be taken for Burlington, Vt.; or, if coming from the north, the boat may be taken southbound at Port Kent.

# HISTORIC TICONDEROGA CALLS THE TOURIST

*(Continued from Page 94)*

for crossing over the lake to Burlington.

Those who particularly desire to do so, may continue farther northward along the shore from Westport through Essex to Keeseville, but are advised not to undertake it except in dry weather, as much clay will be encountered. The better way is to run west from Westport to Elizabethtown, thence north through Pok-O-Moonshine Pass to Keeseville, and by State road to Plattsburg and beyond; or at Plattsburg boat may be taken to Gordon's Landing and to St. Albans, Vt. From Plattsburg a fine State road leads north to Chazy, thence east to Chazy Landing, where another crossing can be made to Isle La Motte on Sweet's Ferry. The boat "ties up" on the west shore, but will come in answer to a signal (provided) at the island landing.

### On the "Island Route"

Not so much is known about this ferry, as it does not figure in the widely-circulated literature of the D. & H. R. R. and the Champlain Transportation Company; in fact, it is an independent enterprise, and to some extent takes travel from the larger companies. There may or may not be any foundation for the claim that reports are spread about Plattsburg to the effect that this ferry is unsafe and in poor condition; I can only say that I found it safe, commodious and more reasonable in its charges than expected, while the cost of transportation either across or along the lakes by the other boats was more than anticipated, nothing exorbitant, however.

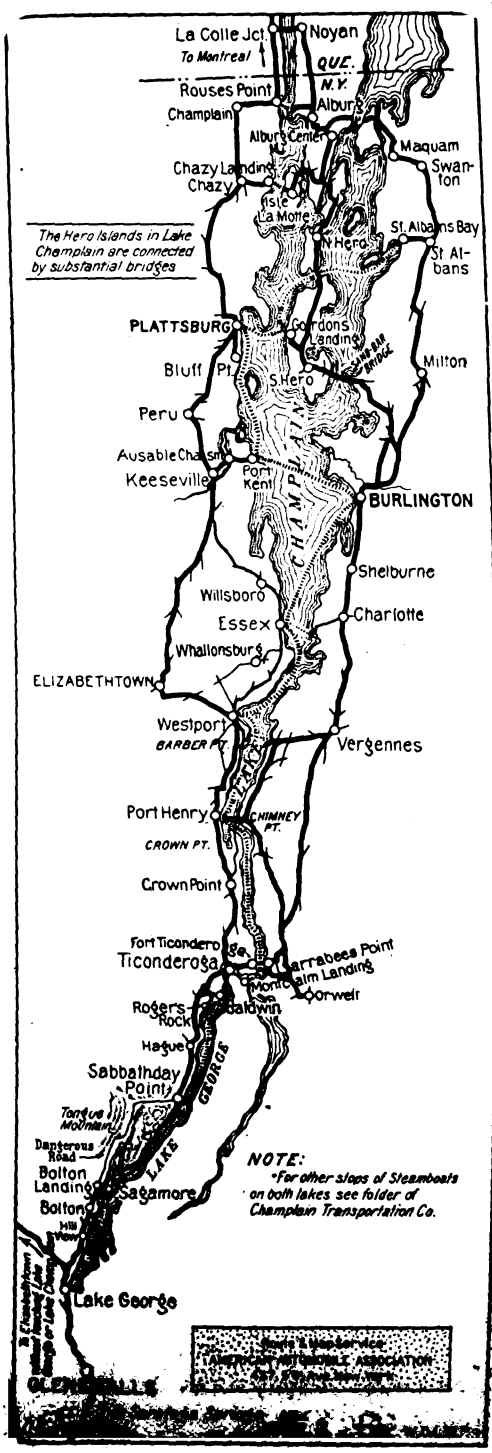
The Chazy Landing ferry is at the opening of the "Island Route" covering Isle La Motte, Alburg Tongue, and North and South Hero Islands, connecting by the Sand Bar Bridge with the mainland of Vermont on the south. Nowhere in New York or the New England states is there a more picturesque and interesting trip than the one through the islands in Lake Champlain, all of which are connected by substantial bridges. The writer went over this route about five years ago and is looking forward with interest to the opportunity of repeating it.

There is also a regular ferry between Rouses Point, N. Y., and Alburg, Vt., opposite; the gasoline boat in this service leaves the Lake House Landing, Rouses Point, crossing Lake Champlain to Windmill Point, Vt. The connecting roads on the east are not to be recommended in wet weather, on account of the clay, when it is best to go by Chazy Landing.

### Crossings Entail No Trouble

From the dock at Windmill Point, one crosses the Central Vermont Railroad at grade and continues about 2½ miles nearly due east, meeting the regular road from LaColle Junction or Noyan to Alburg, where a right turn is made for the regular route through the North Hero and the South Hero Islands. From the east side of Alburg Tongue is another ferry that can be used in a case of emergency leading to the mainland of Vermont. From this east landing (after crossing over to the south and back again at grade) the road parallels the Central Vermont Railroad to Swanton.

By the use of the Champlain Transportation Company's boats and the several ferries, trips can be made across that lake at almost every strategic point, with little or no loss of mileage. The crossing usually makes a pleasant break in one's journey, and it is almost impossible to pick out a place on either like where the view is not worth while. Roads, while not first class all the way, are at least equal to the average for New York or Vermont, except for the occasional heavy clay stretches, characteristic of the locality. Of course, however, there is a loss of time as compared with making the entire trip by road, which should be allowed for in one's schedule.



**Map of Boat Lines on Lake George and Champlain, and Ferries Across Champlain**

Not the least of the advantages of using some parts of the Lake George-Lake Champlain boat service is the opportunity it gives to visit historic Ticonderoga, without making what is a more or less inconvenient detour from the main route farther west. During the last two years so much new construction has been in process on the trunk-line highway from Albany, Saratoga, Glens Falls and Lake George village to Chestertown, Schroon Lake and the eastern Adirondacks, that a large proportion of the travel to Elizabethtown, Plattsburg, Rouses Point and Montreal has been going over to and up the two lakes. The same applies also to the considerable amount of travel from the Mohawk Valley and west, running through Schenectady, Saratoga, Glens Falls and Lake George village to destinations in Vermont.

### Historic Country Easy of Access

Practically all of this travel comes into the Ticonderoga section, which can scarcely be avoided on a boat-and-road trip up the lakes, as navigation is completely broken between George and Champlain. Ticonderoga village and its historic surroundings are immediately on or nearby the main line of road which connects them, and its startegic location is emphasized by the two convenient east-and-west crossings of Champlain between New York state and the Vermont shore.

Heretofore strangers have been somewhat perplexed and inconvenienced by the different names used in that locality, visitors asking for one destination often being unintentionally directed to some other. This has now been simplified by a change in name of what was formerly (and is now on the topographical sheet "Ticonderoga") called Fort Ticonderoga station, about two miles southeast of the village, to Montcalm Landing, the present name commemmorating the landing of the French on that spot in 1757.

What was formerly the meaningless name of Addison Junction (two miles east of Ticonderoga village) is now Fort Ticonderoga station, a change which will save railway travelers going north, and desiring to visit the ruins of the old fort, from either getting off at the present Montcalm Landing, or of going all the way into Ticonderoga village. Road travelers will ordinarily have little occasion for going down to Montcalm Landing; but many will go to the site of the old fort, especially on the way from Ticonderoga village to the ferry across Lake Champlain to Larrabee's Point, Vt.

### Benefits of Good Roads Boom

To do this it is only necessary to go out the same streets that lead to the ferry; but at the battle monument, about one mile out, take the right-hand road to the ruins. After visiting them, keep to the left, a short distance back from the lake, around to what is now Fort Ticonderoga station on the D. & H. Railroad; here connection is made with the road east from the village; and a right turn will bring one almost at once to the ferry, the detour amounting to not over three miles. Tourists bound to Crown Point, Port Henry, Westport and above will return to the village and start north from there.

No section of the state is likely to share

## HISTORIC TICONDEROGA CALLS THE TOURIST

*(Continued from page 96.)*

more largely in the benefits of the present era of good roads building than the Lake George-Ticonderoga-Lake Champlain country; and for one motorcyclist who goes there now, ten will go in a very few years. The visitor will find more historic points in this district than anywhere else in New York state, due largely to the fact that during both the French and Indian war and the Revolution this entire region was on the line of military operations between eastern Canada and the Hudson river. Without going into details, a few brief historical references may be of interest to the motorcyclist touring in this locality.

### Ticonderoga's Stirring Story

As soon as the results of Lexington and Concord became known it was decided by the Colonial government to seize the British fort at Ticonderoga, the most strategic location between Lake George and Lake Champlain; and garrisoned by a small detachment of men under Captain Delaplace. On the night of May 10, 1775, Col. Ethan Allen with other officers and 270 Green Mountain Boys, gained an entrance into the fort, and Allen demanded its surrender, as the tradition goes, "In the name of the Great Jehovah and the Continental Congress."

Seeing that resistance would be futile, Captain Delaplace surrendered the garrison, with 120 cannon and a large amount of ammunition. The surprise was so complete that there was no conflict, and not a life was lost—one of the few bloodless captures in the Revolutionary war. This locality also figured in the war of 1812, which began along the Canadian frontier, and was gradually extended south along the Hudson river to New York and below. At first the Americans suffered reverses, but in time the fortunes of war turned their way, and peace was established by the treaty of December 24, 1814.

## DALLAS PUBLIC PARKS HAVE CYCLE PATROLMEN

Dallas, Tex.—The Park Board of Dallas has organized a system of police patrol in the city parks. The officers use Adlake bicycles for their work. Two of these mounts have been obtained from the Charles Ott Agency, and orders for several more of the same make will shortly be placed. Park superintendent Tietze states that bicycles are more desirable for the work than motorcycles and horses.

## VIRGINIA LOCAL COMMISSIONERS

The Virginia State Commissioner for the F. A. M. has appointed local commissioners as follows: Roy C. Horn for Roanoke, Lewis Drake for Norfolk, R. E. Wash for Danville, and T. O. Acree for Lynchburg.

## ON TOUR TO DETROIT

Passaic, N. J.—William Connelly, a member of the local motorcycle club, left for Detroit in his Indian sidecar. He and his brother are spending their vacations in this manner.

## MOTORCYCLE NOTES FROM NEW SOUTH WALES

THE motorcycle imports into New South Wales for the half-year ending June 30, 1915, totaled £30,325 (about $151,625) in value, a decrease of £9,827 (about $49,135), as compared with the first half of 1914, the falling off being attributable to the war. Uncle Sam sent New South Wales more than three times as many motorcycles during the 1915 period as during that of 1914; however, the values being £1,375 (about $6,875) for 1915 and £389 (about $1,945) for 1914. Great Britain (£18,912), Belgium (£14), Germany (£47, in spite of the war!), and Switzerland (£150), all contributed to the Australian State's motorcycle imports. There are now 6,461 motorcycles registered as in use in New South Wales.

### Sydney to Have Motordrome

Sydney, N. S. W., is to make shortly its appearance on the motorcycle racing map, as Rupert Jeffkins, the well-known auto racing driver, is arranging for the construction of a four-lap, up-to-date motordrome at Rushcutters' Bay, near the site of the world-famous boxing stadium.

Fred Keefe, a former crack cyclist and holder of many road records, has returned to Australia, bringing with him a 7-horsepower Harley-Davidson. Keefe will devote his wheel enthusiasm to motorcycle touring in future.

### Australia's Best Rider

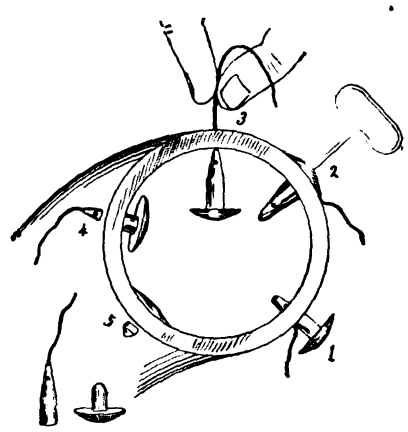
Opinion is divided in Sydney as to who is the greatest motorcycle rider Australia has produced. The choice at present lies between Jack Booth, holder of the flying half-mile road record (speed average 83 miles per hour), and five miles track record (4 min. 43⅗ sec.), and Harry Jenkins, breaker of many road and track records and winner of the Continental Cup for the 570-mile reliability trial between Sydney, N. S. W., and Melbourne, Victoria. The writer considers Jenkins the greater of these two.

The war in which the British Empire is involved is having a very depressing influence on sport, but our cyclists and motorcyclists are turning their attention to military matters. One of Australia's greatest sprinters, Les Hammond, expects to leave for the front very soon, and will seek a transfer to a cyclist corps if the opportunity offers. There is a strong motorcyclist corps in connection with one of the home defense regiments in Sydney, but its members are constantly enlisting for active service.

## NEAL TIRE REPAIR OUTFIT

Bicyclists who ride mounts fitted with single-tube tires will be interested in the Neal tire repair outfit, produced by the F. M. Neal Company, of Bridgeport, Conn. This outfit consists of a plug of special mushroom form, with a thimble attached to the base, and a set of tools for effecting the repair. Plugging is performed in 30 seconds.

The illustration shows the successive steps in the operation. At 1, the plug base and its thimble is seen inserted in the puncture, while at 2 a tool is used to set the plug within the tube. At 3 the plug is within and is being drawn into the puncture base first by the twine, while at 4 the thimble is passing outward through the puncture. In the fifth view, the thimble is withdrawn, leaving the plug in the puncture.



**The Neal Repair Outfit**

The plug is of pure rubber, and is inserted in the thimble in order to have it enter the tube without deforming. With the Neal kit, the repair is permanent, there being no entry for grit or water around the plug. Full directions accompanying each outfit, obtainable from dealers or direct from the makers.

## TAUNTON COLUMBUS DAY PROGRAM

Taunton, Mass., Sept. 21.—Referee A. E. Barber announces that there will be three motorcycle and two bicycle races at the Taunton Driving Club track on Columbus Day, Oct. 12. The motorcycle events will consist of a ten and five mile open and a five-mile sidecar race, while the bicycle races comprise a one-mile open and a one-mile open handicap. Entry blanks can be secured on application to the referee.

## GRELLE RODE AN EXCELSIOR

A news item appearing in a recent issue stated that H. B. Grelle, the winner of the one hundred mile Labor Day race at Vincennes, Ind., was mounted on an Indian. Later reports indicate that this statement was erroneous, for Grelle rode an Excelsior, as did Leslie Allen, who accounted for second position in the century grind.

## HAS TEAM FOR FAIR MEET

Chattanooga, Tenn.—Carl Mourfield has booked his motorcycle team, composed of Charles Hajos, W. G. Martin and Harry Porter, to take part in the exhibition motorcycle races which will be staged each day during the four days of the Sweetwater fair.

## UPLAND M. C. OFFICERS

Upland, Cal.—The new officers of the Upland M. C. are as follows: Edward Riggs, president; Roy Creighton, treasurer; Carl Riggs, secretary; Carl Christian, road captain. The club specializes in Sunday social runs.

## NOTHING SUCCEEDS LIKE SUCCESS

**The Seal of Public Approval Was Long Ago Placed on Rogers Side Car**

and we now take pride in calling attention to the following leading motorcycle manufacturers who have adopted the ROGERS SIDECAR as standard equipment:

| | | |
|---|---|---|
| DAYTON | HENDERSON | MERKEL |
| POPE | THOR | YALE |

The manufacturers of these motorcycles are proud of their standing and reputation and would not adopt and deliver to their trade anything not, in their consideration, in keeping with the quality of their own product.

The features of ROGERS supremacy that have justified this sign of approval are the One Piece Welded Steel Chassis, One Piece Welded Steel Body, No-Strain Ball and Socket Connection and the high quality of finish and appointment that merits the approval of the most fastidious.

While the ROGERS SIDECAR is by far the easiest on the motorcycle it is at the same time the strongest and we state with pride that of the thousands of ROGERS SIDECARS sold his year, not one report has been received of a sprung or broken frame except through actual collision that would break any structure.

We are confident of ROGERS supremacy and invite most critical inspection.

If you have not already examined the ROGERS SIDECAR do it now or write for circular giving full description.

# STEVENS SPECIALTIES

These are the things the rider wants—the things he needs—the things he can be induced to buy with the least selling effort—and what's most important of all—these STEVENS Cycle Necessities STAY SOLD—because of their "alrightness."

Hence, the handy little speedometer lamp, that can be used for trouble-investigating purposes, the nifty sidecar windshield—the easy-starting carbureter air valve; the cross rod that doubles the strength of the handlebars; the handy SAMPSON puncture repair kit that repairs the worst puncture in a minute and a half; the priming gun—the useful hand vice and the magneto switch—these are some of the essentials that can be handled with much profit by every dealer.

# CLASSIFIED ADVERTISEMENTS

FOR SALE.—One 1914 Stoll tandem No. 1, quick detachable with luggage carrier; good as new; cost $28; price $18. Two M. C. Prest-O-Lite tanks, each $7. One Indian electric headlight, complete $2.50. One Indian electric horn, complete $2.50. Jim Miller, Edinburg, Ill.

MR. MANUFACTURER:—
"Why do you not get in touch with some motorcycle or accessory manufacturer? You are selling advertising, making good I presume, on your paper and understand motorcycles, which is the main fault with the average trade salesman. They are selling goods, but do not know the relative value of them."

This was told me in the course of an interview with a motorcycle agent, while soliciting advertising. Regarding myself: I am 26; married; of good habits; own a motorcycle; am conversant with the leading makes of motorcycles and their respective accessories; and employed at present as advertising solicitor on a newspaper. I am open for a change, and believe I would be a valuable adjunct for some firm in need of another "live-wire."

Will visit the New York Show. Write me stating your proposition, and if you wish to have an interview with me at the show.
Box 26, MOTOR CYCLE ILLUSTRATED.

BARGAINS!—1914 H. D. twin, $125; 1914 Indian twin, fully equipped, $145; 1913 Excelsior twin, $100; 1913 Indian twin, $110; 1913 Indian single, $75. Write for details. J. E. Sayre & Co., Terre Haute, Ind.

IT IS NICE to know where to procure parts for your machine immediately. Parts are our specialty. "Flying Merkel," "Thor," "Indian," "Pierce," "Curtis," F. N., M. M., R. S., N. S. U. Always 25 or more used machines on hand, $25 up. The M. M. Sales Co., 1777 Broadway, Room 450.

FOR SALE.—M. M. 4 horsepower; good condition; Bosch magneto, Schebler carburetor; a bargain, $37.50. Mervin Rigg, Hersman, Ill.

FOR SALE.—For $150 1914 two-cylinder, two-speed, Harley-Davidson motorcycle; Prest-O-Lite, speedometer, Klaxon tandem; guaranteed in A1 condition. Walter Pole, 8 Sharon street, Geneva, N. Y.

LATE 1914 Harley-Davidson twin; simplex tandem; lights, etc.; perfect condition. Very cheap. Make offer. Conner, 338 Harrison, Passaic, N. J.

A MOST UNUSUAL OPPORTUNITY—Owing to ill health, am obliged to dispose of bicycle business in one of the largest cities in Dakota. Have live motorcycle agency and good trade in oils, bicycles and accessories. Big repair business. Will welcome thorough investigation. Can show substantial profit on past few years' business. Address P. N., care of MOTOR CYCLE ILLUSTRATED.

INDIAN RACER FOR SALE—7 h. p. ported machine; speed, one mile in 50 seconds; price $110. H. M. Seibold, Fifth and Gay streets, Columbus, O.

100 MOTORCYCLES; new and second-hand; all makes; $25 and up. Write for complete list and prices. Machines sent on approval. Guy W. Campbell Co., Waterloo, Iowa.

SMART BUSINESS MAN, Hollander, 15 years' experience in cycle trade, with good connections among Dutch and Belgian jobbers and makers, wishes to represent for Holland and Belgium manufacturers of specialties in Cycles, Cycle Parts and Sundries, which to introduce in these countries a good opportunity now offers. Would also accept position as manager of branch establishment; good linguist, bookkeeper and general organizer. Apply J. M., care of MOTOR CYCLE ILLUSTRATED.

FOR SALE.—Bicycle repair shop, about $300; one block from Court House Square; rent $20. Owner wishes to retire. Canton Street Cycle Co., Toledo, Ohio.

1913 Harley-Davidson twin, fully equipped; bargain. Must sell at once. Gerald J. Sauer, 130 Madison avenue, Elizabeth, N. J.

20 SECOND-HAND MOTORCYCLES. Must be turned into cash. Your opportunity to get a good bargain. Write at once for descriptive list. C. V. Pendleton, Jr., Norwich, Conn.

$150 takes a 1914 two-speed Excelsior; electrically equipped; Corbin speedometer. Geo. H. Smith, 1035 N. Grand avenue, St. Louis, Mo.

BEST OFFERS TAKE 1915 two-speed Henderson, fully equipped, run 600 to 700 miles; 1915 two-speed Dayton, electrically equipped, run 500 miles. J. Mast, 1525 Race street, Cincinnati, O.

# A Motorcycle Tire Triumph

The "Chain Tread" Motorcycle Tire was welcomed with enthusiasm by motorcyclists. From the date of its introduction, the popularity of the "Chain Tread" Motorcycle Tire has steadily increased. Built strong enough for automobile service, this famous tire gives phenomenal mileage on the speedy, lighter weight motorcycle.

The "Chain Tread" Tire for motorcycles has the same heavy service construction, the same wear-resisting rubber and fabric, and the same practical anti-skid tread, famous as the "Chain Tread" automobile tire which is the sensation of the automobile world.

Profit by the experience of the keen automobile and motorcycle manufacturers, who are increasing the prestige of their products by equipping the machines they make with "Chain Tread" Tires. You can buy "Chain Tread" Tires from good dealers everywhere.

# Real 1916 Models with B

# —and Built to Suit the R

**The 1916 Harley-Davidsons have every feature, every comfort, every convenience and every refinement of detail that even the most experienced rider can demand.**

**The high speed high duty motor is too well known to need comment here. You know what it can do.**

The new rear stroke starter on the three-speed models is the most efficient and at the same time the most simple starter brought out to date.

The striking new stream line tanks are big enough for the trans-continentalist. The filler openings are large enough to take any garage funnel or hose fitting.

Big oversize fenders furnish really efficient protection from mud and water. Rear section of rear fender is detachable to facilitate tire repairs on the road.

Expensive alloy steels are generously used where needed—genuine vanadium steel—nickel steel—chrome nickel steel—and high carbon steel.

The new Harley-Davidsons are designed to suit the rider—built for service on the road—made to give lasting satisfaction, not merely built to sell. Nothing has been sacrificed for price.

The 1916 Harley-Davidson offers the most in power, speed, comfort, beauty, convenience, and careful refinement of detail.

# *The* Winner!

## The Blue Streak Motorcycle Tire

### Now in the Lead With Riders and Dealers

This year again Goodyear Blue Streak Motorcycle Tires have swept the field in the world's great contests for speed and endurance. They've smashed all former records for one mile, 100, 200 and 300 miles.

These famous Goodyear Blue Streak racing tires are now made for road riding, too. They have introduced Beauty, Luxury and *Class* into motorcycling.

And we're advertising Blue Streaks to millions of readers all over America. So they are gaining hosts of riders every month. They're gaining *volume* and handsome profits, too, for good live dealers.

### Like An Automobile Tire

Blue Streak Motorcycle Tires are built with four plies of extra strong fabric, a breaker-strip and the famous All-Weather tread. This tread—like that on Goodyear Fortified Automobile Tires—is tough and extra thick. So it resists punctures and multiplies mileage. We build it extra wide, so it grips the road securely when turning sharp curves. The swagger blue circle 'round the middle gives this creamy-white tire a touch of inimitable beauty.

The Inner Tubes can't leak. They're made like Goodyear Laminated Inner Tubes for automobiles—many thin layers of faultless rubber, vulcanized into one. They're 30 per cent heavier this year than last.

In these and other ways we're spending $50,000 extra for betterments in Goodyear Motorcycle Tires this year.

### Service Station Offer to Dealers

Write today and learn how we make your place a Goodyear Service Station. Get the intimate facts about our plan that's helping thousands win more trade in every line they handle. A postal brings it. Send *now*—today—and ride to profits on the Blue Streak tide.

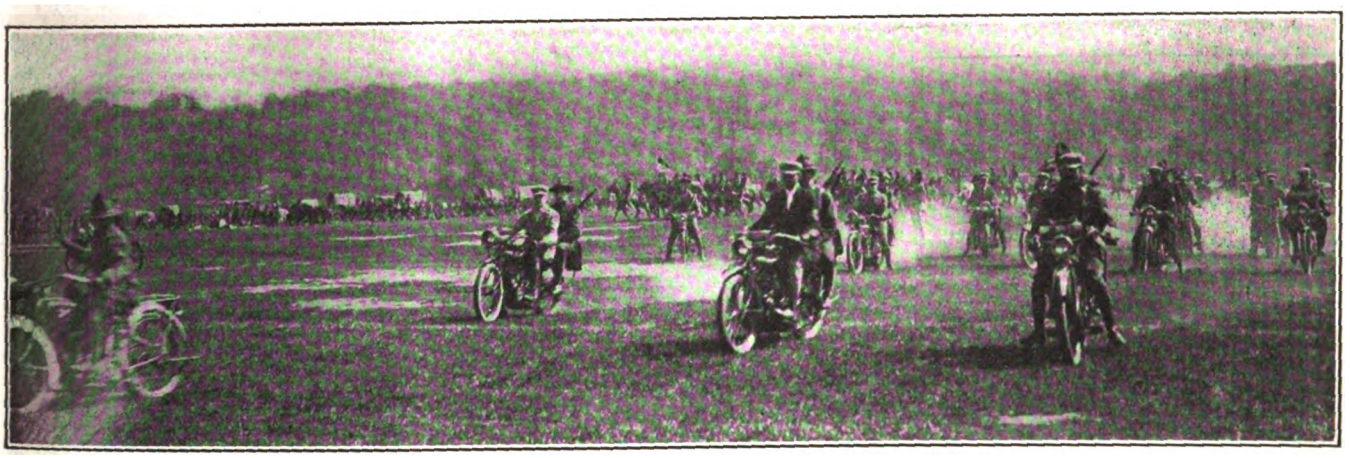
# SPECTACULAR MANOEUVRES OF MOTORCYCLE VOLUNTEERS THRILL THOUSANDS

*State and Army Officials Are Surprised by Work of Power Two-Wheelers in National Guard Program at Van Cortlandt Park, New York; Governor Whitman Compliments Riders, More Than 100 of Whom Participate in Drills*



**Tandem Division Under Captain Lou Guterman Bring Up Supporting Troops During Sham Battle in Afternoon Manoeuvres**

MORE than one hundred motorcyclists took an active part in the manoeuvres of the New York National Guard at Van Cortlandt Park, on Saturday, September 25. As despatch-riders they transmitted messages from regimental to brigade and general headquarters, they carried supporting troops into the firing line on their tandem attachments, and as sidecarists they rushed reserves to reinforce the first and second lines when the defending troops suffered a temporary reverse in the mimic battle. On all sides the riders came in for praise and congratulations for their efficient service in the big military demonstration.

The manoeuvres, held under the direction of Major-General John F. O'Ryan, commanding the New York National Guard, were to demonstrate how a city like New York would be defended from an infantry and artillery attack coming from the direction of Yonkers. The area of Van Cortlandt Park necessitated the holding of important evolutions in a restricted space, but the operation of all arms of the service, accepted and projected, was amply demonstrated to the huge crowd of 125,000 spectators, who lined the edges of the plain and occupied the surrounding bluffs. Full use was made of motor vehicles in the various movements, and the two and three-wheelers played by no means an inconspicuous part throughout the day. In fact, from mid-morning until the close of the affair at 5 o'clock, riders and sidecar drivers were kept busy at their assigned duties.

**Sidecar and Forecar Company Advancing in Morning Demonstration**

The idea of employing motorcyclists was that of Captain Lorillard Spencer, of Governor Whitman's staff. Captain Spencer is a motor vehicle enthusiast in addition to being a close student of military affairs, and as soon as the requisite permission was obtained from General Headquarters, he started to organize a volunteer motorcycle battalion. The first assembly of the volunteers, all of whom were Greater New York riders, was held only

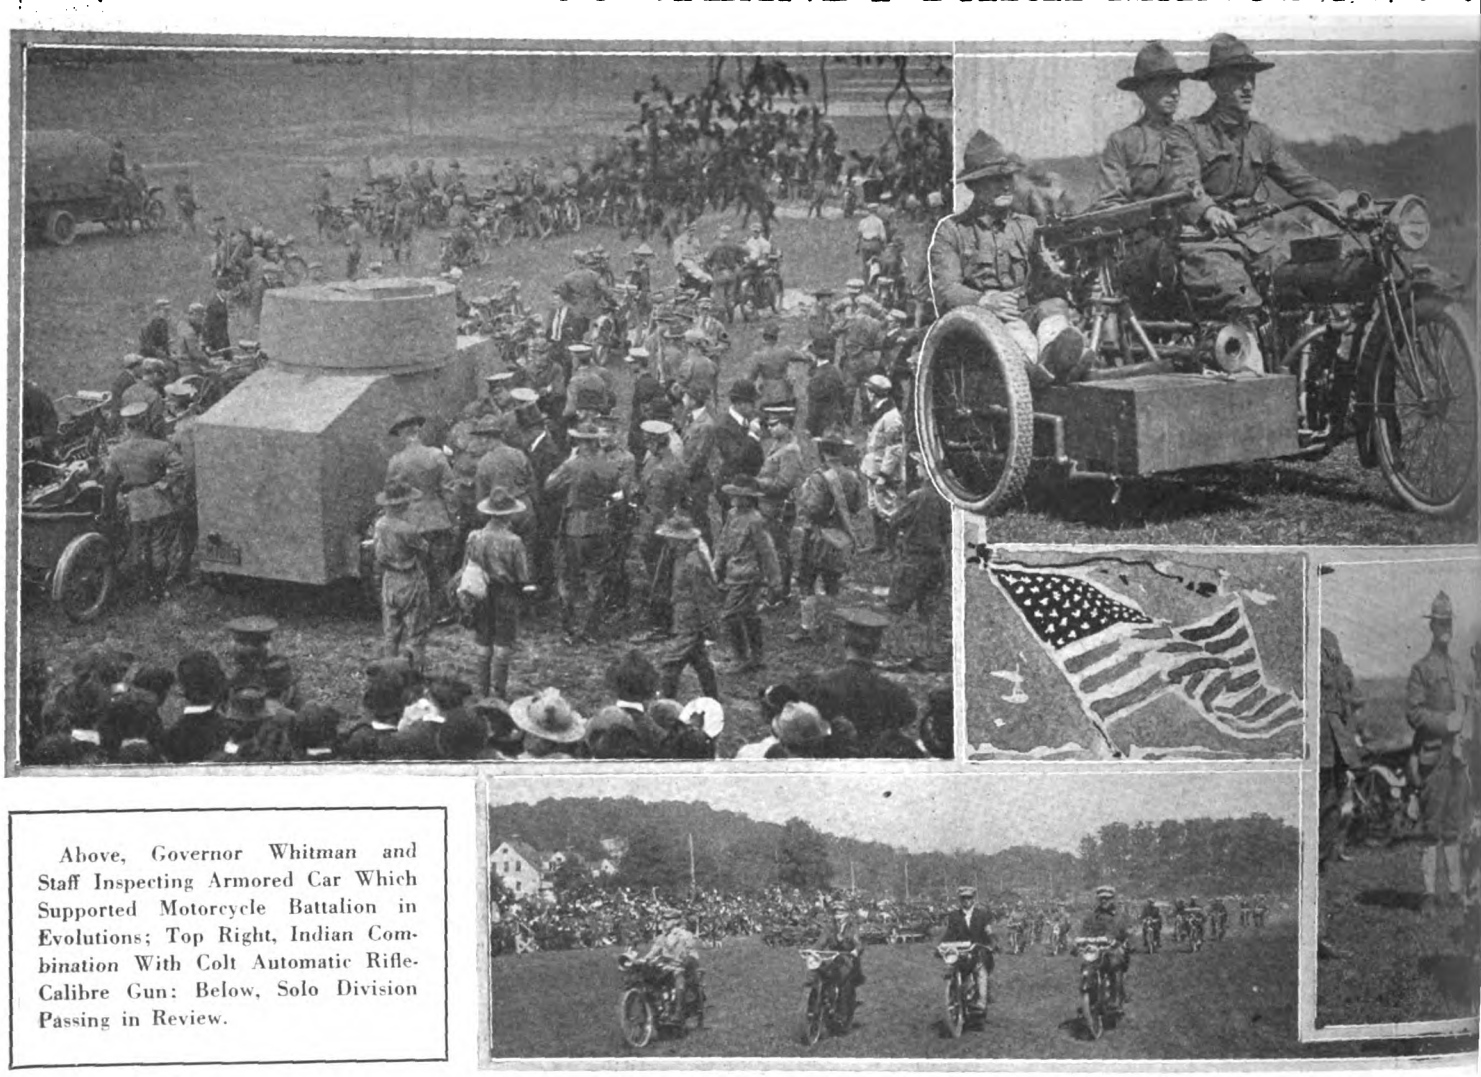
# SCENES AT VAN CORTLANDT PARK MANOEUVRES



Above, Governor Whitman and Staff Inspecting Armored Car Which Supported Motorcycle Battalion in Evolutions; Top Right, Indian Combination With Colt Automatic Rifle-Calibre Gun; Below, Solo Division Passing in Review.

two weeks before the field day, and only one drill, combining indoors and field manoeuvres, was held. In spite of this scant preparation, riders and sidecarists entered into the spirit of the affair, and all movements went off without a hitch. About the only theoretical training many of the volunteers had was obtained from a printed sheet of instructions issued by Captain Spencer.

Clear skies and the prospect of a fine day greeted the riders who assembled at the armory of the Eighth Artillery, N. G. S. N. Y. at 94th street and Park avenue, on the morning of the 25th. Final instructions being given, a detail of twenty-four riders was sent off to act as escort to Governor Whitman at the Hotel Astor. The remaining soloists, tandemites and sidecar drivers then rode off to the Park, all tandems and sidecars being occupied by members of the Eighth Regiment. The arrival at the field of action took place at 10 o'clock. Immediately the different companies parked their mounts and were assigned their duties pending the arrival of the Governor and the General Staff.

### Organization of Riders

The first company, that of solo riders, was commanded by P. F. Edgar, with the rank of captain. The second company, tandem machines carrying artillerymen acting as infantry, was in charge of Lou Guterman, with the rank of captain, while the third company, of sidecars, vans and forecars was under the command of Lieutenant H. H. Powell, Eighth N. Y., with Gus Rotholz as assistant. A considerable number of solo riders was immediately told off to carry despatches, four being assigned to each regimental headquarters, as many more to brigade headquarters and six to general headquarters. The second company were employed in riding to "warm up" and review the various simple evolutions while the Governor was coming northward with his motorcycle escort The sidecar company, which included a Colt rifle-calibre automatic gun on a special Indian chassis, stood fast in park.

### Too Much for Cavalry

The ride of the escort on their swift mounts, with Governor Whitman in his motor car, pumped the horses of a cavalry organization which has the traditional right to act as escort to the commander-in-chief of the New York Guard. The pace was too hot for the troopers and the Governor and his attending riders arrived on the field before the tired stallions of the cavalrymen could catch up. At the command of Captain Spencer, the escort rejoined the park of riders and thereafter took part in the manoeuvres.

Before the main part of the "battle" started, the motorcyclists were assembled before Governor Whitman and addressed by him. The Governor said: "I must congratulate you motorcyclists upon the showing you are making here today. You have given first-class proof of the value of the motorcycle for military service. The interest you take in this affair shows the high quality of your patriotism; you are not only lending your services but your personal property also, to the State of New York, in order that you may be qualified, to do your part in the defense of home and country, should the occasion arise." The Governor then went on to say that he was no judge of motorcycles, but that his interest in the latest addition to the arms of the National Guard was of the keenest. He thereupon extended his thanks to the assembled riders in the name of the State and of the Guard, and was greeted with cheers by the motorcycle contingent.

Governor Whitman, accompanied by the Governor of Massachusetts, his guest, General Leonard Wood, U. S. A., and the Governor's staff, then made an inspection of the park of motorcycles. A number of rounds was fired from the Colt gun on the Indian outfit, a demonstration was given of a Smith Motor Wheel fitted to a bicycle, and an examination was made of the Harley-Davidson military model. The officers and guests then passed on to inspect the armored motor car and other four-wheeled vehicles on the grounds. On their entrance into the reviewing stand the sham battle commenced.

Following the line of skirmishers came

# WHERE MOTORCYCLES PROVED THEIR VALUE

Upper Left, Harley-Davidson Military Model Twin; Right, Captain Lorillard Spencer, Commanding Motorcyclists, Demonstrating Colt Gun—Major-General O'Ryan at Right of Governor; Below, the Governor Addressing the Riders.

an armored motor car, and with the supports rode the tandem motorcyclists, each with his infantryman behind. The latter were soon called into the firing line, and the riders wheeled to the rear and stood to machine until their passengers again mounted at command. The machine gun went into action with the supports, while the ambulance combination was utilized in transporting the pretended wounded and at least one really disabled private who had been overcome by the heat. Sidecars and forecars with their quota of infantry were held in reserve on a side road, and did not come into action, as the "enemy" was successfully beaten off by the forces in the Park itself.

### Effective as Police

When the battle was over and the troops withdrew to form columns for review, the crowd swarmed out on the parade, seeking the discharged cartridge cases and clips. Hundreds left the four rows of massed people for this purpose and it looked as if there would be a hitch in the proceedings. At a word from Captain Spencer, the motorcyclists mounted and swept over the field. The crowd melted away like snow in a torrid sun, amid the smiles of the spectators, and once more the square of onlookers was unbroken. In fact, but for this incident, no civilian was on the field during the whole battle and parade.

## GOVERNOR WHITMAN PAYS TRIBUTE TO THE MOTORCYCLISTS

IN a special address to the motorcycle volunteers, just before the sham battle, Governor Charles S. Whitman spoke as follows:

"I must congratulate you motorcyclists upon the showing you are making here today. You have given first class proof of the value of the motorcycle for military service. The interest you take in this affair shows the high quality of your patriotism; you are not only lending your services, but your personal property also, to the State of New York, in order that you may be qualified to do your part in the defense of home and country should the occasion arise. The part played by the motorcyclists in these manoeuvers has been a revelation to me, and I sincerely trust that Federal as well as State authorities will soon see fit to give the motorcycle the attention it so richly deserves in the general plans for national defense."

The review of the 9,000-odd Guardsmen took some two hours. Following each regimental commander came his four motorcycle despatch riders, and brigade headquarters itself had its quota of humming twins. The need of a two or three-speed mount was made evident in this work, as much riding during the day had to be done at low speeds owing to the nature of the ground. In fact, outside of the Park parade or plain, the high gear could rarely be used. On the reviewing stand being passed, the motorcyclists rode to the Eighth regiment armory and were dismissed.

### Supplies Were Furnished Free

Those who participated in the motorcycle battalion work were furnished with gasoline and oil, as well as tires at the charge of Captain Spencer. Light rations were provided during the noon hour, also. There was practically no mechanical trouble, although mounts of four and even five years' service were used in some cases. There were a few cases of tire trouble, however, but these did not interfere with the evolutions. The performance of the machines in general showed the adaptability of the motorcycle, whether solo, tandem or sidecar rigged, to military service. Prominent military authorities present commented most favorably on the skill of the riders and the excellence of their work, considering that only a few had one drill in company, while the majority had none at all prior to coming on the field. It is reported that the National Guard will purchase twelve solo machines outright in the near future.

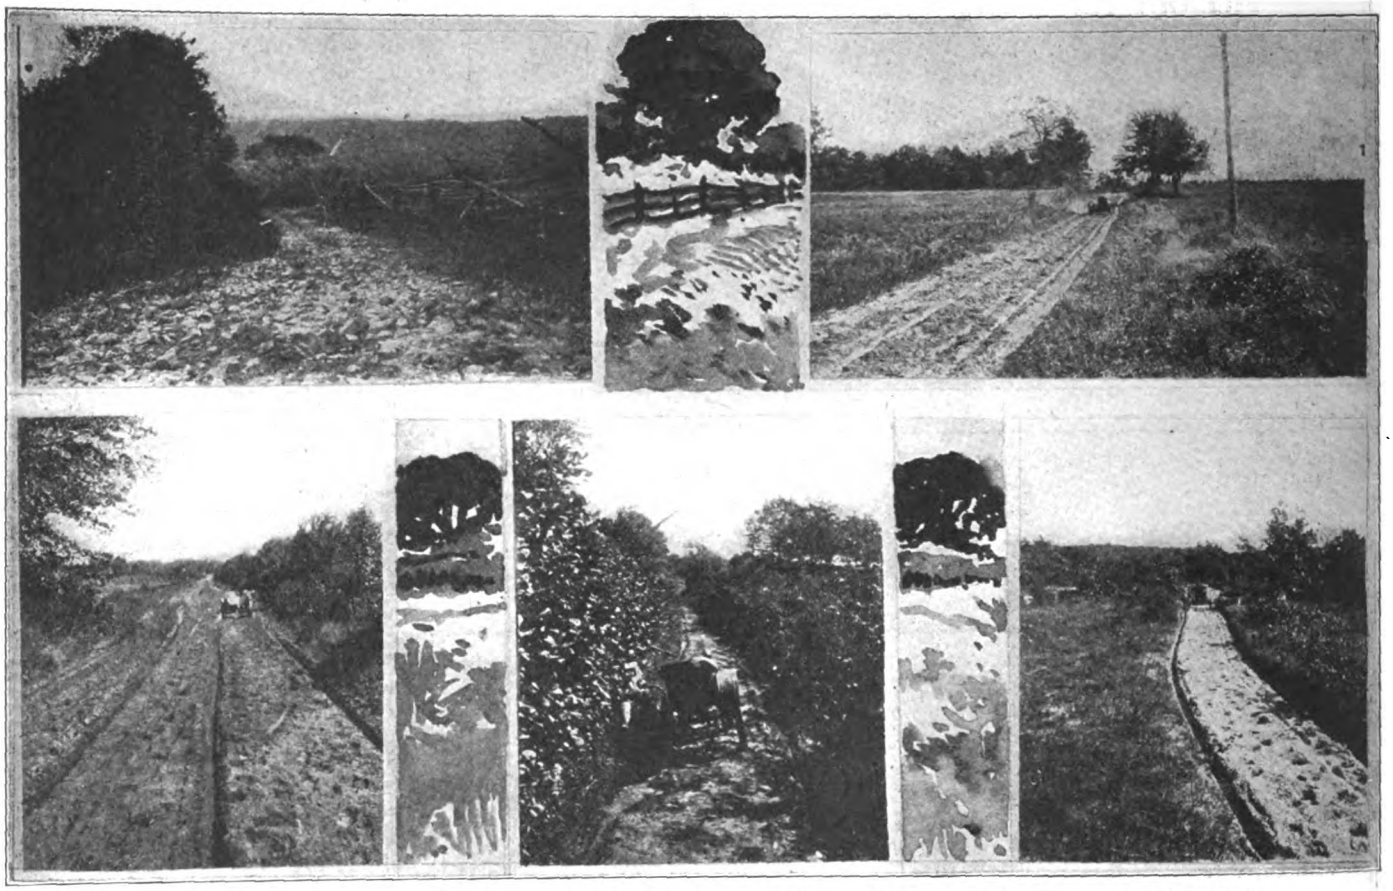
# DAYTON-NEW YORK RUN PLANS COMPLETED

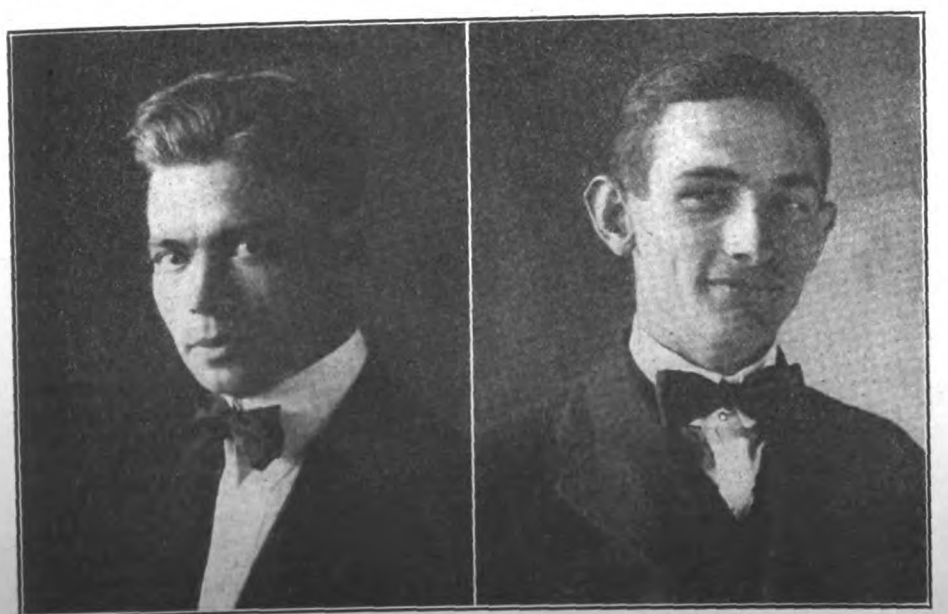


Some Roads to Be Traversed by Contestants in Riding from Dayton to the Madison Square Garden, New York.

INTEREST has grown steadily in plans for the Dayton-New York endurance run, which is to be staged by the Ohio and Pennsylvania F. A. M. organizations, October 9-12, and there are excellent reasons for believing that the event will bring out one of the largest fields ever seen in an American road contest. As the run will end in New York City during the week of the motorcycle, bicycle and accessory show in Madison Square Garden, those who participate will gain two objects: First-class competition on road and the opportunity to visit the show free at the F. A. M. finishing point.

John L. Donovan, Chairman of the National Competition Committee, is expected to be on hand at Dayton and along the course to take charge of sealing and checking in the position of official referee of the run.

Secret checking has been left to the discretion of the clubs and newspapers along the course. Instructions for control keepers, secret checkers and secret route checkers are now in the mail.



E. A. Robertson (left) and Iwin Jacobs, Who Are Fathering the Run

A list of over 200 newspapers along the course is in the hands of the publicity man. Pictures and copy will be supplied to them.

The route will be marked with 2,000 signs. These signs are in the shape of an arrow head, 8 inches long, and with a black border.

At Dayton the Dayton Motorcycle Club have arranged a novel entertainment at their clubrooms on the night before the run starts. Contestants will be assembled there at that time for their final instructions.

At Zanesville, the noon control on the first day, things will be in charge of the Zanesville Motorcycle Club.

At Wheeling, night control, first day, contestants will check at the Wheeling Examiner Building. The Wheeling Motorcycle Club, together with the *Examiner*, will have charge of checking and entertainment. Accommodations will be arranged for at the Hotel McClure.

Somerset, Pa., will be the noon control on the second day, riders checking at the Square. Chambersburg will be the night control.

At Reading, afternoon control on the third day, the Reading Motorcycle Club will be on the job as usual. Lunch will be served, and club members will do the checking and pilot the riders in and out of the city.

Philadelphia, third night control, will be entered through Stenton avenue and North Broad street, avoiding congested traffic. The checking arrangements will be made by Dave L. Marshall.

The New Jersey Motorcycle Club, of Newark, N. J., known the country over

Size of tires..... Maker of magneto.....

What class are you riding in?.....

I hereby agree to conform to and comply with the rules governing this Run in connection with the competition rules of the Federation of American Motorcyclists, and I further agree to hold blameless the Federation of American Motorcyclists and the management for any loss or injury to myself or property and to assume responsibility for any loss or injury in which I may become involved by reason of participation in this endurance run.

.....

NOTE.—These rules are supplementary to the competition rules of the F. A. M. Fill out entry blank correctly and completely and mail it at once with entry fee to I. F. Jacobs, 208 North Main St., Dayton, Ohio.

as one of the livest clubs, has placed its clubrooms at the disposal of the contestants. It is the intention to have the riders clean up in Newark and enter New York in a body. The club has arranged with the local newspapers to do the checking. Club members will be along the course to guide the riders into Newark. On leaving the riders will go out in file and will be piloted by the official N. J. M. C. car to the New York Motorcycle Show, Madison Square Garden.

Co-operation of the M. M. A. is assured. The following letter has been received from Manager A. B. Coffman:

Toledo, Ohio, September 9, 1915.

E. A. Robertson,
Penna. State Commissioner.

Dear Robertson:

Your letter of the 5th with itinerary of proposed run to New York received. Will certainly furnish every individual finishing this run with a complimentary ticket good for the week at the Show, so go to it.

Yours truly,
(Signed) A. B. Coffman, Pres.

In view of a demand for a lightweight class, the promoters have arranged for this and a large number of entries are expected. The schedule is 15 miles per hour, and no consistent riding will be required of contestants in this class.

Among the riders who are preparing to participate are Erwin G. Baker, of transcontinental and Three-Flag fame; Elliot B. Holton, F. A. M. director, of Newark, N. J., who will probably have the longest journey to Dayton for the start; Ed Hawkins and his battle-scarred Thor, from Cleveland; Happy Scherer, Michigan State F. A. M. Commissioner, is expected to be on hand; Nels Hodgins, of Indianapolis, a member of the famous 1910 Hope Club.

Among the teams expected to enter are the Harley-Davidson, Excelsior, Henderson, Indian, Thor, Dayton and Merkel. Club teams are as follows: New Jersey Motorcycle Club, Reading Motorcycle Club, Keystone Motorcycle Club, Wheeling Motorcycle Club, Zanesville Motorcycle Club and the Dayton Motorcycle Club.

In the lightweight class entries are expected from the Davis Sewing Machine Co., Schickel Motor Co., Cleveland Motorcycle Co., Emblem Mfg. Co., Tiger lightweight, Miami Cycle and Mfg. Co., Excelsior lightweight, Westfield Mfg. Co., and Indian featherweight.

This lightweight classification has been especially arranged for, at the request of lightweight manufacturers to allow them to place their product in the limelight at the New York Show.

## BAKER AND O'BRIEN RETURN FROM PACIFIC COAST

Washington, D. C.—Bud Baker, of this city, who started across the continent on May 3 with Richard O'Brien on the tandem seat of his Indian twin, returned a few days ago. Over 10,000 miles of riding had been done by the pair, and they were both in fine condition. Nearly 400 miles of railroad tracks had to be ridden between this city and San Francisco, according to Baker.

Notwithstanding the popularity of motorcycling in the Pacific Coast sections, the pair stated that many more motorcycles were met with east of Ohio than on the West Coast. In one day, O'Brien counted 116 Indians, mostly sidecar combinations, between Albany and Buffalo. Their own Indian scaled 809 pounds with the riders up when ready for the cross-country journey.

Baker and O'Brien took in two big race meets, the F. A. M. national championships in Sacramento, and the 300-mile Chicago race on the way out. The Goodyear front tire on their machine lasted the whole trip, and had original air in the tube all the way to the Pacific Coast and as far back again as Fremont, O.

## State Federation is Formed in New Jersey

NEWARK, N. J., September 27.—With representatives from five motorcycle clubs, totaling a membership of three hundred, a state federation of New Jersey motorcyclists was formed in the New Jersey Motorcycle Club's rooms on Saturday night, September 25.

Walter I. Kerr, of the N. J. M. C., was elected president; C. B. Hay, of Hackensack M. C., was chosen secretary, and J. B. Weiner, of the Passaic M. C., financial secretary.

The aim of the new association is identical with the F. A. M., but it will admit non-affiliated riders and clubs to membership. The next meeting of the federation will be held on October 30 in the New Jersey M. C. rooms. All clubs are invited to send representatives.

### LATE NEWARK NEWS

Newark, N. J., September 25.—"Hal" H. Noyes and E. A. Robertson, of the Hendee traveling force, are in town as guests of Walter Goerke. E. A. Robertson will make the final arrangements for the big four-day endurance run of the "Pa-O" F. A. M.

Walter Goerke has a '16 Indian machine that has been coveted by many riders. It is kept busy demonstrating.

J. M. Wilson, largely responsible for the Splitdorf Way generator, got the first delivery of a 1916 machine and immediately loaded up a side car and "beat it" for the Chicago show.

Since the death of Frank C. Cornish "Bert" Cornell, a veteran bicycle and motorcycle rider, has managed the Yale agency for Mrs. Cornish. Hugo Fuchs, who was outside man for many years passed away two weeks ago. Heart failure was the cause of his death.

Harry C. Schnell, who handles the Merkel motorcycle and Pierce bicycle will soon move into his new store and garage directly opposite his present location at 345 Broad street.

Wm. R. Spear, Thor agent, will close his Lake Hopatcong camp, where many riders have enjoyed a week-end, on October 1.

### MADDENS GIVE SUCCESSFUL PICNIC

South Manchester, Connecticut.—Madden Brothers, local Wigwam representatives, are receiving congratulations on the success of their recent picnic at Cedar Swamp, near Bolton, Conn. The affair was a general one, all riders in and around South Manchester being invited. Forty-six solo and tandem machines and 11 sidecars, carrying 73 persons in all were present, all leading makes of motorcycle being represented.

Cedar Swamp is some six miles from this city, and is a most picturesque spot. The dinner served to the Madden guests consisted of turtle soup, the "stock" being caught on the premises, chicken, corn and other good things. In spite of threatening weather in the early part of the morning, the picnic was a success, and later on the sun came out brightly. On the return home, a procession was formed, at the head of which was an Indian sidecar combination of 1916 model carrying Maurice Madden and John McDowell, of the Hendee travelling staff.

### 150-MILE RELAY FOR MADISON

Madison, Wis., September 27.—The Madison Motorcycle Racing Association will promote on Oct. 3, a one hundred and fifty mile relay on the local track. The event will be open to non-port stock machines. The first prize will be $125; second, $75; third, $35, and fourth, $15. Two riders and two machines will constitute a team. The price of admission will be twenty-five cents.

### SOUTHERN BRANCH HOLDS SHOW

Atlanta, Ga.—The local branch of the Harley-Davidson Motor Company, at 224 Peachtree street, is holding a motorcycle show, to which all dealers in the Southern territory have been invited. The show opened on September 27 and will close on October 3. Gus Castle, manager of the branch, is in charge, assisted by E. C. McDonald, Tex Richards, Guy Storey, J. Hayes, G. M. Hart and G. Peters.

### MARSHAL FALL STYLE PARADE

Altoona, Pa., September 27.—The Annual Fall Style parade held here this week, was marshalled by three local motorcyclists, Earl Fasick, "Dud" Rogers and "Augie" Butz. The parade which was about two miles long, traveled through the principal streets of the city, and the good work performed by the motorcyclists in keeping the parade on the move received much favorable comment in the local newspapers.

### RISDEN'S NEW MANAGER

Los Angeles, Cal., September 25.—Word has been received from C. Will Risden, the Southern California Indian distributor, that while at the Hendee factory in Springfield, Mass., he appointed Thomas C. Butler, Jr., connected with the Atlanta Indian branch, as business manager of the Risden tepee. Butler will start on his new duties about October 15.

Thomas C. Butler, Jr.

## N. Y. State Championship Races October 16th

YONKERS, N. Y., September 27.—According to State F. A. M. Commissioner George A. Ellis, it is probable that state championship races will be held on the Empire City Race Track, Yonkers, on October 16. Both amateur and professional races will be staged at distances between five and one hundred miles. Suitable medals will be awarded to the simon pures and the cash chasers will be given ample "bacon."

A state basket ball league is one of the latest plans which Commissioner Ellis is suggesting to the clubs affiliated with the F. A. M. He believes that club interest and spirit can be kept alive during the late fall and winter by inter-club basket ball contests.

Harry H. Williams, of Yonkers, has been appointed F. A. M. commissioner of Westchester county.

The first meeting of the fall was held by the Yonkers Motorcycle Touring Club last week with Commissioner Ellis in the chair. It was decided to form a basket ball team and to visit the New York show in a body.

### RACES FOR DANBURY FAIR

Danbury, Conn.—Motorcycle races are scheduled for the opening day of the annual Danbury fair in this city from October 4-9. The races will be in charge of Stanley Kellog, of Bridgeport, and will consist of six events, five being for professionals. The events are: Five-mile novice, amateur; five-mile, pro., 30½ cubic inches; five-mile open, pro., 61 cubic inches; ten-mile, pro., 30½ cubic inches; ten-mile, pro., 61 cubic inches; five-mile, pro., consolation. Substantial cash prizes are offered in each event. Blanks can be had by addressing G. M. Rundle, secretary of the Fair Committee, at Danbury.

### 16,800 MACHINES IN PENNSYLVANIA

Harrisburg, Pa., Sept. 27.—Motorcycle owners in Pennsylvania have paid the state treasury $50,000 since the first of the year. The number of such vehicles granted licenses by the state highway department is 16,800. Last year approximately 14,000 were granted state licenses. It is believed the number will be materially increased by the end of the year.

### DEALER AND WIFE ON LONG TRIP

Altoona, Pa., September 27.—Mr. Joseph Wolf, local agent for the Harley-Davidson, who is perhaps Altoona's most enthusiastic motorcyclist and sidecar booster, has just returned from his vacation, which he spent astride his three-speed Harley and sidecar outfit.

Joe's tour covered 1,000 miles through the States of Pennsylvania and New York, having visited Harrisburg, Reading, Lancaster and other points in Pennsylvania while en route to New York. Leaving Altoona with an empty sidecar, "Joe" experienced some difficulty in traveling and keeping the car on the ground, however, the difficulty was overcome on the homeward trip, "Joe" having met his wife in New York, who accompanied him back to Altoona.

## Washington Will Welcome the Lightweights

WASHINGTON, D. C., September 27.—From present indications the new lightweight models promise to be very favorably received in this city. Men prominently connected with the local motorcycle trade have freely predicted a big sale for a machine that is something more than a bicycle and something less than a big motorcycle. The thousands of Government employes, according to the dealers, who daily ride on the street cars to and from their offices will welcome a light machine.

The manner in which the Miami motorbicycle and the Smith motor wheel have been received indicates the coming popularity of the lightweight models. A large number of the Miami machines have been sold, while so many of the Smith wheels are in use that they are no longer a novel sight.

Local motorcycle dealers do not believe that the lightweights will affect the sale of standard models. They argue that no rider intending to purchase a standard model will be satisfied with a lightweight, while many of the younger purchasers of the light models will graduate naturally into the heavier class.

It is believed by several Washington motorcyclists, who are not connected with the trade, but who are observant of conditions in trade circles, that when some enterprising dealer with a reliable and low-priced lightweight machine makes a thorough canvass of the Government departments, he will reap a reward in sales that will open the eyes of the old-fashioned dealers who can see no merit in "new-fangled ideas."

### BUENOS AIRES CLUB RACES

Buenos Aires, August 30.—Indian and Flying Merkel entrants carried off the honors in two out of three races held by the Moto Club Argentino over the 1,100 metre (.683 mile) course in this city yesterday. In the first event, Carlos Santiago, on a 30½ cubic inch Indian covered ten laps or 6.83 miles in 8:28, with J. Schmidt, Singer, second. In the second event, unlimited class, for the same distance Raoul Riganti, on a Flying Merkel 7 horsepower twin, won in 7:55, with A. Massey Crosse, Henderson, second, and A. Bernasconi, Flying Merkel, third.

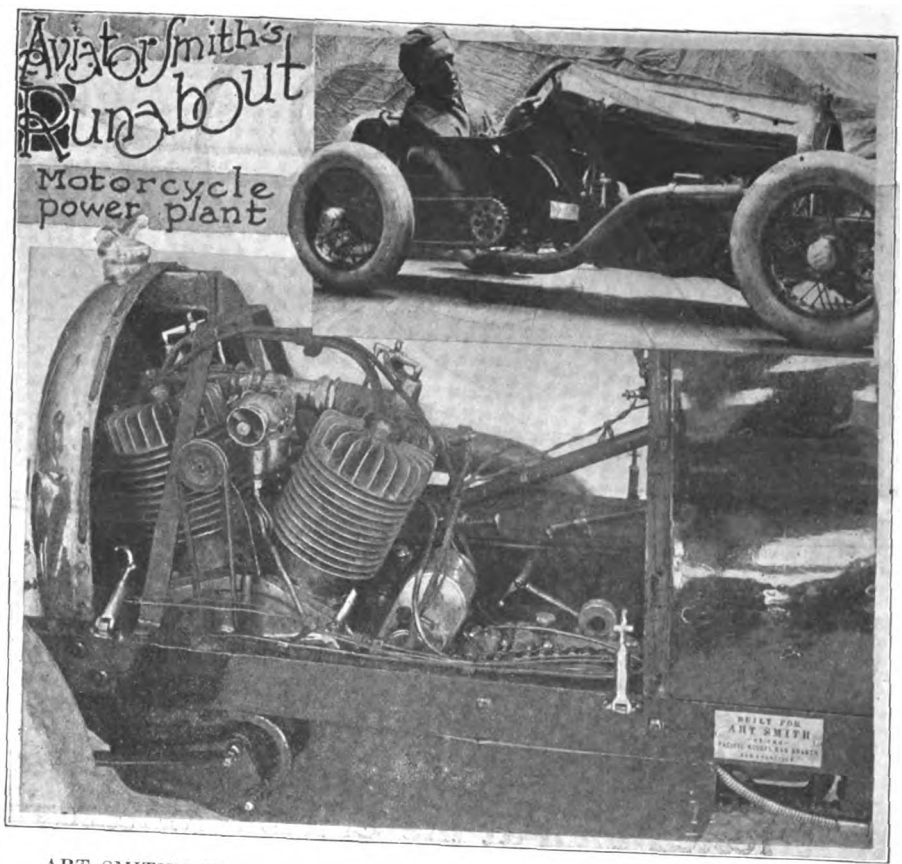
In the third event, also an unlimited class race, but for five laps (5,500 metres), V. Sobreville, Bat twin, was first in 4:55, with A. Dasso, Henderson, second and D. Campanella, Indian, third.

### GETTING BUSY FOR WINTER

Altoona, Pa., September 27.—The Blair County Motorcycle Club, of Altoona, is now renovating their clubhouse and making it cheerful for the coming cold weather. The club have planned many social events for this winter, and will hold euchres and dances at intervals.

### TO HOLD 100-MILE RACE

Peoria, Ill.—The National Implement Association has offered $300 in prizes for a one hundred mile race to be held during its show week in this city. The date set for the race is October 6.



### ART SMITH'S UNIQUE OUTFIT

San Francisco, September 21.—Next to floating around flirting with the clouds, Aviator Art Smith, who entertained thousands of exposition visitors with his sensational flying stunts during the past few months, likes nothing better than taking a spin in his baby automobile racer, which was constructed especially for him by the San Francisco Branch of the Kissel Kar Company.

The machine, which is illustrated herewith, is equipped with a Harley-Davidson special racing motor and transmission which develops 20 horsepower and is capable of making 70 miles an hour. The miniature car is fitted with Goodyear 20x4 aeroplane tires and special wheels, and resembles very much in its lines a Mercer racing car. The motor was furnished by Maggini & Perkins, local agents for the Harley-Davidson.

### ANTI-NOISE LAW PASSES

Danville, Ky., September 27.—The noisy, mufflerless motorcycle and automobile, which have been disturbing the peace and quietude of Danville, and about which a great many complaints have been raised, are now things of the past, the board of council having passed an ordinance prohibiting muffler cutouts.

### TO CONTRIBUTORS

**If our friends who favor us with contributions, either text or photographs, wish to have the material returned postage must be enclosed for that purpose. So many contributions are received weekly that we cannot guarantee their return unless the above rule is adhered to.**

**When photographs are to be returned a line to that effect and the full name and address of the sender should always be written on the back of the picture. If these rules are observed we shall strive earnestly to guard our contributors against disappointment.**

### RAIN STOPS ELWOOD RACES

Elwood, Ind., September 27.—Rain interfered with the racemeet which was staged by the Elwood Racing Association on the local track on Sunday, September 26, but two events were pulled off before the showers broke.

William Vors, of Logansport, mounted on an Excelsior, carried off the five-mile open, and was closely followed over the tape by Donald Marks, of Ohio, who rode a Thor, while third position went to Charles Sudduth, of Bluffton, also astride a Thor machine. The last event, a ten-mile open, was accounted for by Sudduth in 10:04, with Marks second, and Clup, Excelsior, third.

### NEW BUILDING FOR VACUUM OIL

Rochester, N. Y.—The Vacuum Oil Company, of this city will shortly add to its plant. The new structure will be a filter building and will cost $17,000. This will bring the company's expenditure for 1915 improvements up to $210,000.

# WHERE THE INDIAN STOOD

**Indian leadership was never more solidly manifested than at the Chicago Motorcycle Show.**

**It was conceded that the new 1916 Powerplus Motor is one of the few genuine sensations of the season at hand.**

**Total show opinion gave to the new Indian Featherweight the honor of being far and away the most advanced and complete machine in the lightweight division.**

**These, together with the new line of Indian bicycles, were unanimously supported by the dealers who readily recognized Indian progressiveness in bringing out the strongest and most extensive group of machines that 1916 has to offer.**

# AT THE CHICAGO SHOW

During the show Indian received more newspaper publicity than all other makes put together *because what Indian does is news.*

Indian success at Chicago was but further demonstration as to why Indian was given the Grand Prize at the Panama-Pacific Exposition.

***What happened at Chicago will be repeated at the New York Show the week of October 11th. We want to see every Eastern dealer there. Adjustment of territories now going on—a number of big openings for men that are right.***

# SENTIMENT STRONG FOR LATER SHOW DATES

## Most Chicago Exhibitors Believe Winter Shows Would Give Greater Returns

THIS year's National Motorcycle and Bicycle Show at Chicago, produced, as in former years, a wide diversity of opinions among show exhibitors. It is safe to say, however, that among all but a comparatively few of those exhibiting, it was the belief that this show was held rather too early. To be more specific, an analysis of the views on this subject, as held by the different types of exhibitors, discloses the following:

The exhibitors of motorcycles, with very few exceptions, expressed themselves as well satisfied with the early show.

The exhibitors of parts and accessories, with a few exceptions, were of the opinion that mid-September was too early, and expressed their preference for a later date, anywhere from the middle of October to the middle of February.

The jobbers, practically all of them, are opposed to holding a show in September. Their sentiments were demonstrated in a practical way through the fact that the number of jobbers exhibiting was comparatively small.

Dealers, the attendance of whom was satisfactorily large, almost all seemed to feel that a later show would be better.

### Fine Show Throughout

As an exhibition, the show was easily the finest and most impressive ever conducted under the auspices of the Motorcycle Manufacturers' Association. No more appropriate place than the Coliseum could have been chosen, the immense size of the building affording Manager Coffman an opportunity to provide wide aisles and liberal exhibition spaces. In consequence, many who had visited previous crowded shows were of the opinion that the attendance this year was small when, as a matter of fact, it was the largest at any of the separate motorcycle shows. With the big floor space and wide aisles, a crowd of three or four thousand people seemed small in the Coliseum. On the other hand, these favorable conditions made it possible for the exhibitors to show and demonstrate their goods to the best advantage.

This year's show again demonstrated the necessity of separate cycle trades exhibitions annually and, although opinions were expressed to the effect that one show would be enough, the consensus of sentiment seems to be that the present arrangement, calling for one show each year at New York and Chicago respectively, should be continued. Of course, this sentiment will be affected one way or the other by the results of the forthcoming show in the East. But the fact remains that a lot of pressure will undoubtedly be brought to bear upon the motorcycle manufacturers next year, to hold both shows at a later date. This is certain in view of the fact that nearly all the parts and accessory manufacturers, and nine out of ten of the dealers and jobbers, strongly favor a later show.

### Arguments for a Later Date

For example, one well-known parts man called the writer's attention to the fact that the very best year in the motorcycle industry was 1913, the year in which the first separate motorcycle show was held in Chicago, on that occasion in February. This parts man claimed that if the shows are to be regarded as creators of enthusiasm over the new models, among dealers and riders, they should be held at a time just preceding the opening of the active riding season, so that the enthusiasm thus aroused can be converted into actual business. He held that with a long time intervening between the show dates and the opening of the season, a lot of enthusiasm produced by the shows cools off and has no practical results of value to the trade.

All of the above does not mean that the show held in Chicago last week was not a successful one. On the contrary, the Coliseum exhibition was one of the best attended as well as one of the largest business producers in the history of the trade. The motorcycle manufacturers, displaying the most varied and interesting lines a show has ever witnessed, without a single exception, expressed themselves as particularly well satisfied with the results. This applies also to the manufacturers of sidecars and tandem attachments. With reference to the makers of smaller accessories, while some of them broke all previous records, others did just fairly well; while very few indeed reported that the business they did was below their expectations.

# CYCLE JOBBERS PLAN TO BOOM MEMBERSHIP

A MEETING of the Directors of the Cycle Jobbers' Association of America, presided over by Keyser Fry, was held previous to the opening of the Chicago Show, at the Congress Hotel, Monday morning. In addition to Mr. Fry, there were present Secretary John W. Henry, J. W. Grady, Fred I. Willis and Fred Grubb.

Several applications for membership were received. These will be reported on at the next meeting, which will be held at New York during the Automobile Show, in January.

A uniform credit blank was adopted, and a quantity of these are being mailed to every member of the Association.

In the near future, it was announced, a special campaign will be launched for securing new members. The annual dues are only ten dollars, with no initiation fee charged.

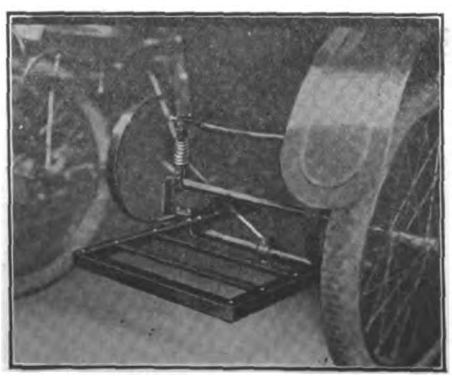
It was the consensus of opinion that an effort should be made by the Association to further co-operate with the cycle dealers, to the end of perfecting, in the latter, a still higher quality of sales efficiency. The plan of campaign, in all likelihood, will be decided upon at the New York meeting.

### B. R. T. LUGGAGE CARRIER

At the booth of the Motor Car Supply Co., of Chicago, was shown a new sidecar luggage carrier, manufactured by Stevens & Co., of 275 Broadway, New York. This carrier, which has a capacity of 150 pounds, and which is illustrated herewith, is called the "B. R. T." According to Mr. McGuckin, of Stevens & Co., this name was selected because, according to the users of the B. R. T., or the Brooklyn Rapid Transit, that company's motto is "Always room for one more."

The B. R. T. Luggage Carrier is made throughout from angular steel, fastened to the sidecar frame by means of four strong spring clips. The carrier is mounted so that the additional weight counterbalances the weight of the car itself and no additional strain is thrown on the frame of the sidecar or the motorcycle. It is finished in black japan, and made up in three sizes, for the Indian, Harley-Davidson and Rogers sidecars.

Stevens safety shock absorbers were shown fitted to numerous sidecars.



B. R. T. Luggage Carrier

### R-S TWIN MAKES BIG HIT

Favorable comment was heard on all sides on the new R-S twin, the handsome lines and other characteristics of which made a big hit with all who viewed the new model. This applied equally well to the R-S delivery van which, though staunchly built on automobile lines, retails at a price thought simply impossible of attainment but a few months ago.

In mentioning the R-S line, one must not overlook the fact that the position occupied by the Reading-Standard Company today is largely due to the ability of Assistant Treasurer and Manager E. W. Theurer, whose thorough-going methods and indomitable energy have contributed so much toward bringing the Reading-Standard product to the fore during the past year or so. Confronted by conditions which would have overwhelmed an ordinary man, Mr. Theurer has entirely reorganized the company's facilities, with the result that an excellent product, prompt deliveries, and the right kind of service at all times are now assured to R-S dealers.

# WHAT THE MANUFACTURERS THOUGHT OF THE CHICAGO SHOW

CHICAGO, Ill., September 25.—The comments made by the various exhibitors at the Chicago show indicated, in the main, that the concerns displaying their wares were well pleased with the impressive appearance of the trade classic and with the amount of business netted as a result of the show.

"The show has given us very good results," said President Walter Davidson, of the Harley-Davidson Motor Company, "and I noted with great satisfaction the enthusiasm which the dealers evidenced. My personal opinion is that this is the proper time of the year in which to hold a show. The policy of my company will be to make prompt deliveries and thus help the dealers to get all the business possible."

Mr. I. Schwinn, of the Excelsior Motor Manufacturing & Supply, expressed himself as not being at all in favor of holding a show so early. "It calls in the salesmen," he said, "at a time of the year when they ought to be out on the road, and the dealers also are busy exhibiting at the country fairs. During the winter months they have more time and can come to a show without being inconvenienced."

Speaking of the lightweight, Mr. J. W. Ash, of the Miami Cycle and Manufacturing Company, said that it would be a "sure comer" and that his company had closed contracts with dealers representing all sections of the United States and Canada.

A. B. Coffman, manager of the M. M. A. and president of the F. A. M., was of the opinion that the jobbers bought more freely at this Chicago show than at any previous exhibition. "The show," he said, "attracted many jobbers and gave them an opportunity to select their 1916 wares early. It was essentially a manufacturers' proposition and as such made good. Manufacturers will now be given a chance to make early deliveries and add at least two months more to the selling season. There was a larger attendance of jobbers and as many dealers as last year."

Al Bartsch, of the Bosch Magneto Company, was enthusiastic over the manner in which the dealers received the new combination ignition-lighting system. The manufacturers' demand, Mr. Bartsch said, would first have to be supplied and then the general trade would be taken care of.

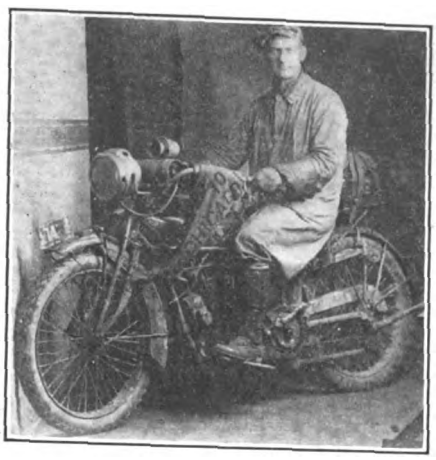
"One million new bicycles for 1916 will be our slogan," exclaimed M. J. Horton, of the New Departure Company. "We will continue our policy of helping the dealer by distributing booklets, moving picture slides, price tags, war bulletins, etc. These have been of great assistance to over ten thousand dealers during the past season. Our line of coaster brakes, bells and other accessories is complete and we are looking forward to a banner year."

"Though we are satisfied with the results of this show," commented Mr. Starr, of the Westfield Manufacturing Company, "I am of the opinion that we could have reached more of our dealers in this territory had the show been held in January or December. We had an exceptionally good business in our bicycle lines."

Mr. Horace M. Hoffman, of the Davis Sewing Machine Company, thought that the show was one of the best in which he had ever participated. The Dayton bicycles and motorcycles aroused much interest, he averred, and the new front drive lightweight model came in for a lot of attention at the hands of the visitors.

The sales manager of the Aurora Automatic Machinery Company, Mr. H. N. Kirk, smiled happily when asked what he thought of the show's business value. He started to spin off rapidly a long list of new dealers who had been signed up.

## FROM NEW ORLEANS TO SHOW



T. Beckett, Who Rode His Indian from Louisiana Metropolis to Coliseum

## EMBLEM LIGHT TWIN WAS BIGGEST SHOW SURPRISE

Undoubtedly the biggest surprise of the show was the $150 seven h. p. lightweight twin exhibited by the Emblem Mfg. Co., of Angola, N. Y., and described elsewhere in this issue. As we stated in a previous issue of **Motor Cycle Illustrated,** Mr. Schack, of the Emblem company, is generally regarded as one of the most conservative men in the trade, and his bringing out of the first twin at that price—and a dandy machine at that—created nothing short of a sensation, both in and out of the trade. We venture to predict that Mr. Schack will dispose of as many machines of this type as he can manufacture.

Mr. Schack is among those who believe that September is too early for the show. He stated he would prefer February. He always has been opposed to extremely early shows, and believes that other manufacturers who have thought differently are now prepared to take his view of the matter.

## CLEVELAND CONTINGENT DECIDEDLY ENTHUSIASTIC

We doubt whether the Show could boast of a more enthusiastic lot of demonstrators than those who made their headquarters at the booth of the Cleveland Motorcycle Manufacturing Company, manufacturers of the Cleveland light-weight. Treasurer H. G. Alexander, Secretary W. S. Quinlan, Eugene Neracher, George J. Squier and Eastern Distributor Herbert F. L. Funke, constituted a combination which had no superior in the Coliseum. With a powerful organization back of it, with excellent facilities and skillful management, the Cleveland concern has quickly made a good place for itself in the industry. It's product is in every way an admirable one and it is safe to predict that the Cleveland will make good in every sense of the word.

## DAYTON MOTOR BICYCLE DRAWS HUGE CROWDS

Surprising even to the manufacturers themselves was the interest displayed in, and the number of orders placed for, the light-weight front-drive $95 Dayton model, manufactured by the Davis Sewing Machine Company, of Dayton, Ohio. Sometimes curiosity is mistaken for interest, but that condition certainly did not apply to the crowds which were constantly to be found surrounding the new Dayton light-weight. A quartet of hustlers, comprising Cycle Department Manager Horace M. Huffman, Assistant Manager W. H. Webb, Advertising Manager S. Ankeney and C. W. Waughop, were almost carried off their feet by the enthusiasm created by their new model.

## PRESIDENT HENDEE WAS PLEASED

President George M. Hendee, of the Hendee Mfg. Company, who reached Chicago on Thursday, was particularly pleased with the reception given to the Indian Featherweight and the Indian bicycle line. Dealers felt that these two lines would very nicely and profitably supplement sales of the regular Indian models.

Mr. Hendee, as well as other manufacturers, took very kindly to the show arrangements for private offices, where a manufacturer could consult with his dealers and others without being constantly interrupted. Mr. Hendee called attention to the fact that the private office plan had been in use in connection with the Olympia shows in London for several years, and that these separate offices are considered indispensable on the other side.

## STOLL TANDEM IMPROVEMENTS

Announcement was made at the Show by the Stoll Manufacturing Company, of Denver, Colo., that the new price on the Stoll Dream tandem No. 1, complete and ready to attach, was now $20. Incidentally several important improvements have been made in the combination tandem No. 2, which retails at $10. For those desiring to carry a heavy passenger the springs may now be adjusted to the weight, by means of a new device built into all the 1916 models of this style. The adjusting requires only a moment's work. Also, a locking device has been added, by means of which the springing system can be locked when the tandem is being used without a passenger. The spring lock fits in the plunger rod, holding it rigid. This arrangement does away with rattle and unnecessary wear.

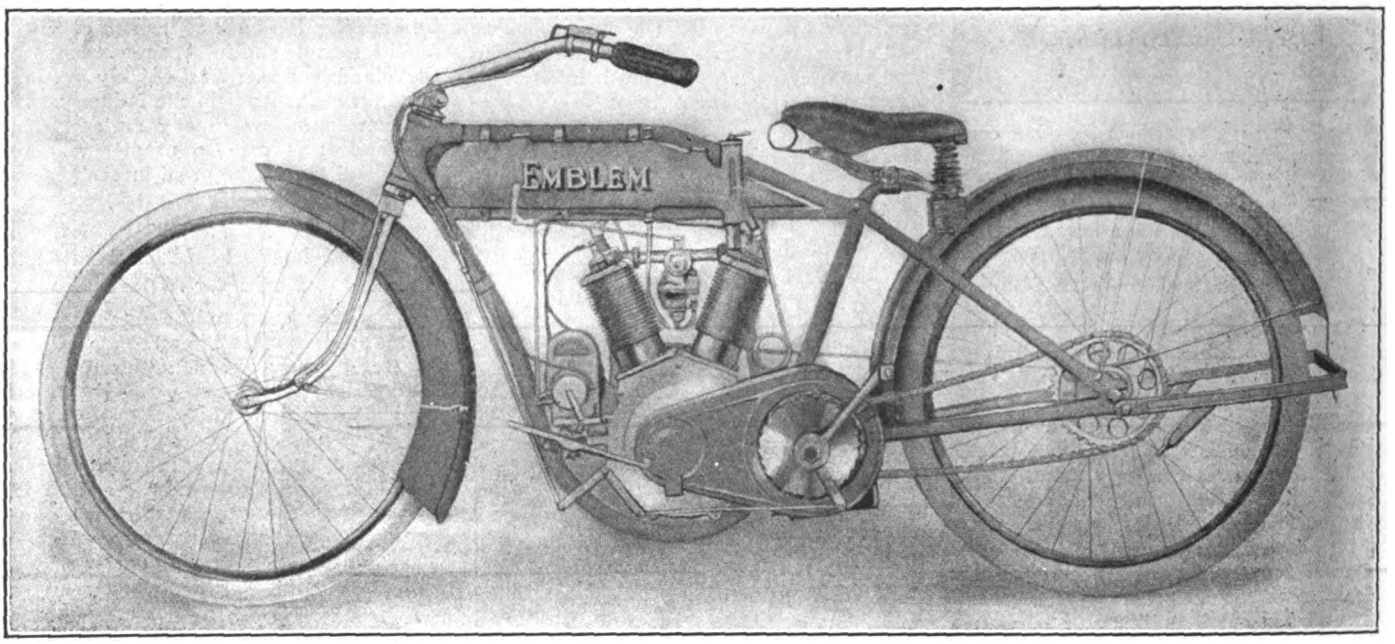
# EMBLEM PRESENTS NEW LIGHT TWIN

## Novel Leaf Spring Fork and Footrests Are Fitted



**Transmission Side of Light Twin Showing Clean Lines, Efficient Mudguarding, Kick Starter and Footboards—Note Low Saddle Position**

FROM the Emblem factory at Angola, N. Y., has been introduced to the Show-going and motorcycling public a light twin bearing the Emblem brand and incorporating a number of novel features. The first of these is a double leaf-spring fork of novel design. A second is a twin motor of 2⅝ inch bore and 3-inch stroke, giving a displacement of 32½ cubic inches. The motor is rated at 7 horsepower.

The Emblem twin, known as Model 106, weighs 150 pounds, being therefore in the light class. It sells for $150, single-geared, or for $175 fitted with an Eclipse two-speed hub. It embodies the regular Emblem features of inlet over exhaust valves, unit cam construction, double chain transmission with Eclipse countershaft clutch and grip control, Emblem kick starter, and folding footboards.

Lubrication on the light Emblem twin is by hand pump, located near the rear of the oil compartment of the combined gasoline and oil tank. Splash oiling takes care of the moving parts within the motor. Ignition is by high-tension Berling magneto, with the sparking point controlled by a small lever at the left of the tank. The clutch is controlled by the left grip and the throttle by the right grip. The carbureter is a Breeze of special design.

The front fork has the sides made up of flat springs, the longer members reaching to the axle and carrying it in a substantial pair of ends. The members are curved to have the fork act as its own spring. The design is very simple and eliminates any side-play.

The frame is of the loop type, of 1⅛ inch 14 gauge tubing. There are ample reinforcements at the points most needed. The tank is seamless, with the oil compartment at the rear. The top tube is dropped toward the rear to give a low saddle position. Deep and wide mudguards are fitted, the front guard having side-wings. The gearing is 5½:1. Wheelbase is 52 inches. The price is $150.

# BREEZY BITS OF TRADE NEWS PICKED UP AT THE SHOW

F. J. Barr, who handles the Harley-Davidson in Davenport, Rock Island and Moline, renewed his contract for 1916 while at the show. He has increased his floor space to 4,800 square feet, and will have the exclusive sale for those cities of the Miami, and Pierce bicycles, next year.

Johnnie Hurck, the Indian dealer of St. Louis, reported a good season's business during 1915, with an excellent outlook for next year. Commercial sales during 1915 were exceptionally good. Johnnie will have an exhibit of motorcycles at the St. Louis fair races to be held shortly.

Charles Weatherhead, Harley-Davidson dealer of Elkhart, Ind., while at the show, reported numerous sales to R. F. D. carriers in his territory. The new ruling regarding the use of motorcycles in the Government's R. F. D. service will mean the sale of many sidecars during the coming season.

The Drouhard Motor Company, Danville, Kan., during the show, took on the agency for six counties for the Harley-Davidson. Within the last year the company sold 194 of the big gray machines and 25 of that number were to mail carriers. The concern has adopted a system of "rider boosters" for keeping in touch with the riders in each county for which they have the agency.

C. H. Lang, the popular Chicago agent of the Harley-Davidson, reported the sale of 25 machines to the local gas company, 16 to the electric light service, and 15 to the public service company.

Herb Kipp, of Toronto, Canada, while at the show, reported that 40 of his customers have been called to war, and as the Canadian Government supplied all of its riders with machines, Herb volunteered to dispose of all the machines which were left behind by the riders. The 40 were sold without difficulty, as conditions around Toronto are greatly improved and money is becoming as free as ever. Herb believes that the new American lightweights are superior to the English machines. American bicycles, he says, are numerous in Canada. In selling American-made cycles in his town it is advisable to have them shipped to the Dominion as parts and then assembled, as in this way a big duty is avoided. Thirty-five per cent. of all motorcycles used in the Dominion are equipped with sidecars.

George J. Wagner, of the Wagner-Dolph Company, Rochester, N. Y., is a stickler for commercial business and has made good during the last year in that trade with both motorcycles and bicycles. The reduced prices of nearly all models, he says, will help immensely in his territory. Mr. Wagner has added the following new agents: May & Verdow, Williamson, N. Y.; J. W. Hill, Hemlock, N. Y. His party to the Chicago show included W. L. Dolph, J. J. Scharar and E. H. Clague. They stopped off at Detroit to see the races.

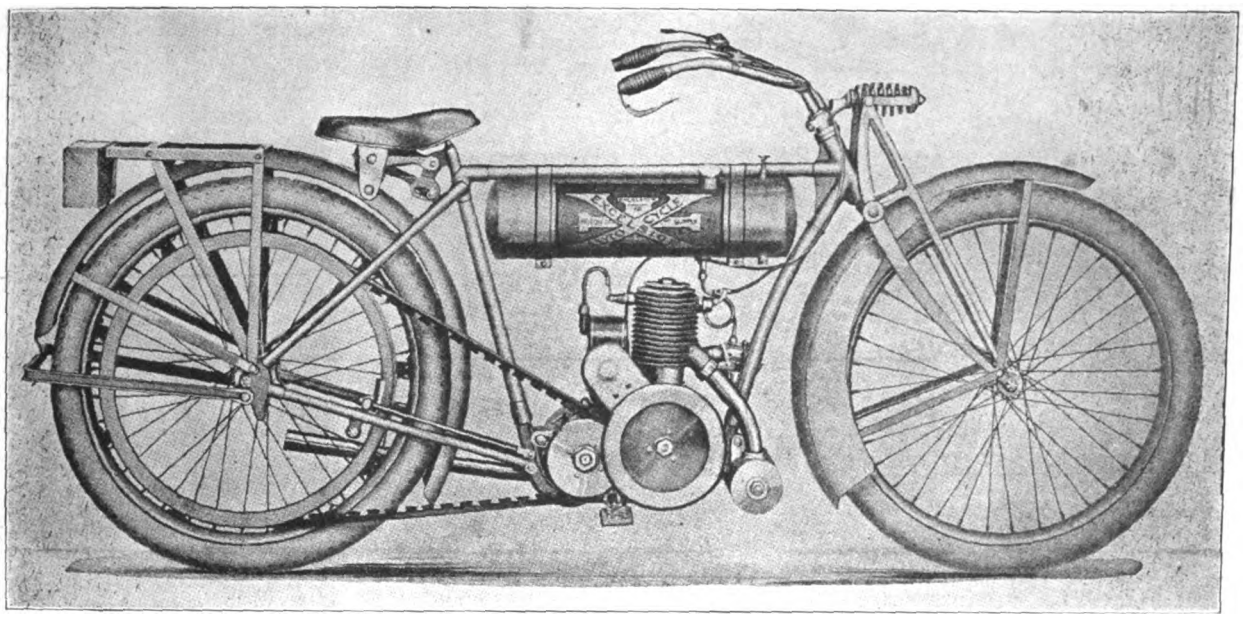
# NOVEL LINES ON EXCELSIOR LIGHTWEIGHT

## Modified Loop Frame and Two-Stroke Motor Features of New Product



**Flywheel Side of Lightweight, Showing Novel Spring Fork, Handlebar Controls, V-Belt Final Drive and Shoe Brake**

WITH a two-stroke motor of the three-port type, combination drive, outside flywheel and rocking cantilever spring fork as a few of its novel features, the Excelsior Lightweight made its debut at the Coliseum in Chicago on September 20. It is distinctly foreign in appearance, but thoroughly Americanized as regards standardization and interchangeability of parts. It weighs about 112 pounds ready for the road. It is priced at $135.

The frame of the machine is of the modified loop type, carrying both the motor and the two-speed gearset in the lower member. The front fork is pivoted at the crown, with nickel steel drop-forged members of cantilever type. The front axle is carried at the union of the straight and curved members, while at the top a U-piece attaches to the end of a coil spring. The latter is fitted to a stout piece projecting from the steering head.

### Three-Port, Two-Stroke Motor

The motor is of the three-port type of two-stroke, with one-piece cylinder. The transfer passage is cast integral with the cylinder, as is also a by-pass from the compression release valve to the muffler connection. The crankcase is in vertical halves. The crankshaft carries the flywheel on the extension outside of the crankcase. The inlet port is at the left of the front and the exhaust port at the right of the front of the cylinder. The transfer passage is at the rear.

The carbureter is a special Schebler, controlled by wire mechanism from a hand lever on the right grip. Ignition is by high tension magneto. Lubrication is by injection, the oil being sent into the crankcase in connection with the gasoline through the carbureter. The compression is relieved by the movement of a poppet valve in the front upper portion of the cylinder casting, this valve being controlled by a wire mechanism to a hand lever on the end of the right grip. The gases passing through the compression release chamber make their way through the integral by-pass, mentioned above, to the muffler connection, and pass out through the muffler with the exhaust.

Motor bearings are of the ball type on the left side and bronze on the flywheel side. Both main shaft bearings are packed to prevent leakage of gas compressed in the crankcase. The packing used is a special compound which will eliminate friction between the bearings and their shafts. The crankshaft is a one-piece drop forging. It carries the counterweights. A marine type of connecting rod is used, Non-Gran bushings being fitted to it.

### Sliding Type Gearset

The two-speed gearset, driven by chain from the motor, is of the conventional sliding type. The main shaft runs on large annular ball bearings and the lay shaft on a steel pin with Non-Gran bushings. The gearset is very compact, but the parts are designed to have ample strength for any emergency. Gears are all of nickel steel drop forgings, accurately cut and oil tempered. Cross-drive is used, the pulley for the V-belt being on the right side, while the primary sprocket is on the left side. This is the same arrangement as in the larger Excelsior models.

### Rear Wheel Details

The belt rim on the rear wheel is of rolled steel in one piece. It is fastened by lugs integral with it to the wheel rim. The shoe brake operates on the inner side of the rim. The rear hub is simply a cylindrical ball-bearing fitted shell minus sprockets or other attachments. The fuel tank is cylindrical in form, being suspended from the top tube of the frame by strong steel bands. It has two compartments for fuel and oil, respectively. The oil compartment is provided with a draw-off cock and measure, the latter being used to get the correct quantity of oil for mixing with the gasoline.

The saddle is a combination of saddle and spring seat designed to be light, strong and comfortable. The machine is fitted with footrests, no pedals being supplied or needed. Starting is by pushing off, either from the saddle or by walking alongside. The finish is Excelsior gray with red trimmings and the characteristic Excelsior trademark. The weight is about 112 pounds, and the price $135.

## NEW LIGHTING SYSTEM

One of the newest accessories shown at Chicago, was the lighting and ignition system fitted to the electrically equipped Excelsior, manufactured by the Motor Ignition and Devices Company, of Detroit. This concern was represented by Dr. Lawton and designer Milton. A complete description of this system will be published in the next issue of Motorcycle Illustrated.

## CARLOAD ORDER OF SIDECARS

R. F. Rogers, manufacturer of the Rogers' sidecar, is the first, to the best of our knowledge, to have received an order, in fact two of them, for the shipment of a carload of sidecars. For a number of years, motorcycles have been shipped in carload lots many times by all of the leading manufacturers, but the orders secured by Mr. Rogers are the very first, we believe, of such a shipment of the third wheel attachment. Mr. Rogers stated that his business during the past year in the East far exceeded deliveries in other sections of the country. This is no doubt due to the fact of the East offering better roads, a condition which has contributed vastly to increasing the popularity of sidecars in the New England and Atlantic States.

### FREED'S LITTLE SURPRISE

A. Freed, of the Pacific Motor Supply Co., of San Francisco, knows how to handle a surprise with the spirit of a true sportsman. If there was ever any doubt about his facility in this direction, it has been dissipated by the nonchalance with which he smiled his way out of an unusual situation as he was about to start from the Coast for the Chicago Show. Freed had planned an innocent little "bachelor party" for the eastward trip and was in high good humor as Mrs. Freed and their nine-year-old daughter went aboard the train at San Francisco, ostensibly to say good-bye. So far so good.

As the train started to pull out Freed went through the motions of hustling Mrs. Freed and daughter out of the car.

They refused to hust.

"But, sufferin' cats!" expostulated Freed, "you haven't any ticket."

"Oh, yes, I have," returned Mrs. Freed calmly, and she displayed the precious pasteboard. There was a moment's silence.

"Well, I'll be jiggered!" stuttered Freed, "I—I, you know—"

"Pacify yourself," soothed Mrs. Freed, "I'm going with you. Won't that be nice?"

"Why, of course," rallied Freed, "but daughter has no ticket. She'll have to—"

"Here's my ticket, papa!" chirped daughter—and she really had one.

Under the circumstances there was nothing for a good fellow to do but smile, and Freed did it. At Chicago he told the story on himself and set up the cigars.

### INDIAN STAFF CHANGES

A number of interesting announcements were made during the Chicago Show by the Hendee Manufacturing Company. It was given out, toward the end of the Show, that P. B. Whitney, formerly manager of the Chicago branch, had returned to his first love, having resigned as sales manager of the H. & F. Mesinger Manufacturing Company, of New York. Mr. Whitney will be connected with the sales division of the Chicago office of the Hendee Company.

Arch Strong, until now Indian traveller in Iowa, Nebraska and Missouri, will in the future concentrate his efforts upon the latter two states, Iowa having been assigned to Ray Seymour, who will also cover Wisconsin.

D. A. Magill, assistant manager of the Chicago branch of the Hendee Company, has resigned and will hereafter be connected with the Chicago office of the Splitdorf Electrical Company.

J. L. Seidell, who has travelled Kansas for the Indian, has been transferred to the headquarters at Springfield, and will travel New England.

Arthur Stevens, who has been making his headquarters at Denver, will be stationed at Kansas City and travel Kansas, Colorado, New Mexico and Wyoming. Indian interests in Illinois, Michigan and Indiana will hereafter be taken care of by F. B. McFadden.

## "A MILLION BICYCLES IN 1916" IS NEW DEPARTURE COMPANY'S SLOGAN

DOMINATED by the slogan "A Million Bicycles in 1916," the Chicago Show exhibit of the New Departure Manufacturing Company, illustrated herewith, attracted a lot of favorable attention by manufacturers, jobbers, dealers and others. The New Departure set-up was one of the most attractive at the Show, and cleverly designed to be as effective as it was handsome.

The display was featured by a showing of a fine line of New Departure posters, window cards, booklets, folders, moving picture slides and, finally, several handsomely gotten up scrapbooks of beautiful photographs showing the bicycle in hundreds of uses, in nearly every country of the world. In other words, the exhibit was an effectively educational one, and must have convinced every dealer who visited the Show that the New Departure Sales Helps are an absolute necessity to every man trying to sell bicycles.

As a matter of fact, nearly 9,500 dealers are now on the New Departure Sales Help list, and it is safe to say that thousands will be added during the 1916 season.

### OBERWEGNER SIGNS UP AGAIN

A. R. Oberwegner, of the Oberwegner Motor Co., Toledo, O., breezed into Chicago about the time the Show opened Tuesday morning "just to look over the new models," as he put it, and incidentally to greet his friends from "all parts." However, before he boarded the fast Lake Shore train for Toledo that night, it was generally known that he had signed up for the Harley-Davidson for 1916. During the current year Oberwegner has handled the Excelsior and Henderson. He retains the Henderson agency in addition to the Harley-Davidson for 1916.

### MRS. MOTER KNOWS THE GAME

One of the most interested, as well as interesting visitors, at the Show, was Mrs. C. M. Moter, of Jackson, Miss. No dealer, rider or trade man, was more thorough in his examination of the new models than was Mrs. Moter. And well might she have been, for she takes an active part in the management of the C. M. Moter Company, Harley-Davidson agents.

Digitized by Google

# With the Manufacturers

## SPLITDORF GIVES MILLION FOR BASIC DIXIE PATENTS

Newark, N. J., September 27.—A million dollars for basic patents of the Dixie magneto was paid last week by the Splitdorf Electrical Company, of this city, to the Sumter Electrical Company, of Sumter, S. C. The latter company controlled the patents through the invention of its president, Charles T. Mason.

It is rare that such a sum of money has been paid for a transfer of patents, but the Splitdorf Electrical Company considers itself fortunate in the acquisition of the valuable rights to the Dixie features, which are playing such a big part in the ignition field of two continents today. The Splitdorf factory is turning out as many as 1,500 Dixie magnetos daily, not only in the one and two cylinder types, but in the four, six, eight and twelve cylinder models, the latter for automobile and aeroplane motors.

The Splitdorf firm announces that it will continue to manufacture the line of Sumter magnetos for stationary engine, marine and tractor service formerly controlled by the Sumter Company at Sumter, S. C., and will manufacture and sell automobile, motorcycle and aeroplane machines of the Dixie types exclusively from the plant in this city.

## DONLEY'S NEW CONNECTION

The many friends of D. W. Donley, for some time connected with the Persons Manufacturing Company, of Worcester, Mass., will be interested to learn that he is now sales manager for the Shickel Motor Co., of Stamford. Mr. Donley's new connection is universally regarded as a particularly advantageous one, both to himself and Mr. Schickel, the pioneer two-cycle manufacturer in this country. The appointment of Mr. Donley as manager of sales provides the Schickel Company with a man of high caliber and national popularity in the cycle trade.

Among the features of the Schickel exhibit at the Show was a lightweight of low gear, fitted with sidecar commercial delivery van. The sidecar body is constructed of galvanized wire mesh and mounted on four helical springs. The machine has a capacity of one hundred and fifty pounds, is remarkably low in price and extremely economical of operation. It looks like a winner.

## THE HARLEY-DAVIDSON DEALER

Descriptions of big race-meets, transcontinental tours by dealers and private owners as well as more than the usual allowance of photographs are to be found in the September issue of the *Harley-Davidson Dealer*. An important announcement to agents by Sales Manager Arthur Davidson and a number of useful ideas are incorporated in the issue, as is the pictorial representation of the picnic held by the office force of the company. New Mackinaw garments for Harley-Davidson riders are also described.

## CARBURETOR CO. INCORPORATES

Paterson, N. J., September 27.—A certificate of incorporation has been filed with County Clerk John J. Slater by the Griffin Carburetor Company, with offices in the First National Bank Building, Paterson. The purpose of the corporation is to manufacture carburetors under a patent recently issued to George Griffen, of Paterson. The new concern has an authorized capital of $25,000, and the life of the company is limited to fifty years.

The incorporators are Frederick W. Cooke, one share; Frederick W. Cooke, Jr., thirty-nine shares; Elmer Z. Halsteadt, ten shares; John W. Stewart, four shares, and George Griffen, thirty-four shares. All of the incorporators reside in Paterson.

## RECENT BLUE STREAK RECORDS

Goodyear Blue Streak performances of recent date number Carl Goudy's winning at Narragansett Speedway, Providence, R. I., on September 18, and Marty Graves' new 100-mile mark at Detroit. Goudy, in a telegram to the Goodyear Tire & Rubber Company, stated that he rode at Providence on the same tires that carried him through the 300-mile Chicago Speedway grind, his speed at the Rhode Island track being 71¾ miles per hour. There was no tire change in either event, he said.

Graves, the winner at Detroit, and Ray Creviston, who came second, both went through the Detroit event without dismounting. Graves set a figure of 80:44 for the 100 miles, and another fresh mark for the ten miles, of 8:18½, not having any reason to touch his tires in either event. Creviston established a new track record of 4:08⅗ in the five mile race on the same date, and he also went through on his Blue Streaks without trouble.

## DRAPER PASSES ON

C. F. Draper, who represented the Champion Spark Plug Co., of Toledo, O., in the metropolitan district for the past year, died at his home in Brooklyn recently. His death followed an operation for illness performed in Dallas, Texas, a short time ago.

## FIRESTONE HOLDS ITS ANNUAL HOMESTEAD OUTING

Foremen, superintendents and officials of the Firestone Tire & Rubber Company to the number of 200, rode by motor car from the factory in Akron, O., to the old Firestone Homestead at Columbiana, on September 18. The occasion was the third annual homestead outing of the company. President H. S. Firestone was the host to the party.

The cortege consisted of 50 motor cars, decorated with flags and pennants, all in the Firestone colors. Just before noon, the machines and their occupants reached their destination, and soon after dinner was partaken of in an immense tent. In the afternoon, the guests of President Firestone played baseball, pitched quoits and ran races to their hearts' content. Numerous photographs and cinema records were taken of the sports. The return to Akron was made in the evening.

At last, George Squier, Traveller; Next, Secretary W. S. Quinlan and Chief Engineer C. A. Neracher; Messrs. Quinlan, Alexander, H. F. L. Funke and Neracher; Funke, Eastern Distributor, Trying Her Out; Treasurer H. G. Alexander in the Saddle.

Digitized by Google

# BREAKER STRIP FUNCTION DESCRIBED

IN a recent bulletin issued by the Motorcycle Tire Department of the Goodyear Tire & Rubber Company, of Akron, O., the function of the breaker strip in the motorcycle and automobile models of Goodyear tires is clearly explained. The breaker strip is put into the tire, says the bulletin, to take the shocks before they reach the organic part. It is not designed to add to the strength or efficiency of the casing, but is simply an armour-belt running around the casing to protect it.

The carcase of the tire is made of close-woven fabric, placed at an angle of 45 degrees. The tread rubber is made thick and tough and exerts a drag on the fabric, tending to pull it loose. By placing the breaker strip with the threads running circumferentially, this drag on the tread is resisted.

When sharp stones and other substances cut the rubber of the tread, in many cases the abrasion is stopped at the breaker strip, and dirt and water are thus prevented from working down to the main fabric. The strip thus helps to prevent water-soaking and sand-blistering. As the breaker strip is the nearest fabric to the road, receiving all cuts, water, dirt and sand, it is made to resist the damage caused by them. The Goodyear construction embodies a fabric of closely twisted yarn, tight-woven to make it waterproof, with rubber rivets extending through it at intervals. Such a fabric is more closely united to the rubber than the ordinary loose fabric and has better waterproof qualities after the tread is cut.

When the rider or driver has breaker strip trouble it is safe to say that undoubtedly the strip has saved the tire much serious injury at a more vital point in its construction, continues the bulletin. To obtain the best results the Goodyear tires contain a cushion of rubber between this strip and the main fabric of the tire. The importance of this feature to combat tread separation and at the same time to protect the main fabric from injury, can hardly be overestimated. It has played an important part in the successful advance of Goodyear tires and has been one of the features instrumental in causing Goodyears to stand out so prominently in the field.

## WALKER COMPLETES HIS LONG TRIP

"Jimmy," otherwise Walter Walker, the Weed Tire Chain traveller, completed his five months' trip through fourteen States on September 24. He stopped his motor for the last time of the trip at 11:30 a. m. on that date in front of **Motor Cycle Illustrated** headquarters at 13 Park Row, New York.

Walker left New York on April 26 last and rode to Albany for the first leg of the long tour. He covered New York, Ohio, Indiana, Missouri and Kansas, and would have gone further west but for extraordinary floods in western Kansas, Nebraska and Iowa. He returned to Illinois, therefore and continued across that State and through Wisconsin and Michigan and Minnesota. He traversed Kentucky and West Virginia, then crossed Pennsylvania and New Jersey, arriving in the metropolis with a total mileage of 12,418, just five months lacking two days out.

He used the same Indian sidecar combination as in 1914, and fitted five new tires for his trip. Mud, rocks, flooded roadways and some railroad tracks were the rule, rather than the exception in the Middle West, and the presence of sharp rocks, nails, and other tire destroyers did much to keep Walker busy in repairing punctures. In fact, he had seven in one afternoon while crossing Illinois. All tire changes and replacements were made at the rear tire of the motorcycle. The tire on the sidecar wheel, a Diamond non-skid, came through the entire trip without change or puncture.

## LONG JOINS HENDEE CO.

Washington, September 27.—Frank S. Long, of this city, has joined the forces of traveling representatives of the Hendee Mfg. Co. and has been assigned the States of Tennessee, Georgia and Florida, with headquarters at the Atlanta office of the company. Mr. Long left Washington last week for Atlanta to assume his new duties, and from that city will proceed at once to cover the territory assigned to him. He has been actively identified with motorcycling in Washington for a number of years, his most notable achievement being the conduct of a campaign that resulted in the repeal of local regulations prohibiting tandem riding. He also took an active part in the recent transcontinental relay, receiving the President's message from Secretary Breckinridge and carrying it over the first relay. Mr. Long has been identified with the Excelsior, Handerson and Indian trade interests in this city, and is thoroughly familiar with the machine that he will represent in the Southern territory. He has been a member of the National Capital Motorcycle Club since its reorganization in 1911, and has taken a part in every movement for the betterment of motorcycle conditions in and about Washington.

### LEWIN HAD FINE 1915 SEASON

Felix Lewin, manager of the New York branch of the Henderson Motorcycle Company, at 227 West 107th street, in reviewing the 1915 season, says he is by no means dissatisfied with the result. In his territory he sold 104 machines of 1915 model, all Hendersons, and 43 second-hand machines of various makes.

"Of course, the big majority of these sold from the old place at 2304 Broadway," said Lewin in a recent interview with a **Motor Cycle Illustrated** representative, "but in our new quarters on 107th street, we have started out nicely. There are orders for at least 24 of the 1916 Hendersons on the books, most of them being for two-speed models.

The New York branch, now occupied about one month, has a frontage of 26 feet and a depth of 69 feet. There is a double door in the center of the front of more than ample width to admit a sidecar combination of 56½ inch tread. The shop department is in the rear and besides a substantial workbench with two swivel vises, includes a motor stand which allows for working on the power plant in any position, a brazing outfit and a drilling machine. Manager Lewin prides himself on the completeness of his small tool sets, and as a result, his repair department is a model one. Spare parts are kept in a substantial cabinet close at hand.

The branch has ample locker accommodation for Henderson patrons. There is storage room for 35 machines, including sidecars. Manager Lewin will shortly have the services of Harry Hunter, one of the Henderson factory experts, as his repairman.

### WASHINGTON SEES "POWERPLUS"

Washington, D. C., September 27.—The first of the 1916 models to arrive in this city was the Indian, the new "powerplus" motors having been received by the local agents early last week. Much favorable comment was heard among old riders at the husky appearance of the new style motor, and both Howard A. French & Co. and Osborn & Leishear state that immediate deliveries will be made of as many machines as can be secured.

### BEARDSLEY IS DOING WELL

Houston, Texas.—C. W. Beardsley, local Excelsior representative, reports the sale of five three-speed twins to the City of Houston, and three single-geared twins to the Houston Light & Power Company among recent sales. To these are added a three-speed twin to Joe Runkle, a local contractor, and a delivery outfit to the Alvin Drug Company, of Alvin.

Beardsley has a big trade in bicycles in addition to his motorcycle business. His line is the Excelsior.

### BECKETT'S LONG JOURNEY

George M. Beckett, Indian dealer at New Orleans, undoubtedly earned the distinction of having ridden the longest distance to the Chicago Show. Beckett travelled to the Western metropolis by way of Pittsburgh, his old home, taking in Baton Rouge, Jackson, Memphis, Nashville, Frankfort, Cincinnati, Columbus, Wheeling, Pittsburgh, Cleveland and Toledo, a distance over all of 2,324 miles. What is more, Beckett intends to ride back to New Orleans.

### NOBLES COMPLETE LONG TOUR

Uniontown, Pa.—W. E. and Mrs. Noble, of this city, have just completed a sidecar tour of 1,400 miles on their three-speed Indian sidecar combination. They went from Uniontown to Erie, Pa., then on to Buffalo, Niagara Falls, Syracuse, Albany and Springfield, Mass. At the latter city, they paid a visit to the Hendee Mfg. Company's big plant, remaining in Springfield for several days.

Leaving the "Indian Town," the Nobles rode to Hartford, Conn., and then on to Atlantic City, N. J., via New York. The return from the New Jersey coast resort was made without having had a stop for trouble during the entire trip. W. E. Noble is a member of the firm of Noble Brothers, Indian agents in this city.

### DELIVERY SYSTEM SUCCESSFUL

Elgin, Ill., September 27.—The success of the parcel delivery service maintained by the Freiber Motor Co., Excelsior agent in this city, has been responsible for a large number of commercial sales during the year. Under the plans of this delivery system the Freiber Company's messengers make the rounds of the stores in Elgin twice daily, charging ten cents per delivery on the first mile and five cents for each additional mile. Private parties who are not regular customers pay a small additional charge. One of the commercial sales was made to a local furniture house which delivers its smaller pieces on a platform mounted on the sidecar chassis.

### FRANK BAKER TO DISTRIBUTE INDIAN IN KINGS COUNTY

Brooklyn, N. Y., September 27.—Frank Baker, for many years associated with the firmt of F. A. Baker & Company and its successor, the New York Sporting Goods Company, of 15 Warren street, New York, has taken the Indian distributing agency for Kings County, N. Y., for the 1916 season. He will shortly open a store on Bedford avenue near Bergen street.

On taking the distribution for this territory, Mr. Baker resigned from his position with the New York Sporting Goods Company, metropolitan Indian distributors. He will have as his associate Frank Goetz, a well-known figure in New York business circles. Mr. Baker is one of the veteran Indian riders in the metropolitan district and has a large following throughout Greater New York. The Kings County distributing agency for the Indian was for a number of years held by A. H. Patterson, of 1081 Bedford avenue, near Lexington avenue.

### SAUFLEY "CHAPERONS" DEALERS

Kansas City, Mo.—The Excelsior dealers and customers of the Saufley Supply Company gathered at the Saufley Supply Company at Kansas City, on Sunday, September 19, and were accompanied, or rather chaperoned, to Chicago by Mr. E. Saufley. Most of the dealers live way out in the country towns, and for some of them it is the first trip to a big motorcycle show.

### TELEPHONE CO. BUYS INDIANS

Lincoln, Neb.—The sidecar business has been unusually good for the Girard Cycle Co., local Indian dealers, ten attachments having been sold so far this season. Three Indians were delivered to the telephone company. The proprietors of this establishment state that rainy weather had greatly interfered with their 1915 output. The National bicycles are featured.

### READY TO SHOW NEW MODELS

Columbus, Ohio, September 27.—With stocks all cleaned up and stores placed in shape, motorcycle dealers in Columbus are awaiting the arrival of the 1916 models. Most of the Columbus agents were fortunate in cleaning up their stocks of old models, and they have had a prosperous season on the whole. Although sales were not as numerous as in some previous seasons, the year has been atisfactory.

# On the Pacific Coast

### COAST BUSINESS IS LIVELY

San Francisco, September 21.—While the war may have hurt other lines of business on the Pacific Coast, it does not seem to have affected the bicycle and motorcycle lines, according to F. L. Ryan, in charge of the Bicycle and Motorcycle Tire Departments of the B. F. Goodrich Company, in San Francisco.

Mr. Ryan has recently been in touch with some of the biggest jobbers on the Pacific Coast, and states that they are the most optimistic bunch of fellows with whom he has ever come in contact.

"Upon my asking one of the larger dealers how he accounted for all this enthusiasm," said Mr. Ryan, "his reply was, 'Not only business conditions, but actual business transacted warrant my optimism.'" Mr. Ryan further states that the entire Pacific Coast trade is looking forward to a big increase in the sales of bicycles and motorcycles and tires for the coming season.

### FRASER VISITS THE DEALERS

San Francisco, September 21.—J. D. Fraser, manager of the San Francisco branch of the Appeal Manufacturing Company, California distributors of Harley-Davidson motorcycles, has just returned from a visit to a number of the company's agents in Northern California. He reports prospects bright for good business in motorcycles and bicycles during the fall and coming season. Bicycle business in the country districts is particularly good just now, Mr. Fraser declares, with a tendency toward the better grades of machines.

### BLOOD ON WAY TO ORIENT

San Francisco, September 21.—W. D. Blood, export manager for the Hendee Manufacturing Company, Springfield, Mass., is in the city, en route to the Orient on business. He is accompanied by his wife and is viewing the exposition for a few days while awaiting the sailing of his steamer.

### MAGGINI & PERKINS TO MOVE

San Francisco, September 21.—Maggini & Perkins, local agents for the Harley-Davidson line of motorcycles, are to move to larger quarters at 116 Van Ness avenue. The growth of their business during the past season has necessitated the securing of more room for both their salesroom and workshop. They expect to be settled in the new quarters by Oct. 1.

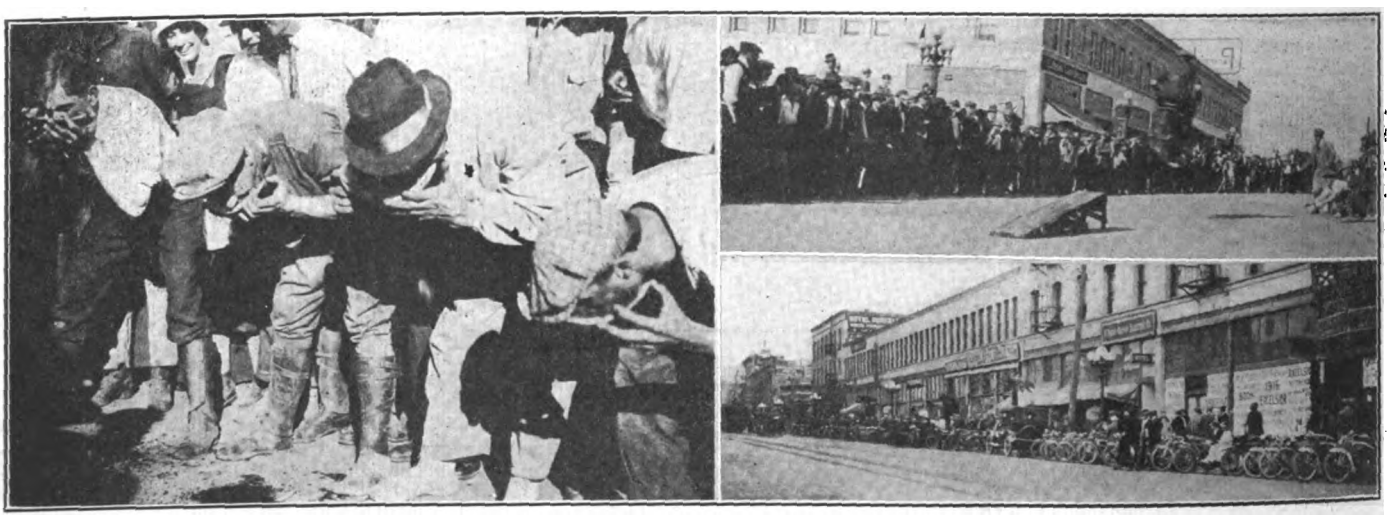
### SPEEDWAY FOR LOS ANGELES

Los Angeles, Cal., September 25.—The Los Angeles Speedway Association has been organized for the purpose of promoting and building a modern speedway. Subscriptions are being solicited actively, and are being received by most of the prominent automobile and accessory dealers. Lew Shank, who built the Chicago speedway, is in the city ready to bid on the construction, as soon as financing is assured. It is expected that motorcycle races will occasionally be staged at the speedway.

### RIDERS PAY VISIT TO CARLSON

San Francisco, September 21.—A good-sized squad of riders from the San Francisco Motorcycle Club journeyed to San Jose last Sunday, Sept. 19, for a visit to D. A. Carlson, familiarly known as "Doc," the popular cashier of the Hendee Mfg. Sales Co., who met with a serious accident at San Jose recently and who has since been confined in the Garden City Sanitarium in that city. Carlson suffered a fracture of the knee-cap and sustained other injuries. It will be several weeks before he can be removed to his home in this city.

## DEALERS' PICNIC STARTS NEW LOS ANGELES CLUB



**At Left, Watermelon Eating Contest; At Top Right, Harry Sexton Making Jump of 41½ Feet; Bottom, Line-Up of Participants**

LOS ANGELES, Cal., September 25.—Nearly two hundred riders joined the new motorcycle club organized at the recent Los Angeles dealers' picnic, which was held at San Fernando. Work is now rapidly advancing to make it, as the dealers hope, the largest and most active motorcycle club in the country. There were nearly one thousand machines, many carrying tandemites, at the picnic.

The ease with which most of the motorcycles made the long winding Newhall grades was a splendid showing, and the drop on the other side of the grade took the riders into the canyon, where the watermelon fest was staged. The dealers provided all the watermelons and lemonade and saw to it that there was more than enough of both. T. E. Barry, manager of the day, wore down the blade of his jackknife cutting the melons, but stuck to his job until the last rider was served. Then Manager Barry was kept very busy in putting through a big program of stunts.

The winners of the various events, for which two hundred dollars in prizes was hung up, were as follows: Pedaling race, "Shorty" Warner, first; "Longy" Penfield, second. Slow race, "Banker" James, first; "Attorney" Brown, second. "Hollering Contest." Roy De Granute, first; Newton Moore, second. Tug o' War, Fat Men won from the Muscular Heroes. Melon eating, "Old Larrupin" Joaquin Vissus, first; Tommy Shannon, second. Broad jump, Al Hart, first; Roy Du Granute, second. Trouble race, Al Rhoades, first; Al Hart, second. Motorcycle broad jump, the sensational event of the day, Harry Sexton, first, with his remarkable jump of forty-one feet and six inches; Al Rhoades, second, and J. A. Fletcher, third. Sparkplug race, Al Rhoades, first; Al Hart, second. Twenty-five yard crawling contest, "on all fours," backwards, Al Hart, first; P. E. Cahoon, second.

The dealers have agreed to guarantee sufficient funds to start a properly housed and equipped club, and riders are taking hold with a will. The next picnic will be managed by Tom Girton and Fred Hoffer.

# C. R. A. WILL BUILD VELODROME IN ATLANTA

NEWARK, N. J., September 28.—John M. Chapman, manager of the Cycle Racing Association, left here on Sunday night for Atlanta, Ga., where the racing association proposes to build a winter track. This is only one of the new additions to the racing circuit that the Newark body contemplates making. Frank Mihlon and Inglis M. Uppercu, the principal stockholders in the Cycle Racing Association, together with Chapman, the manager, held a conference here last week, when plans were laid for a big expansion of cycle racing.

**Tracks for Providence and Phillie**

Besides the track that is to be built in Atlanta, Ga., saucers will be erected at Providence, R. I., and Philadelphia, Pa. Brighton Beach or Sheepshead Bay may also be the site of a new track, but this is not certain as yet. The track at Atlanta will be for winter racing only. In Philadelphia races will probably be held on Tuesday and Friday nights, while no days for the running of meets has been selected for Providence.

A winter track has always been the aim of Manager Chapman, as well as the desire of Mihlon and Uppercu. Six days' races have been run to make the game a year-round sport; some have been profitable, but others have been a gamble for the magnates, as well as the riders. Chapman, while in Atlanta, will settle on a site which he says will be but a few minutes away from the business district. The track will be eight laps to the mile and there will be a seating capacity of 6,000. On account of the cold nights in Atlanta, the building will be of substantial construction and will cost more money than any of the other tracks.

**Good Prospects in Atlanta**

Manager Chapman believes that bicycle racing will be successful in Atlanta, which is his home town. It thrived, he says in the Georgia capital for years, and is appreciated by the fans there just as much as it is in Newark. Atlanta is also the home of Bobby Walthour, one of the greatest bike riders the game has ever known. Before leaving Newark, Chapman said he expects to break ground for the new structure early in October and have the track ready for racing by Christmas week. Motor-paced races will be run indoors along with professional and amateur sprint affairs.

Providence was a good city for motor-paced racing back in 1910, and the Cycle Racing Association has no doubt but that it can make a big thing out of it again. Motor-paced racing will, therefore, be featured, and Nat Butler, who owns a half interest in the Boston track, will have fifty per cent. of the stock in the new Providence venture.

**C. R. A. Will Manage Tracks**

In the future the local management will take care of all the tracks on its circuit and personally see to the management of

John Chapman

the same. There is not much chance now of their affiliating with other promoters as they have done in the past. The present track at Philadelphia is owned by H. M. Stetzer, but the Cycle Racing Association holds the franchise. The association proposes to exercise its franchise rights and the track erected will be under the sole ownership of the Newark people. The local association built the old track and owned a half interest. Stetzer secured the property at a receiver's sale, when the entire Point Breeze Park, where the track is located, was sold at auction. Mihlon, as well as the late Floyd MacFarland, were in Europe at the time and did not know a thing about the sale.

**New York and Chicago Tracks**

Sheepshead Bay and Chicago were big failures to the local management this year. Manager Chapman returned from Chicago on Saturday and said that he was unable to collect the $2,600 due the riders. This amount of money Chapman expects to pay to the cyclists who competed in the Windy City.

Messrs. Mihlon and Uppercu were both enthusiastic in discussing the new ventures. Uppercu said: "We have suffered some losses this season, but that is something we expected, owing to general business conditions. We are eminently satisfied with the way Manager Chapman has handled our affairs and, with the return of business prosperity, cycling will thrive as it never has before. Mr. Mihlon coincides with my views. I'll take this opportunity to deny the allegation that the Cycle Racing Association is a trust, for trusts invariably make money. We have never done anything but dig down in our pockets and contribute to the cause. In fact, we are not even professional promoters, for they either make money or throw up the sponge. We are sticking it out."

**Mihlon Against 6-Day Races**

Mr. Mihlon was much elated over having a winter track, and in discussing it with the **Motor Cycle Illustrated** staff man, said: "I have always wanted to build a winter track in a city where there would be as much response to the sport as there is in Newark. Personally I do not like six-day races and I would be pleased if there was never another one run. They are injurious to the riders and there is little money to be made by either the riders or the promoters.

"The future of many young and promising sprinters has been killed by participation in six-day races. As long as six-day races are run there is little chance of developing an American rider to succeed Frank Kramer. As soon as a youngster shows a flash of speed his first thought is to ride a six-day race. One or two grinds kill whatever chance they might have of becoming great sprinters. With a winter track we will pass up the six-day races and endeavor to have the younger riders compete there.

---

## NEW YORK BICYCLE CLUBS WILL HOLD CHAMPIONSHIP RACES

Sunday, October 3, promises to be the best racing day on the calendar of the New York City bicycle clubs. Various club and inter-club championship races will be held on the Pelham Parkway course in the Bronx. A big crowd is expected to be on hand and the races, from present indications, will be more hotly contested than ever before. Among the clubs that will be on hand are the New England Wheelmen, the Acme Wheelmen, the Unione Sportiva Italiana and the Century Road Club Association.

# A BIT OF OLD HOLLAND ON LONG ISLAND

## And an Interesting Week-end Trip Along the Sand Dunes

By ROBERT BRUCE

NOW that cool, bracing weather has invaded New York and its vicinity, and the mercury has quit its exasperating flirtations with boiling point, cyclists in Gotham, like those in many other sections of the country, will feel a keen desire to take longer trips awheel than the heat of summer months permitted them. For that reason two interesting week-end trips on Long Island are presented in this article.

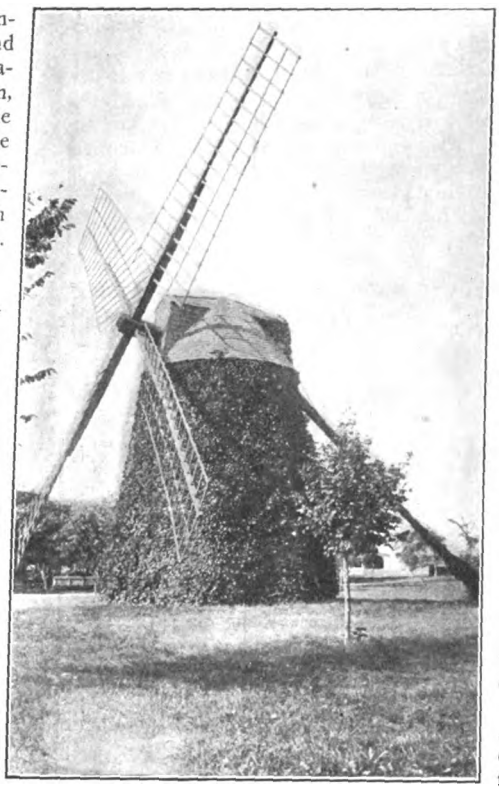
### Old Holland on Long Island

There are two localities along the northern Atlantic seaboard where large, old-fashioned windmills can be seen in fair numbers by the tourist—eastern Long Island and Cape Cod. Naturally, those on Long Island are more familiar to cyclists residing in the Metropolitan District; and perhaps twenty of them will be seen from the road in making a trip along the South Shore from New York to Sag Harbor, or vice versa. In most cases they are a part of the landscape of the finer private estates, though now and then you see a less expensive one.

On the direct road between Southampton and Bridgehampton, there is a little village called "Water Mill," the only one in the country so far as the writer has been able to discover; this name is due to the number of water mills, and gives the scattered little village a unique interest. It is about 2½ miles east of Southampton, and immediately beyond the bridge over Mill Creek, which connects Mecox Bay with a pond on the north side of the road which, while it has no name on the U. S. government survey map, is nearly a mile across at its widest part.

### Picturesque Mill

The one shown in the picture is in a little public park on the right-hand side as you go east, and nearly opposite the post office. It is said to be the only one on Long Island that was turned by a lever instead of by a small windmill at the top. If farther interested, one may see, from the road just before crossing the bridge, an old water mill, situated at the outlet of the millpond; the two make a very interesting contrast.



In the Little Village of Water Mill, L. I.

On account of lack of roads around it, not much is seen of Mecox Bay on a through trip, though it is exceedingly picturesque and during the summer many pleasure craft are seen upon it. Only a very narrow stretch of sand separates the bay from the ocean, and it is said that frequently the natives cut a rough channel through the soft ground and exchange fresh water for salt water.

One regrets to learn that some of the old windmills are going to pieces, especially those owned by the natives, who fail to understand their interest to visitors. On the other hand, those which belong to the fine modern estates are usually kept up as a matter of pride and individuality.

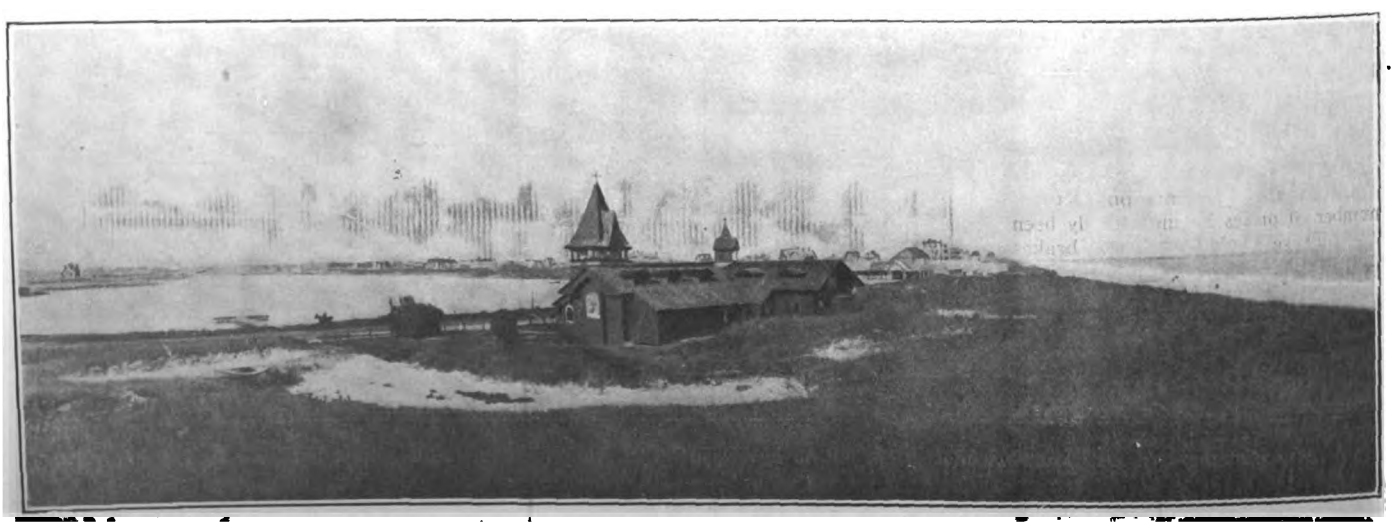
### Along the Sand Dunes

The large illustration above shows a bit of unusual sea-and-shore life less than a hundred miles from New York City. It is not actually on one of the main-traveled highways, but only about a mile aside; and the little additional distance required to visit the locality is well worth while. Look at any map of Long Island, and it will be seen how the South Shore narrows down between Shinnecock Bay and Great South Bay, so that you might almost throw a stone from the side of one into the other, and the choice of several roads on the right and left is lost in the one picturesque highway.

### Approaching Southampton

Immediately east of this narrow neck both bays recede, and the land widens out very quickly as the tourist approaches the quaint old town of Southampton, from which several good roads run nearly direct to the ocean. Eastbound, it is best to turn right (south) at the Irving House corner on "First Neck Lane," which is about a third of a mile from the west side of Agawam Lake, and straight nearly to the end. Arriving at the Meadow Club gate, turn left on the road shown in the picture, passing the sand dunes (along which you can see, even yet, some remains of abandoned whaling boats), and also the one-story rustic red church seen in the foreground.

This was formerly a life-saving station, and began to be used as a church only after a new life-saving station had been built farther east. After rounding the lower east side of the lake, the tourist usually takes the next left turn back toward Southampton, this road becoming Main street in the village. At the conspicuous white church, on the corner of Job's Lane and Main street, you intersect the road that you would have used by going direct through without a detour to the beach, thence straight on through the village as per the usual route. Of course, on west-



View from the Sand Dunes, Below Southampton, L. I., the Ocean on the Right Hand Side and Lake Agawam on the Left

Digitized by Google

bound trips these directions would simply be reversed.

**Just Separated by Dunes**

The distance between the south end of the lake and the ocean at the point shown in the view is less than a quarter of a mile—yet Agawam is a deep, fresh-water lake, with no apparent outlet, and is separated from the salt water of the ocean only by these sand dunes. The latter extend all the way to "Fort Pond Bay," beyond which the "shore" is mostly high, bold bluffs, a distance of about 6 miles to Montauk Point, the tip end of the Island. The road from Fort Pond Bay to the Point is inland but very picturesque; it is dirt, but hard and very good. If one can stand a few mosquitoes and his machine the soft, sandy road beyond Amagansett, he will never regret his trip to the Point.

There are two fine and interesting detours on the way back from Montauk Point (or Easthampton)—one to Sag Harbor, and then over the fine, new road direct to Southampton; or, further on, leave the main road at the "Art Village," at the eastern end of the Shinnecock Hills, taking the Golf Club road to the right. In this case pass the Golf Club, and continue west on a fine new road with beautiful views of Peconic Bay, joining the main road again at the bridge at Canoe Place.

## Sherman Takes Fourth Race in Crescent Series

Baltimore, Md., September 27.—Welby Sherman, this season's star speed merchant of the Crescent Bicycle Club, annexed his fourth consecutive victory in the Crescents' championship race series when he won the hill climbing contest held last Sunday, pulling away from Langdon M. Sanborn by a burst of speed near the top of the steep Bellona avenue hill, Fred M. Sanborn finishing third, William T. Wright fourth and Walter Doersch fifth. L. M. Sanborn and F. M. Sanborn rode neck and neck to a point midway up the grade, where L. M. Sanborn drew away, closely followed by Sherman, who sprinted into the lead at the last break, finishing first by a safe margin over his nearest competitor. Sherman now has a safe lead in the championship series, having scored 24 points in the five races held thus far in the series of ten to be run. Capain L. M. Sanborn is second with 18, Fred M. Sanborn with 16 being third, and William H. McAvoy, William T. Wright and Walter Doersch have 6, 4 and 1 points respectively.

Interest continues to grow in the ten and a half mile open handicap road race to be held by the Crescents on October 10, a number of prizes having already been received. These include coaster brakes donated by the New Departure Mfg. Co., and the Corbin Screw Division of the American Hardware Corporation, a Persons racer saddle from the Persons Mfg. Co., and a pair of pedals from the Standard Co. The local dealers have also promised to assist with some worth-while prizes, and every indication points to the fact that this race will be one of the most successful ever promoted by the local club. It is expected that other prizes will be added before the race.

## De Lackso Arrives at San Francisco Exposition

SAN FRANCISCO, Cal., September 25.—Francis De Lackso, the young Frenchman who left New York last Spring to ride to the Panama-Pacific Exposition handcuffed to his bicycle, arrived at his destination this week. His journey was delayed for more than five weeks, when as a result of a serious accident he was laid up at the Spokane, Wash., Hospital. De Lackso was struck by an automobile while entering Spokane and sustained a broken collar bone, his bicycle being totally wrecked.

**Francis De Lackso**

After leaving the hospital he managed to secure another bicycle and, again having himself handcuffed to the machine, he continued his cross country trip. That he had thoroughly recovered from his mishap when seen by his friends at the Exposition was evidenced by his statement that he had gained twenty-eight pounds since leaving New York.

The French cyclist is being entertained by the New Century Wheelmen. De Lackso announced that he will ride back to New York on his machine.

### SAD WORDS TO CYCLISTS

Chicago, September 27.—Of all sad words of tongue and pen, the saddest are these, "It rained at Riverview Velodrome again." Another meet was put into the discard yesterday afternoon by a near-torrential rain. This marked the twenty-sixth meet at the local track that was postponed by bad weather during the season. The meet of yesterday will be staged next Sunday afternoon.

### PAPESCA WINS U. S. I. RACE

From a field of twelve riders, "Jimmy" Papesca made the fastest time in the unpaced championship race at three miles held for the members of the Unione Sportiva Italiana over the boulevard at Grant City, Staten Island, N. Y., on Sunday, Sept. 26. Papesca's victory is remarkable in view of the fact that he had done no bicycle riding in two months, and had intended to give up the racing game. Considering that the return journey over the course was against a stiff headwind, the victor's time of 8:32⅕ was good. Three other races were to have been held on Sunday, but the police interfered and the remaining events will be run off next Sunday. The results of the three-mile unpaced race are as follows:

| Place | Name | Time |
|---|---|---|
| 1 | James Papesca..... | 8:32⅕ |
| 2 | Louis Rabbino..... | 8:37⅖ |
| 3 | Tony Pace..... | 8:47⅖ |
| 4 | James Alfonso..... | 8:48 |
| 5 | C. Zoccola..... | 8:48⅗ |
| 6 | Thos. La Rossa..... | 8:52 |
| 7 | S. Maccario..... | 9:14⅘ |
| 8 | Chas. Rabbino..... | 9:31⅘ |
| 9 | A. Ramezzano..... | 10.07 |

### WOODMAN GETS BIKE AGENCY

Joliet, Ill.—John Woodman has bought the bicycle business of Charles A. De Coo, formerly located at 412 Jefferson street. Woodman has moved the stock and fixtures to his new store at 218 Jefferson street, and will feature the Chicago Supply and Pope lines of two-wheelers.

## Carroll Wins Mile Race at C. A. C. C.

SAN FRANCISCO, Cal., September 25.—Ed. Carroll, of the Olympic Club, accounted for the one mile bicycle race held last Sunday, Sept. 19, at Shelmound Park, under the auspices of the California Associated Cycling Clubs. E. Wiseman, of the Acme Club, was in second place, and Vic Spence, of the New Century Wheelmen, finished third. The time was 2:31.

The contestants found the park track a very difficult one to ride, for it is a ten-lap affair and the turns were not banked.

The C. A. C. C. will hold three races at the Stadium on Oct. 3—a one-half mile, a one mile open and a three mile handicap.

Last Saturday night, Sept. 18, the New Century Wheelmen gave a social dance which was keenly enjoyed by the members and their friends.

### ACME WHEELMEN IN RACES

Although rain put the Eastern Boulevard in poor condition for bicycle racing, the Acme Wheelmen, of New York City, held two championship races over the course on Sunday, September 26. Fred Miller won the three-mile championship and covered the distance in 9:33 2-5. Fred Fesselmeyer was second and Frank Small finished third. Paul Renicke was the winner of the five-mile unpaced race in 11:54 4-5, while George Schart was second, Frank Small third, George Grundig fourth, and Frank Messner fifth. The other club championship races will be held next Sunday over the same course.

### NEW COLORS FOR N. J. MARKERS

Paterson, N. J.—White lettering on an English brown background has been chosen by William L. Dill, commissioner of motor vehicles for New Jersey, as the colors of the 1916 markers. New Jersey college colors were first used, but the list has since run out. The new markers will be distinctive from the colors of any of the adjoining States.

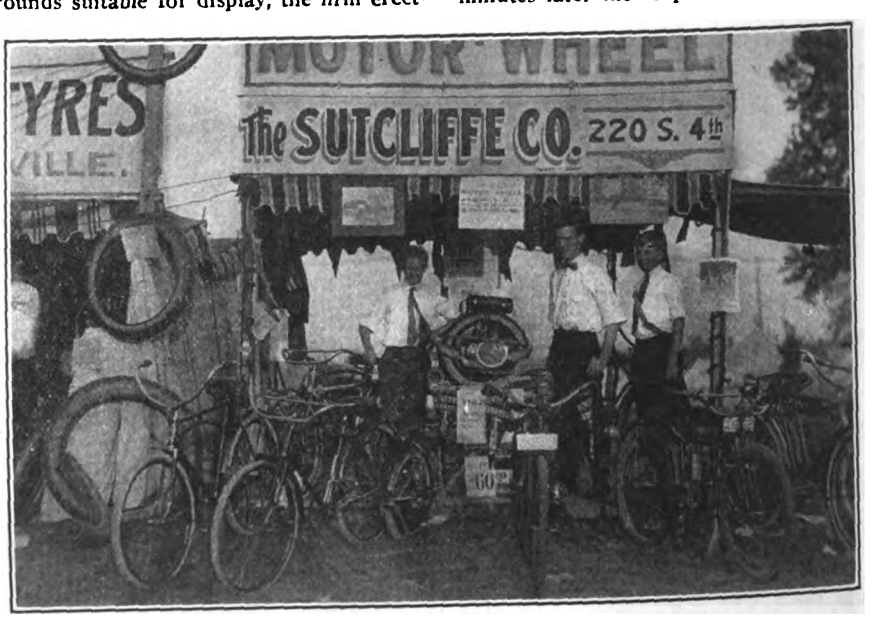
### SETS UP AMATEUR RECORD

Buffalo, N. Y., September 20.—At the Buffalo Velodrome yesterday afternoon, Louis A. Peterson, the West Side Rowing Club bicycle rider, broke the world's amateur time record (7.07⅘) for a five-mile motor-paced race. He made the five miles in 7.02.

### EXHIBIT MOTOR WHEELS IN TENT AT KENTUCKY STATE FAIR

Louisville, Ky.—One of the main attractions at the Kentucky State Fair, which was held in this city from September 13 to 18, was the tent exhibit of the Sutcliffe Company, Smith Motor Wheel agents, in Louisville. There being no building on the grounds suitable for display, the firm erected a large tent, building a circular board "saucer" behind it. On this saucer, which measured 36 feet in diameter, a number of young riders demonstrated the little bicycle booster every afternoon and evening.

Large crowds were present during each day of the Fair and access to the Sutcliffe "show" was usually difficult owing to the presence of many people in and around both the stand and the saucer. In addition to the riding on the little track, demonstrations were given on the regular mile dirt track each day at the finish of the horse races. The Sutcliffe firm consider the exhibit a great success, for, as a preliminary, four Motor Wheels were sold during the week and other orders have been since booked. The photograph shows the tent exhibit as it appeared at the Fair.



The Sutcliffe Exhibit at the Kentucky State Fair

### WRIGHT LEADS CRESCENTS

Baltimore, Md., September 27.—William T. Wright still leads the Century Mileage Contest of the Crescent Bicycle Club, as reported by Capt. L. M. Sanborn up to the end of August. John G. Stricker continues to hold second place, with Fred M. Sanborn third and Welby Sherman and L. M. Sanborn fourth and fifth, respectively. The standing of the first ten men follows: First, William T. Wright; second, John G. Stricker; third, Fred M. Sanborn; fourth, Welby Sherman; fifth, Langdon M. Sanborn; sixth, William H. McAvoy; seventh, Walter Doersch; eighth, Raymond Curry; ninth, Rudolph G. Leimbach; tenth, August Leimbach. The total mileage for August is 4,299.

### RHEINWALD VICTOR IN ANNUAL BERNE-GENEVA RACE

Geneva, Switzerland, August 26.—Covering the 160 kilometres (99.4 miles), which constitute the course Berne-Geneva, in 5:12:50, Henri Rheinwald won the seventh annual holding of this classic contest on August 24. The brothers A. and J. Grandjean were, respectively, second and third, A. Grandjean coming in one-fifth second in point of time later than the victor. The three first men all rode Condor bicycles.

Thirty-six contestants came before the starter at Berne at 5:30 a. m., and eight minutes later the 13 pro. riders were started off, trailing an official car. Morat, the first scoring point, 28 kilometres (17.4 miles) out, was reached at 6:30 by the pro. contingent. The 23 "simon pures" had meanwhile been started off in squads, just 30 minutes after the pros.

Coming close to Lausanne, the route led over the Chalet-a-Gobet incline, and this, after some 47 miles of riding, told heavily on the competitors. The first rider to enter Lausanne was Perriere, who swung in behind a fast-traveling motor car near Payerne (29 miles out of Berne), and took pace from it for some 15 miles. His time of arrival was 8:43. Five minutes later, A. and J. Grandjean and Rheinwald passed the Lausanne control and sped off toward Geneva. They caught Perriere up near

# HOOSIER CITY PLANS A CYCLE SHOW

Indianapolis, Ind., Sept. 28.—Plans are being formulated for the holding of the Indiana Cycle Show in this city during the last week of February, 1916. This will be the second annual exhibit of motorcycles, bicycles and accessories for the dealers of the State. In addition to cycle exhibits sporting goods will also be shown.

This show promises to be larger than the one of last year, and assurances have already been given that there will be a more representative exhibition of machines and accessories. Throughout the six days when the show will be in swing, entertainment will be provided for the spectators.

Last year the show was a big success as far as the number of visitors was concerned. It was estimated that more than seven thousand people entered the garden in which the exhibition was held for three nights. Since the 1916 show will be open both day and night for nearly a week, it can readily be seen that the attendance will probably climb above the twenty thousand mark.

New directors have been added to the board, several of the directors being F. I. Willis, J. H. Kinney, G. H. Westing, W. B. Harding, H. L. Dipple. The officers of the Indiana Cycle Show Association are W. F. Sturm, president; F. C. Baldridge, treasurer, and Jack Carr, secretary. President Coffman will again supervise the details of the show.

### NEW HARWACO BICYCLE TIRES

Five different styles of Rollfast bicycle tires, an entirely new line of goods, are manufactured by the Harwaco Rubber Works Company, of 48 Warren street, New York. They range in price from $5 to $8.50 per pair. There are also three sizes for juvenile machines, these listing at from $3.75 to $4.25 per pair.

The $5 tires are made with Disc tread, four layers of Egyptian heavy fabric and a thick gray tube. The Extra Heavy Rollfast, listing at $6 per pair, has a specially-compounded tread and an extra heavy tube. It has four layers of heavy fabric.

The Harwaco Heavy Tread tire comes at $7 per pair. The tread is extra heavy, red in color, backed by a layer of motorcycle fabric, a heavy gray rubber layer and a second layer of motorcycle fabric next the tube. At $8.50 per pair are listed Non-Skid Chain Cup tires, these having a white tread, motorcycle fabric next layer, white rubber layer following, and a motorcycle fabric layer next to the pure gum inner tube. The Moto-Fabric tires have a red tread, with the fabric in layers of Sea Island motorcycle fabric and heavy gray rubber. They list at $7.50 per pair.

### SUPPLY CO. IN LARGER QUARTERS

Louisville, Ky., September 27.—The National Supply Co. has moved from its old location at 207 West Main street into larger and better quarters at 104 West Market street, where it will carry an extensive line of bicycles as well as a complete stock of bicycle and motorcycle supplies. In addition to being better located, the new store is equipped with spacious show windows in which goods may be displayed to the best advantage.

### RACECYCLES FOR POLICE

Dallas, Tex., September 27.—Julius J. Meyers, the live dealer of Galveston, Tex., has placed two racecycles with the police department of that city.

### WILL IMPROVE TRI-CITY ROUTE

Columbus, Ohio, September 27.—The plan is on foot for the immediate improvement of a main market road, connecting, by the shortest route, Cleveland, Columbus, and Cincinnati.

The direct route, which is several score miles shorter than the road now principally traveled by automobilists who go across the State from Cleveland to Cincinnati, is not now generally used, because of stretches of unimproved road. The route is by all odds the most beautiful in the State, and when finished will open up a line of trade and travel of big possibilities.

### ALSO SOLD TO POLICE

Joliet, Ill.—Bicycles will be stocked for the new season in the establishment of F. E. Beck & Co., local agents for the Harley-Davidson. During the year two three-speed machines were delivered to the local police and one single, two-speed to the Public Service Co. Installment business is not encouraged by Beck.

### INGENIOUS POPE BICYCLE LOCK

In the bicycle section at the exhibit of the Westfield Manufacturing Company was a most ingenious bicycle lock, operating in connection with a Corbin coaster brake. The lock, in fact, incorporates the arm of the coaster, replacing the regular Corbin anchor-arm. It prevents the rear wheel from turning when in action.

The lock mechanism is of the pin tumbler type, all the mechanism being housed in a small cylinder. It operates automatically to lock. The bolt engages with a slotted collar slipped on over the hub shell and attaching firmly to the base of the spokes close to the flange. It cannot be removed without tearing the spokes out of the flange. A special key is needed to open it. The complete lock can be fitted in 30 minutes' time. It retails for $1.25. While shown adaptable to the Corbin coaster brake, it will in a short time be made adaptable to other forms of coaster brakes.

### AFTER MAIL ORDER BUSINESS

Dallas, Texas, September 27.—A special campaign for the mail order business of the consumers and small dealers in bicycle parts and sundries has been started by the Cortines Supply Company, of this city, the first step in which was the mailing of 5,000 catalogues to the small towns not made by the road men. Results already coming in are considered a sure indication of a healthy condition of the cycle trade over the state.

# STANDARDIZATION COMMITTEE MAKING PROGRESS

ATTENDED by Keyser Fry, President of the Cycle Jobbers' Association; Chairman L. M. Wainwright, of the Diamond Chain & Manufacturing Co., Indianapolis; J. W. Grady, of Worcester; J. W. Ash, of the Miami Cycle & Mfg. Company, of Middletown; W. G. Schack, of the Emblem Manufacturing Company, of Angola, N. Y.; Fred I. Willis, of the Hearsey-Willis Company, of Indianapolis, and M. E. Stokes, of the United States Tire Company, of New York, a meeting of the Cycle Parts Standardization Committee was held at the Congress Hotel in Chicago last Tuesday morning.

Mr. Fry, as President of the Reading Cycle Manufacturing Company, of Reading, Pa., announced his intention of asking the sixteen other bicycle manufacturers in the United States to meet with this committee and aid in the adoption of new standards. Mr. Fry stated that practically all the interested parts manufacturers had submitted answers to the questions propounded by the committee on standardization. These answers are now in the process of compilation, and a definite and detailed report of what is desired by the cycle trades will be made at a meeting to be held at New York.

### RHEINWALD VICTOR IN RACE

(Continued from page 44.)

Bursinel and all went at it hammer-and-tongs. Finally, Rheinwald by a sprint took the lead and held it over the tape at the finish. His winning was a close one, for the Grandjeans flashed across the line at only a fraction of a second intervals after him.

In the amateur class, Ch. Martinet was first in Geneva, in 5:40:12, with E. Ammann, second, in 5:40:12 1-5. M. Suter came third, just one-fifth of a second behind Ammann. Martinet crossed the line ahead by a sprint of about 65 metres, winning over Ammann by a close margin. In all, eleven finished in the amateur class. Following are the summaries:

**Professionals**

Henri Rheinwald, first, 5:12:50; A. Grandjean, second, 5:12:20⅕; J. Grandjean, third, 5:12:50⅘; Perriere, fourth; Demichelis, fifth; Zorloni, sixth; Bani, seventh; Lequatre, eighth; Guyot, ninth; Dreier, tenth; E. Grandjean, eleventh; S. Klein, twelfth. Wiedmayer broke both pedals and retired.

**Amateurs**

Ch. Martinet, first, 5:40:12; E. Ammann, second, 5:40:12⅕; M. Suter, third, 5:40:12⅖; Bernet fourth; Strasser, fifth; Dalberto, sixth; Kung, seventh; Luthy, eighth; Scribanti, ninth; Lomazzi, tenth; Peier, eleventh. Cerutti and Decrevel finished after the time prescribed. The following "simon pures" abandoned the run: Cornaz, Righetti, Collet, Pifferini, Bonini, Michel, Tissot, Marguet, Clavel and Moliterni.

### KOKOMO RUBBER ADDITIONS

Kokomo, Ind.—The Kokomo Rubber Company, of this city, is adding two buildings to its plant. The new additions will be one-third the size of the present factory group and will be used exclusively for the manufacture of bicycle tires. The buildings will be finished and occupied by Dec. 1, according to present estimates.

### CORTINES AT CHICAGO

Dallas, Tex., September 27.—E. J. Cortines, of the Cortines Supply Company, inventor of the Safety First reversible bicycle handle bar, is in Chicago negotiating for the manufacture of his patent.

# McNAMARA BREAKS A WORLD'S RECORD

NEWARK, N. J., September 25.—Reggie McNamara won a twenty-five-mile bicycle race at the Velodrome on Wednesday night, September 22, and broke the world's record for that distance. McNamara clipped 34⅕ seconds off the old mark and rode the distance in 53 minutes 38⅖ seconds. The former figures were 54 minutes 13 seconds, made by Frank Kramer at New Haven on July 14, 1910. McNamara was an easy winner, leading Alfred Goullet over the tape by about six wheel lengths. Just as McNamara finished, his chain slipped off, but Reggie had the race won. Jackie Clark was third, Bob Spears fourth, and Harry Kaiser fifth.

**"Goullie" Also Lowers One**

The new mark put up by McNamara was not the only record broken, as Alf Goullet gets credit for setting a world's record for twenty miles. "Goullie" rode twenty miles in 42 minutes 56⅕ seconds. The old figures were 43 minutes 39 seconds, made by Walter DeMara at the local track on August 24, 1910.

Kramer did not have a chance to protect his world's record, as he was put out of the race with a puncture after riding sixteen miles and two laps. Alf Grenda, who was also expected to be up with the leaders, punctured at eleven miles and three laps. When Kramer punctured he quit the race, but Grenda got a new wheel and continued in the grind, grabbing off lap prizes. Oscar Egg was not feeling well and did not start in the race.

**Continual Sprints—Fast Time**

There was a dollar up for the leader of every lap and the first man at each mile collected five bills. The riders were also allowed to drop from the race and come back again to compete for the lap prizes. These continual sprints kept the pace fast all the time. At five miles the time was 10 minutes 39⅘ seconds, with McDougall leading. The riders covered ten miles in 21 minutes and 22 seconds. Menus Bedell was the leader. The time for fifteen miles was 32 minutes 12⅕ seconds.

Two laps from home Freddy Hill shot out, followed by Cavanagh, McNamara and Spears. Goullet was in a bad position. McNamara jumped on the backstretch and was leading at the bell. He shot into the last lap, trailed by Thomas, Cavanagh, Kaiser, Clark and Spears. McNamara seemed to gain with every kick and had a comfortable lead on the backstretch and around to the tape. Goullet came out in the middle of the backstretch, and by a mad sprint to the tape managed to get second place, just beating out Jackie Clark, while Spears and Kaiser followed close behind.

**Goullet Somewhat Peeved**

Goullet won a three-cornered match against Iver Lawson and Jackie Clark, Goullet won in straight heats, while Lawson followed him over the line both times. In the first heat Lawson battled with Goullet from the first turn on the last lap to the last turn, but Goullet easily outsprinted Iver in the homestretch and won by a wheel's length. The last eighth was ridden in 12⅕ seconds. The second heat saw Clark go into the last lap leading. On the backstretch both Goullet and Lawson rode around Jackie, and "Goullie" led home again by a wheel's length. Goullet seemed rather peeved after winning and handled his bonquet like a head of cabbage. After dismounting he threw the flowers to one side.

A match between Hans Ohrt, of San Francisco, and Arthur Spencer, of Toronto, went to three heats with Ohrt the winner. Spencer took the first one by showing a brilliant bit of head work, but Ohrt came back and took the next two.

Eddie Madden, with 100 yards, won a two-mile invitation handicap race for professionals. Ernest Jokus, who had 90 yards, was second, and Willie Hanley, riding from scratch, finished third. Madden took the lead on the backstretch of the last lap and held it to the finish. Summaries:

One-third Mile Handicap (Amateur)—Won by Frank Scaduto, Newark (70 yards); second, Charles K. Browns, Newark (65 yards); third, William Murray, Harrison (75 yards); fourth, Joseph Marti, Newark (70 yards). Time, 36s.

Two-Mile Invitation Handicap (Professional)—Won by Edward Madden, Newark (100 yards); second, Ernest Jokus, Newark (90 yards); third, William Hanley, San Francisco (scratch); fourth, Menus Bedell, Lynnbrook, Long Island (45 yards); fifth, Peter Drobach, Boston (20 yards). Time, 3m. 51⅘s.

Three-Cornered Match Race at One Mile (Professional)—Won by Alfred Goullet; second, Iver Lawson; third, Jackie Clark. First heat won by Goullet; second, Lawson; third, Clark. Time, 1m. 42⅖s. Last eighth mile, 12⅕s. Second heat won by Goullet; second, Lawson; third, Clark. Time, 1m. 45⅖s. Last eighth mile, 12⅕s.

Two-thirds Mile Match Race (Amateur)—Hans Ohrt, San Francisco, vs. Arthur Spencer, Toronto. Won by Ohrt. First heat won by Spencer. Time, 1m. 35⅕s; last eighth mile, 12⅓s. Second heat won by Ohrt. Time, 1m. 46⅗s; last eighth mile 12⅖s. Third heat won by Ohrt. Time, 1m. 51s.; last eighth mile, 12⅖s.

Two-mile Open (Amateur)—Won by Fred Taylor, Newark; second, Thomas Grimm, Irvington; third, Edward Byron, Australia; fourth, Frank J. Whitney, Newark. Time, 4m. 22⅘s.

Twenty-five-Mile Open (Professional)—Won by Reginald McNamara, Australia; second, Alfred Goullet, Austalia; third, A. J. Clark, Newark; fourth, Robert E. Spears, Australia; fifth, Harry Kaiser, Bronx. Time, 53m. 38⅘s.; a new world's record.

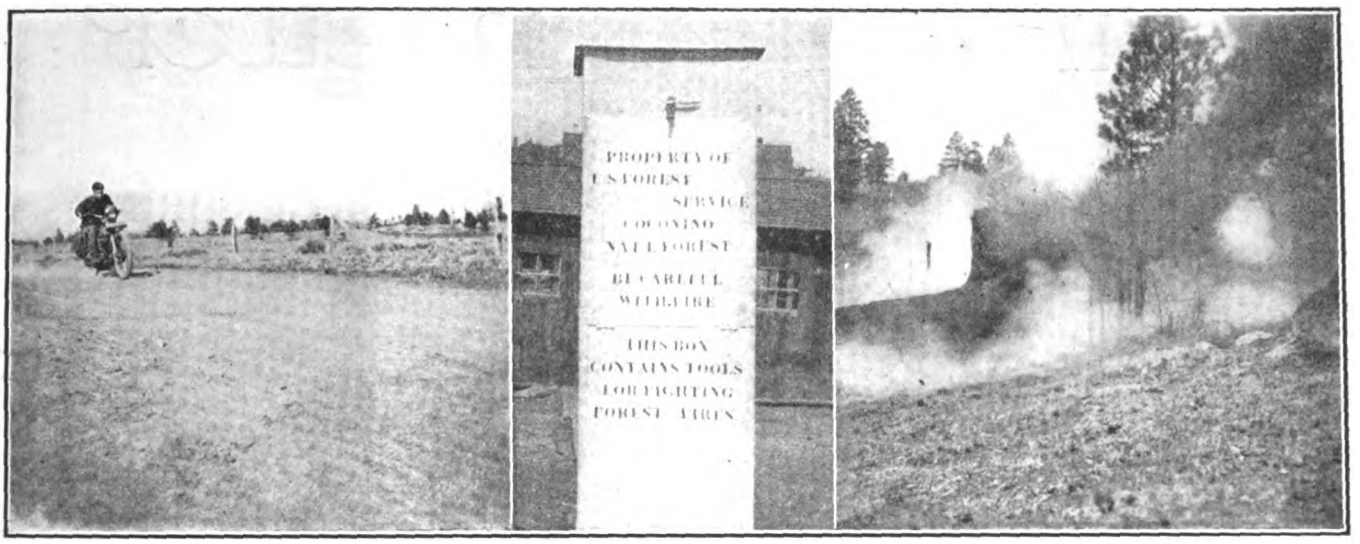
# HELPING TO FIGHT FOREST FIRES IN ARIZONA

## Government Experiments With Motorcycles For Patrol Work in National Reservation

By W. F. KERR



**Left—Coconine Forest Patrolman Rushing to Fire. Middle—Type of Fire Tool Box. Right—Forest Blaze**

FLAGSTAFF, Ariz., September 21.—About four months ago two motorcycles were installed by the United States Forest Service for use by fire patrolmen in the Coconine National Forest. In that short period they have proved so efficient in helping to reduce the number of fires and checking blazes before much damage had been done, that Supervisor John D. Guthrie, of Coconine Forest, has put himself on record as endorsing the powered two-wheeler as a very necessary adjunct to forest service equipment.

### What the Supervisor Said

"This is the first year," he said to a correspondent of **Motor Cycle Illustrated,** "that motorcycles have been used in the Coconine forest, and so satisfactory has been the work rendered by them that the future will undoubtedly see many motorcycles in service in the National forests throughout the States. You can be absolutely certain that we will continue our motorcycle patrolmen."

The installing of motorcycles in the Coconine National Forest was largely in the nature of an experiment which suggested itself to the officials of the Forest Service of the United States Department of Agriculture. Good roads had been constructed along this wooded reserve, which accounts for its being made the scene of the experiment. The Ocean to Ocean Highway and the National Old Trails Highway both pass through the reservation and are extensively used by coast to coast tourists.

Two motorcycle patrolmen are employed by the government to go over specified routes twice a day. These men are Allen T. Bedell, who rides a Harley-Davidson, and Noble H. Glenn, who uses an Indian. Bedell and Glenn each cover a route of approximately sixty miles a day, riding over the same ground twice daily.

Since it is necessary for the men to keep a constant lookout for forest fires starting along their patrol routes, they are limited to a speed of not more than ten miles an hour, except when they are actually going to a fire, in which case they are permitted to "open her wide" and "get all that's in her."

On the luggage carriers of his machine, each of the patrolmen carries a pair of leather cantinas, or saddle bags, where he tucks away a "take down" automobile shovel, an army emergency ration and a map of the National Forest, showing his route and the location of telephones, fire tool boxes (one is shown in the above illustration), ranches and such other information as might prove of possible advantage in his work.

Before beginning the day's journey, the motorcycle patrolmen report to the supervisor and several times during the ride over their respective routes they report by telephone. In case of fire at any point in the reservation, these frequent reports enable the supervisor to get the men quickly to the blazing forest.

**Ready to Start Out on Daily Patrol**

### Regulation Now Observed

The forest roads are used frequently by ranchers, freighters and tourists, so that the possibility of conflagrations starting by lighted matches, cigars and cigarette butts, or fires left burning by campers, is always imminent. But since the acquisition of the motorcycles, the observance of posted regulations has become more pronounced and the number of fires has decreased materially, while in such cases where fires have started they were nipped in the bud.

The real value of the motorcycle in the forest service lies in the ability of the motor patrolman to cover a larger area in a shorter space of time and in a very comfortable fashion, thus enabling him to give almost his entire attention to a thorough inspection of the timberlands on either side of the road. Should he see from a good vantage point anything that "looks suspicious," he can put on full speed and soon find out whether his suspicions are well grounded. His route not being long, the patrolman is never very far from the scene of a fire and can be called up at all times by the supervisor, located at headquarters, and ordered to ride to any point in a jiffy.

In closing it may be of interest to motorcyclists to know that the forest patrolmen are appointed as "forest guards" by the secretary of agriculture, competitive examinations being held for these positions several times in the year.

# Our Canadian Letter

## CANADIAN DEALERS DEPLORE LACK OF ACCESSORIES

TORONTO, Ont., Sept. 28.—The Canadian motorcycle and bicycle trade moguls have returned from the Chicago show simply bubbling over with enthusiasm and new ideas—although several had a serious complaint to make regarding a lacking feature of this year's display. Following the making of new arrangements with manufacturers at the big shine, several Canadian trade boosters also had occasion to burst into the limelight with interesting agency announcements.

Walter Andrews, 369 Yonge street, for several years the Flying Merkel distributor in Ontario, hurried home to announce that he had acquired the selling privileges for the Harley-Davidson for a good slice of Central Ontario territory. This, of course, for 1916. Andrews has issued an official statement to the effect that he is bound to dispose of over 150 machines. Further, he has annexed Wilfrid Morrison, the ex-Excelsior traveller in Eastern Canada, to help him shove Harley-Davidsons around the map. Andrews is the former bicycle champion of Canada, and so he was interested to see many racing bicycles on display at the Chicago exhibition. He was also "eye-opened" by the many lightweight motorcycles ready for the 1916 spring drive. He paid a visit to the Harley-Davidson factory at Milwaukee and saw how the company handled the service question. He now promises real service for his customers in future, and Andrews' promises are always kept.

A. E. Humphrey, president of the Humphrey Bicycle & Motor Company, Limited, Toronto, bicycle and accessory jobbers, registered an objection because he failed to find the accessory exhibits in large number at the show. He went to the Windy City, he says, to see samples of new and prevailing accessories and to place orders for the same but was disapopinted. He did renew his contract for the Canadian market with the Great Western Mfg. Co., of LaPorte, Indiana, makers of bicycles. He declares he was ready to place orders for both motorcycle and bicycle accessories but couldn't do business for lack of accessory displays. He was particularly anxious to examine saddles and leather goods to replace hard-to-get British goods. "I do not wish to knock the show but I cannot help but criticize the accessory makers for not taking part," Humphrey told your correspondent. "I am going to look for them again at the New York show, and I trust that I will not be again disappointed."

J. W. Gibson, general manager of the Canada Cycle & Motor Company, Ltd., West Toronto, was also disappointed because of the absence of many accessory exhibits which he had hoped to visit with an idea of placing orders for 1916.

H. M. Kipp, the local Indian agent; H. W. Kipp of the Canadian end of the Hendee interests; Percy A. McBride, the Excelsior and Henderson hustler; Jack Crabtree, the Winnipeg and Regina motorcycle merchant; Mr. Anderson, the Harley-Davidson man of Ottawa and, of course, the Canadian officials of the Cyclemotor Corporation of Rochester, who had a novel exhibit, were among the other Canadians noticed.

### LONDON M. C. ON RUN

London, Ont., Sept. 27.—About forty-five members and friends of the London Motorcycle Club engaged in a pleasant fall run to Glencoe and return last Sunday under the direction of Charles Keene, road captain of the club, and George A. Wenige of the Bicycle & Motor Sales Company, the hustling local motorcycle firm. All and everything passed along nicely until the devotees were riding cityward when the automobile owned by ex-Ald. John Richter, with his daughter driving in the same direction, started to clear the road. R. McIntosh and his wife, on a motorcycle and sidecar, were ditched but were not injured. Members of the club who were witnesses are now issuing challenges to the former civic officer to meet them in fair combat.

### SIDECAR TOUR OF 1,273 MILES

Winnipeg, Man.—Two prominent local motorcyclists, Bob Irvine, president of the Winnipeg Motorcycle Club, and Bill Abercrombie, recently participated in a pleasant tour of 1,273 miles to Minneapolis and back, using an Excelsior two-speed motorcycle and sidecar.

### THANKSGIVING DAY RACES

Uxbridge, Ont., Sept. 27.—Monday, October 11, being Thanksgiving Day in Canada, the motorcyclists will disport themselves on the local half-mile speedway on that date in an effort to thrill the attending population. Toronto speedsters will tour the 47 miles between here and there for the purpose of enlivening the proceedings.

### JUDGE'S COMMENT AROUSES IRE

Toronto, Ont.—Although he declared that "sidecars are dangerous and should not be allowed by law," Judge Morson, of the Division Court gave judgment to Bert Clark, a local rider, for $25, the full amount of his claim against James Emerson, an autoist, for damages to his motorcycle and sidecar when the defendant's automobile struck him on Gerrard street East. Clark's wife and child were in the sidecar at the time, but, fortunately, were uninjured, even though they were thrown out of the car.

Judge Morson's unnecessary comment has created great interest among the hundreds of sidecar owners in Toronto.

### BRAVES DEATH FOR SPECTATORS

Cornwall, Ont., Sept. 27.—During the recent Cornwall Fair, an accident occurred in the motorcycle feature on the half-mile track which showed the pluck of James Poapst, a member of the St. Lawrence canal guard, who was a competitor. During the action of the race, the prize for which was a large silver cup, Poapst threw himself and machine into the fence rather than collide with persons who were foolishly crossing the track. He suffered a broken foot and a sprained arm. The race was won by W. O. Relyea on an Indian, following Poapst's accident.

### CYCLIST GETS DAMAGES

Montreal, Que.—The jurors for the court action brought by George Bergeron againts the Montreal Tramways Company for $3,000 damages for alleged negligence, which resulted in the plaintiff being struck by a street car while he was riding a bicycle, have awarded Bergeron the sum of $1,000. At the same time, however, because it was shown that the cyclist had broken a traffic by-law just previous to the accident, the jury in the case deducted the sum of $600 from the award so that the rider will have to be satisfied with $400 in settlement of his claim.

### C. M. A. OFFICIAL ENLISTS

Niagara-on-the-Lake, Ont., Sept. 27.—One of the latest to enlist with Canada's Expeditionary Force is W. G. Self, for two years vice-president of the Canada Motorcyclists' Association, and one of the best known figures in motor-chugging circles in the Dominion. Self's specialty has always been his motor-jaunts down through New York State for the Saratoga Rallies, F. A. M. State conventions and other features. Self enlisted with the Canadian Army Service Corps and cannot take his much-used Indian with him—just yet.

There you have it all in a nutshell—the majority of makers know that there is only one way to give dependable, efficient ignition—it's with the Bosch Magneto. Bosch is used by most makers on most motorcycles sold to most people. You see here which way the wind is still blowing: the Bosch way, of course.

Don't argue—insist that the motorcycle you buy or sell is fitted with none other than the Bosch Magneto—anyone can have a Bosch Equipt Motorcycle if he insists.

# TWITCHELL AIR GAUGE

## Guessing May Cost You Your Life

## BE SURE

You can't tell how many pounds pressure there is in your tires by pinching them or looking at them, and a difference of a few pounds between what they have and what they should have means the price of a new tire or a broken collar bone, or both.

Inflate your tires to the pressure prescribed by your tire maker and test the pressure in them by means of a Twitchell gauge. There is no other SAFE way of doing it.

Write for table of air pressures recommended by the tire manufacturers.

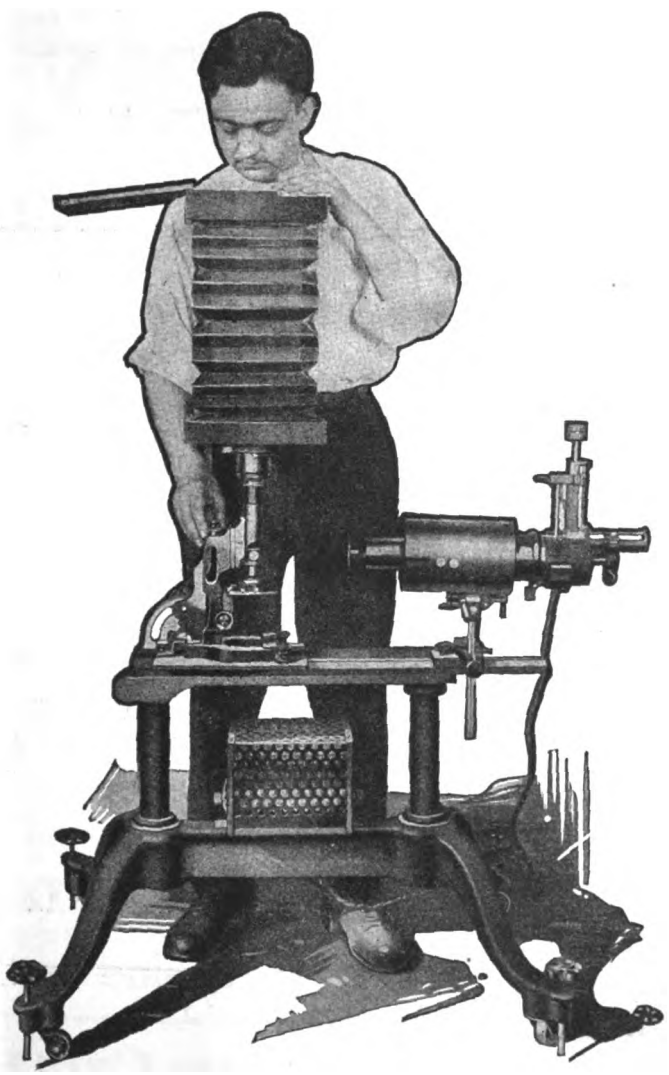
# STANWELD PRODUCTS



## *Under the Glass*

things look different. Tiny imperfections the naked eye would never see become quite noticeable—and are eliminated. These tests are the literal definition of *Safety First.*

Manufacturers seldom are compelled to render this unseen service, yet it is the best insurance of satisfaction, safety and service of the product.

All raw material used in the manufacture of *Stanweld Frame Parts* is subjected to rigid analysis. The task is a stupendous one, but it guarantees those qualities which the careful manufacturer and rider demand—and we therefore continue it.

Your motorcycle or bicycle is a better machine when built of *Stanweld Frame Parts,* and you should insist that you get them.

No 5 PIRATE PEDAL

# Two Pedals That Are Immensely Popular

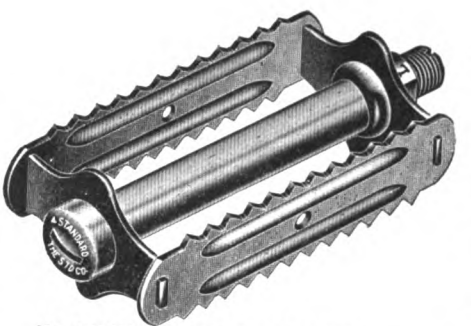
Their design and construction assure strength and comfort. Especially is this true of the No. 5 PIRATE, whose deep corrugated rubber cushions are not only soft to the feet, but absorb shocks and keep the feet from slipping.

The No. 4 STANDARD is a new addition to our large and comprehensive line of Rat Trap Pedals. It is strongly made, well designed and gives a splendid foot hold.

## The Standard Co. *Torrington Connecticut*

*Manufacturers of*

Diamond "E" Spokes and Nipples for bicycles, motorcycles, tricycles, velocipedes, invalid chairs, sulkies, carriages, cycle-cars and automobiles. Pedals for bicycles, tricycles, velocipedes and motorcycles. Toe clips for bicycle pedals. Emergency axles for pedals. Screw machine products.



No. 4 STANDARD RAT TRAP PEDAL

# SAMPSON Feather-Edge Innertube REPAIR PLUG

The minute-and-a-half puncture repair that takes the trouble out of tire trouble and puts pure, unalloyed pleasure in its place. 20 seconds to find the puncture, another 15 to cut a round hole with the tool, 15 seconds to insert the plug, 15 more to screw down the plug and break off the wire. Result—a permanent puncture repair —*guaranteed*—every time—or back goes your money. Price of complete kit, $1.50. At your dealer's.

## For That Cranky Carbureter

Cold weather's here. Your carbureter may not behave itself just now. Fit the handy little air valve shown here and watch your motor get its old starting "pep." Gives a rich starting mixture at all times. List price, 20 cents.

**STEVENS & CO.**

**CORBIN-BROWN SPEEDOMETER**

*"The Speedometer of Absolute Accuracy"*

It is expensive to run on a blind guess. It is expensive not to know the mileage in your tires, the amount of gas consumed and oil used. It is expensive not to know the speed of your engine for it not infrequently leads to fines.

To travel without a speedometer takes money out of your pocket, but to travel with an inaccurate speedometer takes more. Not only are its services useless but the initial cost is wasted.

The Corbin-Brown is the one reliable speedometer. Scientific tests and actual road service have proved this. It is accurate, it is strong, it is durable, it is convenient. In principle and construction it is fundamentally correct. Guaranteed for one full year of service. Investigate today.

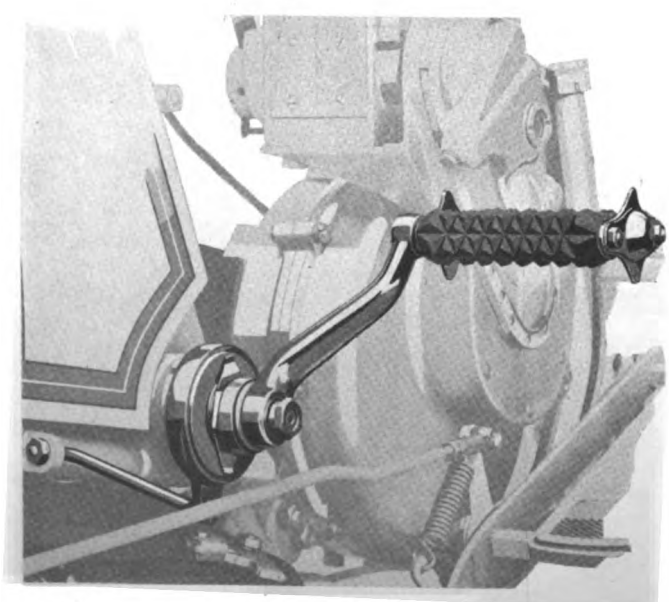
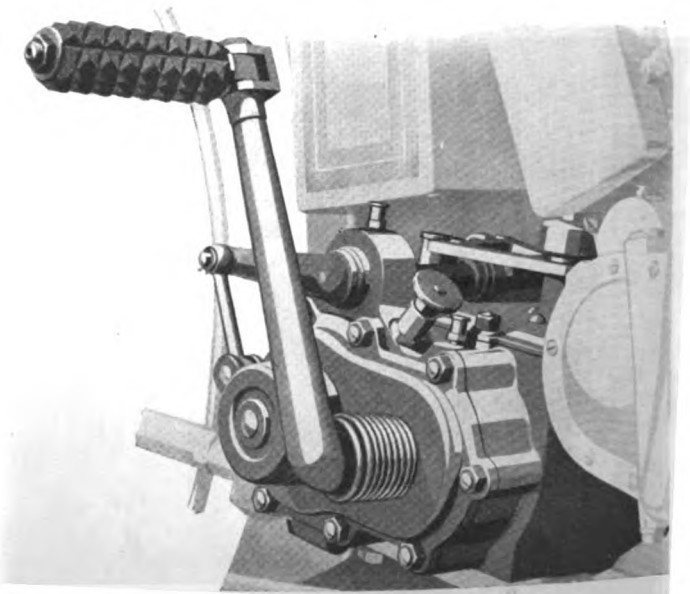
# Your Choice

## Harley-Davidson dealers can now speed models their choice of the starter or the well known Harley-

## The Harley-Davidson Motor Co. has always been wide awake to its riders' and dealers' desires, and this option is given because our dealers tell us that many Harley-Davidson owners, in placing their orders



The well-known Harley-Davidson pedal Step-Starter. Standard equipment for 1916 for the third year on all one-speed models, and offered for 1916 as optional equipment on three-speed models.



The powerful new Harley-Davidson rear stroke Step-Starter. This single stroke starter has a husky crank 7 inches long, with spring return, and is fitted with a substantial folding pedal.

Digitized by Google

# of Starters

## offer buyers of the 1916 three- lew Harley-Davidson rear stroke )avidson pedal step-starter.

for 1916 models, have evidenced a desire to get the pedal step-starter on their new models because of the extreme satisfaction they have had with it on their old Harley-Davidson mounts.

### *It Is Merely a Matter of Riders' Preference*

Both Harley-Davidson starters offer ample leverage for starting the motor—both have all working parts entirely enclosed, out of the way of mud, sand, water or sleet, which might affect the operation of a starter with exposed working parts. Likewise, the positive Harley-Davidson "back kick" release is a feature of both, and all starter gears are genuine chrome nickel steel.

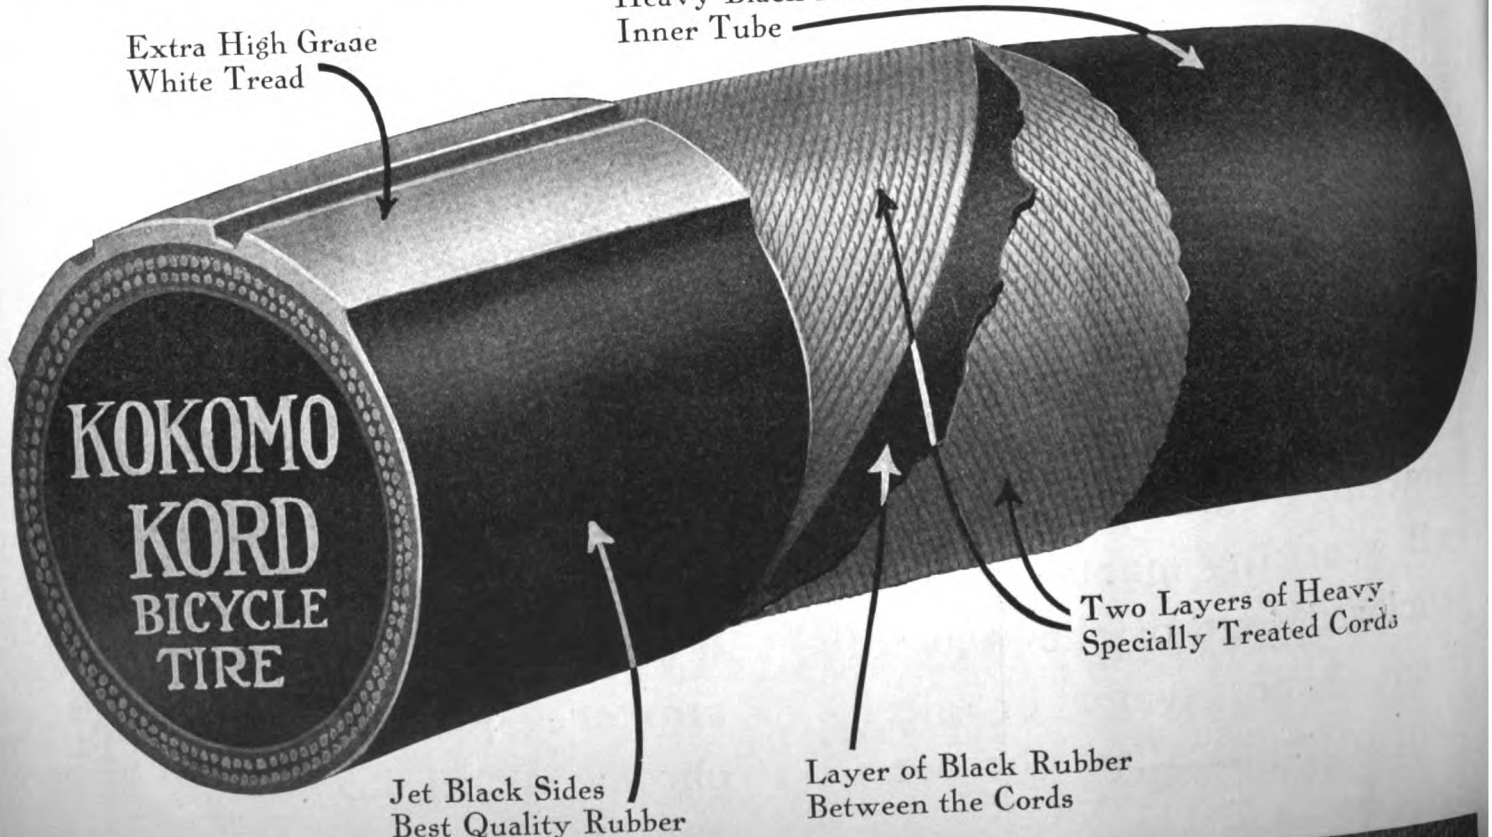
# KOKOMO KORD—Lasts Better

**KOKOMO KORD has a beautiful white face, black sides, and is made with two plys of really large cords lying diagonally and transversely—the rubber is of the highest quality obtainable.**



Digitized by Google

## *We Lead, Others Follow*

A few years ago we conceived the idea of making a bicycle tire with motorcycle fabric—it was then we brought out the Everlaster tire. At that time we little dreamed that there was such a field—such a demand—for so fine and high grade a tire. Facts proved, though, that the motorcycle fabric tire has quite revolutionized the bicycle tire industry. Who now can get along without a motorcycle fabric tire?

## *Tire Makers for 20 Years*

Small wonder that we have been able to produce a tire with such a record—a tire of such excellence. For twenty years we have made tires—always working and planning to produce absolutely the best tires, at the same time making and marketing them at the lowest possible prices.

## *To our Friends and Patrons*

Grateful are we to our many friends and patrons, who when we first marketed the Everlaster, displayed their faith in our new product. We knew the wonderful qualities of the new tire—and you took us at our word. We made good then—offered a new product that took hold from the start—and now we are prepared to make good again.

## *New Papoose in Chief Kokomo Family*

Ever looking to the best interests of the trade, we ask you to again show your confidence in us. This introduces our very latest—the new Papoose in the Chief Kokomo Family. Kokomo Kord has a beautiful white face, black sides, and is made with two plys of really large cords lying diagonally and transversely—the rubber is of the very highest quality. Most assuredly Kokomo Kord will repeat the success of the Everlaster.

## *Our Claim for Kokomo Kord*

While it would be quite impossible to produce a tire that would outlast the Everlaster, this new tire will last as long. It is an unusually strong and durable tire—and is the easiest and smoothest running tire it has ever been our pleasure to test and observe. A hard running wheel fitted with Kokomo Kords glides along as if it were equipped with an extra set of ball bearings.

## *A Real CORD Tire*

The Kokomo Kord tire differs most radically from the old time Thread Fabric—there is just as much difference as between the old time bicycle fabric and the motorcycle fabric. The threads in the Kokomo Kord are in reality cords, running diagonally and transversely, as previously stated. This construction makes the tire quite immune from the evil effects of stone bruises. The tire is also harder to puncture, due to the thickness and toughness of the cords. The Kokomo Kord is, therefore, wonderfully effective and decidedly durable, besides running so easily and smoothly. Incidentally Kokomo Kord is an easy tire to repair in case it should be punctured.

## *Thoroughly Tested*

While the Kokomo Kord is a new tire, new to the trade, it is a thoroughly tested tire—tried and true is Kokomo Kord. We would not have any of our good friends think for a moment that we are experimenting—we stand back of Kokomo Kord and you know by experience that you can rely on our word.

# Cleveland 2--Stroke--2 $150

## The Outstanding Feature Of the Chicago Show

Here is the **one big important point** impressed upon everyone at the Chicago Show.

The new Cleveland has a powerful appeal for classes never before interested in a motorcycle. This was conclusively proved by Cleveland sales made during the week.

It was a revelation to the hundreds who rode the demonstrator. Dealers, jobbers, engineers and riders expressed unbounded approval.

The reason lies in **light weight—low price—advanced design.**

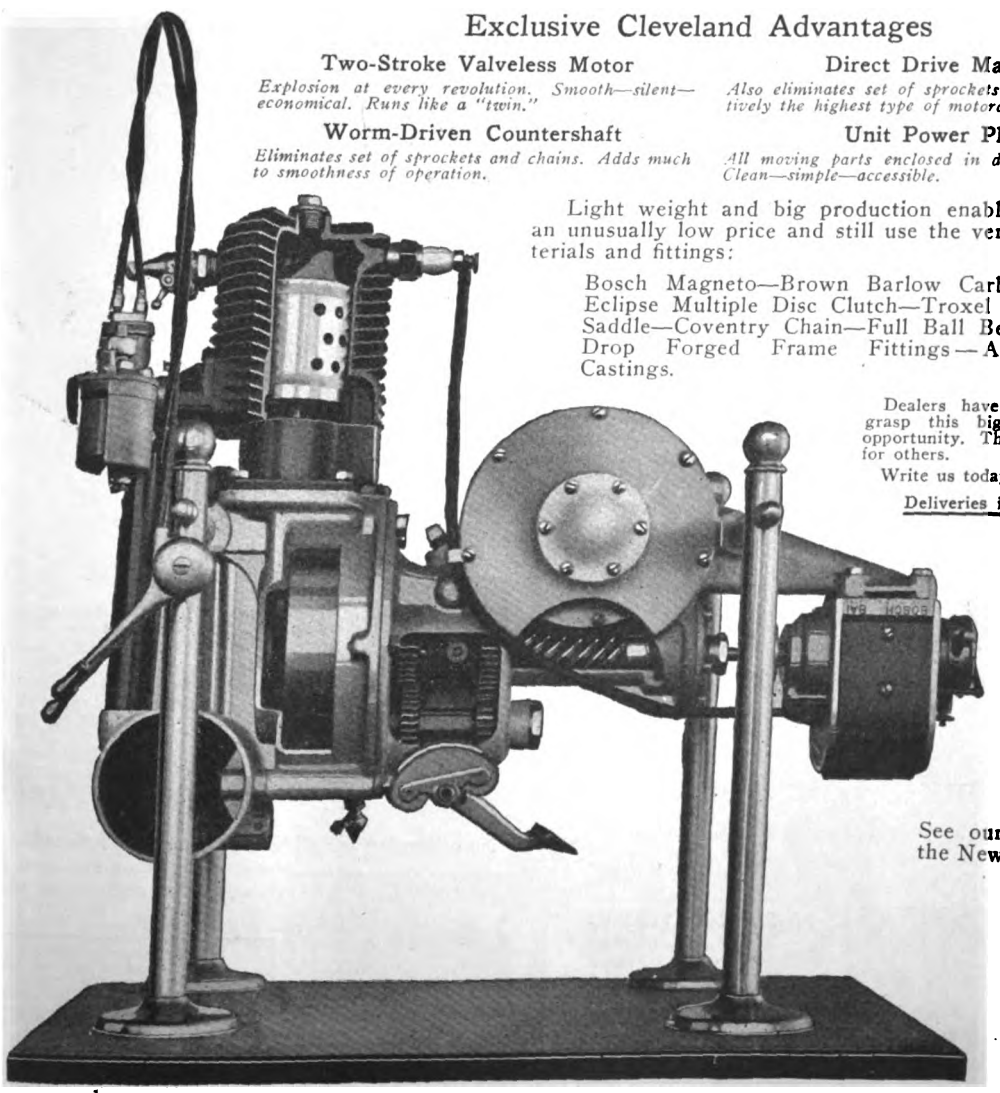
### Exclusive Cleveland Advantages

**Two-Stroke Valveless Motor**
*Explosion at every revolution. Smooth—silent—economical. Runs like a "twin."*

**Direct Drive Magneto**
*Also eliminates set of sprockets and chains. Positively the highest type of motorcycle ignition.*

**Worm-Driven Countershaft**
*Eliminates set of sprockets and chains. Adds much to smoothness of operation.*

**Unit Power Plant**
*All moving parts enclosed in dust proof casings. Clean—simple—accessible.*



Light weight and big production enable us to make an unusually low price and still use the very best of materials and fittings:

Bosch Magneto—Brown Barlow Carburetor—Eclipse Multiple Disc Clutch—Troxel Truform Saddle—Coventry Chain—Full Ball Bearings—Drop Forged Frame Fittings—Aluminum Castings.

Dealers have been quick to grasp this big money-making opportunity. There is still room for others.

Write us today.

Deliveries in October.

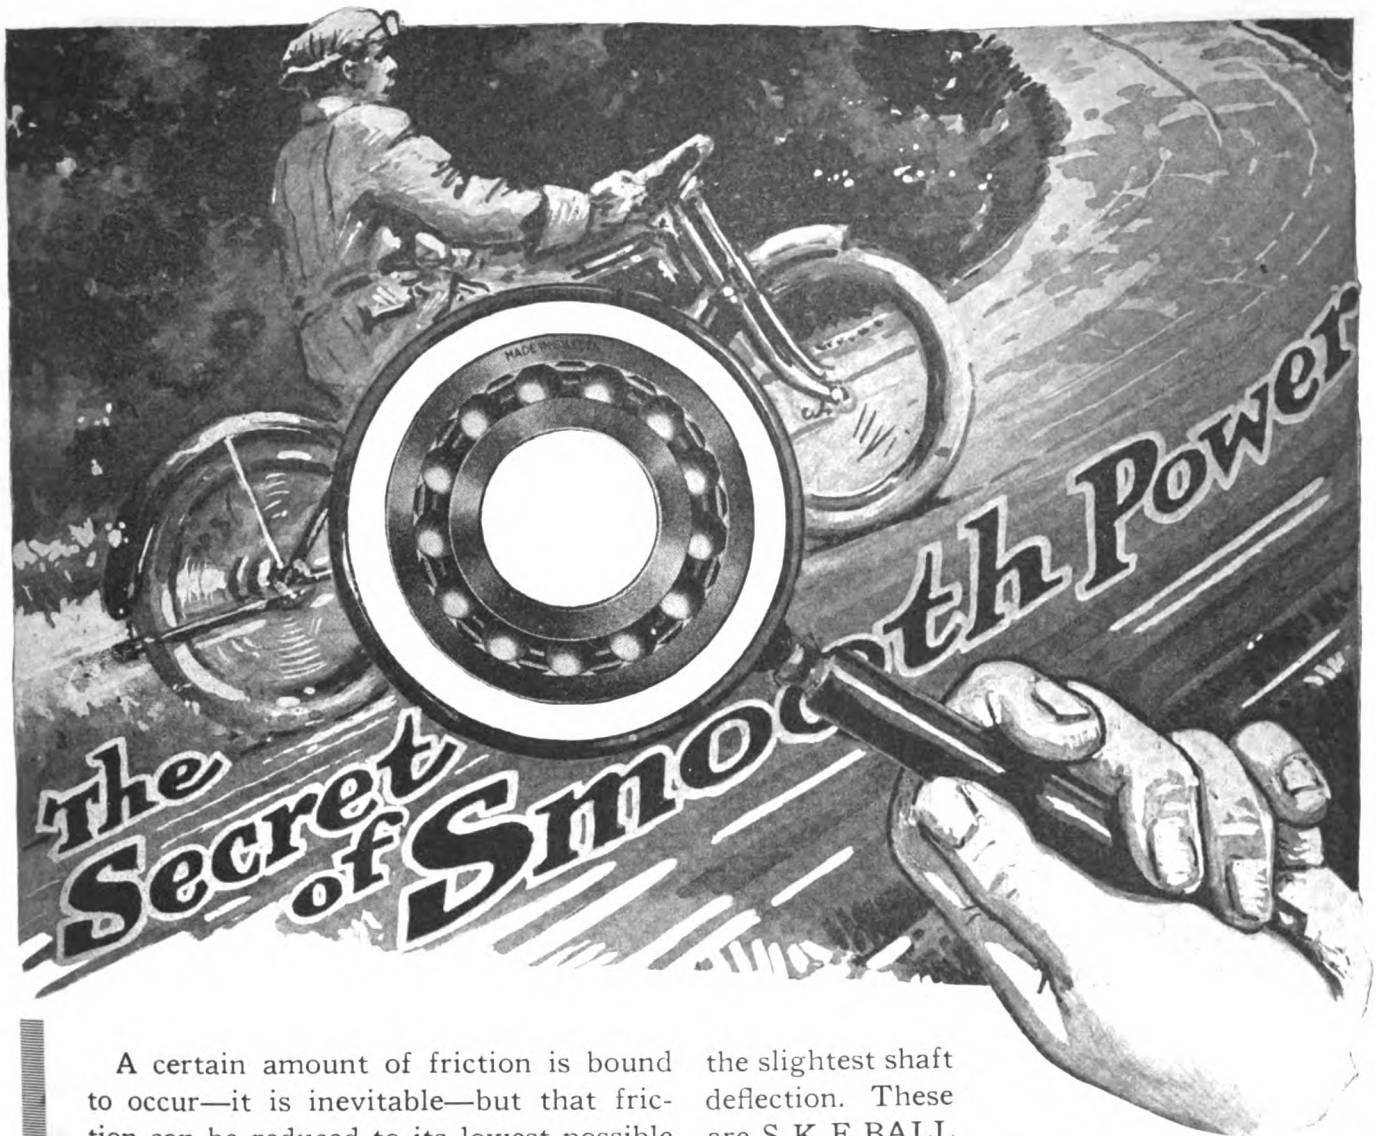
RELIABILITY CONSISTENCY

SPEED POWER

Digitized by Google



A certain amount of friction is bound to occur—it is inevitable—but that friction can be reduced to its lowest possible point by the application of proper bearings.

Have you ever stopped to listen to the smooth, purring bass note of the Harley-Davidson the almost inaudible "click-click" of the cams—the silent, ***smooth power*** of the entire motor?

If you had an X-Ray eye, you could see mounted on the engine shaft a double row of balls of Swedish Crucible Steel, that adjust themselves automatically to the slightest shaft deflection. These are S K F BALL BEARINGS, the same as are used on the leading cars in America and abroad.

**SKF**
**BALL BEARINGS**

True appreciation on the part of Harley-Davidson engineers of the value of proper bearings led them to choose S K F Self-Aligning Ball Bearings as being best fitted for their needs. The question of cost came last, quality considerations dominated—hence S K F.

**A copy of our SKF booklet will interest you. Shall we send one?**

# HOW THE SMITH MOTOR WHEEL HAS STOOD THE TEST

## 7 Reasons for the Remarkable Success of the Smith Motor Wheel

**1. Durability**—*It is built by the largest manufacturers of automobile parts in the world—evidence of the high quality of materials used and skillful construction.*

**2. Detachability**—*It is the only bicycle motor on the market that is detachable as well as attachable and, because it is a complete power plant in itself and by the method of attachment it absorbs shocks from ruts and bumps and strengthens rather than weakens the bicycle.*

**3. Utility**—*Less than five minutes is required to attach the Motor Wheel to or detach it from any bicycle, hence, it can be used on a delivery van or on a lady's or gentleman's bicycle or tandem alternately.*

**4. Economy**—*It will push bicycle and rider from 100 to 125 miles on one gallon of gasoline, depending upon road traveled and weight of rider.*

**5. Simplicity**—*No "after the sale" trouble for the dealer. The Motor Wheel is well tired, has a high tension Magneto and float feed Carburetor—a child can operate it.*

**6. Vibrationless and Cleanly**—*It attaches to a bicycle in such a manner that no vibration from the motor reaches the rider and it sets back far enough so that the rider's clothing cannot become soiled.*

**7. Cash Transaction**—*About 75% of Smith Motor Wheel sales are made on a cash basis—no "trade-ins" to consider.*

**You can see the Smith Motor Wheel demonstrated at the New York Show, Madison Square Garden, October 11-16; Space Numbers 73-74-79-80; 576 square feet.**

A year ago cycle dealers generally were interested in the Smith Motor Wheel—but they would ask questions, such as:

Is it practical—Will it climb hills—Will it negotiate country roads—Is it simple enough for the average rider to handle—Will it sell and will it stand up?

These are some of the things dealers wanted to know about the

**Smith Motor Wheel**

**(Detachable)**

*"The Bicycle Booster"*

The answer to every question was, and is: "It will"—and today the Motor Wheel forms the biggest part of the business of some of the largest cycle dealers in the country.

About the only questions heard now are: "Is my territory closed?" and "Can I have more territory?"

Being in a class by itself, the Motor Wheel has no competitor and with nearly half a million dollars' worth of Motor Wheels in use still the market has only been scratched.

# Riders! "Dress Up"

## Your Motorcycles With Blue Streak Tires

Motorcyclists are "dressing up" with Goodyear Blue Streak Motorcycle Tires more and more every day. You know how it is with automobiles.

Beauty in tires was not thought of at first.

Then owners began to "dress up." Cars had to look right, as well as run right.

The same thing has happened to motorcycles.

## Motorcycle "Class"

Motorcyclists now want a "classy" appearance.

And most of them are getting it by using Blue Streak—the creamy white tire with the deep-cut blocks, and the racy blue circle 'round the center. This is almost an automobile tire, built of four plies of extra strong fabric, a special breaker strip and the famous All-Weather tread—tough and double-thick.

As made last year, Goodyear Motorcycle Tires excelled all rivals for speed and endurance.

As made this year—$50,000 better—these motorcycle tires far out-distance many automobile tires.

Yet our prices are 15 per cent lower than a year ago—due to the growing demand for Blue Streaks that gives us a quantity production.

Five-mile stock. Cooper, first; Johnston, second; Filmore, third. Time, 5:13.
Sidecar race. Mile heats, 2 in 3. Warner, first; Stephens, second.
Ten-mile open. Cooper, first; Johnston, second; Stephens, third. Time, 11:24.
Three-mile amateur race. Metcalf, first; Gabbart, second; Woods, third.
Ten-mile limit pursuit race. Warner, first; Johnston, second; Cooper, third.
Ten-mile handicap. Warner, first; Cooper, second; Filmore, third.
All above winners used Blue Streak Motorcycle Tires.

DETROIT, MICH.—Marty Graves made 100 miles, F. A. M. Champion meet, in 84:41⅗. World's record for dirt track. Creviston, second. Fourteen entries, all Goodyear Tire equipment. Graves and Creviston completed 100 miles without dismounting. Graves also won ten-mile event in 8:18½, and lowered track record for a mile in 48⅗.

MILWAUKEE, WIS.—Ten-mile stripped stock race. Don Johns, first; Parkhurst, second; Brier, third. Time, 8:34. 100-mile stripped stock race. Parkhurst, first; Wolters, second; Frederick, third. Time, 90:54. All events were won on Goodyear Blue Streak Tires.

PROVIDENCE, R. I.—After finishing Chicago 300-mile race in new world's record time and without making a tire change, Carl F. Goudy won the 1-hour race here, covering 71¾ miles over a very rough track on identically the same pair of Goodyear Blue Streak Tires.

EAST PALETINE, O.—Shorty Matthews won all firsts here on Blue Streak Tires.

# Dealers! "Speed Up"

## Your Sales With Blue Streak Tires

Blue Streak Tires will help decide motorcycle sales for you that are hanging in the balance. They lead about 3 to 1 in popularity and hosts of motorcyclists are coming to them every month.

## Appearance Plus

is one good reason why Goodyear Blue Streak Motorcycle Tires sell the easiest.

Other reasons are:

**Their Mileage**—Barring mishap or abuse, they outlast all others. In seven recent tests the front tire averaged 9,515.57 miles; the back tire 7,329.14 miles.

**Their racing record**—They win in classic after classic. Only last month, at Chicago's famous speedway, Carl Goudy made the world's record on Blue Streak Tires—300 miles in 3:29:51. All former records for 100, 200 and 300 miles were swept away in this event; and each of the 25 riders used Blue Streak Tires.

The nation-wide advertising campaign, which has spread the fame of this through every town.

# Riders! "Dress Up"

## Your Motorcycles With Blue Streak Tires

Motorcyclists are "dressing up" with Goodyear Blue Streak Motorcycle Tires more and more every day. You know how it is with automobiles.

Beauty in tires was not thought of at first.

Then owners began to "dress up." Cars had to look right, as well as run right. The same thing has happened to motorcycles.

## Motorcycle "Class"

Motorcyclists now want a "classy" appearance.

And most of them are getting it by using Blue Streak—the creamy white tire with the deep-cut blocks, and the racy blue circle 'round the center. This is almost an automobile tire, built of four plies of extra strong fabric, a special breaker strip and the famous All-Weather tread—tough and double-thick.

As made last year, Goodyear Motorcycle Tires excelled all rivals for speed and endurance.

As made this year—$50,000 better—these motorcycle tires far out-distance many automobile tires.

Yet our prices are 15 per cent lower than a year ago—due to the growing demand for Blue Streaks that gives us a quantity production.

## Some New Blue Streak Victories

HUTCHINSON, KAN.—Three-mile open. Warner, first; Cooper, second; Johnston, third. Time, 3:43.
Five-mile stock. Cooper, first; Johnston, second; Filmore, third. Time, 5:13.
Sidecar race. Mile heats, 2 in 3. Warner, first; Stephens, second.
Ten-mile open. Cooper, first; Johnston, second; Stephens, third. Time, 11:24.
Three-mile amateur race. Metcalf, first; Gabbart, second; Woods, third.
Ten-mile limit pursuit race. Warner, first; Johnston, second; Cooper, third.
Ten-mile handicap. Warner, first; Cooper, second; Filmore, third.
All above winners used Blue Streak Motorcycle Tires.

# PUTTING 12,418 MILES BEHIND SIDECAR OUTFIT

## What it Means to Travel the Roads of Fourteen States in All Kinds of Weather

By WALTER F. WALKER
Missionary for the Weed Chain Tire Grip Co.

The Author

OVER 12,000 miles with a sidecar outfit in five months of business traveling in fourteen states—climbing mountains in all kinds of weather, sloshing through lowlands with the mucilaginous roadbed clinging to the bottom of my sidecar by the gummy, gooey pound; U-boating through flooded areas with my footboards awash and plugging hub-deep in gumbo where farmers had taken their horses out of the shafts and abandoned their wagons—is quite a little record for an unassuming chap like myself, and I profited by every bit of it.

It is pretty generally known that a lot of hard roadwork has fallen to my lot (this was my third annual journey of the kind), but it is safe to say that the tour I have just completed was the most severe in many ways of my riding career. There were times when I thought I would have to get off and wade, but as a general thing I managed to sit tight and get through. Many a time I had difficulty in convincing the natives that I had just ridden over a certain stretch of road which they had regarded as impassable, and on all sides wonder was expressed over the stamina of my outfit.

So much for the trip in the abstract; now let's get down to some of the details. It was on April 28 last, at 12:30 in the afternoon, that I got under way, my start being made from the *Motor Cycle Illustrated & Bicycling World* office in Park Row, New York City. As in previous years, there was quite a demonstration by the hundreds of curious people who lined the sidewalks and streets, and it finally became necessary for traffic officers to clear a path for my getaway. The last good-bye having been said, I gave the motor a churn and headed out of the city for my five months on the road.

Of course, no rider ever knows what is ahead of him on a long journey, and I expected my share of trouble. Still I looked forward with pleasure to making the long jumps, for in every town I would greet old friends, and perhaps make new ones. I have often been asked why I do not carry a sidecar passenger on my trips, and at times I have thought the plan a good one. But when I am ready to start, my sidecar is always so heavily loaded that a passenger would have to hang on behind. My experience has taught me to take along only what I actually need, but it is my aim to be able to meet any ordinary difficulty, and I have so arranged my equipment that I can go any old place without lacking personal comfort or quick repairs for my motorcycle.

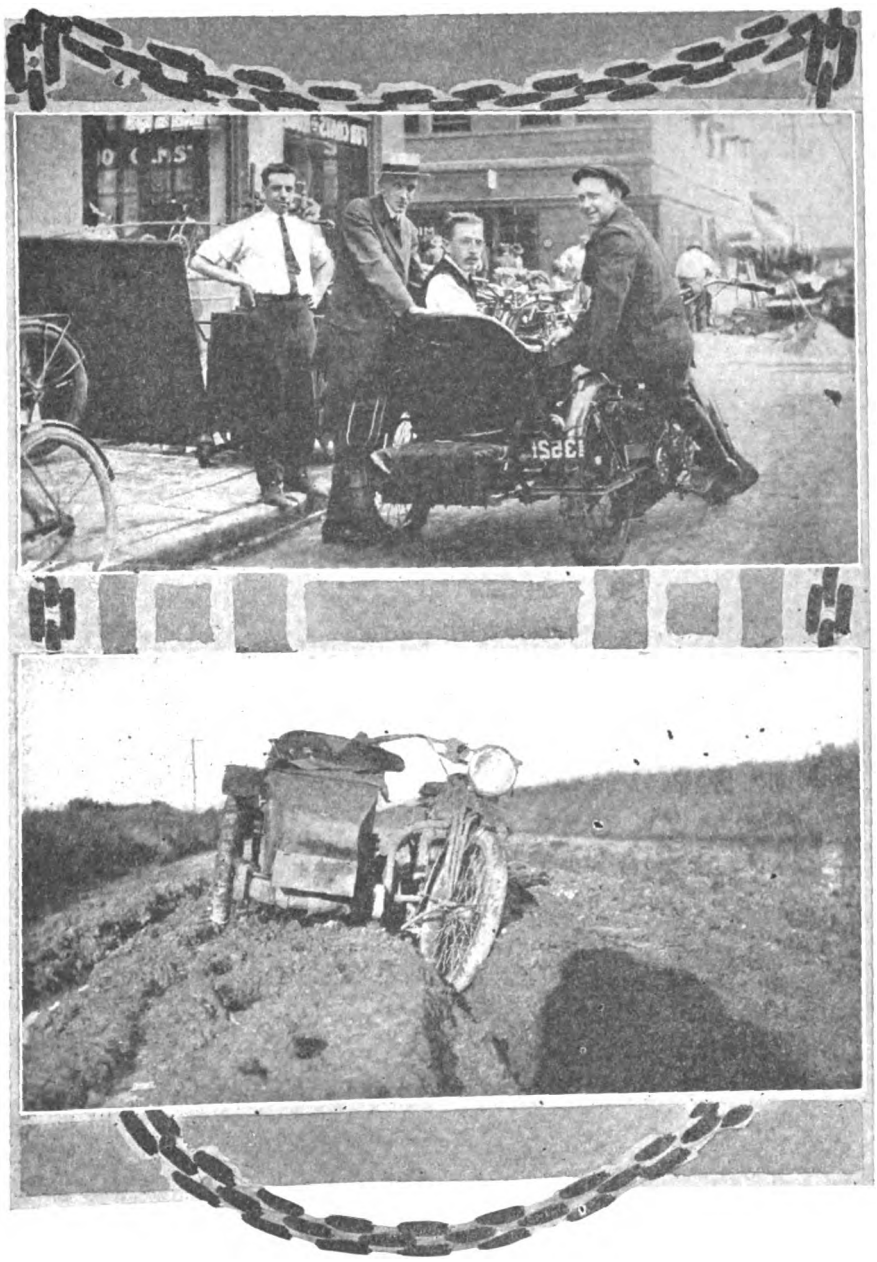
As usual, my ride was begun with every confidence, and as I weaved my way through the traffic on Broadway, I found time to think of the many miles I would put behind me before I could give the White Way the "once over" again. Passing out of the city and going northward I enjoyed the Hudson River scenery to the utmost; it is not new to me, but I always find something of interest in it. After leaving Yonkers, however, there were other things to claim my attention, for a traveling missionary must work, and although I am a great lover of the outdoors I am also anxious to combine business and pleasure. It pleased me to meet friends all along the line, and in many instances I carried greetings from the dealer in one town to the agent in my next stopping place. A number of times I also carried orders for parts from a dealer to his distributor in a nearby city.

As a result of my policy to help the dealers in every way possible, I collect a vast store of information, and at the end of my trips I have usually gathered many opinions concerning the motorcycle and accessory markets. Sometimes I have to listen to their tales of woe, but oftener they tell me of their plans for better business in the coming year. I found that most of the cycle dealers had enjoyed a pretty good season, in spite of bad weather, their progress being due chiefly to the fact that they are waking up to the necessity for more energetic sales methods. There is still room, however, for many more neat repair shops; they seem to be scarce.

Remarkable Evidence of What Walker's Outfit Went Through

Digitized by Google

**WALKER WITH JAMES FENMORE IN SIDECAR AT SYRACUSE, N. Y., ON HIS WAY WEST AND SAMPLE OF STATE HIGHWAY LEADING TO DODGE CITY, KANS.**



Although I made my start on a clear day, I found myself plugging through rain on the next day, and, if my count is correct, I enjoyed only seventeen days in the months of May, June and July on which it did not rain some time during the twenty-four hours. This naturally set my stage for a series of individual endurance runs; and, believe me, there is a big difference between doing endurance riding alone and doing it in competition with a crowd of other fellows. If you don't think so, just try it.

At Poughkeepsie, my first night stop, I began to realize that even I must repair punctures, and this one was only the forerunner of the scores that followed on my long journey. From Poughkeepsie my route lay through some beautiful country to Albany. On the way I had to make several detours, one of which carried me back into the hills, and I had my first taste of bad roads on this trip. The road was muddy, there were many big rocks and the sharp turns and steep ascents were numerous.

It was while going through a very small town on one of these detours that I had my first good laugh on the trip. I had stopped for gasoline at a country store when one of the natives who had gathered around my outfit began to ask questions. These I answered to his satisfaction, and then he told me how he and Dr. Dunn had been standing in the doorway when I appeared. It went something like this:

"Doctor Dunn, he says to me, he says: 'Ike, I'm a-goin' to git me one o' them 'ere Fords,' and jist then I looks up and a seed you a-comin', and I says to Doc, says I: 'Doc, there comes a feller a-scootin' fer all git-out and by gum it ain't a Ford!'"

Of course, it would be hard for me to give an exact imitation of the native, for he was of the genuine backwoods type with a full-fledged rube accent, but I surely enjoyed his comment. Some of the people I passed later in the day must have thought I was crazy, for every once in awhile I would straighten up in the saddle and laugh.

From Albany I started in a downpour of rain for Binghamton. On this day I struck twenty miles of road which was under construction, and traveling over the rough trap rock which had been laid in the roadbed was an awful job. It plays havoc with tires, and to cover a mile of these stones without ruining a tire is rare.

After leaving Binghamton the next stop was Elmira, and Phay Rutan, the Indian dealer, with his friends, did the honors there for several days. Sunday was spent in the mountains, and in going up I had ample opportunity to test the climbing powers of my outfit. After a visit to the local club I finally set out for Rochester with a friend, by name Dannie Sullivan, and we rode together 25 miles before we parted at a cross-roads.

### Rochow and His Invitation

Not long after leaving Sullivan I came across Arthur Rochow, the Excelsior traveler, and he proposed to buy a drink for me. We accordingly rode to the next town; but, alas! it was a dry one, and I am wondering now if Arthur did not know this all the time. We finally went our separate ways without that drink. I got to Rochester in due season, stayed there a short while, and then turned the front wheel toward Buffalo and Niagara Falls.

From the Falls I tried to cross into the Dominion of Canada, but farther than the park on the Canadian side I could not go. The sidecar was thoroughly examined before I could get that far, by the military, and I was requested to avail myself of other means of transportation while in Canada. I visited our Canadian factory, and, on returning, once more mounted my combination and set out for Buffalo. I got a bunch of photographs on both sides of the International Boundary that I had never been able to get before.

### Muddy Going to Erie

From Buffalo I went down to Angola, N. Y., where the Emblem is built, and saw W. G. Schack. The shore road along Lake Erie, usually very good, was in frightful shape, the almost steady rain for three weeks having converted it into a sea of mud. A number of detours, almost as bad in some cases as the main highway, had to be taken to get through, but with a three-speed machine and Weed chains, there are few places that a motorcycle or sidecar rig cannot get through. So, outside of a goodly covering of mud, I experienced no real difficulty in making Erie, Pa., on schedule time.

From Erie I headed for Cleveland, O., and struck a series of tire troubles; a continuous series, in fact. I think that I could have repaired tires in my sleep, for I had lots of practice while I was awake. It seems that this day was generally a bad one for me, for I came near ditching the rig to keep from running down a brood of little ducks. I have often run into chickens feeding on the road, but I did not have the heart to run into the little ducks, who looked to be only a few days' old. I set my brakes and stopped just in time, but had to dismount and shoo them aside. In spite of all my troubles I got into Cleveland and fell into the hands of Louis J. Mueller and H. Tracy, of the local tepee, which meant being treated like a prince.

Digitized by Google

October 7, 1915.

After a few days, I bade good-bye to Mueller and Tracy and a few others, and was off to Indianapolis to see the 500-mile races on the Speedway there. There is a choice of several routes to Indianapolis from Cleveland, and I picked the one going via Fort Wayne. I struck roads deep in mud, with occasional small lakes, but kept on, determined to get to the Indiana capital in spite of vile surfaces. At Huntington, Ind., I was elected guide and tourmaster for a party of ten motorists bound for the races, as I was the only one who knew the roads. This position was very amusing to me, for while not trying to speed, I frequently had to wait at turns and crossroads for the party to catch up. My sidecar combination got over the roads much better than the automobiles did. However, all hands came through in fine style and I felt proud to register as one who had come over a thousand miles to see the big automobile events.

The streets of Indianapolis were crowded with automobiles, and every available space had its park of cars. There were thousands of motorcyclists in the city from all parts of the country. As Indianapolis is my old home, I had a busy time meeting old friends and was glad to know that I had a few days' rest coming to me before starting into the flooded districts of Missouri, Kansas, Nebraska and Iowa.

### Into the Flooded Sections

Newspapers were sending out warnings to those in the Mississippi Valley about the floods. I was advised not to go over my proposed route, but while I will admit I had a hunch that I would find all the mud roads I was looking for, it was a case of go as far as possible, for there was plenty of time on my hands. Later, I found out that it took all the time I could spare.

My first night stop out of Indianapolis was Terre Haute, Ind. So far all was well, and apart from some rough sections, the going was good. But on riding toward St. Louis, I struck a road which took me through several miles of swamps. Expecting this stretch to be in bad shape, I was making all possible time to get over it before dark, when my front wheel took a very deep rut. In trying to pull out, the front axle broke and off the road I went into a ditch about three feet deep in mud and water.

### Repaired for Fifty Cents

This unlooked-for accident twisted my forks badly, and I had to take them out and straighten them. I walked some distance with the forks to a village blacksmith's shop, where the smith did a very good job on them and I only lost three hours' time. When I was ready to pay, the smith said, "Well, sonny, do you think fifty cents will be too much?" It was a big surprise, that figure.

After getting going again, I began to watch out for holes and deep ruts. There were plenty of both all along. In one place to cross a bridge that had the approach almost washed out, I was obliged to take three rails from a neighboring fence to build a runway.

### At the Filling Station

In one small town, after I had safely crossed the bottoms, as they are called, I drew up to a filling station and asked for gasoline. The garage man looked at me, covered with mud, and as it was quite dark then, he came closer and noticed that I was a stranger. He then inquired where I had come from, and on my telling him from Terre Haute, he was unconvinced, saying that not even a horse and wagon had come through there for nearly a week.

To be sure there was some consolation in this, but I certainly was very much used up. The rest of the road into St. Louis was in pretty fair condition, and, with the assistance of my two powerful headlights, I was able to continue the journey, and reached the Missouri metropolis about 9:30 at night. While in St. Louis members of the local club entertained me royally—they were a jolly bunch those St. Louis lads. After a brief stay with John Hurck, the St. Louis Indian dealer, I reluctantly turned to the hard job of plowing through a miserable stretch of road leading into Kansas City, Mo.

This part of my trip proved to be a series of hold-ups—not by robber, but by an almost endless succession of mud holes. For the first few miles out of St. Louis I had good going, but upon leaving St. Charles, alas! verily my troubles began. The mud was about as deep as they make it, concealing great big boulders and sharp rocks, which would surely have wrecked my motor but for the boiler plate protector on the base. Not being able to do much to my motor, the rocks sort of took it into their heads to get back at me by cutting the tires. And then I had to get out of the saddle, wade in a foot of mud and water to repair the punctures. Nice job!

# WHAT THE ANNUAL SHOW MEANS TO THE RIDER

## Careful Study and Comparisons of the New Models Should Enable Him to Select a Mount Perfectly Suited to His Requirements

By WILBUR K. TOMPKINS

FOR the thoughtful rider a show week is a period of comparisons. It is the one occasion during the year that affords the motorcycle buyer and user an opportunity to consider the various models of each make, to ascertain which type is best suited to his special requirements and to ask questions to his heart's content. Choosing a motorcycle is not the simplest task in the world for the rider who is keenly desirous of obtaining the best possible returns for his expenditure. I have heard one seasoned roadster praise a certain model to the skies, while another could work up no enthusiasm for it. There was no fault with the motorcycle; the riders simply differed in their opinions as to what they needed, and therefore they should not have selected the same make and model. Rider No. 2 could have been suited as perfectly as No. 1 if he had been equally careful to obtain a mount in keeping with his needs.

### How to Get Information

Admitting that it is a wise procedure to study all the makes and models before arriving at a decision, the opportunity offered the rider at the annual show is not one to be passed over lightly. I fear riders do not make the most of it. There is no reason why every visitor to the show should not post himself fully, remove the last vestige of doubt as to which motorcycle he should ride and go home with his mind at ease. Attendants who are acquainted with all makes of motorcycles, and who know their particular make from A to izzard, are lined up at the stands from end to end of the show—just itching to have a question raised. The busier they are the better they feel, and the knottier the question the more pride they take in answering it.

### Making a Friend Help

If the visitor is one who has not previously ridden a motorcycle he will find his path made somewhat easier by having with him a friend who already rides. Many little details can be threshed out between them as they make the rounds of the show, and the rider, with a season or two of experience behind him, and with his knowledge of the special conditions under which the beginner will use his machine, can give excellent advice. If a riding friend does not happen to be available, the non-riding visitor's best move is to tell the booth attendant frankly that he knows little or nothing of motorcycles and then explain the precise conditions, geographical and otherwise, under which he plans to use his mount. The buyer with extensive touring ambitions naturally could not be satisfied with a machine intended for runabout service; the machine that is intended to "double" (as our actor friends say) in pleasure and commercial service often needs qualities that would be superfluous in the strictly touring type, and it would be obviously unwise to expect sidecar work from a model that the manufacturer had designed to meet the less exacting requirements of purely solo riding. The deeper the situation is probed the more evident it becomes that a good part of the satisfaction derived from a motorcycle depends upon the degree to which it is adapted to the intimate needs of the individual.

### Big Range of Models

The annual show is the place to air those needs and have them attended to. With the 1916 motorcycle ranging all the way from the featherweight type, through the lightweight and middleweight divisions, to the heavy service models, it is superfluous to say that no prospective buyer can fail of satisfaction if he approaches the matter of selection in a businesslike way. No manufacturer likes the idea of having a rider mounted on an unsuitable machine, especially after making costly and tedious factory preparations in order to provide a range of models to guard against just such contingencies. Manufacturers know that a rider unsuitably mounted is not only a breeder of prejudice but often a menace on the road; that the sale of a motorcycle under such conditions is not worth while. In striking proof of this, witness the variety which marks all the leading makes. There is no excuse for a 115-pound solo rider straddling a big twin, with enough horsepower under him to propel a freight car. The manufacturers have provided lighter types for him. Nor is it necessary for the tandem or sidecar enthusiast to worry about his case; the powerful twins are equal to his every whim, especially with the improved two and three-speed gears which feature the 1916 products. The middle-aged roadster of conservative bent is well catered to; the buyer who has commercial service in view can easily find the type of motorcycle calculated to give him rock-bottom economy with maximum results, under the specialized conditions to which he will subject it. And so it goes.

### Don't Overlook Anything

Get to the bottom of your motorcycle plans next week at the show. See all the exhibits, question all the booth attendants, take the Mrs. to inspect the sidecars if possible—if not, don't fail to see them yourself, anyway—and thus have the satisfaction of knowing that the exhibition was worth something to you. Go to the show with perfect as-

# OPPORTUNITIES OF THE DEALER AT THE SHOW

## In Addition to Closing His Contract He Can Lay in a New Supply of Sales Ammunition and Broaden His Outlook

By TRADESMAN

THE dealer who shucks his shop togs long enough to visit either of the annual cycle shows is entitled to the fullest possible return from his inspection of the new models. His time is valuable, and in addition to closing his contract for the next season—which is the yearly custom of many wideawake dealers—he should strengthen his sales campaign. Many opportunities to do this present themselves at the show.

### Value of Inside Information

It has long been claimed that dealers in general are not as fully acquainted with the innards of the motorcycle they handle as they should be, and that sales arguments sometimes suffer because the agent is unable to speak authoritatively of the machine's vital mechanical features. Be that as it may, the writer is of the opinion that the average dealer of today understands the wisdom of knowing his line from the ground up, and that his chief trouble comes, not through lack of personal knowledge of the motor's principles, but through inability to deliver his points strikingly in a discussion with a prospective buyer. In some cases he may not appreciate the full significance of a motor change upon which the factory designers have spent much time and money. Under the circumstances, a feature that should help to make a sale is practically overlooked. It does not properly impress the patron. It does not "get across" the punch that was counted upon by the manufacturer.

It is a matter of record that factory travelers have brought balky prospects into line with one demonstration, after a local dealer had followed them up for weeks. This is accounted for by the fact that the traveling representative was acquainted not only with every mechanical feature of the motorcycle, but with the underlying reason for every change. He was backed up by all the observations of the factory engineers, all the reports of testers, all the widely diversified data which supported the manufacturer in his claim that his product was better than ever before. The traveler was loaded for bear. He knew the intimate, inside story of the thought, labor and money expended to produce an improved motorcycle for the new season, and when he talked his arguments struck home.

### Loading "For Bear"

There is no reason why the dealer should not also be loaded for bear, and the annual show offers him the best possible opportunity to lay in his ammunition. He should not be satisfied with a cursory examination of the new models, after he has closed his contract, but should extract from the booth attendants every fact that can have any bearing on the making of a sale. When a factory representative starts to discuss his make of motorcycle he usually has a machine gun beaten forty ways for speed of delivery, and the dealer who is seeking inside information can lay in a supply in half an hour that will bolster up his selling campaign for months to come.

### Working Up Enthusiasm

This heart-to-heart chat idea between the dealer and the show representatives of the motorcycle he handles is too often overlooked, but experience has convinced the writer that it ranks next in importance to the actual signing up of a contract for a reliable make. In spite of all that has been written concerning the wonderful mechanical value offered in the motorcycle of today, it is doubtful if many prospective purchasers are made to realize fully the striking combination of speed, economy and reliability afforded in the motorcycle power plant. The manufacturer and his engineers know all about this; the factory travelers assimilate the big idea with every breath they draw while at the plant, but the dealer—being somewhat apart—must work up his enthusiasm, as a rule, from the catalogs and circular letters sent out to him. That is, unless he visits the annual show and "grabs off" some of the factory ammunition.

### Discussing Local Problems

Then there is the opportunity offered the cycle dealer at the show to discuss with the factory men any local sales problems that he may have encountered. Towns differ. Methods that boom business in one district may fail of definite results in another. But the factory traveler, covering as he does a considerable territory, comes in touch with all the various angles of the business and is often in a position to make valuable suggestions. What's more, he is willing and anxious to do so. That's part of his business. In brief, there are a lot of inside pointers to be picked up by the conscientious dealer from the factory representatives, and the show—with its ideal combination of business and social aspects—opens the way. The building up of sales arguments and general publicity campaign is naturally an all-year occupation with the cycle dealer who is determined to get ahead; he always has a keen eye open for a new channel by which to approach the potential motorcycle users of his district. But as a starting point for the new season there could hardly be a better occasion than the national show.

The show cannot fail to exert a broad-

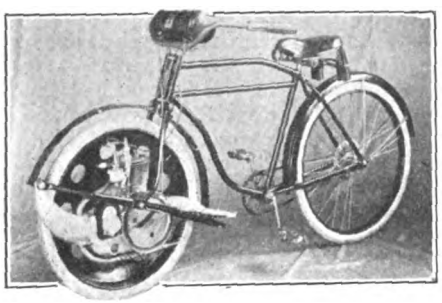
# A Review of the 1916 Models

## DAYTON

Six models: D-1, Dayton motored single-geared, $240; D-3, Dayton motored two-speed, $265; D-4, Dayton motored, two-speed with electrical equipment, $305;

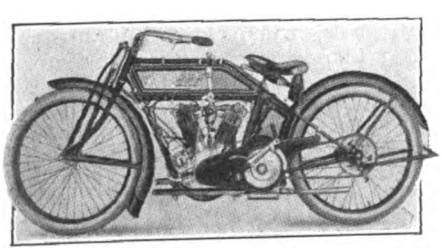


*Dayton Motor Bicycle*

D-5, De Luxe motored single-geared, $240; D-7, De Luxe motored, two-speed, $265; D-8, De Luxe motored, two-speed, with electrical equipment, $290. All models have twin motors. Splitdorf Mag-Dynamo system on D-4 and D-8.

## THOR

Two models: Model U, 12 horsepower three-speed twin with dual clutch control and new foot starter; Model V, 6 horse-

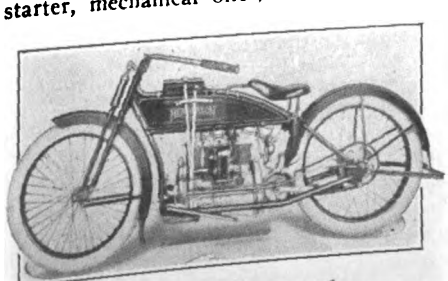


*Thor Model V*

power three-speed twin with similar equipment and new type of front fork. Three-speed gearset is countershaft-mounted and band brake is fitted. Double chain drive on both models.

## HENDERSON

Two models, both with four cylinder motors: Two-speed model, with kick starter, mechanical oiler, dual clutch con-

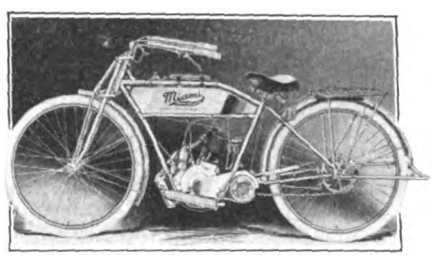


*Henderson Two-Speed*

trol, spark plugs in side of valve pockets, $295; single-speed model, with same construction except hub gearset, $265. Electrical equipment of Rex-Henderson two-unit type, $45 extra on either model.

## FLYING MERKEL

Nine models: Three in Miami line and six in Flying Merkel series: Model 14, battery-ignited Miami Motor Bicycle, belt drive, single-geared, $100; Model 15, magneto-ignited Miami Motor Bicycle, belt drive, single-geared, $125; Model 16, magneto-ignited, two-speed Miami Motor Bicycle, chain drive, $140; Model 675, Flying Merkel, two-speed twin with foot starter, $260; 673, twin two-speed without starter, $250; 671, twin, single-geared, $225;

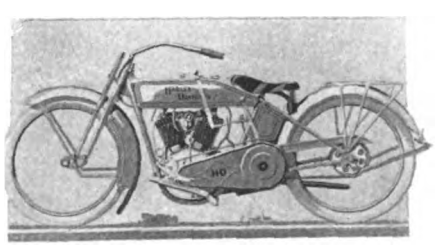


*Miami Model 16*

overhead valve twin, $250; 643, single cylinder, two-speed, $225; 641, single cylinder, single-geared, $200.

## HARLEY-DAVIDSON

Eight models: Model 16F, three-speed twin, $265; 16-J, three-speed twin with electrical equipment, $295; 16-E, single-gearel twin, $240; 16-C, three-speed single cylinder, $230; 16-B, single-geared single

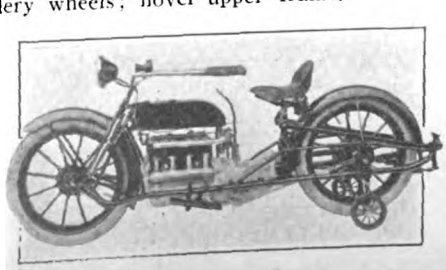


*Harley-Davidson 16-F*

cylinder, $200; 16-R, twin cylinder speed roadster, $250; 16-S, four horsepower single cylinder stripped stock, $210; 16-T, twin cylinder stripped stock, $250. Harley-Davidson electric system on 16-J. Side-Car Model 16-L, $75; Sidevan, $65.

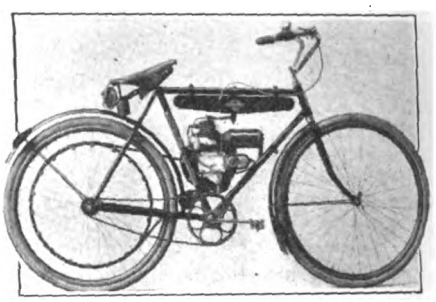
## MILITAIRE

One model: Four cylinder motor, three-speed gearset, dry plate clutch, shaft drive; all in unit; pressed steel frame, artillery wheels; novel upper frame.



## CYCLEMOTOR

One model, fitting in bicycle frame: Single cylinder, two-stroke, 5½ cubic inches displacement, magneto ignition,

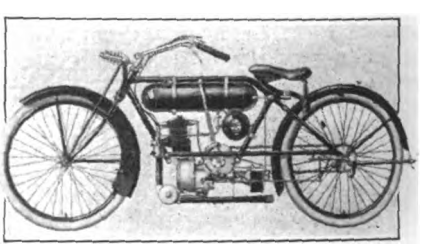


*Cyclemotor Outfit*

round Spartan belt drive, one lever control, $55 complete with tank, muffler, belt rim and necessary attaching devices.

## CLEVELAND LIGHTWEIGHT

Two models: 1-B, two-stroke, two-speed model with unit powerplant, including motor, two-speed set, countershaft and magneto, $150. Model 1-A, single-geared machine with unit powerplant, including

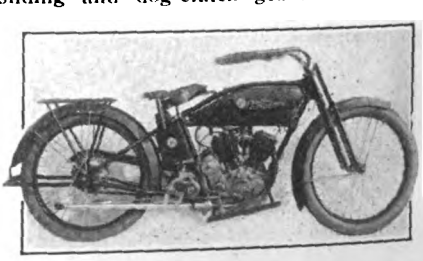


*Cleveland Model 1-B*

motor, countershaft and magneto, $140. Mainshaft runs continuously from interior of crankcase to Hooke's Joint driving magneto and carries countershaft worm gear.

## READING-STANDARD

One model: Three-speed 12 horsepower side-by-side valve twin, with countershaft sliding and dog-clutch gear; dual clutch



*The 1916 R-S*

control, kick starter, new front fork and spring seat post, $265. New dropped top tube and large capacity tank; mechanical oiling system; Eclipse brake.

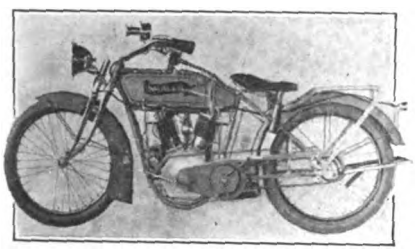
# ...ith Representative Types Illustrated

### EMBLEM

Four models: Model 110, 76 cubic inch twin, $250; 108, 67 cubic inch twin, $225; 105, single cylinder, $200; 106, twin of 32½

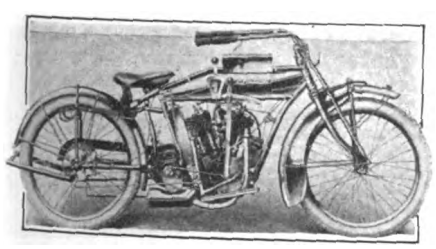


*Emblem Model 108*

cubic inches, $150; two-speed on any model $25 extra. Battery-ignited model 105 lists at $175. All models fitted with Emblem starter. Sidecar "Beautiful," $70; sidecar "Serviceable," $60.

### INDIAN

Five models: Model F, three-speed twin with Powerplus motor and spring frame, $275; Model G, three-speed Powerplus twin with regular frame, $250; Model H-1, eight-valve racer, $350; Model H-2, four-

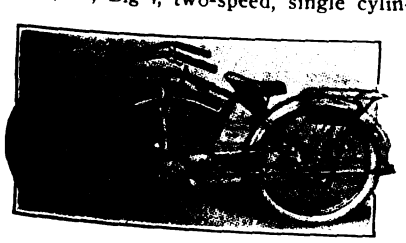


*Indian Twin Three-Speed*

valve racer, $300; Model K, Featherweight two-stroke, three-speed, $150. Indian Mail sidecar, $75; Parcel Car, $75.

### IVER-JOHNSON

Five models: 16-7TS, two-speed twin with kick starter and spring seat, $250; 16-7, single-geared twin with same equipment, $225; Big-4, two-speed, single cylin-

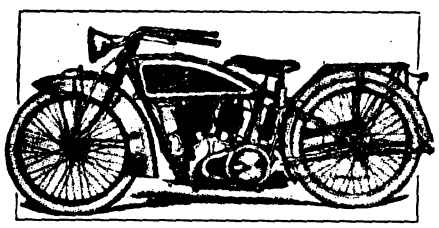


*Iver-Johnson Two-Speed*

der with starter and spring seat post, $200; Big-4 single speed, with same equipment as Big-4 two-speed, $175; V-belt single, pedal-equipped and spring seat post, $150. All models but V-Belt Single have planetary clutch; latter has double cone clutch.

### EXCELSIOR

Seven models: Model 16-3, three-speed twin, $250; 16-1, single-geared twin, $225; 16-S. C., short-coupled stock twin, $250; 7-T. S., two-speed twin, $200; 7-C, single-geared twin, $200; Police Model, with three-speeds and 16-S. C. motor, price not given; Lightweight, two-storke, combi-

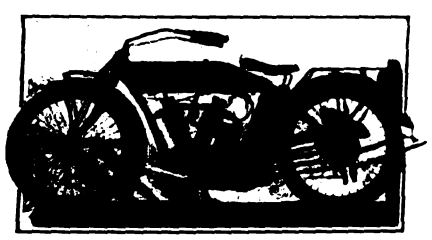


*Excelsior 16-3 Twin*

nation drive, $135; electric equipment on 16-3 and 16-1, $30 extra; acetylene lighting equipment on 7-C and 7-T. S., $25 extra. MIDCO electric system used.

### POPE

Five models: R-16, three-speed twin with foot-starter and double clutch control; TM-16, three-speed single cylinder with same equipment as model R-16; L-16, single-geared twin with pedal starter; M-16, single-geared, single cylinder; H-16, single-geared, single cylinder V-belt trans-



*Pope Three-Speed Twin*

mission. Single cylinder motors except H-16 are of 5 horsepower; H-16 has 4 horsepower motor. Prices not yet quoted.

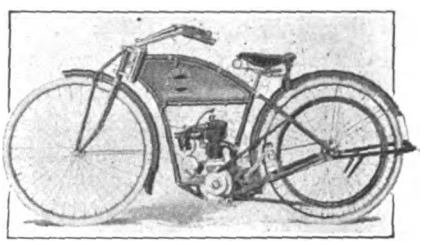
### SCHICKEL LIGHTWEIGHT

One model: Two-stroke single cylinder motor with detachable head, pedalless, V-belt transmission and novel rear wheel suspension, $100. Spring fork, $10 extra; spring seat post, $5 extra. Control on this machine by means of levers on right grip.

*Schickel Lightweight*

### TIGER AUTOBIKE

One model: Two-stroke single cylinder motor with special valve arrangement, pedal gear and V-belt transmission, $112.50.

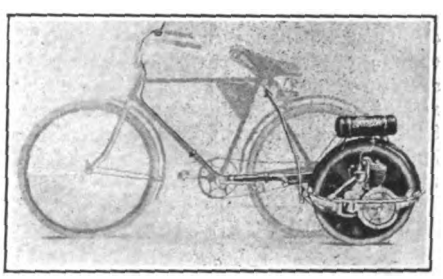


*Tiger Autobike*

Coaster brake furnished as stock equipment, novel front fork and camel-back frame; wide range of saddle positions.

### SMITH MOTOR WHEEL

One model: Single cylinder four-stroke air-cooled motor, 2¼-inch bore, 2¼-inch stroke, outside flywheel, developing one horsepower. Magneto ignition, splash lubrication with automatic control of oil level in crankcase, automatic float-feed

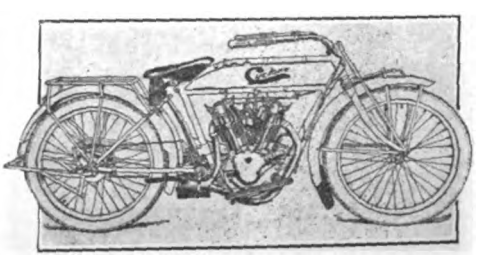


*Smith Motor Wheel*

carbureter. Mounted to drive pressed-steel disc wheel through gearing from crankshaft; wheel fitted with 20 x 1⅝-inch tire. Control by single lever. Price $60.

### CYCLONE

Two models: Touring model with inclined leaf spring rear frame, countershaft chain drive, scroll-end leaf spring front



*Cyclone Touring Model*

fork, footboards, disc clutch and band brake; speed model, with dropped bars, pedal gear and hand brake. Twin motors.

## FINAL ARRANGEMENTS FOR THE SHOW

**MANAGER A. B. COFFMAN announces that his headquarters during the week of the New York Show will be at the office of the Motorcycle Manufacturers' Association, 1482 Broadway—Room 704.**

**Madison Square Garden will be open for exhibitors to begin arranging displays, etc., on Sunday, October 10, at 9 a. m., and will remain open till 6 p. m. On Monday the Garden will again be open to exhibitors at 9 a. m., and all exhibits must be in readiness at 5 p. m. At that hour the work of cleaning the place will be started preparatory to the formal opening of the show.**

**Exhibitors who find it impossible to have their displays in readiness before 5 p. m. on Monday will be given an opportunity to arrange their booths before 9:30 on Tuesday morning. The show will be thrown open to the public at 7:30 Monday evening, October 11.**

### NOVEL ALARM CLOCK FOR BIG CHIEF

Suffield, Conn.—President George M. Hendee, of the Hendee Manufacturing Company, of Springfield, Mass., has the largest and most expensive alarm clock yet used to awaken guests at his villa in this city. It is a big German organ, costing $50,000, and is controlled by a push-button alongside Mr. Hendee's bed. His guests can be awakened gently by the strains of Il Trovatore or some other classical selection at the will of the motorcycle magnate, either by pushing the button at his bedside or by pushing other buttons in various parts of the house. The organ is only one of the many luxurious appointments of the Hendee villa, which the Big Chief and his family will occupy very soon.

### BOOKLET ON THE CYCLEMOTOR

An attractive booklet which points out the capabilities of the Cyclemotor and calls attention to the wide range of service to which it can be applied, has just been issued by the Cyclemotor Corporation, of Rochester, N. Y. Under the tempting slogan, "Wheeling Without Work," the manufacturers of the tidy little Cyclemotor explain how efficiency and a remarkable degree of compactness have been combined in the newly-marketed product, and include a full set of specifications so that the prospective purchaser may acquaint himself with the outstanding features of the power plant.

Several photographs, showing the Cyclemotor on the road, add to the interest of the booklet, and a sectional view of the motor itself places emphasis on the simplicity of the designing. The booklet will be sent on request.

### GOUDY PRAISES BOSCH MAGNETO

In a recent telegram to the Bosch Magneto Company, of 225 West Forty-sixth street, New York, Carl Goudy, the winner of the Chicago 300-mile race, gives full credit to the Bosch magneto for its aid in his victory. Goudy stated that he calculated that his Bosch machine turned over 2,170 times per minute, which for 3½ hours approximated 1,000,000 sparks, all of which were hot and fat. "It is my firm conviction," said Goudy, "that my Bosch would have kept up this consistent work for 3,000 miles as easily as the 300, without a murmur."

### EVERYBODY'S PLEASED

*Diana (from her perch on Madison Square Tower): Well, well, it certainly does seem homelike to have the cycle displays back in the good old place after the fashion of years ago!*

### STRATTON AND MEYER WIN 150-MILE RELAY IN 147 MINUTES

Madison, Wis., October 4.—Alva Stratton and George Meyer, mounting Indian machines, won the 150-mile relay race held here on Sunday. Meyer had a bad spill in the 31st mile which retired him, and Stratton was obliged to cover the rest of the distance without a partner. The time was 147 minutes for the century and a half.

Fred Lochner and Frank Montgomery, the Excelsior team, finished second, and Walter Ferch was in third place, alone. Ferch used two borrowed Excelsiors throughout the race.

### POWER BICYCLE CATALOG

Miami Power Bicycles in their various models are attractively pictured in the latest catalog issued by the Miami Cycle & Mfg. Company, of Middletown, Ohio. The catalog is entitled "100 Miles for 10 Cents," and is gotten up in blue and white to correspond with the colors on the machines themselves. All illustrations of complete models are colored, and the various parts are carefully described and illustrated in detail.

### FIRESTONE MEN COME HOME

Akron, Ohio, October 4.—Fully 500 salesmen, branch managers, department heads and officials of the company attended the "home coming" of the Firestone Tire & Rubber Company, held at Akron, Ohio, last week. Special cars were run from many parts of the country, bringing in the tire men to attend the meeting.

On September 29, the men were received in the executive offices of the Firestone plant and later a session was held in the assembly room where a number of addresses on tire making and selling were made. At noon a luncheon was served in the restaurant of the company which was followed by an inspection of the plant. An all day session of the branch managers and department heads was held September 28. One of the features of the meeting was an address on "Carriage, Motorcycle and Bicycle Tires."

### GOODYEAR CONFERENCE CLOSES

Akron, O., October 2.—The annual conference of the Goodyear Tire & Rubber Company salesmen closed here last Wednesday. There was a huge crowd of the live-wire travelers present and after the conference they went to their respective territories enthusiastic over the 1916 outlook and happy because of the fine report of motorcycle and bicycle sales increases during the season which has just closed.

### RACES AT QUINCY, ILL.

Quincy, Ill., October 4.—The Baldwin Park dirt track was the scene of several motorcycle races on Sunday, October 3, which were run off under the management of the Harley-Davidson Club of this city. The three-mile event for singles was won by Fruhe, Beck taking second place. The time was 4:15. Schwartz took first in the five-mile race for twins in 6:10, and second in the three-mile race, which was captured by Abbott in 3:59.

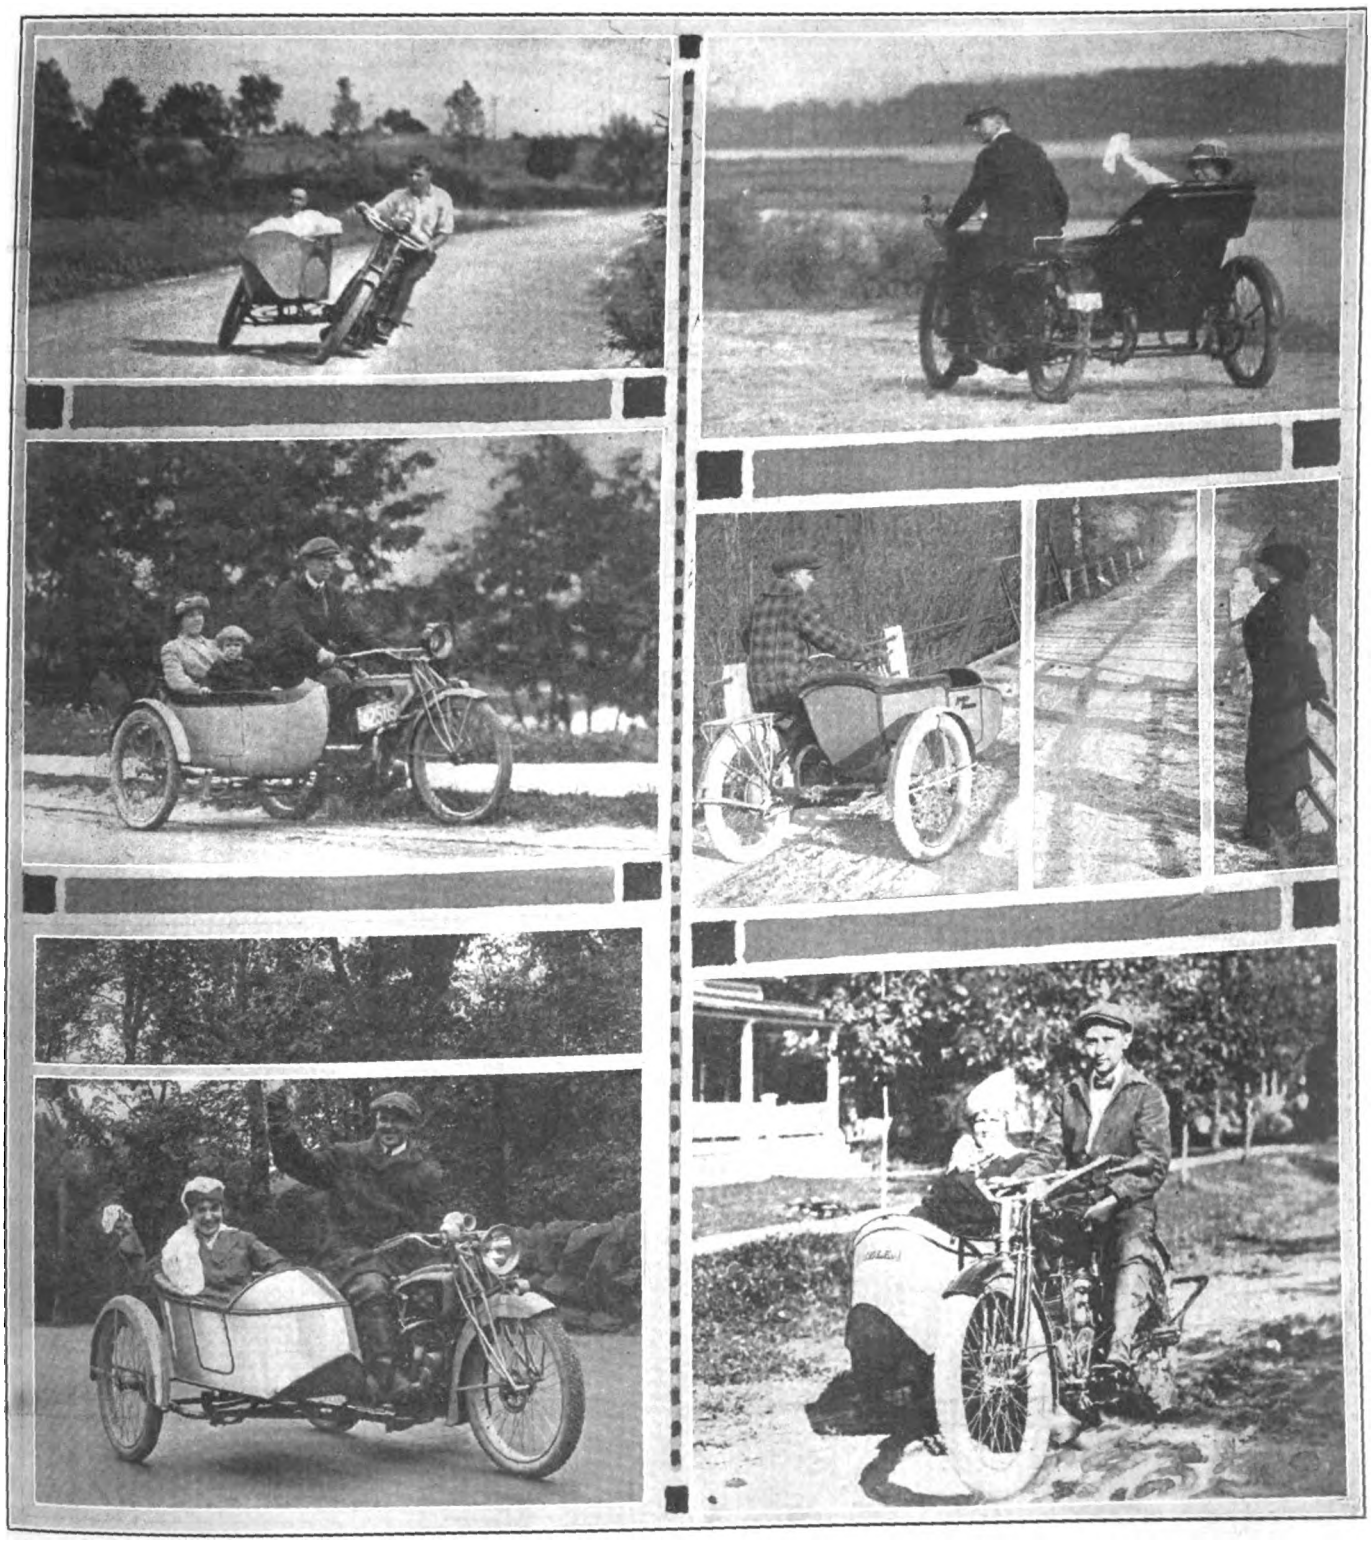
# SOME SIDECAR TYPES THAT WILL BOOM 1916 INTEREST



SIDECARING has increased to a marked extent in popularity during 1915 and will become even a more widespread pastime during the coming season, if past performances are any indication. The sidecar has literally no seasons; it can be used no matter what the weather, and very few indeed are the owners of combinations who retire their rigs this season for zero weather or snow. Above are shown a number of views of combinations, including different makes of sidecars which will be seen at the Madison Square Garden Show, in New York, next week. Several photographs showing other models of the third-wheel passenger attachment were received too late for reproduction and accordingly are held over until next issue.

In the upper left hand view is a Flxible sidecar rig, with the driver inclining to take a corner on one of Ohio's good roads. The next picture below is a family party in a Majestic sidecar combination near Roxbury, Mass., and shows the ease with which a child can be carried, in this case on a small auxiliary seat. At the bottom is a Rogers sidecar as fitted to an Excelsior twin, the happy party having the characteristic pleased expressions of sidecarists in general. At the top of the righthand column is a Henderson sidecar outfit fitted with Cape top and traversing a pleasant river road.

In the next picture below is a Harley-Davidson sidecar combination halted for a moment near Green Bay, Wis. The last view shows an Emblem sidecar party in Western New York. The machine is also of Emblem make.

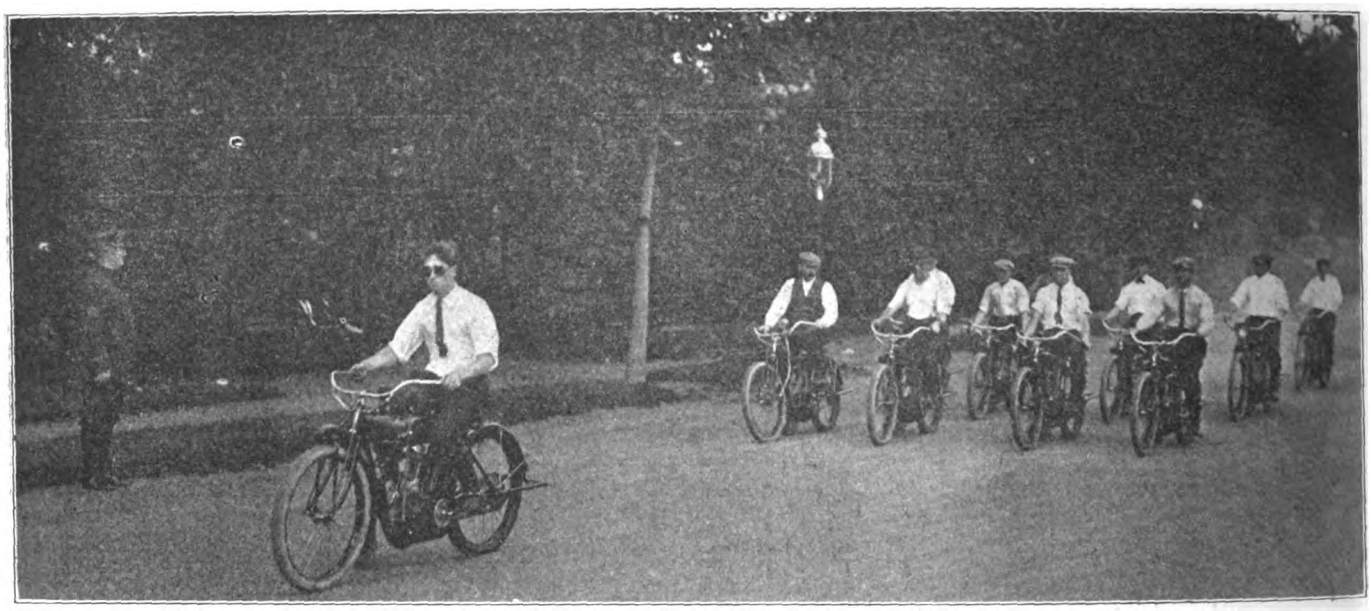
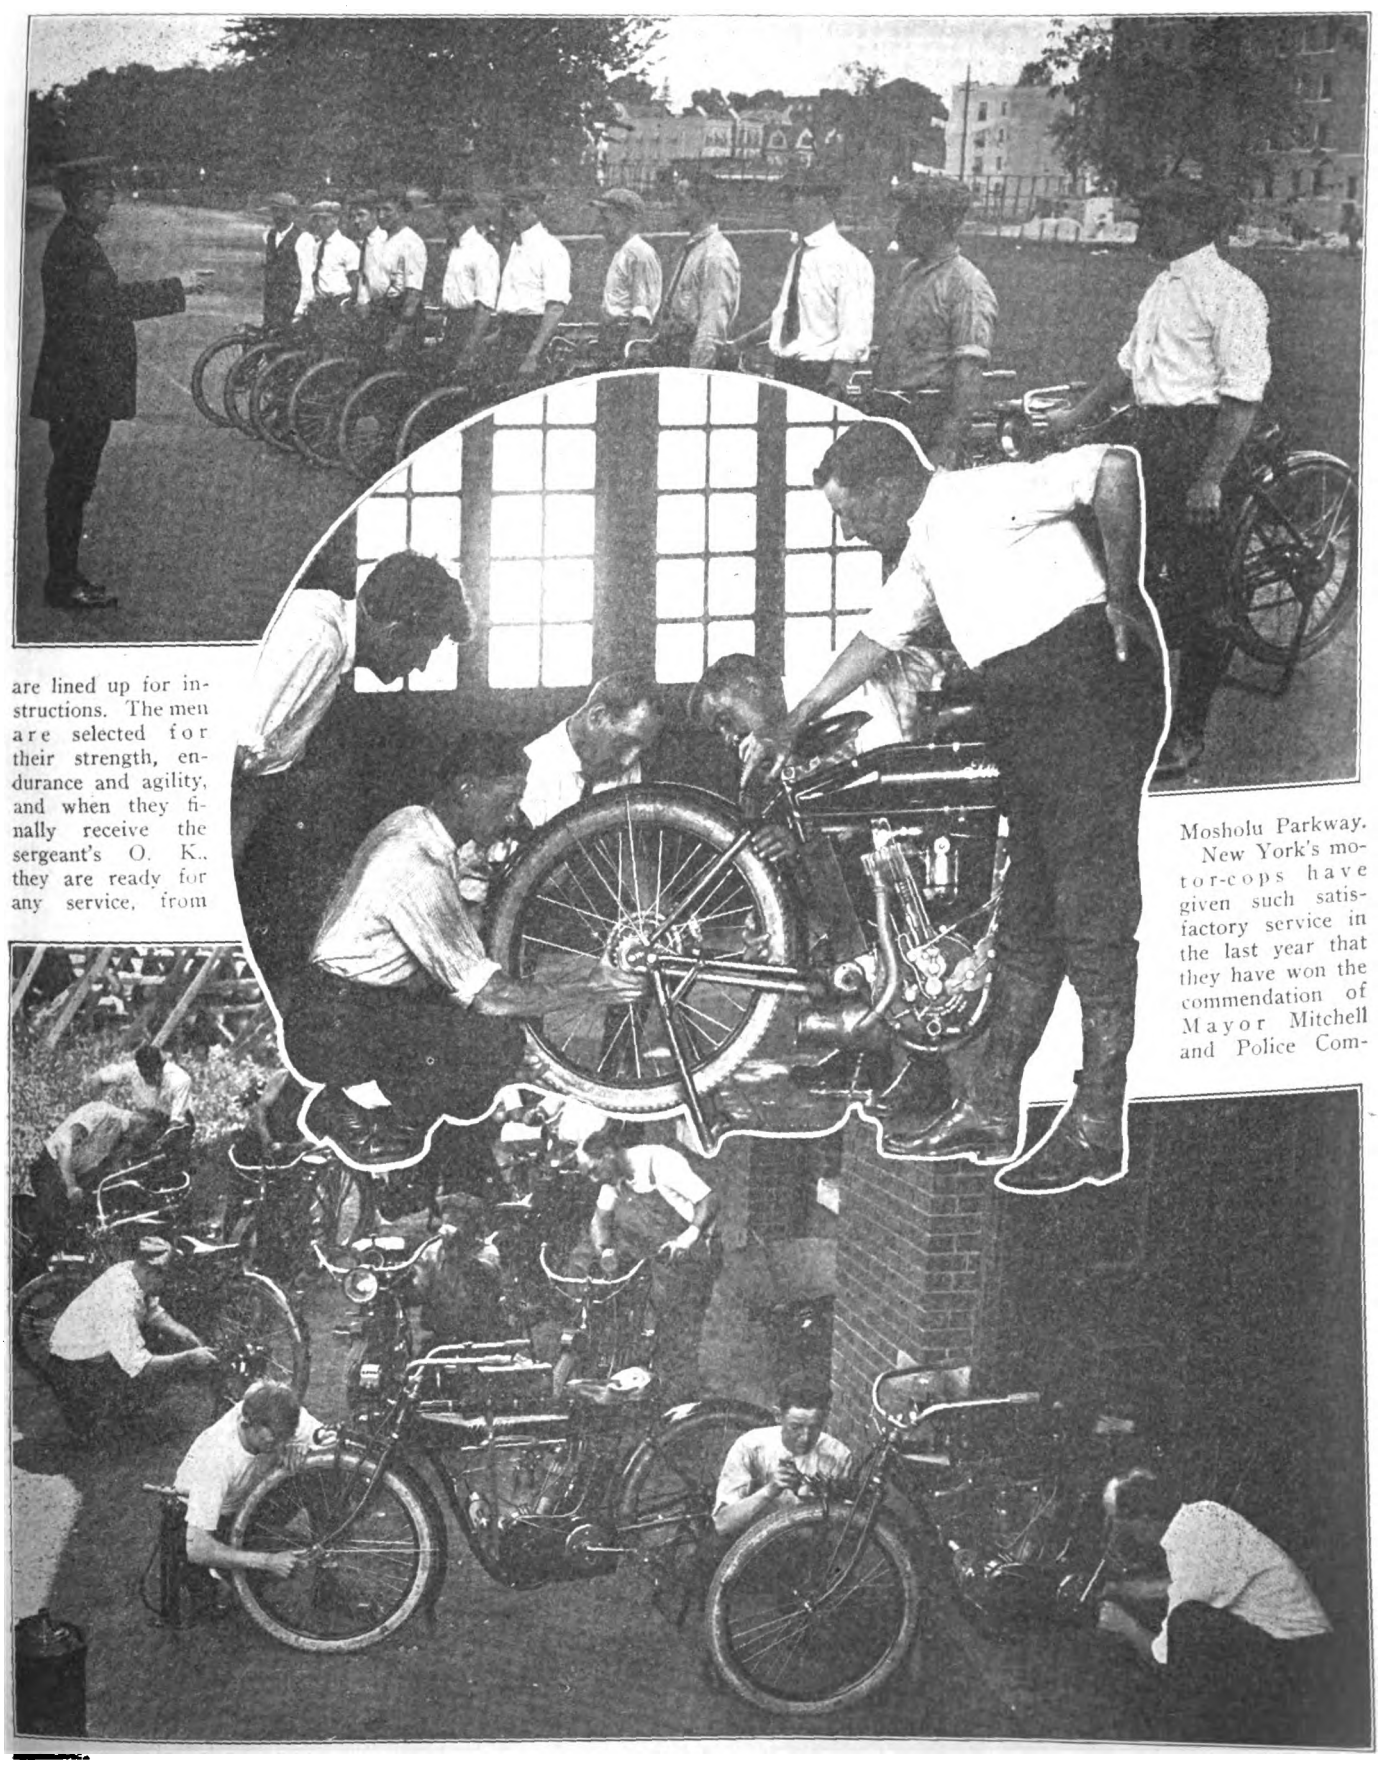
# Training School for New York Police



NEW YORK CITY'S methods of training her motorcycle policemen are fully shown for the first time in the accompanying photographs. At the top of this page appears a squad of recruits under the chaperonage of Sergeant Walter Shea, who is in charge of the school. This phase of the training takes the officers to one of the parks, where they acquaint themselves thoroughly with their motorcycles before going out on regular traffic duty. At the left of this page is a snapshot of Sergeant Shea, taken while instructing the class in mechanical details. Shea is a seasoned traffic rider, and, incidentally, an expert motorcycle mechanic. At the right are shown a number of the motor-cops learning the art of making quick tire repairs.

At the top of the opposite page a squad of prospective traffic regulators

Digitized by Google



are lined up for instructions. The men are selected for their strength, endurance and agility, and when they finally receive the sergeant's O. K., they are ready for any service, from

Mosholu Parkway. New York's motor-cops have given such satisfactory service in the last year that they have won the commendation of Mayor Mitchell and Police Commissioner Woods, both of these officials having recently gone on record as favoring rapid and generous extension of the police department's motor squad. The riders soon acquire such skill in negotiating congested streets that their exhibitions are a source of wonder to spectators

capturing a runaway horse or overhauling an automobile speeder to riot duty and escort work. The center picture above shows Sergeant Shea explaining the proper method of putting on and aligning a rear wheel. Nothing is left to guesswork, and when the motor-cop receives his "diploma" he is capable of making any ordinary repair or adjustment on his mount, in spite of the fact that the city provides for garage repairs as a rule. The bottom photograph presents a busy scene at the school; the riders are seen tuning up their motorcycles preparatory to a practise spin on

# PERRY HAS BIG LEAD IN HOUR CHAMPIONSHIP

HAWTHORNE, Ill., October 3.—Seven thousand speed fans saw Bob Perry win the one-hour National Championship race on the Hawthorne track this afternoon. The race was the feature event of the program held by the North Shore Motorcycle Club. Morty Graves, Indian, was in second place. Perry's distance for the hour was 64¾ miles, while Graves was 4½ miles behind. Glen Stokes, Excelsior, was third.

Perry rode a clean-cut race and managed to shake the jinx that has been trailing him pretty consistently all over the country. Carl Goudy, Perry's team mate, came in for trouble, however, when his machine caught fire in his 22nd lap. He was forced to retire. There was some disappointment over the absence of the Harley-Davidson crew. Only one rider of that make was entered and he was a private owner.

Bob Perry fared well in the standing start for the hour championship, and led the field of five entrants for the first lap. At the southwest turn Perry had a bit of trouble and Don Johns on his Indian passed him like a flash. Johns kept the lead only one lap and was then headed again by Perry. From that time on Bob showed the way home.

Johns was the first rider to stop at the pits with mechanical trouble. This left Perry and Goudy with quite a lead. When Goudy's tank started to leak and his mount caught fire in the 22nd lap Perry was left well up in front, and Morty Graves and his Indian were in second position. In the meantime Don Johns was having trouble at the far turn with a broken chain and damaged pedal. This cost him twelve miles.

### A Batch of Minor Troubles

Glen Stokes, Excelsior, came in for his share of trouble in the 11th mile when he was forced to make a saddle adjustment which cost him a mile. Graves pulled up at the pits with a fouled spark plug, and Don Johns had a little difficulty which halted him at about the same time. Bob Perry stopped for oil in the 36th mile, and a little later Graves made another stop to juggle spark plugs.

At the 40th mile Perry had a lead of 1½ miles; he had lost two laps when he stopped for oil. Graves, his nearest competitor, was striving to cut down the lead but with small success. Stokes was five miles behind at the 40th mile, but after passing the 45th mile he set a hair-raising pace and managed to cut down some of Perry's lead. When the 45th mile had been ridden there was little or no chance of a change in the positions of the leaders, barring an accident which would retire one of them. Perry romped home an easy winner, with Graves trailing him more than four miles in the rear, and Stokes coming in for third money.

### The 10-Mile Professional

Perry gave additional evidence that he was back in form by winning the 10-mile professional event. Incidentally, he lowered the track record for the distance by five seconds, he having hung up the old mark last year. His time today for the 10 miles was 8:47⅗. Glen Stokes held the lead in this race till the fifth mile, when Perry passed him and continued to gain until he had a lead of half a mile at the finish. Don Johns was forced to retire in the eighth mile with burned out spark plugs.

Top, Start of Ten-Mile Open Race; Below at Left, Bob Perry, the Hour Winner; Next, Morty Graves, Who Came Second; Right, Glen Stokes, Third Man

Another record for the track was dented in the 5-mile open professional race. Glen Stokes captured this event and went the distance in 4:23⅗. The old record for the track was 4:33. Bob Perry finished second. Graves damaged his front wheel and was forced to retire in the third mile.

Joe Hallock, Excelsior, grabbed off the 5-mile amateur dash, his time being 5:14⅗. Drier, Excelsior, was in second place at the finish, 1½ miles behind the winner. Harry Ford checked out third, being something like five miles in the rear of the first-line trenches. The summaries:

One-hour professional—Bob Perry, Excelsior, first, 64¾ miles; Morty Graves, Indian, second, 60¼ miles; Glen Stokes, Excelsior, third, 57¾ miles; Don Johns, Indian, fourth, 40¼ miles.

Ten-mile open professional—Bob Perry, first; Glen Stokes, second; Morty Graves, third; time, 8:47⅗.

Five-miles open professional—Stokes, first; Perry, second; Johns, third; time, 4:23⅗.

Five-mile for private owners—Joe Hallock, Excelsior, first; Drier, Excelsior, second; Harry Ford, Excelsior, third; time, 5:14⅘.

## WEISHAAR COPS TWO RACES AT DANBURY

DANBURY, Conn., October 5.—Nearly five thousand spectators saw I. Weishaar, Harley-Davidson, romp home with two out of the four professional races which were staged here on Monday, October 4, under the auspices of Stanley T. Kellogg, the Bridgeport, Conn., Excelsior distributor, in connection with the Danbury fair.

There were two ten-mile and an equal number of five-mile events. Two Indian riders shared the honors with the Harley-Davidson star, Nixon, Indian, winning the first five-mile event, and Burdick, Indian, accounting for the first ten-mile race. The track was fast and the weather all that could be desired.

Two hundred and ten dollars in prizes were divided among the first three place takers in each race. There were eleven entrees for the professional event, while the race for "simon pures" had to be called off, due to lack of entries. The summaries:

Five-mile professional—Won by F. B. Nixon, Indian; H. F. Burdick, Indian, second; N. R. Ceves, Indian, third. Time, 6:27.

Ten-mile professional—Won by H. F. Burdick, Indian; N. R. Ceves, Indian, second; J. R. Pillazzo, Excelsior, third. Time, 13:16½.

Five-mile professional—Won by I. Weishaar, Harley-Davidson; H. F. Burdick, Indian, second; J. R. Pillazzo, Excelsior, third. Time, 6:18¾.

Ten-mile professional—Won by I. Weishaar, Harley-Davidson; H. F. Burdick, Indian, second; F. B. Nixon, Indian, third. Time, 12:29½.

Consolation race—Won by F. R. Craddock, Indian; Stubner, Excelsior, second.

# NO PERFECT SCORE IN HACKENSACK CLUB RUN

HACKENSACK, N. J., October 3.—The first annual durability run of the Hackensack M. C. was held here today over a 206-mile course. Roads, ankle deep with mud and water, gave the contest all the earmarks of a real blown-in-the-bottle, 14k endurance run. So much so that not a perfect score was made by any contestant and but two silver and four bronze medals will be awarded by the club. The field consisted of 45, being composed of 34 solo riders, 1 tandem and 10 sidecar outfits.

As was expected, the sidecars made the best showing on the heavy roads, and three drivers of the three wheeler turned in the highest scores. Orrie Steele, 994 points, Indian, won the professional sidecar cup; J. W. Terhune, 992 points, Harley-Davidson, was second, and John Steele, father of the winner, drove a 1916 "Powerplus" outfit to the score of 990 points. Keen competition for the six cups offered by the club brought forth the best riders of the Haledon, Hackensack, Arrow and Passaic clubs.

The Haledon M. C., to which Orrie Steele belongs, took home the straight three-man professional cup, the single geared machine cup when Simon Stone, Indian, turned in high score of 925 points, and also accounted for the club cup when four riders turned in a total score of 3,795 points.

The "First President's Cup," limited to teams of three Hackensack M. C. riders, was won by the Harley-Davidson team, which was made up of Frank Edwards, P. B. Garrison and Eric Matthews. The three-man amateur cup went to the Passaic M. C. team, on which rode J. B. Werner, Frank Evan and Wm. Connolly. The Indian M. C., of New Brunswick, comprising E. J. Mills, Oscar Harkins and F. B. Leach, was second.

The first riders left Hackensack at 6:30 a. m., and the field followed at one minute intervals. The course lead them through Rutherford, across the meadows deep in mud and water, giving the riders an idea of what they would encounter later in the mountains. Report from the first secret check showed that riders who had equipped with chains both front and rear, would have the best chances. The route led on through Montclair, over Cushnall Hill to West Caldwell, then doubled back to Pompton and straightened out for Greenwood Lake, the second regular check.

From that point a fifteen-mile mud road led round the lake and over part of the Invincible Club course, through Sterling Forest. This stretch proved the undoing of many riders. Leo Herzig, Indian, skidded and went into the lake but was fished out and dosed up with "smoke oil." This smoothed out the road for him and he sped on.

The afternoon loop was started by thirty-one riders; this time the course led them out over the Palisades, along the Hudson, and up Bear Mountain. And then they all had an introduction to the Invincible Club's pet hill—Crow's Nest. All riders agree that the surface was good; there was no mud to skid on—it was just bare bed rock and a trifle more rough than it was last May. Getting over the famous hill the riders were checked at Canterbury and soon were booming along over the Suffern-Newburgh road to their final checking place, twenty-six contestants checking in on time.

As forty-five started and twenty-six finished, we had better tell what happened to some of those missing riders. Herzig, Indian, of course, lost his ambition to rival Baker when he did that "Annette Kellermann" into Greenwood Lake. McInnis, Eagle, with a single speed mount, just naturally lost ground all the time. Otto Schell, Indian, punctured in Midvale and decided, when he got the skid chain off and had the job repaired, that he was too far behind, and quit. Kalshoven and Knell, Harley-Davidson, started late, never caught up to the field, and thought they'd make a pleasure jaunt of it instead. Heller, Indian, preferred good hardroads to mud—that accounts for him.

Seigert, Harley-Davidson, broke a thrust rod in around or near his clutch, and went into the dry dock for repairs; this being made, he beat it, missed three checks, and wisely came in to see the finish. Aug. Charton, Harley-Davidson, mixed it up with an automobile—not a Ford—in Nyack, wrecked his front wheel and got first aid service from Mort Lentz, Jersey City agent, completing the course late.

Chas. Ward, Harley-Davidson sidecar, lost part of his Schebler, had two punctures and a chain break, then he remarked something "about knowing when he had enough," and became a spectator. Ralph Donaldson, Harley-Davidson, who won the Yonkers run with Charton, missed a secret check, went looking for it, and arrived late. In the afternoon he and Bergfels, his partner, went "cork-pulling" and finished, satisfied that a good day's work was done. Bakelaar, Kaune, Versele, Mettricker, Walker, and Witzeman just faded from view, and that winds the hard luck section up.

The scores were as follows:

| Contestant. | Machine. | Score. |
|---|---|---|
| Orrie Steele, | 1915 sidecar, Indian, 3-speed.. | 994 |
| J. W. Terhune, | 1916 sidecar, H.-D., 3-speed. | 992 |
| John Steele, | 1916 sidecar, Indian, 3-speed.... | 990 |
| J. W. Collins, | 1915 sidecar, Indian, 3-speed.. | 986 |
| Geo. Baar, | solo, Indian, 3-speed..... | 979 |
| E. J. Mills, | solo, Indian, 3-speed..... | 976 |
| Oscar Harkins, | solo, Indian, 3-speed..... | 973 |
| E. Vernaecken, | solo, Indian, 3-speed..... | 969 |
| T. K. Lee, | sidecar, H.-D., 3-speed..... | 969 |
| Elmer Havenstrite, | 1916 sidecar, H.-D., 3-speed | 968 |
| Frank Edwards, | solo, H.-D., 3-speed..... | 957 |
| P. B. Garrison, | solo, H.-D., 3-speed..... | 956 |
| J. B. Werner, | sidecar, H.-D., 3-speed..... | 954 |
| Wm. Connolly, | sidecar, H.-D., 3-speed..... | 946 |
| Frank Gross, | sidecar, H.-D., 3-speed..... | 934 |
| Simon Stone, | solo, Indian, 1-speed..... | 925 |
| Arthur Rhodes, | solo, Jefferson, 1-speed..... | 843 |
| F. B. Leach, | solo, Indian, 2-speed..... | 840 |

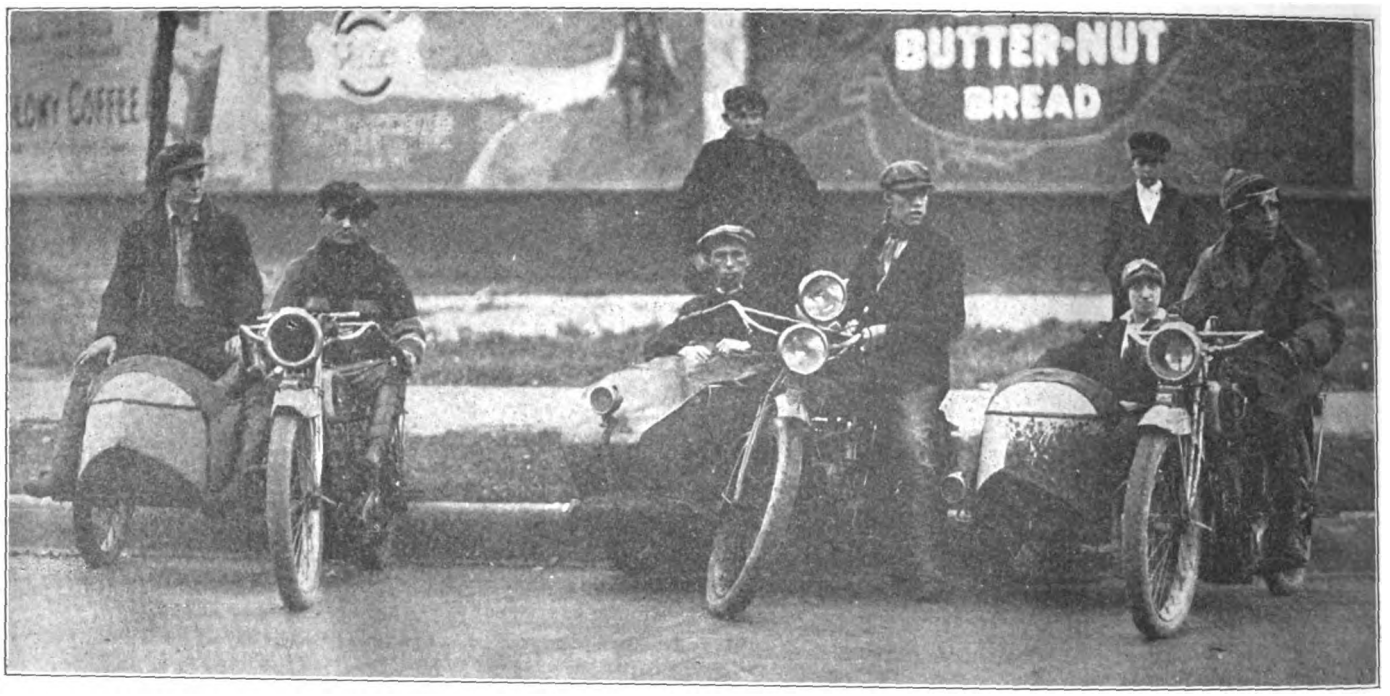
# TWENTY-EIGHT RIDERS IN CHICAGO ENDURANCE RUN



**Sidecarists Who Successfully Came Through the Chicago Excelsior Club's Run to South Bend, Ind., and Return**

CHICAGO, Ill., October 4.—Eight perfect scores were made in the first open endurance run of the Chicago Excelsior Club, which was held on Sunday, October 3, having South Bend, Ind., for its objective. Twenty-eight riders started; the distance of the run was two hundred and forty-one miles.

Frank R. Smook, manager of the R. C. Crist branch store on West Jackson Boulevard, started the contestants at 6:01 in the morning at intervals of one minute, until the twenty-eight husky motorcyclists were all headed for Hammond, Ind., the first control.

All checked in on time at Hammond and then hit the high places for Valparaiso, not one of them knowing that a secret control was hidden behind a clump of trees near Valpa. Joe De Salvo and Jess Wilburn, the two boys manning the control, played a good little game of hide and seek, that defied detection, as they determined on a hilly spot a mile and a half out of Valpa. Only one man was caught at the secret checking station and he was seventeen minutes ahead of the schedule.

South Bend was the noon control and a hot chicken dinner awaited the contestants. There was a rip and a snort when the lunch hour was over, for most of the riders were busy making repairs and were not ready to continue the grind. After a delay of a few minutes the homeward grind was begun.

John Bowman, the road captain of the promoting club, got into trouble just outside of La Port, Ind., and rode a flat tire into Michigan City, a distance of twelve miles. At that place he was twenty minutes late. But Bowman cut loose after repairing his tire and forgetting all about the country sheriffs, managed to enter Chicago with a perfect score. E. Jennings, who was driving a sidecar outfit, had a perfect score until he reached Jackson Park, Chicago, when his chances were crimped by a bad puncture.

The perfect scorers are as follows: John Bowman, Excelsior; W. Kolb, Indian; H. Hausu, Indian; J. Meyers, Indian; G. Martin, Indian; A. Gassman, Indian; E. Jenkins, Thor; J. B. Dohl, Thor; Bill Powell, Harley-Davidson.

Those who participated in the run are: John Bowman, C. Capico, Tony De Tobro, Wm. Kolb, H. E. Osmann, H. E. Hausu, H. L. Lawrence, C. L. Nelson, Peter Giese, Beil Powell, A. Gassman, E. L. Guth, G. Martin, Steve Komon.

A. Busch, Morris Tannenbaum, Frank Barnes, J. Jeffery, J. B. Dohl, J. W. Claskey, Jn. Meyers, Harvey Goss, J. F. Stewart, Chas. De Salvo, Jno. Morris, Chas. Zimmerman, Geo. Roberts, Sidney Barrett, E. Jennings, Leo Munger, Wm. C. Miller.

## JONES LEADS THE WAY AT TOLEDO TRACK

TOLEDO, O., October 3.—The race meet of the Interstate Racing Association at the fair grounds half-mile track this afternoon drew an immense crowd, which was rewarded by an exhibition of fast and skillful speed work.

Maldwyn Jones and his Merkel racing machine were the big winners of the day, taking the chief events and making the fastest time. Jones had no cinch in doing it, for the competition was of the classiest variety, including among the riders Ray Creviston, Shorty Matthews and L. S. Taylor.

Jones won the first qualifying heat of five miles in 5:41, with Shorty Matthews second and Louis Stohan, Indian, third. Creviston's only appearance on the track was in the second heat, which he won in 5:44, with Taylor, Indian, second and Amos, Merkel, third.

"Krazy Horse" Verrill borrowed Creviston's four-valve for the consolation race, five miles, and won in 5:55, with Meyers second and Amos third.

Taylor cut loose in a hurry in the final heat, ten miles, and took the lead in the first lap, with Verrill second and Jones in third place. But Jones wouldn't be denied, and stormed past to first place in the next round, after which he steadily drew away and won by half a lap in 11:09, the fastest time for the distance on the track this year.

Additional features of the afternoon were aeroplane flights and a novelty race.

### MERZ TAKES BIGGER FIELD

Indianapolis, Ind.—The Merz Motor Company, Excelsior dealer, has taken eight counties in Indiana for its territory in 1916. Sidecar sales have been good, according to John Merz, head of the firm, no less than 22 of Dunham make having been disposed of so far this season.

## WHAT THE ANNUAL SHOW MEANS TO THE RIDER

*(Continued from page 32.)*

surance that there are motorcycles there to suit you, no matter how finicky you may be, and then make the rounds with eyes and ears open until the auspicious moment arrives when you know beyond doubt that you have found your mechanical affinity.

As for the rider with seasons of experience behind him, he usually goes to the show with a pretty fair idea of the selection he is going to make for the new year, and it is hardly necessary to counsel him about asking question. He has the habit. It is a fact, nevertheless, that no rider does himself full justice unless he makes an unbiased inspection of *all* the exhibits. That's what they are there for. The visiting rider, however experienced he may be, can hardly fail to profit by careful study of the new models. He may have his heart and mind set on another "good old Jack-Rabbit" (you've heard him say it) like the one he is riding, but he owes it to himself and to the tireless designers and manufacturers to visit the show.

There are motorcycles of the various makes on all sides the year round, but they have a habit of keeping on the jump so consistently that inspections and comparisons are practically out of the question except for occasional traffic cops and some of the more skillful aeroplanists. That's why a lot of money is spent annually to bring the new models under one roof and anchor them until riders and prospective riders have an opportunity to pick them to pieces, one after another, and learn just why they are the most remarkable vehicular products.

### ENGAGEMENT ANNOUNCED

Announcment if made of the engagement of Alex. F. Osborn, Service Manager of the E. P. Remington Agency, Buffalo, N. Y., to Miss Helen Coatsworth, of the same city.

### ARRIVING AT SAN DIEGO

A. L. Holmes, Harley-Davidson, After Covering 134 Miles in 156 Minutes

### PROTECT GUIDE POSTS

San Francisco, Cal., September 30.—That an early stop will be put to the vandalism that has been practiced on some of the sign-posts, which the B. F. Goodrich Company has erected along the mainly traveled routs of the Pacific Coast, now seems assured by the co-operation which newspapers and various associations are effectively lending. Like other public-spirited newspapers, the Seattle (Wash.) *Post-Intelligencer* has offered a reward of ten dollars for the arrest and conviction of anyone wantonly destroying any of the guide posts erected by the rubber company.

### MORGANSON FIRST ON THE LIST

San Francisco, September 21.—Officer James Moganson, the popular San Jose motorcycle policeman, is to have the honor of receiving the first 1916 three-speed Indian to be delivered to a purchaser in this territory, he having been the first rider in Northern California to place his order for the new model.

## OPPORTUNITIES OF THE DEALER AT THE SHOW

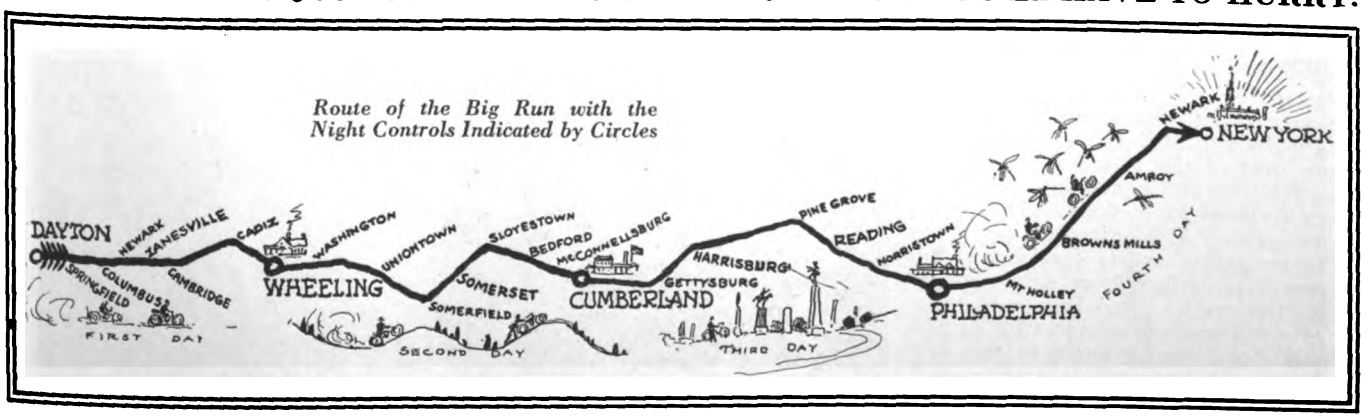
*(Continued from page 33.)*

ening influence upon every dealer who visits it, even though he may have closed his annual contract in advance and, perhaps, have visited the factory to learn at first hand the story of the new models. Steady plugging along one general line of activity in a somewhat limited territory is not conducive to the broad vision which the motorcycle booster requires if he is to play his part effectually in the national scheme of motorcycledom. He must get out now and then and swing his arms, so to speak; he must view the field occasionally through the eyes of others who are working industriously along lines similar to his own; he must loosen up and take a squint at both sides of the business sheet. He must mix.

If there be any who doubt the efficacy of the annual show as a source of inspiration to the dealer, let it be stated here that more than one motorcycle representative has visited a show with the idea of dropping his agency and bidding farewell to a field in which he seemed to make no headway, only to take a new grip on things and go back home with another contract and a dozen plans to make the approaching season a hummer. So, no matter how the situation is viewed, the significance of the annual gathering of motorcycles and bicycles, and of the men who make and sell them, cannot be denied. There is some talk of discontinuing the New York show, but it is to be hoped that no such decision will be reached—for the sake of the scores of Eastern dealers who profit by the exhibition in New York and who could not make the trip to Chicago.

As far as the dealer is concerned, the annual show is largely what he makes it. It can easily be an educational period of far-reaching value, a time of readjustment, an occasion for a business house-cleaning and a fresh start. If considered in that light it is worth all that it costs.

## IF YOU WANT TO JOIN THAT DAYTON-NEW YORK RUN YOU'LL HAVE TO HURRY!



Dayton, O., October 4.—Entries are still coming in from all sections of the East and the Middle West, indicating that the four state endurance run from this city to the New York Show, October 9-12, will be one of the biggest events of the year. Riders who still contemplate entering will certainly have to hustle, for there is next to no time remaining.

Every man who finishes the run may be assured that he will receive a season's pass to the big show—President Coffman will take care of that. Contestants will have some tough going in ploughing over the nerve-racking route, but when they finish the grind, they may be certain of getting a royal welcome in New York, where a large number of local riders will turn out to meet them, and lead them where the great sights of cycledom will dazzle their eyes and absorb their interest.

# MOVIE ACTOR IN A HAIR-RAISING FEAT

Walter Klintberg Making His Long Jump for Feature Film at Los Angeles

IN the accompanying photograph Walter A. Klintberg, a motion picture actor for the Keystone Film Co., is seen hurdling an automobile on his motorcycle. This stunt furnished some of the thrills in a film recently produced by the company near Los Angeles, Cal. The motorcycle cut through the top of the automobile, and some of the fabric of the auto top can be seen clinging to the fork of Klintberg's motorcycle.

Klintberg was a motorcycle policeman in the film. He was chasing a speeding car when another automobile suddenly appeared in his path from a side road. A special board platform had been concealed in the road to give him a "take-off" and when the proper moment arrived he shot his machine in the air, safely hurdled the automobile and went roaring on down the road.

Not long ago Klintberg dashed off the end of the 70-foot high wharf into the sea at Redondo Beach carrying a passenger on the tandem; he also jumped his machine from the roof of a fourteen-story building across an alley to the roof of the adjoining building. The rider uses a two-speed Indian, practically every joint of which is specially brazed.

## HENDERSON BUSINESS STRONG

Detroit, Mich., October 4.—Business has come with a rush at the Henderson factory since the Chicago show and announcement of the 1916 models of the four-cylinder machine, and day-and-night forces are working to their limit in trying to keep up with orders.

The volume of orders for immediate delivery has, in fact, been surprisingly large. Dealers who had been expected to order two or three machines for demonstrating and display purposes shot in letters wanting 10 to 25 machines right away, mostly two-speeds.

Preparations had been made for large sales, but the actual business has been in excess of the maximum amount figured on. Orders for hundreds of machines for immediate delivery are in hand today, and an average of 20 per day coming in, in addition to the usual orders for delivery in 30 to 60 days.

## LIMA RACE RESULTS

Lima, O., Sept. 29.—Creviston, Verrill and Taylor, all Indian lads, cleaned up the three professional events which were held here on September 28. Smith, Harley-Davidson, accounted for the two amateur races, a 3-mile solo and a 3-mile sidecar, with Schlegel, also riding a Gray Fellow, second in each of these events. The summary:

Five-Mile Professional—Taylor, Indian; Creviston, Indian; Matthews, Indian. Time, 6:01.

Three-Mile Amateur—Smith, Harley-Davidson; Schlegel, Harley-Davidson. Time, 5:48.

Ten-Mile Professional—Taylor, Indian; Jones, Merkle; Marks, Thor. Time, 11:56¼.

Five-Mile Consolation—Verrill, Indian; Matthews, Indian; Marks, Thor. Time, 5:52⅛.

Three-Mile Sidecar—Smith, Harley-Davidson; Schlegel, Harley-Davidson; Van Pelt, Thor. Time, 4:51⅛.

Twenty-five-Mile Professional—Creviston, Indian; Taylor, Indian; Jones, Merkel. Time, 29:30.

## ONE MAN COVERS TWO ROUTES

Dallas, Texas, October 4.—An Indian single has been purchased by a real estate company of this city for the use of its collector. By the use of the motorcycle the routes previously covered by two men with buggies are now worked by one man.

# ARMY OFFICER OUT TO BEAT BAKER'S TIME

Boston, Mass., September 29.—Lieutenant Hoffman, U. S. A., started from George Holden's Indian agency yesterday to ride across the Continent in the interests of the U. S. War Department, and also with a view of breaking E. G. Baker's record. His time of departure was 2:03 p. m. and he proposed to make Buffalo via Albany in 24 hours. He rides an Indian twin, fitted with U. S. Nobby Tread tires, the same machine on which he crossed from the Pacific to the Atlantic Coast this season.

Hoffman will pass through Buffalo, Cleveland, Chicago, and Omaha, then go to Lincoln, Iowa and Salt Lake City, taking the "Overland Trail" through Nevada to San Francisco. In order to better Baker's time of 11 days, 12⅙ hours, Hoffman will have to average more than 291 miles per day, and accordingly, he has set three single day runs on this end, each of which exceeds the best day's mileage of 418 made by Baker. When he reaches Omaha, Hoffman hopes to have enough "velvet" to enable him to proceed without worrying through Cheyenne and along the "Overland Trail" to 'Frisco, and to set a new record.

Lieutenant Hoffman's original trip took him 18 days, but he was not then out for a record. He came by way of Denver to see a friend and made various unnecessary sacrifices of time.

# CAPT. SPENCER WILL ENLIST RIDERS FOR NATIONAL GUARD

CAPTAIN LORILLARD SPENCER, of the New York National Guard, officially announced this week that he was prepared to enlist twenty men to form a Division Headquarters Motorcyclists' Detachment of the National Guard of New York.

The motorcyclists thus enlisted will become regular members of the National Guard, which is now, to all purposes, the Sixth Division of the United States Army. The detachment will have its own rooms at the Division Headquarters Armory in New York and will have separate drill nights. The enlisted riders will be under the supervision of an aide to General O'Ryan.

Machines, uniforms, etc., will be furnished without charge to the men, who, Captain Spencer says, are to be selected on their mental and physical qualifications.

At the time the above announcement was made, Lieutenant Perry issued a statement in which he declared his intention of organizing a Motorcycle Machine Gun Platoon for one of the infantry regiments of the National Guard.

Below is an application blank which motorcyclists, who wish to enlist, can use in communicating with Captain Spencer. Though the Captain has not specifically requested any other information than that outlined in the blank, it would undoubtedly be advisable for applicants to supplement the blank by a statement as to their health, education, military and motorcycle riding experience. Further announcements will appear in these columns.

It is now definitely understood that the New York National Guard is in the market for twenty motorcycles. Just what makes of machines would be purchased or how the officials would go about selecting mounts was not disclosed.

**Motorcycle Volunteer Machine Gun Squad Dismounting Colt Gun During Recent National Guard Maneuvers at Van Cortlandt Park, New York**

## APPLICATION FOR ENLISTMENT IN THE MOTORCYCLE DETACHMENT

Captain Lorillard Spencer,
New York National Guard,
50 Madison Avenue,
New York City.

Sir:

I hereby make application for membership in the Division Headquarters Motorcyclists' Detachment of the New York National Guard, it being understood that, if I am accepted, machines, uniform, etc., will be provided free of charge.

In pursuance of your request, as reported in Motor Cycle Illustrated, I give the following information:

Name in full.....

Age .....Occupation .....

Business Address .....

Business Telephone .....

Residence .....

Home Telephone .....

(Signature) .....

### FIELD DAY AND "DUTCH LUNCH" FOR SAVANNAH M. C.

Savannah, Ga., October 4.—Sunday October 10, has been set aside by the Savannah Motorcycle Club as its "Field Day and Dutch Lunch." Between two and three hundred invitations have been issued to riders and their friends, and a general good time is being arranged for those that will attend.

The affair will take place at German Club. The start will be made at one o'clock from the club rooms, a one hour ride having been arranged by Captain J. S. Cafiero. The entertainment committee is composed of Messrs. J. L. Hetzel, H. C. Gould and J. F. Entlemen, Jr. Features of the field day will be an indoor ball game, a bowling match, a three-legged race, a 100-yard as well as the 50-yard dash.

### JAMAICA CLUB ENDURANCE RUN

Jamaica, N. Y.—The Jamaica M. C. of this city will hold an endurance run over Long Island roads on October 24. The total mileage is to be 215. Departure will be made from S. Hurvin's store at 7 a. m., and Greenport, N. Y., the outmost point of the run, is to be reached by noon. Return from that place will commence at 1 p. m. and Jamaica should be reached by 6. The outward route is via the South Shore, while the return will be via the North Shore of Long Island. For further information, apply to S. Billings, secretary, 447 Fulton street, this city, or to S. Hurdin's establishment.

### WINTER MEETINGS RESUMED

Columbus, Ohio, October 4.—The Capital City Motorcycle Club of Columbus, which has club rooms at 142 East Gay street, will resume its regular meetings during the winter season. More interest is being shown in the affairs of the organization and it is planned to give a series of social affairs during the winter. The club rooms have been fitted up with lockers and equipped with pool tables for the convenience of the members.

### MEMBERSHIP CONTEST KEEN

Rockford, Ill.—The Rockford M. C. has a strong membership contest in full swing now, and competition continues keen. At the present time, Paul Pfansteil's Indian squad is seven members ahead of Henning Johnson's Harley-Davidson team in the competition, but the Johnson forces are rallying and a change of status any week is looked for.

The winter bowling season will open on October 15, with eight teams entered. These teams are formed according to makes of machine and include the Harley-Davidson, Indian, Henderson, Thor, Yale, Flying Merkel, Dayton and Excelsior aggregations. The first three are the most favored as winners just now.

## NATIONAL CAPITOL CLUB REORGANIZATION PLANS

Washington, D. C.—At a recent meeting of the National Capital M. C., of this city, a reorganization was affected to wage an active campaign for new members and to keep up interest in riding and other branches of motorcycling during the cool months. The club further put into effect a new policy of charging only $2 for six months' dues and with no initiation fee.

The club rooms have been completely refurnished, new carpets having been put down, a pool table fixed up and apparatus for moving picture exhibitions put in place. The latter are to be regular features this season, as the club numbers a number of operators and experts in that line among its members.

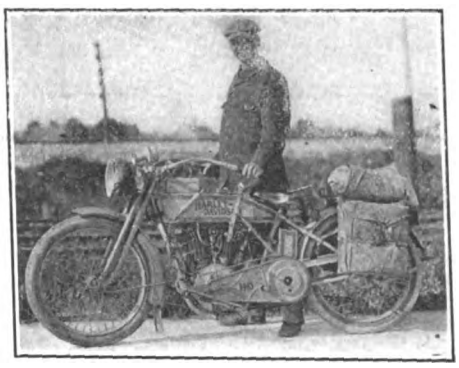
In the direction of renewing activity in motorcycle circles, the club has called to leadership some of the members who were successful in previous years in that direction. E. M. Dodson has been elected president, vice T. N. Moody, resigned, and George W. Bell has become captain in place of Harry May. President Dodson held a similar office in the club during 1913-1914.

---

W. H. Woody, Jr., of Oklahoma City, Okla., is member number 35,000 in the F. A. M.

## BROWN HAD NO WORRIES

Boston, Mass.—A number of popular fallacies concerning transcontinental touring by motorcycle are exploded by Irving F. Brown, who has just returned from an extensive western journey on his Harley-Davidson. In the first place, Brown expresses satisfaction over road conditions in general, de-



Irving F. Brown

spite the fact that 1915 has been an exceptional year in point of wet weather. He believes that the bad roads bugaboo has been overestimated, especially in view of the increased efficiency of up-to-date motorcycles. Brown also states that no sensible rider needs be held back from a long tour through fear of mechanical trouble. His worries along this line were negligible. Nor did he have trouble with the natives at any point, even in the roughest and most isolated districts. He had a revolver in his luggage kit, but never took it out.

Glacier National Park is recommended to motorcyclists by Mr. Brown in preference to Yellowstone. The former is richer in natural beauties and there are better accommodations for tourists.

---

## CHELINI FINE FUND

A contribution of one dollar has been received from F. A. M. Commissioner Fred N. Mills, of Washington, D. C., for the Chelini Fine Fund, making the total contributions to date nine dollars. Fifty dollars is the mark that friends of A. Chelini are trying to reach in order to reimburse the California motorcyclist for the fine he had to pay when he was arrested for speeding in covering the last leg of the recent Transcontinental Motorcycle Relay. All contributions should be sent to **Motor Cycle Illustrated.**

---

## READING CLUB PLANS RUN

Reading, Pa., October 4.—The Reading Motorcycle Club will hold an endurance run on Sunday, October 17, and the routes are now being laid out. It will be open to members and to non-members.

## WHEN BRAVES FROM THE BIG WIGWAM FEASTED AT AGAWAM, MASS.

# EXPORT NEWS GATHERED FROM MANY SOURCES AND BOILED DOWN TO FACTS FOR THE BENEFIT OF BUSY MANUFACTURERS

**A New Department Which Will Appear Hereafter in Alternate Numbers of Motor Cycle Illustrated and Which Aims to Give Practical Assistance Along Export Lines.**

### HOLLAND REPRESENTATION

Frank W. Mahin, American Consul at Amsterdam, Holland, informs us that large dealers in his territory say that there is an excellent market for American motorcycles and that several makes are already in use and giving satisfactory service. He adds that most of the bicycles used in the Netherlands come from England, whose manufacturers have thus far controlled the market. He explains that "the chief difficulty in the way of American bicycles is the long distance from the United States. This makes freight rates higher than from England, and also makes it impossible to fill orders quickly. The latter difficulty can be obviated by keeping stocks on hand in Holland, but this involves an investment which no American manufacturer seems willing to make."

In connection with the above, it is interesting to note that a large number of our inquiries for American-made bicycles, parts and accessories are now coming from Holland, importers and others declaring that it is practically impossible to get deliveries from England under present conditions. There is, therefore, no better time than the present for American manufacturers to overcome the advantages which English makers have hitherto enjoyed in the Netherlands.

### THE SITUATION IN SPAIN

"Practically the only condition," writes Mr. Paul H. Foster, American Consul at Jerez de la Frontera, Spain, "that affects unfavorably the sale of American-made bicycles and motorcycles in this district is the lack of direct representation of American manufacturers in the territory. The American machines have, such as have found their way to this district, attracted favorable and even enthusiastic attention, so any prejudice that may exist is in their favor. But no representative of an American manufacturer in this line has ever visited Jerez with the object of establishing an agency, nor, subsequently, made occasional visits to maintain the interest in the product. Until this is done the business of this field will remain where it is—in the hands of the foreign firms that do."

### OPPORTUNITY IN HONDURAS

E. M. Lawton, American Consul at Tegucigalpa, Honduras, advises this journal that "there is a steadily growing demand for bicycles, motorcycles and automobiles in this section. The purchasing power of the district is small, but sufficient to develop a small market in these lines. I am of the opinion that bicycles, more especially, might be made a permanent business if properly handled. At present there are comparatiely few in use, possibly not more than six or eight."

### HEAVY INCREASE IN EXPORTS

A compilation of the exports of American-made goods from the Port of New York, for the week ending September 11, has just been made by the National City Bank. It shows that the value of motorcycles exported during that week from the port of New York was $34,952, as against $4,949 during the same week last year.

Nor is this particular week an exception. While in this case the increase shown is 600 per cent., it is safe to estimate that since the first of July last exports of American-made cycles have averaged 300 per cent. more in value than for the same period in 1914.

### DANISH DEMAND FOR CYCLES

We are informed by American Consul-General E. D. Winslow, at Copenhagen, Denmark, that the opportunities for the sale of American-made cycles, parts and accessories in Denmark are good and the conditions favorable. He informs us of his belief that there are more bicycles used in Denmark, in proportion to its population, than in any other country in the world.

### SWEDEN A PROMISING FIELD

"The use of motorcycles," writes the American Consul at Goteborg, Sweden, "is increasing and there is a good demand for American machines. It appears certain that when trade resumes its normal course, the importation of American machines will increase materially."

The import duty on finished bicycles into Sweden is $5.36 each and on motorcycles $16.08 each.

### NORWEGIAN FIRM WANTS DATA

We are in receipt of a letter from Guttormsen & Co., importers and exporters, of Cristiania, Norway, P. O. Box 284.

This concern is desirous of securing representation for American-made cycles, parts and accessories, in the Scandinavian countries, Norway, Sweden and Denmark. They advise that they have traveling agents and are in a position to push the goods they handle. They desire to receive catalogs, lowest export prices and information as to commission that would be paid in the event of a representation being established.

### IN GUERILLA-RIDDEN MEXICO

American Consul Frederick Simpsich advises that there are no dealers in motorcycles or bicycles in the district of Nogales, State of Sonora, Mexico. This district embraces practically the northern half of the State of Sonora. There are no dealers in sporting goods to whom cycle catalogs could be sent to advantage. The roads in this vicinity are in no condition for travel by motorcycles. A few bicycles are used, but these are usually purchased from retailers in the American towns, such as Bisbee, Douglas, Tucson and Phoenix.

### INQUIRY FOR AMERICAN BICYCLES

We have an inquiry from Dirk Van der Mark, Keizer Sgracht, 635, Amsterdam, Holland, for a list of the names and addresses of several American bicycle manufacturers. Mr. Van der Mark wishes to take up the agency for a high grade American bicycle, and American manufacturers who have no representation at Amsterdam, Holland, will do well to send him their catalogs and other information.

### CUBAN BANKING IMPROVED

A noteworthy step in the development of Cuban banking facilities was the opening, on August 31, of the West Indian Branch of the National City Bank of New York in Havana, Cuba, with quarters in the old Bank of Havana. A feature of importance to American firms in the Latin-American export trade is the Commercial Agency Department in connection with the National City Bank. This will be in charge of Mr. Claude V. Allnutt.

### WATCH THE FOREIGN POSTAGE

There is nothing that provokes the foreign business man so much as to receive letters and catalogs upon which he has to pay additional postage, particularly when the communication has not been invited. American Consuls quote cases of foreign firms who have requested them not to send in their names in response to any inquiries, for this very reason.

### ANOTHER REPORT FROM MEXICO

Homer C. Coen, American Vice Consul at Durango, Mexico, informs us that under existing conditions, on account of the revolution, he would not recommend any efforts to extend American trade in and about Durango, Mexico. He states, however, "that in normal times this is a very good field for American-made cycles, parts and accessories and practically all that are used are bought in the United States."

# DUTCH MOTORCYCLISTS COMPETE FOR EYSINCK TROPHY

## American Machines Figure in Holland's Road Classic

Translated Especially for Motor Cycle Illustrated From De Revue der Sporten

WITH much interest the Holland motorcycling world looked forward to the great event of the season, namely the race for the Eysinck cup. Each year the Eysinck motorcycle factory of Amersfoort, Holland, promises a beautiful cup to the winner of a motorcycle ride organized by Messrs. Eysinck. This year the ride promised to be more interesting than ever, because several military despatch riders would compete. The Hollanders are very much devoted to the motorcycling sport and the military authorities pay special attention to their cyclist detachments, either on motorcycle or bicycles. When serving in the army they undergo a serious training, so that the Dutch military cyclists have got the reputation of being the most accomplished cyclists in the country.

### Some of the Rules

The rules to which the riders had to conform provided that this ride should not bear the character of a wild race, but of a pure sportive and scientific event. For instance, the competitors had to ride with an average speed of 25 miles an hour. The distance to be covered was 260 miles, for which exactly 10 hours and twenty minutes was allowed. There were many fixed but also secret controls, so that riders had to be careful not to offend the rules. Besides, an extra prize was offered for the rider who had used the least gasoline.

On a beautiful Saturday morning at seven o'clock forty-eight competitors started from the International Auto Garage at Utrecht, forty-two civilians and half a dozen military riders. Notwithstanding the rather early hour, many friends of the riders had gathered at the start to see their favorites get off. Lieutenant Ruurds was present to see the six cracker-jack military motorcyclists start. Of course they wore their greyish-green uniform. There were many different kinds of motorcycles; we noticed many Harley-Davidsons, several Indians, a good many F. N.'s, a couple of Excelsiors and some Scotts, while the military riders all rode Eysinck machines. The well-known motorcyclist Witteveen rode a brand new four cylinder F. N., which aroused the general admiration. During the ride it proved to be an excellent machine, running without falter.

Lieutenant Ruurds fired the pistol shot and off they went in a long row along the Heerenstraat to the "Amersfoortsche weg," the road which leads to Amersfoort, the first goal. During the first four miles, the cyclists were obliged to ride in a pace varying between 12 and 20 miles an hour; because in some parts of the city no greater speed is allowed; but as soon as the cyclists had reached the country road they hurried on in order to obtain the average speed of 25 miles an hour and conform to the rules.

The Utrecht-Amersfoort road is about 42 miles long and is one of the best roads in the country. Not that the other roads are bad, for as a whole Holland possesses almost over the entire country ideal roads, hence the cycle sport is so popular in Holland. As on this road races are frequently held, special care has been given to it, so that it is almost as smooth as a billiard table. Big trees on both sides protect the riders against the burning sun. Never have the trees been so appreciated as this year, because since 1858 it has not been so hot in Holland as this year. However, as it was nice and cool in the morning and the road was fine nobody had a kick to make and the riders were gay as could be.

### Passing the First Control

Between 8:10 and 8:15 most of the riders passed the first control at Amersfoort; the army men arrived exactly on time with military strictness—not a minute too late nor too early.

From Amersfoort the road led to Apeldoorn. This way leads through the Dutch mountains, but I must confess that these "Holland mountains" do not amount to much, being nothing but hills, covered with pine and oak woods. As this is, however, all the high country we possess, the Hollanders are very proud of their so-called mountains. This region is indeed beautiful and it never tires the motorist to cross this part of the country, which is also covered for a great part with extensive plains, covered with lilac-colored heather plants. In some parts the roads are somewhat sandy here, but not to such an extent as to be troublesome for the rider. At Apeldoorn many soldiers are camped; mostly fresh troops, which have to be trained. The new military law, which has

### STROGONOFF WAS MASTER OF CEREMONIES

Digitized by Google

It Will Be Noted in the Picture Above and the One on the Opposite Page That Sidecars and Tandems Were Quite Plentiful. The Picnic Was Featured by the Usual Games for Riders of Both Sexes and a Big Dinner

just been passed in the houses of Parliament, brings the army from 400,000 men to about 700,000 men, calling classes to the colors which before the war did not need to serve in the army. Thus we met around Apeldoorn many troops under training, making trenches, shooting, etc. When the six military riders passed by, they were heartily cheered by the soldiers, who seemed to be excellently posted on sport events.

**Where Belgian Soldiers Are Interned**
